The Nation.

NEW YORK, THURSDAY, JULY 3, 1879.

The Week.

THE extra session was brought to a close on Tuesday. The last days were spent in dividing the Judicial Expenses Bill into an acceptable and an unacceptable portion—the one, providing for "certain judicial expenses," passed the House on Thursday and the Senate on Friday, and was signed by the President; the other, providing conditionally for the pay of United States marshals, passed the House on Friday and the Senate on Saturday, and was vetoed by the President. The size of the "revolution" has dwindled down to this latter measure, which the Democrats, incapable of passing over the veto, have refused to amend, and so have gone back to their constituents. The long debate ended in a formal attack on the opposing positions of State sovereignty and National supremacy by Mr. Garfield on the one hand and Mr. Hurd on the other. Is there a national peace? are there national elections? and in what sense? are the questions now referred to the country. The only other noticeable proceedings during the week were the passage by the House on Monday, by 117 to 23, under a suspension of the rules, of a bill putting the salts and sulphate of quinine on the free-list, the Senate agreeing on Tuesday; the introduction by Senator Burnside of a joint resolution declaring it inconsistent with the Monroe Doctrine for European Powers to construct or control a canal across the Isthmus of Darien; the passage of a joint resolution by the Senate appointing a committee to investigate the best means of guarding and collecting the revenue; and the appointment by the House of a committee to sit during the recess and codify and simplify the complicated rules of that body.

The President has sent in a message vetoing the bill containing the appropriation for the expenses of the United States marshals, because it makes no provision for their expenses in attending elections; also another message, urging Congress to provide for the payment of the marshals and their deputies during the coming fiscal year, as the appropriations from which they draw their pay expire on the 1st of July. The reason for the veto is the same as that given in the veto of the Judicial Appropriation Bill—viz., that the refusal to pay the expenses of supervising elections deprives the President of the means of executing laws which he is sworn to execute. Subsequent attempts to pass either an unrestricted appropriation for the marshals or a separate appropriation for their ordinary expenses apart from their election expenses failed, and adjournment leaves them unprovided for. The Republicans are very well satisfied with this situation, and have reason to be. The Democrats say they are satisfied too, but the grounds of their satisfaction is only apparent to those who are better acquainted with the mind of their constituency than we profess to be. As the marshals will not be called on to perform election duties before Congress meets in December no practical inconvenience would have resulted from the President's signing the bill, but there are a good many grave reasons, which he has already set forth, for his refusing to countenance in any way attempts to control him in the exercise of the veto power by presenting him with odious alternatives.

The convention of "the Stalwart Republican party of Maine," as its temporary chairman characterized it, assembled at Bangor last Thursday. It nominated Mr. Daniel F. Davis for Governor, listened to two or three speeches of a ringing order, among them one from ex-Congressman Eugene Hale, and resolved that the country is a nation and not a confederacy of States; that a fair ballot is an important thing; that the Democratic party—in spite, doubtless, of all that Mr. Blaine can do to prevent it—is bent on "reopening exciting and sectional issues"; that "an irredeemable paper currency" is the "worst curse that can be inflicted upon a nation"; that State affairs should be conducted "economically and prudently"; that temperance is "a course which has conferred the greatest benefit on the State"; and that the laws ought to be enforced not only thoroughly but impartially. The resolutions and speeches were of a piece, and from them the independent voter, who is an important agent in Mr. Blaine's constituency, is at liberty to infer that on no subject except the so-called Southern question are the Maine Republicans explicit in their enunciation of principles. And the currency question is in Maine, one would say (reflecting upon the last election there and the distance of the State from Mason and Dixon's line), of considerably more importance than the Southern question. But both the Stalwart speeches and the Stalwart resolutions of the convention contrived to elude the pith of the currency question, and to expend their eloquence in abuse of "irredeemable paper" which will probably seem to Secretary Sherman more zealous than pertinent, and in particularly unspecific eulogy of "coin." It is difficult to see of what benefit this timid and transparent course can be to the Maine Republicans. Mr. Murch and his associates will certainly not be won over by denunciation of greenbacks, and people who oppose the principle of inflation, whether embodied in greenbacks or in "short" silver, will find little encouragement in evident verbal juggling in the matter. The Democrats held their convention at the same place on Tuesday, renominated Governor Garcelon, and did their best to make their platform agreeable to the Greenbackers—an accomplishment which seemed to cost them almost no effort whatever.

A "bi-metallic league" has been formed in Chicago for the purpose of speedily restoring silver to its position as a money metal, "with the rights of coinage the same as gold." The public meeting which gave it birth was called and attended by leading merchants, lawyers, judges, military men, and politicians. Not less than three judges made speeches. One declared that the panic, which ought to have run its course long ago, "still holds us in its grip"; another, that "the act demonetizing silver, in view of the manner of its passage and of its past and prospective evils, was one of the most cruel enactments that could be found on the statute-books of any civilized country"; a third, that "gold and silver were married in remote periods of antiquity, and destined for ever afterwards to go hand-in-hand as equals, and what God had joined together no man should put asunder." This sentiment was received with laughter, though there was no particular reason for its being singled out as amusing. A Colonel Daniels "spoke loudly, long, and earnestly in favor of a free, unlimited coinage of silver." He also provoked laughter and applause by saying that Senator Bayard "knew no more about the subject of finance than a calf." He said further that "the silver-men demanded the silver option; that the contract should be fulfilled; that the dollar paid should be of the same size that the people agreed to pay. If that didn't mean that they were in favor of honest money, he should like to know what honest money was." The League appointed a Publication Committee, and will do what it can to ensure the passage of the Warner Bill next December.

Mrs. Mary Clemmer, one of the Washington correspondents who, we believe, first called public attention, some years ago, to Mr. Conkling's "magnificent torso," has been mourning in a recent letter over the signs of advancing years exhibited by some of her Senatorial heroes. She remarks upon him in particular that not only has he "grown grey and bald," but "the malevolence of his expression has visibly increased." "It must be terrible," she says, "to despise and hate people as much as he looks as if he did. The

supercilious sneer on his lips seems actually to hurt them." Mr. Conkling has been much attacked and abused, but nothing so serious as this defection of the female correspondents has hitherto befallen him.

Mr. Roach, the ship-builder, has written to the New York *Times*, in reply to some remarks of that journal on the carrying trade, reprobating the doctrine that in order to sell to other nations we must buy from them. He says the true plan for us is to sell the foreigners our surplus produce, sent over in our own ships, and take nothing in exchange for it but "bonds and gold," and then let the ships come back in ballast and let us spend the gold on our own manufacturers. That this is sound doctrine he shows by the fact that when we were importing largely from foreigners our bonds were only worth fifty cents on the dollar, but now, when we export much and import little, our bonds and notes are worth one hundred cents on the dollar. If the ships come back in ballast, he says, and bring gold and bonds, it will "fill our Treasury and make cheap money throughout the country." The letter is interesting as an example of the odd notions about trade and its conditions which many shrewd business men entertain, and the small extent to which they think some things out. Mr. Roach evidently believes that we could go on for ever absorbing the gold of the world in return for our surplus products and running home-built ships with freight one way and ballast the other, the loss on the return voyage being made up by subsidies out of the public treasury. Trading vessels are, in fact, in his eyes, a kind of public yachts which need not be made to pay, and a foreigner is a simple-minded man who buys your products for ever as fast as you bring them to him, and delivers his "gold," which he apparently gets out of his private mine without selling anything to anybody, and is never "short."

The *World*, which was an advocate of the theory that Dr. Hull was the murderer of his wife, followed up the discovery of the real murderer by some able remarks on "the perils of circumstantial evidence." It says that "the people who believed Dr. Hull guilty will most rejoice to be relieved of a suspicion dishonoring not only to the afflicted man who was the victim of it, but to human nature itself." But it adds that the suspicion of "the afflicted man" was "terribly plausible," and that "many men have suffered death on evidence less strong than that brought against Dr. Hull." It then goes on to show that of "the three elements of capacity, opportunity, and motive which must be established by circumstantial evidence, that of capacity was apparently lacking, and motive was not proved." In other words, the people who suspected "the afflicted man" acknowledge that he was not physically able to kill his wife as she was killed, and that they know of no reason why he should wish to kill her, and that all they did know was that he might have come into her room in the night, and have killed her had he been able to do so. If this is the case against him, and they thought it sufficient to hang him, it is no wonder that these remarkable jurists rejoice over his vindication. It ought to be observed, however, that the evidence on this view was still stronger against every other inmate of the house, so that the male boarders, at least, have had a narrow escape from the gallows; for every one of them, besides the "opportunity," possessed the "capacity" to commit the foul deed.

Another man accused of wilful murder is now on trial by the newspapers, a Mr. Blair, living at Montclair, N. J., who had a dispute with his coachman and shot him twice. No third person was present when the shooting took place. What has to be ascertained is whether the coachman was trying to use a pistol against his employer when the latter fired at him, and there is evidence that before the fray the coachman was violent and abusive. The Brooklyn *Eagle*, however, which has the reputation of a sober-minded paper, has already heard and decided the case. It says that Blair "abused the coachman to madness because he drank a glass of beer," and that "the miserable despot then went for a revolver, and, without the least provocation, shot his hired man twice in the back," and it pronounces the defence "sheer nonsense." After much vituperation of Blair it adjudges him worthy "to be hung without shrift" by a mob, and also of "punishment compared with which hanging is lenient." The killing, we may remark, was only committed on Friday afternoon, and the *Eagle* found Blair guilty and sentenced him to be hanged on Saturday forenoon. We hope the irruption of historians and jurists into journalism which Mr. Whitelaw Reid promises us, is coming soon, because with this rapidity of process in criminal proceedings it is of the last importance to us all that the newspaper bench should be filled by men of extraordinary capacity.

An enquiry, conducted by the Bar Association, has been going on during the past fortnight before a commissioner in regard to Sheriff Reilly's management of the Ludlow Street jail. This is well known as the place in which Tweed was confined at the time of his death, and more recently as that from which "Red Leary" escaped by the aid of confederates through the wall of his cell into an adjoining house. It appears from the testimony that there are two distinct grades of living in the jail, accordingly as the inmates are "boarders," or down-stairs prisoners, who pay their way, and regular or up-stairs prisoners. The former are exempt from discipline as to hours of rising, exercise, and retiring, and have an unlimited amount of company of both sexes. Scandalous scenes, such as a wife's finding prostitutes in her husband's cell, have occurred; and "Red Leary," who spent most of his time at the bar (fancy a bar as a part of the conveniences of a jail!), had women visitors in his cell, by day and night, who sang songs, "some good, and others not good—not fit to be sung in such a place." A tuneful warden, who frequented the same and other convicts' cells, endeavored to raise the standard by singing "Auld Lang Syne" and "The Sweet By-and-Bye." Other wardens are accused of drunkenness and violence; the cells of the non-boarders are infested with vermin; the sanitary accommodations altogether inadequate; the food often unwholesome and repulsive. In short, if the evidence is to be believed, a more disgraceful state of things could hardly be imagined. Of course the witnesses are nearly all criminals, or men who have lost their character for integrity, and this is made the most of by the counsel for the defence. But there is a general agreement among them which leaves little doubt as to the truth.

Mr. Talmage is having a great success in England, and is making the religious public there familiar with the comic method in the pulpit, and they seem to like it, as funny and "American." He told the congregation of a Presbyterian church in Islington the other day that "it wasn't till Job got a carbuncle and a pest of a wife that he wanted to leave this world," at which there was a "decided titter." In fact, it is not unlikely he will introduce "the titter" in England as a normal feature in public worship. The fact that his Presbytery divided nearly evenly on the question whether he was not guilty of falsehood and deceit, and that he is still in the hands of ecclesiastical justice, does not seem to depress or impede him in the least.

The Harvard-Yale University eight-oared boat-race was rowed last Friday on the course at New London, and resulted in the worst defeat that Yale has ever experienced except, perhaps, in 1872, when she was a bad last of six contestants. There was little noteworthy about the race, save, indeed, that it was no race at all. There was long delay in starting, owing to an accident to the Yale boat and to rough water, and the dusk had almost grown into darkness before the signal was finally given. Yale led at first, but it was only for a moment, and afterwards the interest of a contest was wholly lacking. The four miles were made by the Harvard crew in twenty-two minutes, fifteen seconds, the beaten eight being one minute and forty-three seconds behind them. So far as appears there is little moral to be drawn from the uneventful narrative of the race. Yale was simply out-rowed and badly out-rowed by an exceptionally fine Harvard crew. The delay, due to the rough water, proves that the New London course is not perfect, and its advocates have never pretended that it was; but everything else in

the way of material aid and comfort to a successful race was provided.

Owing to the closing up of speculative and other accounts the past week has been the dullest of the season in the financial markets. The only exception has been in the case of United States bonds, for which the demand has again become very active, especially from the national banks, which have to provide a substitute for their "called" 10-40s. The price of the 4 per cents. has advanced to 103 to 103⅛, and a further rise is anticipated from the demand incident to the reinvestment of the July interest and dividend payments, which are estimated to amount to about $50,000,000. As usual at the time of providing funds for those payments, the money market shows considerable firmness, the rate on call loans being at the moment 5 to 6 per cent.; but as the withheld moneys are disbursed the market may be expected to relapse into its wonted summer ease. Cable advices report that the $15,000,000 of 4 per cents. bought by J. S. Morgan & Co., of London, from the First National Bank Syndicate, have already been marketed, and offers have been received from London for further amounts. The foreign exchanges are easier, partly owing to foreign movements in securities, and partly to considerable sums of sterling bills having been loaned to stock operators, which amounts to a sixty days' loan on London. Rates now range considerably below the specie-shipping point. Silver at London has ruled at 51⅝ to 51¾*d.* per ounce; the bullion value of the 412½-grain silver dollar here is 87.59 cents.

Our London correspondent discusses elsewhere the difficulties the British Ministry are having with the Irish vote in the House of Commons over the education question. Since the date of his letter the Cabinet has produced the scheme by which it proposes to satisfy the Catholics, which is neither more nor less than the conversion of the Queen's University, a completely non-sectarian institution, with only non-sectarian colleges under its control, into a mere Examining Board, like the London University, to which any properly-affiliated institution, however sectarian, can send up candidates for degrees. It does not appear in the despatches how it is proposed to organize the government of the new university, or in whose hands the control of the examinations is to be lodged; but it is quite certain that no scheme which does not give the Catholic bishops a considerable share in it will do much to give the Tories the Irish Catholic vote. The Beaconsfield Cabinet, on this question, as our correspondent points out, are between the devil and the deep sea, but with a marked *penchant* for the former.

Mr. Goschen, who is, perhaps, one of the highest financial authorities in the world, has delivered a very important speech on the silver question in the House of Commons apropos of Indian finance. He strongly deprecated any legislation about the depreciation of silver. He ascribed it in a much greater degree to the German demonetization than to the large production of the American mines, and, strange to say, makes no mention whatever of the cause assigned by Mr. Murat Halstead, the great Silver Prophet of the West—viz., the demonetization of silver in the United States in 1873; which looks as if Mr. Goschen did not keep up with the literature of the subject. He thinks that the German sales are now nearly at an end. The power of India to absorb silver he considered practically unabated, and he is totally opposed to interfering with the process by substituting a gold for a silver standard. He is also opposed to the introduction of the gold standard into any country in which it is not now in use, believing it to be for the good of the world that nations which like silver should keep it. But he declared "it was a perfectly different thing to say that those countries which had a gold currency ought to embarrass themselves with a silver currency as well," here again showing that he has not read Mr. Halstead's celebrated "silver articles."

There seems to be a fair prospect of peace in Zululand, Cetewayo having sent in to open negotiations for his submission, and this time there is said to be good reason for believing that he is sincere. The terms offered him are the disbandment of his army for five years, a fine of two oxen for each male Zulu, and the admission of a British resident to his capital, or, more properly speaking, the "kraal" or corral where he keeps most of his cattle. The extent of the preparations against him has apparently frightened him. His surrender, if the news be true, comes very apropos, as the difficulties of transport for the invading force during the next three months promised to be very great, owing to the disappearance of the grass for the oxen during the dry season. There are very disagreeable telegraphic stories about Prince Napoleon's death. The Quartermaster General is accused of having sent him on a dangerous service with a small escort against Lord Chelmsford's express orders, and the escort is said to have misbehaved grossly by galloping away as soon as the attack was made, when, as a general rule, a mounted man on open ground has little to fear from the Zulus. But the painful truth is the Prince had no business to be there at all; but as he was there, it is greatly to his credit that he took the service as it came, with the ordinary risks, instead of following the camp as a limited-liability soldier.

The Sultan's firman deposing the Khedive, in favor of his eldest son, Prince Mehemet Tewfik, has at last been issued, and on Thursday last the latter formally ascended the throne. The Porte has also dextrously tried to use the occasion to revoke one of the concessions to the late ruler which enabled him to maintain fleets and armies and make treaties with foreign powers; but France and England have remonstrated against this, and the decree will probably be abrogated. The new Khedive is only twenty-seven years old, and of course promises to reform everything. The most marked incident attendant on his father's outgoing was the appearance of Germany among his coercers. This has excited genuine indignation among the English Liberals, and will probably have a serious effect on the Tory fortunes at the next election. Egypt ten years ago was looked on all over Europe as substantially a dependency of England, which she might without offence occupy at any time under the spirited foreign policy of the Tories. This position has been completely lost; France has been admitted to full partnership in Egypt, and now Germany has appeared on the scene claiming the right to a voice in the management of its affairs also.

The débâcle in the German Ministry seems to continue, the new policy of the Chancellor proving more than most of the members can bear. Herr von Hobrecht, the Minister of Finance, has given in his resignation, it is believed owing to his opposition to the scheme for the purchase of the railroads; Dr. Falk and Herr von Friedenthal go with him—these two, probably, owing to the negotiations with the Ultramontanes. The conduct of the new régime promises to be one of the most difficult jobs the Chancellor has undertaken, and he undertakes it with declining health and in the evening of his days.

The Countess Lambertini, who has been claiming a share in the late Cardinal Antonelli's estate as his daughter, has been beaten on what we should call a demurrer—namely, the plea that if a daughter she is what the Roman lawyers call a "sacrilegious child," being the child of a priest, and therefore entitled to nothing. The amount she would have received is said to be over $2,000,000. Nothing is more curious than Antonelli's success in getting all the good things of this world. There was during his lifetime no doubt in the public mind at Rome that his amours were numerous, and there was no easy or creditable way of accounting for his facility in making money, but it did not prevent his remaining high in place and power, and being the Pope's intimate friend and confidant for thirty years. He, in fact, enjoyed all the external advantages that holy orders can give a man, and suffered none of their restraints, and this in one of the most conspicuous positions in Europe, and when the Papacy was passing through a very trying crisis. His brothers have secured his fortune under the Lambertini decision, however, at the expense of his reputation.

THE POLICE OF PARLIAMENTS.

THE scenes of disorder in the French Assembly when the question of granting permission to prosecute Paul de Cassagnac for libellous attacks on the Government in his newspaper was under debate, are said to have surpassed anything ever witnessed even in France. The members of the Right came down into the space around the tribune, shook their fists in the faces of the members of the Government, and called them foul names. In one or two cases they actually laid hands on them and mauled them, and two members got to fisticuffs. Of course while the tumult lasted the President was powerless, and it lasted just as long as the promoters of it chose. It does not, indeed, seem to have been a sudden outburst of fury, but rather a premeditated scheme of the Bonapartists for bringing the Assembly, and indeed the whole Government, into discredit. It appears, however, to have made more impression on the European public than any previous scene of the same kind in the French legislature, and so sober a paper as the London *Economist* is led by it to propose a new plan for the government of legislative bodies. It thinks that as these bodies multiply, and the material of which they are composed becomes more inflammable, the method of ruling parliaments through a single officer, which has been in use from the beginning, and has spread to every country in which parliaments exist, will become inadequate. This officer is, and must of necessity be, in most cases a member of the majority, and therefore, in practice, though perhaps not in theory, the servant of the majority. His moral authority is thus weakened necessarily by his connection with one party, and his rulings in times of excitement are wanting in judicial weight. The *Economist* therefore proposes that he should be assisted by two or more assessors or censors, who should be permanent officers or real judges, who should be called in to assist the speaker whenever it becomes necessary to inflict penalties for the preservation of order.

The disease, however, is not at all so grave as the *Economist* seems to imagine. In fact, considering the great and rapid extension the parliamentary system has received since 1848, and the number of new and raw communities which have adopted it and live under it in all parts of the world, the success of the speakership may fairly be pronounced very remarkable. Disorders which the speaker cannot repress by his unaided authority are very rarely heard of in the parliaments of the remotest West or of the colonies, and the reason is that even if members are excitable, public opinion, even in the rudest societies, severely condemns tumults in the legislature. Voters, as a general rule, however low their intelligence or rough their manners may be, like, if there is any political fighting to be done, to do it themselves during or before the election. The members of parliament whom they choose they expect to behave in a parliamentary manner, and carry on their warfare according to the rules of the parliamentary game. They may like their representative to be combative and vituperative, but they expect him to be so within the forms of legislative procedure. Consequently, in ordinary times any party is damaged with its public by displays of violence in the legislative halls as long as there is on both sides an agreement as to the foundations of the Government.

What makes French parliamentary proceedings so disorderly is, that ever since the Revolution a portion of the legislature has always treated the existing Government as the product of fraud and usurpation, and as, therefore, only entitled to as much respect and obedience as it could get by superiority of physical force. It is to this division of sentiment about fundamentals that the late turbulence at Versailles has been due. To the Bonapartists and Legitimists (or Brigadiers) the Republicans (or Stalwarts) are simply rapacious scoundrels, who have got hold of the administrative machinery by successful violence and are using it for the execution of all sorts of evil designs, and deliberation with whom is simply a painful necessity. To men in this state of mind, and who are by no means a reflective class, of course all proceedings of the Assembly in which they are worsted are highly irritating, and their only idea of a debate with the Republicans is an interchange of taunts and threats.

There was a state of things somewhat similar to this in Washington before the war, owing to the deep and increasing belief of the great bulk of the Southern members that the Union would before long be dissolved, and that their own connection with the Government was only temporary. Moreover, their constituencies shared their feelings, and regarded the Northern members as in some sort alien enemies, to whom neither courtesy nor co-operation was due, and whom their own men were therefore justified in treating in any manner the mood of the moment suggested. There has been since the war, and probably there is now, a good deal of the same feeling still among the Southern members, but it wants the stimulus of hope. No Southern man now looks for any deliverance from the necessity of living under the same government with the North; and this despair, if we can give it no better name, tends constantly to produce, first resignation and then contentment, and finally, it is to be hoped, good feeling. It is almost certain that the same cause will produce the same effect in France. The death of the Prince Napoleon, by destroying hope, will probably soon convert most of them into Republicans, who will behave as well in debate as anybody. The conversion of one of them, Cuneo d'Ornano, who has been almost as remarkable for his violence as Paul de Cassagnac, is recorded already; that of others, of like character and antecedents, will probably follow rapidly. In fact, it is doubtful if the irascible Paul himself will hold out very long. The change is harder for the Bonapartists than it would be for men of most other political parties, because they are essentially a military party, who do not believe, and never have believed, in the parliamentary régime, or in the settlement of differences of opinion by discussion. They have been used to seeing their opponents put in jail or deported, or silenced by an imperial censor like De Morny.

At the North, since the war, the Stalwarts, though men of essentially peaceable disposition and of strong parliamentary habits, have had also a hard struggle in carrying on parliamentary government with the "ex-rebels," and are consequently prone even to this day to convert debate into a series of taunts, and to take up the time in showing not that their opponents' arguments are unsound, but that their opponents themselves are bad fellows. They have found it very difficult to reconcile themselves to the spectacle of men who had lately been in the field for the destruction of the Government assisting in carrying it on on equal terms with those who had fought in its defence, and some of them have concluded that this spectacle proved that the war has been a failure. A century ago they would have been equally shocked by the spectacle of "ex-rebels" retaining possession of their property, and two centuries ago they would have insisted on cutting off their heads, and the sight of a prominent "ex-rebel" with a head would have led them to declare mournfully that their own dead had died in vain. Now the worst they do is to harass the rebel by an examination of his "record," and show that his presence in Congress is an illustration of the unexampled clemency of his conquerors.

The parliamentary troubles arising out of disputes about the legitimacy of *de-facto* governments are not likely to last much longer, as there is in the more highly civilized countries no *de-facto* government now in existence which does not rest on a very solid basis of popular consent. Whatever difficulty in preserving order in deliberative bodies may hereafter show itself will most likely arise from the presence of fanatical minorities like the Socialists in the Reichstag, or the Irish Home-Rulers in the House of Commons, who seek to make up for their numerical feebleness and to coerce the majority by obstruction under the rules of procedure. But they can always be held in check by amending the rules without increasing the power of the presiding officer.

FATHER HYACINTHE'S "GALLICAN CHURCH."

IT is announced in the French newspapers that Father Hyacinthe's so-called "Gallican Church" has received its first clerical adhesion in the person of a priest in the Department of the Ain,

who has come to Paris and already begun to officiate at the chapel in the Rue Rochechouart. The Protestant newspapers applaud this "brave example," but regret that the new assistant to the ex-Carmelite should present so painful a contrast to his chief in point of eloquence. The progress of the new sect is attested by the announcement of six hundred names inscribed upon its books; but the significance of this figure would be more clear if we were informed to what the subscribers bound themselves, and especially whether they agreed to pay any cash. Up to this time one of the characteristics of the "Old Catholic," "Liberal Catholic," "Christian Catholic" movement, which now reappears under the title of "Gallican Catholic," has been the stern consistency with which its votaries have declined to pay their money for the advancement of their principles—coupled, in some instances, with a generous alacrity in expending for that purpose the money of the public. Few things would do more to assure the world that M. Loyson's new enterprise is an exception to the general fate of Old Catholic undertakings, than to see his disciples putting hand in pocket and proving by a modest subscription that devotion to principle which he declares they are ready to "seal with their blood."

Thus far, we say it with regret, there is no hopeful appearance of vitality in the meeting which its founder calls, with a certain disproportionateness of phrase, "the Gallican Church." The crowd at the chapel whenever Father Hyacinthe is to preach is a matter of course; he is not only famous—notorious even—but eloquent with that intense dramatic eloquence which is dear to Frenchmen and entertaining to everybody. The time is far distant when there will not be found in Paris, of a Sunday morning, a thousand people eager to see a man who has been much talked of, and to hear the French language spoken, not always with the correctness of an Academician, but with copiousness and power, and in the perfect enunciation of a voice of exquisitely sweet and sympathetic quality. But when this fervid and popular preacher talks of himself as a representative of the uprising of French Catholics to throw off the yoke of the Vatican, and calls himself and his disciples "the Gallican Church," and organizes contributions in England and America for the support of that branch of the Church Universal, it can hardly be deemed impertinent to ask for some other evidence of the existence of "the Gallican Church" than the crowd on Sunday mornings at the preaching in his chapel.

As a matter of fact, there does seem to the worldly mind to be a flavor of humbug about "the Gallican Church" as now reconstituted. The Paris correspondent of the *Guardian* long ago remarked it as curious that all the manifestoes of this uprising of French Catholics should bear the imprint of "Grassart, librairie protestante," and that the expense of transforming a variety theatre into a chapel should have to be met by a rich American. It is equally impressive that not only is there no bishop in French-speaking Christendom to countenance the movement, but that even for the post of assistant priest the minister of a French Protestant Episcopal church had to be imported from New York, until, after some months of waiting, an abbé from the eastern frontier offers himself for that humble function. In its quest for episcopal encouragement the new enterprise has had a droll experience. Those bishops of the Roman obedience whom Father Hyacinthe is fond of alluding to as known to him to be secretly writhing in suppressed rage against the impositions of the Vatican, still keep their secret wonderfully veiled, and nobody but himself can guess who they are; at all events, they decline to lend a hand in this emergency. The Old Catholic bishops in Switzerland and Germany send a civil word, which, considering the former relations of the parties, is as much as could be expected. The Jansenist bishops in the Low Countries, who have shown themselves so willing to accommodate, were perhaps not asked. The Archbishop of Canterbury cordially turns over the applicant to his Scotch brethren, who are less embarrassed than himself by acts of Parliament and considerations of expediency. And the Scotchmen, who are still red in the face with the violence of their protest against the schismatic behavior of some returned colonial bishops ("returned empties," as they are maliciously called) that ventured over the border to do a little confirming to oblige a friend, perceive at once that this is one of those cases which circumstances alter, and will be happy, in a general way, and on purely Gallican principles, to lend an official hand to a promising little schism in the diocese of their brother of Paris; and are utterly unable to see the point of the joke until it is explained to them, with a certain degree of acrimony, by some of their English brethren.

Perhaps the clearest evidence of humbug about this whole business is the use of the name "Gallican." Under this name Father Hyacinthe would rally those who "have rejected the yoke of Ultramontane pretensions, and attached themselves to the ideas of Lacordaire, Montalembert," and others. Now, nobody knows better than Father Hyacinthe that these men were emphatically and explicitly not Gallicans, but Ultramontanes—"Liberal Ultramontanes," such as he himself was while he continued in the Roman Catholic Church. But he is equally well aware that the English and American Episcopalians to whom he looks for his money do not know this, nor suspect that the Gallicans are as extinct as the Merovingians, and that the chance of finding in France a live Liberal Catholic of the school of Montalembert is something like the chance of discovering a dodo—not absolutely desperate, but far from hopeful. The sudden and complete vanishing from the face of the earth, since 1870, of that plucky and brilliant little politico-religious party is one of the most striking and even tragical pages of ecclesiastical history.

A part of the complex delusion on which "the Gallican Church" depends is the notion that the "Latin races," the "Southern peoples," cannot be satisfied with Protestant Christianity, and that the Liberals in a Catholic country have a craving desire to hold on to ritual and priesthood and as much of the Roman system as they can keep while shedding off the papal supremacy. Impressive as these ethnological generalizations are when uttered magisterially by ritualistic Englishmen, they do not seem to correspond with the facts. Nowhere has Protestantism in its baldest form been so tenacious of life in face of exterminating persecution as among the pure Latins of the south of France. Nothing but Protestantism, frank and decisive, seems to content those Frenchmen who care for any Christianity at all in place of the Romanism they reject; and over to Protestantism they are going, high and low, sometimes by churchfuls at once, while Old Catholicism stands in open market and finds no takers.

It must not be supposed from all this that we mean to imply that Hyacinthe is playing the part of a deliberate impostor. On the contrary, there is hardly any man who can, on the ground of self-delusion, be more easily defended against such an imputation. He is always one of the first to be convinced by his own dramatic—almost theatrical—eloquence, and seems really to believe that the arguments by which he vindicates his position to the public are the identical considerations that brought him into it. Rarely has any man had so much difficulty in discriminating his conscience from his *amour propre*. The successive quarrels with which he alienates one set of friends after another are all, in his mind, grave issues between eternal right and wrong. As with his hates, so with his loves. He announced his marriage to the fascinating widow whose confessor he had been while yet a Carmelite, as a high act of heroism for the benefit of the church. The *Nation* (No. 377) warned him at the time that a cynical world is obstinately incredulous of such statements of motives. But he returns to the argument with a perseverance that betokens sincerity, and argues publicly, on the testimony of one of his unknown bishops, that he has done an immense thing for Catholic reform by marrying the Widow Merriman, at which those who know the subsequent effect on public sentiment renew their smiles; and notwithstanding his repeated invitations to the world to discuss with him the expediency of his marriage, they good-naturedly decline. This capacity of self-delusion is a vast help to him, as well as a hindrance. For a man of so many winning and amiable traits, and such unquestionable talents, he is strangely poor in influence and following. Out of all the multitude of the French clergy one poor

abbé alone comes tardily to his support. And yet none who know him need doubt his sincerity when, laying his prophetic ear to the ground, he announces the approach of the sacramental host of "the Gallican Church," and the coming overthrow of Rome. His character is not one utterly unknown to the student of human nature. The ruling spirit of "the Gallican Church" is the spirit—exalted, dignified, transfigured, but still the same,—the spirit of Wilkins Micawber.

THE CULTIVATION OF THEOLOGY IN COLLEGES.

THE various college commencements which are so prolific in exposition and exhortation have this year only produced one address which has attracted much attention outside the audiences to which they were spoken; we mean that of President Eliot, of Harvard, before the Smith College at Northampton—an institution, as our readers know, for women exclusively. His utterances were looked for with additional interest owing to the fact that rumors have been for some time in circulation that the opposition of Harvard College to the admission of women was relaxing, and that the experiment of what is called "co-education" would there be witnessed before long. President Eliot, however, has apparently not in any degree changed his position on this subject. He believes in giving women as high an education as careful trial will show they are willing to take, and can take without injury to their health or interference with the peculiar social functions with which they are now charged. But he is unalterably opposed to mixing up the purely educational experiment which has still to be made, as to the nature and extent of the intellectual training which women require, with "the social experiment of bringing scores or hundreds of young men and women into intimate relations in the same institution at the excitable age of eighteen to twenty-two." He does not think any college is now competent to try the latter in a complicated society like that of the Eastern States, in which marriage is by no means the easily-arranged contract which it is in the simpler communities of the West, and in which parents are much more solicitous, and reasonably solicitous, about the relations into which their sons and daughters enter, or are tempted to enter, on the threshold of life. He thinks the only good argument which can be offered for co-education is the poverty of the community, and this is an argument which is not now available in this part of the world, as the existence of such institutions as Smith College and Wellesley and Vassar shows, and as the creation of other similar ones hereafter will doubtless continue to show.

He dwelt, too, with special commendation on the position of Smith College with regard to religion: it is, he said, "entirely undenominational in its management and instruction," and he added that in taking this position it follows the example of "Harvard, Yale, and Columbia, which declare their policy to be unsectarian, and appoint professors from various sects." We are inclined to believe that this statement of the position of these colleges is hardly accurate. We question very much whether a member of the Unitarian denomination would be appointed to a professorship in either Yale or Columbia. Moreover, judging from President Eliot's remarks in his address at the commencement dinner of his own college, and from the successful efforts he has recently made to secure large donations for the Harvard Divinity School, we fear it would be difficult to show the incorrectness of the popular impression that Harvard College is really associated with the Unitarian body, and deeply interested in supplying ministers for it, and therefore not in the strict sense of the term "undenominational," or entitled to share in the praise rightly or wrongly bestowed on non-sectarian institutions.

He said at the dinner:

"I had something to do with the actual solicitation of subscriptions for the new endowment of the Divinity School, and there are two or three facts about it with which I am greatly impressed. In the first place, there is a common opinion that the interest in the great themes of God and immortality, and life and death, has died out. That is not at all true. On the contrary, there never was a time, in my opinion, when the interest in these subjects was keener and more universal. And there certainly has never been a time in the whole history of theology in this University when any such contribution has been made to the support of theology as has been made within the last three months. Now, you will allow me to mention that the motive of most of the gentlemen who have contributed to this endowment was, I think, the support of theological teaching of a perfectly unsectarian character. [Applause.] That was precisely what interested them in this movement."

We shall take the liberty of observing in reply to this, in the first place, that neither the Harvard Divinity School, nor any divinity school in this country or in England, exists simply for the cultivation of theology as a science. All these institutions, whatever the theory of their organization may be, exist for the much more practical purpose of training ministers, and most of them ministers for particular denominations. In other words, they are professional schools, like the schools of law and medicine, and it is a rarer thing for anybody to enter them who does not seek preparation for the clerical calling than it is for any one to enter a law school or a medical school who does not mean to practise as a lawyer or doctor. Amateur theologians, if we may use the term, no doubt abound everywhere, but they seldom or never cultivate their taste by taking a theological course in a college. We may go still further, and say that no divinity school in the country is prepared to equip a man for the ministry of all denominations whatever, in the sense in which a law school equips a man to practise law in any State. We grant that a Presbyterian minister may, and sometimes does, get his training in an Episcopal seminary, or an Episcopal minister in a Presbyterian seminary, and so on; but as a general rule each denomination thinks it more than desirable to educate its own clergy, and the teaching of a Unitarian divinity school is nowhere accepted as sufficient preparation for an orthodox pulpit. The graduate of such a school who sought a call to an orthodox pulpit would only obtain it through a formal process of recantation or repudiation, or, at all events, a fresh profession of faith. We are sure President Eliot did not intend to be vague or ambiguous when he used the phrase "theological teaching of a perfectly unsectarian character." But we are also sure that he would find it difficult now to tell us what such teaching is. The most important question in Christian theology is the nature of Christ—was he truly the son of God, and was his death an expiatory sacrifice by which believers are saved from the consequences of hereditary and innate sinfulness? or was he simply an exalted person sent to help men to pure living by his teaching and example? The Christian world is divided radically on this question. Those who take the first of these views hardly admit those who take the last to be Christians at all. President Eliot surely does not mean to tell us that the professors in the Divinity School are going to teach that both views are true, or to teach that it makes no difference which a man holds. Still less is he likely to maintain that it would be "non-sectarian teaching" to tell the students that one was true and the other false. If, on the other hand, the professors are to confine themselves to a mere description of Christian doctrines and an account of the controversies which have arisen over them, their work might be very properly done in the University itself by a good Chair of Ecclesiastical History. We may, therefore, safely set down the Harvard Divinity School as necessarily denominational in its practical workings, whatever character its managers may seek to give it, or may have originally claimed for it.

In the second place, we must take exception to President Eliot's dictum that it "is a common opinion that interest in the great themes of God and immortality, and life and death, has died out." As far as our observation goes—and each person can only base an assertion of this kind on his own observation—the "common opinion" is not that interest in these great themes has died out, but that the belief that anybody can speak about them with special authority has greatly declined. The interest in the themes is as deep as ever, no doubt. There is hardly any man who can ever cease to regard them as tremendous; but there is a widespread and growing opinion that no person can throw much light upon them, and that no secrets about them are communicated in divinity schools which are not within the reach of every one who walks the highway. It is this belief which is weakening the hold of the churches on the educated class, of which so much complaint is made, and which is diminishing the influence of the clergy, and which is doing so much to make a minister's success depend on his personal qualities rather than on his professional degree. It is certainly not to be met or vanquished by increasing the endowments of divinity schools and equipping more ministers. It must be encountered in the market-place and in the lecture-rooms of all the sciences, in the forum and in every department of activity, by showing beyond question how much the human mind can do by investigation and reflection to elucidate the darker problems of human existence. In other words, the training needed to combat it must in our time be much wider than that given in any theological seminary.

We hold it, too, to be a great mistake to suppose that there is in the Protestant world in our time a science of theology, abstracted from denominational belief, which it is worth while to keep up a divinity school to teach, or with which, as theology, a university has any concern.

There is such a theology in the Roman Church, but it is a great body of law, made up in part of the decrees of councils and popes, in part of the dicta of famous and approved doctors, and it is taught as the civil law is taught—by the citation of authorities and the exposition of the statutes with the aid of commentators—and there is in existence a final court of appeal always ready to settle disputed points. The Protestant Church has what is called natural theology, which consists in the deduction of the existence of an all-wise and all-powerful Creator from the order of the universe, and then the reconciliation of his attributes with the existence of evil. But this forms, or ought to form, in every university a branch or department of moral philosophy, and no education can be considered complete which does not include more or less acquaintance with the discussion which the problem has in all ages called forth, even if no solution of it be possible. No teaching of ethics, for instance, can altogether avoid it.

Among Protestants the proper work of a divinity school begins only with the extraction of theology from the Bible and from the commentators on the Bible, and the teaching it furnishes necessarily consists in the interpretation of the Scriptures and the examination of the opinions of independent interpreters of the Scriptures. But we do not need to say that all theology of this kind is necessarily denominational. Every denomination has its own set of interpreters and its own set of standards set up by the interpreters, and these standards are constantly undergoing modification under various influences. Each denomination, too, takes care that this theology is well taught from its own point of view. The country is abundantly supplied with schools for instruction in it, and these schools are manned by the best theologians that can be found, who are aided in the work of instruction by the leading pastors of churches and amply supplied with funds by the members of the communions to which they belong. There is, in fact, no branch of learning which excites so much popular interest and which receives so much popular encouragement, and about which, therefore, a university like Harvard needs to give itself so little concern.

This is, no doubt, as true of the Unitarian denomination as of others. The readiness with which President Eliot has obtained subscriptions for the Harvard Divinity School, and his own zeal in the matter as a Unitarian layman, show, we think, clearly enough that Unitarians would support it liberally if it had no connection with the University whatever, and that neither the University, nor President Eliot as the head of the University, need take any thought for it. In fact, it is a grave question whether both it and many other divinity schools are not already overburdened with funds. Some of the best observers are of opinion that the cheapness with which these institutions now offer a clerical education to all comers has had a very injurious influence on the ministry, by seducing into it the weaker class of young men who have no stomach for the battle of life in the other professions, and that the best thing that could be done for the divinity schools would be the diversion of the funds now spent in free lodging, fuel, gas, and even clothing and washing, to the strengthening of the professorial chairs. So many students might not then seek them as are now attracted by the gratuities they offer, but those who did seek them would be men of much more robust type, who would succeed in any calling, and there never has been a time when the Church needed such men more. But these things are emphatically the affair of the churches and of individual believers, and not of universities like Harvard.

The large sum which is being added to the endowment of the Harvard Divinity School—about $130,000, we believe—would not, therefore, be applied, as President Eliot's remarks above quoted might lead one to suppose, to the cultivation of the religious sentiment among the students of the University in general. Even if this could be done by collegiate machinery, we understand that nothing of the kind is contemplated. No student of the Harvard Academical or Medical or Law or Scientific Department will, in consequence of this endowment, hear anything more of God and immortality than he hears now. The principal if not the only result of it will be an increase in the number of students prepared for the Unitarian ministry, which might be desirable if it could be shown that there was now any dearth of Unitarian ministers—that is, that there were more Unitarian congregations than could be supplied with pastors. But no such state of facts exists. On the contrary, we believe it cannot be denied there are already more Unitarian ministers than can find pulpits, and that there are many signs that the younger generation of Unitarians find their spiritual wants better supplied in the orthodox churches than in their own. So that no matter from what side we approach the matter we fail to see why a university which has been making such rapid strides as Harvard towards a thoroughly non-sectarian and national position should suddenly pause and devote large sums of money, sorely needed in other fields, to the cultivation, for the benefit of one sect, of a study which is already abundantly provided for by the various Christian churches, and the connection of which with the moral condition of the college is at best very faint. Nothing can be more important than to give undergraduates a regard for the things which are eternal, but we know of nothing in the recent history of American colleges to warrant the belief that this regard is fostered by the presence of a divinity school. On the contrary, there is much reason, in recent experience, for believing that the more colleges abstain from official connection with religious teaching, and the more they leave the nurture of religious impressions to agencies emanating from home and church, the better chance there will be for the ideas of God and immortality to retain their power over young men's lives. An official religion, whether in state or university, is always a sickly thing. The more you endow it the less of "the heart's adoration" you get for it.

THE UNIVERSITY BOAT-RACE.

New London, Conn., June 28, 1879.

ON the evening before the race New London seemed strange to those who remembered the crowds, the light and color, and animated groups which have enlivened the nights before former college regattas. Nothing disturbed the wonted quiet of a New England town. Owing to the appointment of the race in the afternoon and the facilities for reaching the city, few students had arrived, and these were mainly on the shore, where the cool breeze and the view of the harbor gleaming with innumerable bright lights on the yachts made a fair summer evening. In the city itself there were small crowds in the close pool-rooms, or watching the gyrations of a wheel-of-fortune, or aimlessly standing at the corners. It was late in the forenoon of the next day before the streets and the hotel became thronged with the peculiarly mixed classes which characterize a regatta crowd—dignified elderly gentlemen, with the blue ribbon of their college days; quiet but anxious students, wandering in search of the man who had offered to bet and had disappeared in search of his friend; observant reporters; old university oarsmen, one of whom, from Yale, I heard remarking that it would be a close race, for the Yale crew were "deceptive men" (and he seems to have been right); together with all these, and outnumbering them, noisy drummers and bummers of all descriptions were looking on with curiosity at the crimson or blue ribbons of the students, and occasionally elbowing their wearers with evident pleasure.

At last the time approached, and as the press-boat steamed by Winthrop's Point at the finish the grand stand was gay with color. For half a mile or more along the course craft of all sorts lay at anchor; the graceful yachts and the great excursion steamers, with their whole bulk adorned with flags, stood out among the lesser sail-boats. As we went up the beautiful river to the head of the course many picturesque sights met the eye—picnic parties under the green trees upon the bank, the Harvard crew on the turf beneath their bright flag, the moving train with its gleaming awnings and rival colors winding along the western shore. The hours of the postponement passed more comfortably for us than for others. At the Yale quarters there was a fine view of opening gorges to the north and there was cool shade under the trees. At last we were off again, and watching the boats going to their positions. In the roughest part of the stream the Yale crew stopped, and on their remonstrance both crews were ordered back to their quarters. In a few minutes it grew calmer, and the whistle of the umpire's boat called the crews back. The overcast sky threatened rain from the north; the late hour threatened dusk from the east; the water was very quiet, but it was a long while before the Yale boat was mended and launched and took its position beside Harvard. The story of the race is soon told; there was some excitement for a few hundred yards, and then it was all over. But if it was not exciting, it was as picturesque a scene as I ever saw. The two shells were shooting ahead, followed close by the privileged boats, first that of the referee, who was standing in the bow and waving back from time to time the press boat as it came too near, in advance of the University boat and the Yale launch, all pushing along at full speed, with the dark steely sky, the bold green bluffs, and the level water in the background. So, without any noteworthy incident, we neared the end, the Yale boat directly ahead, Harvard with its colors indistinguishable in the dusky distance, the masts of the shipping growing more distinct, until the flash and boom of the discharging cannon and the dip of the flags saluted the victors on their last half-mile and the cheers broke out from the thousands who had been so

tired with waiting for these few minutes. Then the finest sight of all was seen, as the yachts closed in behind the Yale boat and filled the space, with their white sails spread full and their graceful forms made more beautiful by motion, while the decorated steamers moved heavily among them, and the smaller craft literally crowded the intervals. The crews lay on their oars in the midst, in imminent danger of being run into, as gradually, in groups or singly, this fleet passed through the narrow space and rounded the point into the larger harbor.

Probably experts will tell, now that the race is over, why it was so unequal ; but even to an inexperienced eye the form of Yale, after the first dash, seemed almost awkward in comparison with the symmetry of movement of the Harvard eight. The distance by which Harvard won was so great as to make the race comparatively dull for those who saw only the finish. They came to see a contest, and practically there was none ; at least they thought so, for it is hard to analyze the interest which weighted these few minutes with the intense expectation and attention of many thousand spectators, involving the expenditure of many thousands of dollars. To see a trial of well-matched muscular power, to see which was the best college and satisfy the passions of rivalry, to make money, to have a good time spending it, to get excitement of any kind, to gratify a sporting mania, to see what it was like—all these motives and others went to generate an interest in a sight which lasted perhaps two minutes. It was generally said that the race was uninteresting, but the crowd was a very satisfied one, certainly after the short time in which the blue ribbons got away. The Harvard men took possession of the town, and did all that remained to be done ; they cheered and sang, they hired a band and marched in procession amid the smoke and glare of torches and showers of sparks from inexhaustible Roman candles, and the noise of exploding bombs. It was after midnight when throats and fireworks were exhausted and the city settled down to comparative quiet.

The management of the race was excellent, and the success was so great that there is little doubt that the great college race will come off hereafter at New London. The accommodations for visitors were ample ; the race was easily seen from the grand stand, and from the train, which was especially comfortable with its awnings, cushions, and limited seats, and offered nearly as good an opportunity for seeing the start and the greater part of the race as the boats which followed the crews; the course was kept clear of boats for several hours, and there was no accident. But however good the course and management may be, what makes a race is two well-matched crews, and unless Yale has better success in keeping up with Harvard than in the two last races interest will die out. The two colleges must have about the same chances for good material in weight, muscle, and build. This year, it is true, Harvard had a remarkably fine crew in their mere physical development, but there was not difference enough between them and the Yale eight to account for such an extraordinary lead at the finish. The victory ought to depend mainly on perfection in form, which can be acquired by careful and persistent training, and which tells against simple strength ; and in regard to the badness of Yale's form there was no difference of opinion. There is hope of a better race next year, for Yale is likely to make a vigorous attempt to retrieve what is, I believe, the worst defeat which she has yet had to bear.

ENGLISH PARTIES AND THE IRISH VOTE.

London, June 19.

WHATEVER may be the faults of Irish members, they know their opportunity and are very skilful in availing themselves of the necessities of English parties. Everybody in Parliament is thinking about the coming election, which cannot now be very far off, according to the best opinion. Parties will be very nicely balanced. A bare majority, scarcely sufficient for working purposes, is likely enough ; the scale may be turned by some fifty or sixty Irish votes.

The Government last session did what was conceived to be a very skilful bit of business in passing the Irish Intermediate Education Bill. So dextrous was the manœuvre thought to be that the leaders of the Opposition were eager to participate in it. Practically the measure endowed Roman Catholic education in middle-class schools, but the forms of unsectarianism were observed. A conscience clause was inserted which is certain to be inoperative ; still, appearances were kept up. Moreover, a gap existed in Irish education which it was thought necessary to fill. For half a century the measure with which the name of the late Lord Derby is honorably associated has given Ireland an ample supply of primary schools, formerly "mixed," now practically denominational. The Queen's University and Colleges, and the University of Dublin, as unsectarian as they, supply institutions for the higher learning which may bear comparison with the university and college system of England and Scotland, and of any country in the world. But the middle rungs of the ladder were wanting, and it required great agility to pass from the lowest steps to the highest. Mere steady climbing could not do it ; it needed an effort of gymnastics. The result was that Irish education stopped short for the great majority of the people in the elementary schools, and many of those who entered Trinity and the Queen's Colleges did so imperfectly prepared. I do not know that this state of things is confined to Ireland, but this is no reason for declining to remedy the evil there if it can be fairly encountered and overcome. The method adopted last session was to establish and endow a board of intermediate education, which offers exhibitions to students who shall pass certain prescribed examinations, thus giving them the means of continuing their education, and which will pay by results the schools which may turn out a certain proportion of successful pupils. The act acknowledges no distinctions of church or sect, but the great majority of the institutions which will profit by it are in the hands of the Roman Catholic clergy. The diocesan seminaries in every Roman Catholic district, the schools of the teaching orders of the Roman Catholic Church, and those in connection with monasteries and convents, will mainly benefit by it. The payments made to the pupils will enable them to continue their education without unduly taxing the resources of their parents. The payments made to the institutions will enable these to improve their methods and to enlarge their apparatus of teaching. The scheme is a plausible one, but it has yet to be tried in its actual working. The Roman Catholic bishops have hitherto contended that they cannot control teaching unless they can control examinations. The examination will itself, and must necessarily, shape the instruction. The subjects of examination, the books in which pupils are examined, and the temper and views of the persons examining will decide everything. A little accommodation will be practised at first, while the thing is still an experiment watched by English opinion, but it requires no discernment to see that when the first difficulties are over, protests will be made against books not written in a Roman Catholic sense and examiners not animated by a Roman Catholic spirit. The Roman Catholic bishops will have logic on their side ; the principle admitted, it will be difficult to refuse the application of it. Given their premises, it will be impossible to avoid their conclusion.

The O'Conor Don's Irish University Bill is a sequel to the Irish Intermediate Education Act. It applies the principles of that measure to the higher schools. The projected University of St. Patrick is the equivalent of the Intermediate Board. Individual students are to receive exhibitions and scholarships, offered too copiously to be a reward of real merit, and the institutions from which they come are to be paid by results. As colleges affiliated to existing universities are excluded from competition, only Roman Catholic institutions will be affiliated to the new university, whose very name denotes its final destination. The issue is obvious. The examination must be adapted to the teaching. After a show of neutrality and unsectarianism the Roman Catholic pupils of Roman Catholic teachers will be tested by Roman Catholic examiners in their proficiency in Roman Catholic text-books. The Roman Catholic religion will thus be far more effectually subsidized than if the Roman Catholic Church in Ireland were itself directly endowed. The funds for this purpose are to be taken from the surplus remaining from the unappropriated revenues of the Disestablished Irish Church, notwithstanding the fact that a clause in Mr. Gladstone's act distinctly prohibits their use for any sectarian or ecclesiastical purpose. If the measure passes, the education of the Irish people outside a few counties in Ulster will be given over without check or control, from the infant-school to the university, into the hands of the Roman Catholic priesthood. The state will furnish the funds, but it will do no more.

The measure, however, will not pass. The Intermediate Education Act of last session was a bribe offered by the Government to Irish members. It was all but publicly announced to be the price offered them for abstinence from obstruction. While the measure was in progress and until it became law parliamentary obstruction ceased. The moment the boon had been secured obstruction began again, and this session it has been more desperate and unrelenting than it was before. The attitude and language of Sir Stafford Northcote and the temper shown by the occupants of the Conservative benches prove that the Government have no intention of repeating the experiment, and that even if they were disposed to do so their supporters would not allow them. Docility would be converted into mutiny. Irish members charge the Government with

something like a breach of faith in the matter. There is, I believe, no doubt that officious representatives of the Government went great lengths in promising the support of ministers to such a settlement as the O'Conor Don has proposed. A good many seats depend on the Catholic vote. In many Irish boroughs and counties where a Home-Ruler has no chance the election may be turned by it as between Liberal and Conservative. This fact accounts for the appearance of the name of Mr. Kavanagh, an Irish Tory, on the back of the O'Conor Don's bill. In the county divisions and boroughs of Lancashire the Roman Catholic electors certainly contributed to the Conservative victory. What is true of Lancashire is true of other parts of the United Kingdom in which there are Irish plantations. The party which could secure the Catholic vote without losing what is more valuable to it would do a good stroke of electioneering business. The dream floats before the eyes, not usually very visionary, of party managers and intriguers, but it is only a dream, which waking perceptions dispel. In the first place, the Irish vote cannot be secured by any English political party. Experience surely ought to have made that clear to the dullest party-broker or stock-jobber. The great measures of Mr. Gladstone's Administration, an administration which may be said to have devoted itself to Ireland, did not secure it even common good-will and friendliness when it had rendered the great services which are among its most honorable titles to memory. The Land Bill and the Church Bill were forgotten in the failure of the Irish University Bill, a bill framed in Roman Catholic interests and under Roman Catholic advice, but rejected in obedience to a sudden and unexpected mandate from Rome. But though the bill had the approval in the first instance of Cardinal Manning and had been privately vouched for by two Roman Catholic members of the Administration—Lord O'Hagan, then Lord Chancellor for Ireland, and Mr. Monsell, now Lord Emly, and then Postmaster-General—its failure showed that nothing further could be hoped from Mr. Gladstone.

The Irish desertion at once took place, and the breach between Irish members and the Liberal party has continued unto this day. The Intermediate Education Act of last session was the Tory bid for their support. The support was given while the bill was in progress, and was withdrawn the moment the bill was passed. In the party divisions of this session which have so reduced the Ministerial majority, the Irish vote was given with the Opposition, as an intimation to the Government that the purchase was not complete, and as an intimation to the leaders of the Liberal party that the Irish members were still open to an offer. If it became law through the agency of either party, the same game would be played with the next Irish question. It is quite certain, therefore, that the Irish alliance cannot be secured for a single session by any capitulation, however complete. If it could be, the price to be paid for it would be ruinous. The Church party would be alienated from the Conservatives. The dissenting secularist parties would be alienated from the Liberals. The Government, it is now clear, will give the measure the go-by. If the leaders of the Opposition are induced to take it up, they will certainly exclude themselves from all chance of power for another Parliament; that is to say, during the political lifetime of Mr. Gladstone and Lord Granville. Lord Beaconsfield will go to the country on a Protestant cry which will be far more potent through England, Scotland, and the North of Ireland than any that has been raised during the last generation. Of course, if the demands of the Irish Catholic party are, in the view of the Liberal leaders, founded in justice and social expediency, it is right that they should be supported at any cost. The Whig chiefs of a former time sacrificed office for a generation rather than acquiesce in the maintenance of Roman Catholic disabilities. A similar, though a less enlightened conscientiousness, would be morally respectable on the part of their successors. But it can be shown, I think, that justice and social expediency do not require the Liberal leaders to ruin their party. The interests of Ireland, and especially of the Roman Catholics of Ireland, demand resistance to the educational projects of the Roman Catholic hierarchy. As this is a subject which is of national and of something more than national interest, I shall be glad if you will allow me to return to it in another letter. †††

Correspondence.

MR. C. A. COLE AND THE *ART AMATEUR*.

To the Editor of The Nation:

Sir: Will you oblige me with space in your journal to correct a disingenuousness by "Montague Marks, editor and publisher" of the *Art Amateur*, which my friends at a distance may not understand without explanation?

In the *Art Amateur*, No. 2, just issued, is the paragraph, "For the information of whom it may concern, we would say that Charles A. Cole *has no connection with this publication.*" (This italicizing is my doing.)

Now, though I am thankful that the paragraph is true in the sense that I am not connected "with this publication" any longer, it is fair to complete the truth, and to state that I was associated with Montague Marks from April 28 to May 24, and that in the *Art Amateur*, No. 2, "this publication," the following portions are the work of my friends and myself: The article "Spurious Old Masters," on p. 23, by Mr. John Snare, which I brought to Montague Marks; seven paragraphs in "My Note-book," p. 25, supposed to be written by the editor himself entirely, under the *nom de plume* "Montezuma." The loan of all the wood-cuts, as well as the prices and purchasers' names of the Spencer Collection, on pp. 26, 27, 28, 29; the article "Mr. Haden on Etching," p. 31, which I wrote, only I never affixed plate or date, nor did I append any signature—these were added by Montague Marks himself, after his custom. In the "Art Notes," p. 32, I contributed twenty-eight items. "Buhl Furniture" and "Hints for Home Furniture," p. 34, came from my pen. "Pottery Decoration," p. 37, was contributed by my friend Mr. John Bennett; "Amateur Taxidermy," by my friend Dr. Holder; and "Flowers of June," and "Wild Flowers, Ferns, and Grasses," pp. 40, 41, 42, by my valued correspondent Professor Day, of the Normal College.

Now, sir, your readers can see what "Montague Marks" is as "editor" and paragraph writer.

Respectfully yours, Charles A. Cole.

New York, June 25, 1879.

CHEAP AMUSEMENT.

To the Editor of The Nation:

Sir: A judge and jury have recently ascertained that the proper punishment for shooting a young lady friend is a five-hundred-dollar fine. As playing with pistols has become so ordinary a pastime it is well to have a judicial decision to the effect that even when death results the expense need not be severely felt by those in moderate circumstances. A person of large means might, at this rate, slaughter his whole visiting list without feeling it severely in pocket, and without suffering a day's imprisonment.

It is to laxity of this sort that we must ascribe the prevailing increase of lynch law, which always has its origin in the fear that justice will not be done by the ordinary process of law. Judges and juries that do not honestly do their duty by criminals are morally answerable for the irregular proceedings that usurp their functions. M. C. L.

Notes.

Estes & Lauriat, Boston, will publish in the fall an authorized translation of Maxime Lalanne's 'Treatise on Etching,' by S. R. Koehler, editor of the forthcoming *American Art Review*. Ten plates etched by M. Lalanne and printed in Paris will adorn the volume.——Houghton, Osgood & Co. have in press 'The Philosophy of Music,' by Dr. Pole.——'Essays from the *North American Review*' will shortly appear with the imprint of D. Appleton & Co.——R. Worthington announces 'A Scotchman's Views of America—Black and White,' by Lord George Campbell.——Macmillan & Co. have received from Professor Masson the final instalment, volume vi., of his comprehensive 'Life and Times of Milton,' and the work will be published in the course of the year. The same house have in press the 'Life of Charles James Mathews,' chiefly autobiographical, edited by Charles Dickens.——The July number of the *Magazine of American History* is largely occupied with an admirable compendious account of the French in Rhode Island, by the editor, Mr. John Austin Stevens, illustrated with maps, plans, views, and fac-similes; and the conclusion of the translation of Fersen's letters to his father, 1780–82. This is a timely reinforcement of the appeal to Congress to purchase the Rochambeau papers.——The Proceedings of the American Association for the Advancement of Science at its St. Louis meeting last August have just been published (Salem, Mass.) The papers are, as usual, of great and varied interest, from Mr. Edison's "Use of the Tasimeter" to Mr. Bandelier's "Sources for Aboriginal History of Spanish America" and President Newcomb's address on the "Course of Nature." There is a noticeable increase in illustrations, apropos of glacial striæ, the flexi-

bility of the earth's crust, the Rocky Mountain locusts, meteorology, etc.——We lately described the aims of the proposed Archæological Institute of America, "formed for the purpose of promoting and directing archæological investigation and research," by sending out expeditions and otherwise. Life memberships at $100 and annual memberships at $10 are now earnestly desired, and persons of either sex who wish to join the organization should address the Secretary, Mr. Edward H. Greenleaf, Museum of Fine Arts, Boston. Prof. C. E. Norton is President, and the Executive Committee embraces also Messrs. Martin Brimmer, O. W. Peabody, Francis Parkman, H. W. Haynes, W. R. Ware, W. W. Goodwin, and Alexander Agassiz.——From B. Westermann & Co. we have received Part I. of the 'Geschichte der Literatur des skandinavischen Nordens von den ältesten Zeiten bis auf die Gegenwart,' by Frederik Winkel Horn, of Kopenhagen. The work aims to give a succinct account of the literature of Iceland, Denmark, Norway, and Sweden, and to this is to be added a chapter on Finland. Prof. Horn is well known as the translator into Danish of the Elder Edda (Copenhagen, 1869), and of sundry Old Norse sagas, and his fitness for the work he has now undertaken cannot be doubted. The first part is wholly devoted to Icelandic literature, the old and modern.——We have received the annual report of the Natural History Society (*Naturhistorischer Verein*) of Wisconsin for 1877-78. The Society, which exists in Milwaukee, is exceptional in being composed chiefly or wholly of Germans. It has a museum and library, and has been fairly prosperous during the past year.——Some Italian translations of Longfellow's poetry, including "Excelsior" and "Footsteps of Angels," accompany an anonymous paper in honor of the poet's 72d birthday in No. 75 of the *Rassegna Settimanale*.——In No. 16-17 of the *Magazin für die Literatur des Auslandes* just and high praise is given by Dr. J. Koch to Dr. Jarník's 'Index to Diez's Etymologisches Wörterbuch,' a much-needed clew to a discouraging labyrinth.——*Magyar Amerika* is the title of a new weekly paper published July 1, in this city, half in English and half in Hungarian.

—We have received from F. W. Christern the first few numbers of the new Paris weekly *La Vie Moderne*. It is a quarto of sixteen pages with a buff cover, profusely illustrated by those processes in which the French so far excel every other nation. Some of the cartoons, like Bonnat's important portrait of Victor Hugo, or Ulysse Butin's sea-side studies, or Couture's "Courtisane" (after the original now owned in Philadelphia), occupy two pages. There are reproductions of sketches by Detaille, Meissonier, Gérôme, Paul Baudry, and other well-known masters, in all respects like those of which *L'Art* is so prodigal; there are portraits of literary and artistic notabilities, scenes from every-day life on the streets, and designs for the *feuilleton;* in short, the stamp of this new periodical is above and before all artistic. When we come to the text not much is to be said for it, nor much about it, except that it treats lightly of the stage, music, furniture, bric-à-brac, science, art, etc., and that Edmond de Goncourt and A. Daudet are already among the contributors. Perhaps the most curious feature of the high-sounding programme of *La Vie Moderne* is its intention to be a very proper family paper; to encourage the pride of maternity; "de traiter des questions domestiques et des choses du foyer avec la souci que l'on met à scruter les secrets de la vie galante"; to prove that all women are not adventurers, etc. This way of putting it is characteristically French, and so is the concession which the editors ask in return of the *mères de famille*—some little license (*quelques franchises*) for the contributors, especially in works of imagination; for, these mothers must remember, their husbands have to be won over to the new family paper. One would say that the price of *La Vie Moderne* is not dear to those for whom its pictures would prove the chief attraction—36 francs per annum, plus postage.

—*Solon Shingle*, very firmly planted in his seat, introduces us in the July *Scribner's* to an interesting historical review of "The American on the Stage," meaning by "the American" what a foreigner, who uses the term loosely, would understand better by the Yankee. One is a little surprised at the diversity of the types which have from time to time found favor both here and abroad, from Hackett's *Nimrod Wildfire* to Florence's *Bardwell Slote*. Perhaps reasonable objection might be made to Mr. Matthew's enumeration among more general types of Chanfrau's *Mose* and Jefferson's *Rip van Winkle;* but taken all together they give a rather comfortable sense of high achievement by a few chosen American actors, and encourage the hope of a greater diffusion of histrionic excellence hereafter. Mr. Smith's "Indian Village on the Amazons" (Ereré) is by far the best of the series, and did not need the foot-note which certifies the author's long acquaintance with the Indian people of this vicinity. Of particular interest is the account of pottery-making by the women, as Prof. Hartt had previously described it, and of the process of preparing farinha. Madame Bonaparte's letters from Europe are embellished by Stuart's triple likeness of the writer, and that of her husband by the same artist. A paper on "Summer Entomology" is illustrated with figures of moths and butterflies borrowed from the standard Massachusetts work known as "Harris on Insects Injurious to Vegetation." In these wood-engravings our countryman, Mr. Henry Marsh, not only surpassed all previous efforts in this line of natural history, but will leave a confident challenge to posterity to equal them. Dr. George M. Beard talks at length of the "Delusions of Clairvoyance," but makes no progress towards establishing the unreality of the gift which imposture successfully counterfeits. He narrates his experiments with "healing mediums," after having told us that a certain "formulated biological law" makes investigation unscientific as well as unnecessary. Facts, however, are sometimes of even more value than formulas.

—In another place we have spoken of Mr. Linton's paper in the June *Atlantic*, and of the reply to it in the current number of *Scribner's*. The Linton article was sharp and uncompromising enough as printed; but it appears that the writer took the gravest offence at the omission from it of several expressions which, in the opinion of the editor of the *Atlantic*, were too violent or too grotesque. Mr. Linton has printed a small pamphlet consisting of his protest addressed to the editor, and of the resulting correspondence between himself and the editor and publishers, with some very vituperative comments of his own; the whole of which he submits to the public as the great tribunal of final judgment in such cases. The difficulty in addressing that tribunal is, however, to gain its ear. It is apt to refuse to listen; very apt to underrate (in the appellant's opinion) that which (in its own opinion) the appellant overrates. There is the very greatest danger that, in this case, the judge may think that Mr. Linton is making a prodigious fuss about a small matter. Why should not his paper, however valuable, share the common lot, and receive editorial revision? But, says Mr. Linton, it was positively promised me by Mr. Howells that my article should be printed as I wrote it. In this assertion lies the only sting of the pamphlet in question. It is directly charged against the well-known and respected editor of the *Atlantic* that he promised not to change this paper at all, and that he broke his promise. But Mr. Linton prints what he calls the promise, and it certainly does not, to our mind, convey a guarantee against the trifling changes which Mr. Howells made.

—The *Atlantic* for July opens with an excellent anonymous story, "Massy Sprague's Daughter," describing the early life of a young girl of East Indian descent who lived on a remote island off Newport. It gives opportunity for characterization of two opposite kinds, the ignorant, warm-hearted islanders and the fashionable circles of Newport. The story is pathetic, but quiet and carefully wrought out, and is remarkable for the variety of interest it affords in so few pages. Another anonymous author writes of the "Public Balls of New York," and after an unnecessarily long introduction in regard to observers and observations all over the world, he finally comes to the object of his article, and describes the Charity and the French Cooks' Balls, the Liederkranz and the Arion Balls, in a way which will please those who are not New-Yorkers, and will give a new view of the greatest American city to many persons who have fancied themselves well acquainted with it; but he leaves out one class of balls which M. Taine would have seen and on which he would have commented. The more solid articles are "Recent Modifications in Sanitary Drainage," by Colonel Waring, a matter so important that no one ought to be deterred from reading it by its necessary technicalities, and "Our Commerce with Cuba, Porto Rico, and Mexico," a very plain and vigorous presentation of the bad state of our commerce with those countries and of the reasons for it. The only other noticeable article is Rev. E. E. Hale's "A Fossil from the Tertiary," an account of the origin and early history of the Phi Beta Kappa Society, together with some description of its founders and their personal characteristics. "H. H." and Prof. Boyesen are among the poets of the number.

—The complete history of the Smithsonian Institution rightly seemed to the Board of Regents important enough to merit preserving in a connected form, and this not easy task was assigned to Mr. William J Rhees. The result of his patient labor is a volume of 1,000 pages, derived entirely from original documents. Three-fourths of it is occupied with Congressional proceedings in regard to the Institution; the remaining space being given up to pertinent extracts from the Memoirs of John Quincy Adams, the Treasury account with the Smithson Fund, proposed

applications of Smithson's bequest, and letters on the programme of organization. We remark as of present interest that the late George Catlin was a petitioner to Congress, thirty-three years ago, "for the purchase of his gallery of Indian collections of paintings," which has just now, almost by a miracle, been freely acquired by the Government. Their estimated value was $50,000, which Senator Clayton proposed should be paid off in ten annual instalments. The paintings, he said, about six hundred in number, were then "at the Louvre, in Paris, where they met unqualified approbation." The intelligent Mr. Westcott, however, of Virginia, said bluntly that he was "opposed to purchasing the portraits of savages. What great moral lesson are they intended to inculcate? He would rather see the portraits of the numerous citizens who have been murdered by these Indians. He would not vote a cent for a portrait of an Indian." Neither would nor did a majority of his colleagues. Passages like these enliven the volume as they do the *Congressional Globe*, and even the Index will be found amusing. The wag who compiled it not only makes entries referring to the Smithsonian Institution sometimes under S and sometimes under I, but gravely indexes the rhetorical allusions of Congressmen and others, so that we find "Arabian merchant, story of education of son of," "Bible, story of purchase of, for $2,500 false," "Foedera, Rhymers" (*sic*), "Italians, elastic resiliency of," "Lying-in hospital" (!), etc. Senator Hale had quoted a remark of the *Tribune's* that the Institution "was a sort of lying-in hospital for literary valetudinarians."

—The result of the balloting for Overseers at Harvard on Commencement Day was, that out of seven hundred and sixty-one votes cast, the Rev. Dr. H. W. Bellows received six hundred and seventy-six, and was elected first on the list for the term of six years. This confirms our view that the college is not suffering from provincial narrowness, since but for the prevalence of a feeling we need not say of the importance of the innovation proposed by the Harvard Club, but of the propriety or even unobjectionableness of it, the local element might easily have outvoted the non-resident. President Eliot expressed his gratification at so hearty a verdict, which he thought would have to be passed upon by the courts, and perhaps involve an amendment of the statute. In that case he hoped the whole body of graduates (not those of the college alone) would be admitted to the suffrage, now that the standards of the law, medical, and other schools ensure it against debasement. It certainly seems as desirable to strengthen the attachment of these alumni to the University and to have the benefit of their advice, as to regard the wishes of the non-resident classical alumni. It only remains to observe that the Harvard Club has put forward the best possible candidate to prove the sincerity of its agitation, and that its representation in the Board of Overseers will not be merely nominal.

—Busch's book about Bismarck continues to excite attention as the cause of legal and personal disputes, the last of which is now before a French court. A Mr. Seinguerlet hit upon the excellent plan of publishing the more interesting parts of Busch's two volumes, accompanied by notes explanatory of the persons and events referred to—a sort of editing which would not have injured the American edition. But at the same time Seinguerlet's version was making, an unabridged and unannotated translation was being prepared, and it chanced that the two works were ready for publication the same day. The compiler of the abridgment was as happy in the title chosen as he was in the general idea of his work, and 'Les propos de table de M. de Bismarck' had reached a second edition before the publisher of the full translation obtained an injunction upon the sale of the rival edition. And not content with thus heading off competition in the trade, he at the same time began a prosecution of Mr. Seinguerlet himself as guilty of breach of copyright. The trial has not yet taken place, but the authorized version has reached a third edition.

GAIRDNER'S RICHARD III.*

I.

THOSE who take up this book need not be afraid that they will find in it another whimsical rehabilitation of a tyrant, combined with slanderous disparagement of his victims. It is a learned and judicial investigation of a strange case. "Richard III.," says Mr. Gairdner truly, "is not a monster. He is the natural outgrowth of monstrous and horrible times. He is the fitting termination of the rule of the House of York—the exemplification of an old divinely-attested saying, that they who take the sword shall perish by it." Mr. Gairdner proceeds to qualify this statement, so far as the character of the House of York is concerned, by the admission that Richard's father, the Duke of York, "was not an extreme man, but one who protested by every loyal means against misgovernment, and exhausted every form of peaceable remonstrance before he finally advanced his title to the crown." This is no more than justice. The original fountain of this deluge of blood and horrors was undoubtedly the maladministration of Margaret of Anjou and her Camarilla. York came forward in the first instance, with abundant justification, as a national reformer, and it is pretty evident that the best and most civilized portion of England adhered to him and to his house. The first example of unbridled savagery was also set by the Lancastrians in the treatment of York's body and the butchery of his young son, Rutland, after the battle of Wakefield; and the excesses committed by the barbarous Northern levies of the Lancastrians in their great raid upon the South, at the time of the second battle of St. Albans, may well have awakened a fierce spirit of retaliation. But let the original responsibility rest where it will, it is not the less true that Richard's character was formed by a civil war, and by a civil war remarkable not only for sanguinary ferocity but for boundless perfidy and treachery on both sides.

This, moreover, is the period of English history corresponding to that period of Italian history the characteristics of which culminate in the Borgias and Machiavelli. It is the interregnum between the Catholic morality of the Middle Ages and the Protestant morality which, though it may be said to have commenced with the Reformation, or even with the Lollards, hardly gained a strong hold upon the nation before the close of the Tudor dynasty. Superstition was still rife: relics and ecclesiastical privileges commanded a high price; people could anxiously stipulate for absolution at the hands of Pope Alexander VI., and Richard III. was a founder of religious houses. But, among the higher classes especially, morality, public, domestic, and personal, was at the lowest ebb. In England criminal ambition, of course, took a less refined form than in Italy; it stabbed you with a dagger instead of poisoning you in a consecrated wafer. Still, even in England we can discern the union of Renaissance culture with the depravity of the Catholic decadence. Tiptoft, Earl of Worcester, for example, justly surnamed the Butcher, was a man of culture and a patron of letters. Nor are traces of the same tendency wanting either in Edward IV. or in Richard III.

An excuse has been made for Jeffreys on the ground of youth. Richard III. is entitled to the same excuse in larger measure. He was precociously able, for when only nineteen he commanded divisions of his brother's army with success both at Barnet and Tewksbury; and from his very boyhood he sat in the conclave of iniquity and was steeped in criminal intrigue and blood. The murder of his father and his brother by the Lancastrians, coming just when it was likely to make a deep impression on his boyish mind, probably seemed to him to justify any use of his dagger in the interest of his family, and may palliate, or at least bring within the limits of ordinary wickedness, the slaughter of the young Edward, son of Henry VI., at Tewksbury, and the murder of Henry VI. himself in the Tower, supposing Richard to have been guilty of these crimes. With regard to the slaughter of young Edward, the result of Mr. Gairdner's judicial review of the contemporary evidence seems to be that Richard's share was at most that of an accessory, though it is very likely that he was a zealous and forward one. In the murder of Henry VI. in the Tower there is more reason for believing that Richard acted the principal part. That Henry was murdered, and did not, as the official chronicler wished the world to believe, die "of pure displeasure and melancholy" at the overthrow of his party and dynasty, there can be no reasonable doubt; and the truth as to the chief agent in the transaction is probably indicated, though in a cautious way, by the circumstantial narrative of Dr. Warkworth, Master of St. Peter's College, Cambridge, written, as Mr. Gairdner says, certainly within twelve years after the event:

"And the same night that King Edward came to London, King Harry, being in ward in prison in the Tower of London, was put to death, the 21st day of May, on a Tuesday night, between eleven and twelve of the clock, being then at the Tower *the Duke of Gloucester*, brother to King Edward, and many others; and on the morrow he was chested and brought to Paul's, and his face was open that every man might see him. And in his lying he bled on the pavement there; and afterwards at the Black Friars was brought, and there he bled new and fresh; and from thence he was carried to Chertsey Abbey in a boat, and buried there in Our Lady's Chapel."

Some deduction, more perhaps than Mr. Gairdner is disposed to al-

* 'History of the Life and Reign of Richard the Third. To which is added The Story of Perkin Warbeck, from original documents. By James Gairdner, Author of 'The Houses of Lancaster and York,' Editor of 'The Paston Letters,' etc.' London: Longmans.

low, must be made from the value of Dr. Warkworth's testimony, on the ground of the incredible statements with which it concludes as to the miraculous effusion of blood from the corpse. Yet a witness may be trustworthy as to facts in general though with regard to a special class of facts he is not free from the popular superstition of the time.

These deeds, however, if done by Richard at all, were done in the interest of his family or his faction ; they were quite in the moral fashion of his day ; and they do not seem to have affected his position in public opinion ; certainly they did not prevent his being personally very popular in the North, where, when he had married one of the two coheiresses of Warwick and become lord of her estates, he principally resided. He acquired and has retained higher distinction as a criminal by the deeds which he is accused of having committed in the interest of his personal ambition against the members of his own family, and which, if he was really guilty of them, were violations not only of public morality but of natural affection. The first of these is the plot against the life of his brother Clarence. Shakspere's version of this affair has been so deeply imprinted on our minds by one of the highest efforts of his dramatic power that we do not easily liberate our judgments from the spell ; but it must be owned in justice to Richard that the real evidence is very shadowy, and that the matter remains one of the dark mysteries of that wicked and murderous court. Shakspere dramatizes the story told by Sir Thomas More, who for the imputation of fratricidal intrigue which he is disposed to cast on Richard does not pretend to have any stronger ground than the surmise of "wise men," and ends by saying : "But of all this point there is no certainty, and whoso divineth upon conjectures may as well shoot too far as too short." He testifies, indeed, that Richard "resisted openly," though with an insinuation that the resistance was merely colorable and hollow. On the other hand, if the expression of tardy remorse attributed to the king is authentic, neither Richard nor any one else made any effort after the sentence to stay the execution. Richard profited, as Mr. Gairdner shows, by his brother's death, though not to such an extent as to constitute a strong temptation to fratricide, unless he had already conceived the design of usurping the crown. It is perhaps a suspicious circumstance, considering his general character, that he founded, just after the tragedy, two colleges of priests to pray for the souls of the family, including Clarence. Edward IV., however, was a tiger whose ire when once aroused—and there was enough to arouse it in the character and conduct of Clarence—would scarcely need to be stimulated by the artifices of any Iago. Richard's memory would probably have escaped this accusation if he had not been undeniably guilty of other crimes against his own flesh and blood.

On the other hand, there can be no sort of doubt that he usurped the throne of his nephew and ward, well knowing him to be the rightful heir. It seems also certain that, to lend color to his usurpation, he caused an infamous charge to be published against the honor of his own mother. This was an almost gratuitous outrage on nature and decency, since he had another plea, on which he ultimately rested his case before Parliament, exactly adapted to the moral and ecclesiastical taste of his age, and not devoid, it would appear, of a shadow of foundation. It was a thing not unlikely in itself that so reckless a sensualist as Edward IV. should have used, for the purpose of seduction, a false promise of marriage ; and a bishop was ready to attest a precontract with Lady Eleanor Butler, which would have rendered the subsequent marriage with Elizabeth Woodville invalid and its offspring illegitimate. Perhaps this slander of the Duchess of York is the worst part of the transaction. As to the usurpation itself there is not a little to be said for it, at least from the Positivist and Bismarckian point of view. To a kingdom still heaving with the restless elements of civil war the accession of a boy king would have been the greatest of all possible calamities. Only the rule of a man, and of a strong man, afforded the slightest chance of escape from the renewal of a sanguinary anarchy. There was at least as much need of a "constable" on the morrow of the Wars of the Roses as there was when Cromwell felt himself called by public necessity to undertake that part. The government, under a stripling, would have at once become the prize of court factions, and the faction which was worsted in intrigue would infallibly have appealed to arms. Supposing even that Richard had succeeded in ruling for some time in his nephew's name, he might expect that his fate in the end would be that which another Duke of Gloucester met at the hands of Richard II. The Woodvilles were evidently coming up to London with a large body of troops to seize upon the government. Their summary execution and that of Hastings by the Protector were probably measures of self-defence, though savage and precipitate. It was a daring and unscrupulous move in a game which everybody had been playing for thirty years, and the victims themselves would scarcely feel indignant, though they would feel that they had been checkmated. Earl Rivers seems hardly to have taken umbrage at having his head cut off, for he specially commended to "my Lord of Gloucester," in terms implying confidence in my Lord's generosity and piety, the fulfilment of his last will. As to the nation, it no doubt accepted as perfectly familiar and natural these incidents of another revolution.

Pictures of the Past. Memoirs of Men I have Met and Places I have Seen. By Francis H. Grundy, C.E. (London: Griffiths & Farran. 1879.) —Mr. Grundy began life as a civil engineer in the days of the first railroad mania, and from that time to his latest expedition into the Australian bush his career has been full of incident and adventure. Before he left England he had the good fortune to meet several distinguished persons, and his reminiscences of these make the chief literary interest of his book. In his childhood Miss Martineau frightened him by patting him on the head and putting him questions which he had to answer by shouting through her "trumpet apparatus" ; and her brother, the Rev. James Martineau, "benevolently ugly, if ugly at all, with his rough-cut features, wild, upstanding black hair, low, broad forehead and swarthy complexion," seems to have won his boyish affection. While still in his teens he became the intimate friend of Patrick Branwell Brontë, of whose life he gives a frank account, which he does his best to make a defence against Mrs. Gaskell's characterization. The two young men met in Yorkshire, where Brontë, twenty-two years old, was a station-master at Luddendenfoot, having previously been successively usher at a school, private tutor, and self-taught portrait-painter ; they were boon companions, and were thrown together by the entire absence of any other youths of equal education and breeding. This is Mr. Grundy's sketch of the Brontë family at this time, while they were still obscure :

"The father, upright, handsome, distantly courteous, white-haired, tall ; knowing me as his son's friend, he would treat me in the Grandisonian fashion, coming himself down to the little inn to invite me, a boy, up to his house, where I would be coldly uncomfortable until I could escape with Patrick Branwell to the moors. The daughters, distant and distrait, large of nose, small of figure, red of hair, prominent of spectacles, showing great intellectual development, but with eyes constantly cast down, very silent, painfully retiring. . . . Branwell was very like them, almost insignificantly small—one of his life's trials. He had a mass of red hair, which he wore brushed high off his forehead—to help his height, I fancy ; a great bumpy, intellectual forehead, nearly half the size of the whole facial contour ; small, ferrety eyes, deep sunk, and still further hidden by the never-removed spectacles ; prominent nose, but weak lower features. He had a downcast look, which never varied, save for a rapid momentary glance at long intervals. Small and thin of person, he was the reverse of attractive at first sight."

The author describes Brontë at this time as given to opium-eating (a habit which he broke off, but afterwards took up again), to copious drinking, and to fits of passion, during which he would strike his fist through door-panels to soothe himself. He was brilliant in conversation, ambitious of literary or artistic fame, affectionate, attached to his home, but weak-willed, addicted to debauchery, with a character undermined by the self-indulgence to which he had become habituated through his forced companionship with the native villagers at the tavern—the only society open to him in boyhood, because his father had refused to send him to school. His great powers were undoubted. He was the hope of the family, and his brilliancy was widely known. Even Mrs. Gaskell speaks of him as "perhaps, to begin with, the greatest genius in this rare family," and he received the private commendation of men well known in letters. But the wreck was already plain when the author first knew him. He lost his situation through culpable carelessness, and Mr. Grundy lost sight of him for three years. In 1845 Brontë writes in better spirits :

"I have at length acquired health and strength and soundness of mind far superior, I trust, to anything shown by that miserable wreck you used to know under my name. I can now speak cheerfully, and enjoy the company of another without the stimulus of six glasses of whiskey. . . . I would rather give my hand than undergo again the grovelling carelessness, the malignant yet cold debauchery, the determination to find how far mind could carry body without both being chucked into hell, which too often marked my conduct when there, lost as I was to all I really liked, and seeking relief in the indulgence of feelings which form the black spot in my character."

Then followed the three years of the intrigue which ruined him finally with heart-breaking love for a woman who appears to have been both bold and base. At the end of this time, a few days before his death, Mr. Grundy saw Brontë at Haworth Inn, and the description shows a broken-down man, half-crazed by grief, opium, and brandy, on the verge of madness,

from which death saved him. Mr. Grundy would have served his friend better by silence than by publishing such letters as these, which prove only more distinctly the utterly wretched life of Brontë, and bring out in fuller detail than hitherto the abject weakness of his character. There is nothing here to show his genius, and until some better proof is forthcoming, the assertion which the author reports from Brontë, that he wrote a great part of 'Wuthering Heights,' may be disregarded, although Mr. Grundy adds that "what his sister said bore out the assertion."

Meanwhile, during this interval the author had made the acquaintance of the Stephensons, Leigh Hunt and his family, G. H. Lewes, and other eminent men. Of the Stephensons the fullest account is given by a friend of Mr. Grundy, who has contributed a whole chapter on them to the volume. George Stephenson is, of course, the central figure, and as this anonymous friend lived in his house as his private secretary we get a close personal view of the great inventor. He was overburdened with the vanity which besets self-made men, and showed his coarse pitman extraction more than once; simple in dress, contemptuous of all ornament or display, fond of animals, devoted to his gardens, talking much and loudly of himself and his success, he showed the same determined self-assertion in private life as in his experiences with companies and committees. He did not forget his early life or attempt to avoid reference to it, and one of his liveliest stories was of a fight with a brother pitman who was torturing some animal.

"'They said I was beat,' said he, excitedly, 'but I never knew it myself, and just as I was feeling faintish-like Bully Bill gave in. I didn't mean to be beat, and I was just as obstinate then as I was when old Lord —— abused me for it. But I wasn't just myself either for a week or two. Bully Bill was a good 'un.' And then old George would relate how he had 'almost' thought of going into the 'profession'; nay, for the moment he 'almost' persuaded himself and quite persuaded *me* that the 'ring' had lost a bright ornament in him."

There are some characteristic reminiscences of Leigh Hunt, in whose innocent ignorance of the value of money the author believes, but for these we must refer the reader to the book, as well as for what makes up the larger part of its subject-matter, accounts of the last days of inns and stages in Yorkshire, of the perils and toils of engineering, the opening of new lines and the eating of great dinners, the Plug Riots and the Irish famine, together with the graphic description of Australian life in early days in town and bush, so similar, except for local color, to life in Western mining and railroad towns. All of it is entertaining and instructive, although much marred in the telling by a very familiar, loose, gossipy, and disjointed style, which, if it sometimes amuses, will sometimes irritate the reader.

Reading as a Fine Art. By Ernest Legouvé, of the Académie Française. Translated from the Ninth Edition by Abby Langdon Alger. (Boston: Roberts Bros. Pp. 97.)—*The Art of Reading.* By Ernest Legouvé, of the French Academy, translated and illustrated with copious notes, mainly biographical, by Edward Roth. (Philadelphia: Claxton, Remsen & Haffelfinger. Pp. 372.)—Though hardly two years have elapsed since M. Legouvé's little book was warmly commended in these columns, three attempts have been made to render it into English: first Miss Kate Hillard condensed it into an article for *Appleton's Journal*, then the Boston volume appeared, and this has at last been followed by the more pretentious and bulky book from Philadelphia. Despite such strong testimony in favor of M. Legouvé's essay, it may be as well to repeat that it is the best book known to us on the subject, that it is written by an expert, and that it is illustrated with many pertinent and personal anecdotes. Very few books indeed which teach so much and so wisely are so interesting as this. M. Legouvé first asserts and then proves that reading is not a gift but an art; and an art, like any other, long, and worthy of devoted study. After that he drops the part of the preacher and assumes the teacher's office, to indicate errors and to suggest means of correction.

Miss Alger's translation fills only ninety-seven pages, each about as large as M. Legouvé's page, of which he has one hundred and seventy-one. The translation is obviously very much condensed, whereas the original work is only too brief. The omissions are sometimes of a single word, as on p. 10, where M. Legouvé mentions five fine actors with whom he has worked, and the American translator gives us the names of only four; in general they are more important. A passage on pp. 14–15 of the French edition is reduced by nearly one-half on pp. 16–17 of the American, and one whole chapter, "Souvenir de Ponsard," pp. 156–166, is entirely dropped. Allowing for this uncalled-for curtailing, Miss Alger's translation is flowing and free, and fairly represents the spirit of M. Legouvé's teaching. It can be cordially recommended to all who cannot read the original, and yet desire to know what France, a land of good readers and skilful reciters, may have to teach us.

Mr. Roth's unabridged translation is also acceptable, although not as neat or as vigorous as Miss Alger's; it dilutes unduly where the other condenses. "Talma," says M. Legouvé, "avait réduit toutes ces règles en une maxime frappante: Tout artiste qui se fatigue est un artiste médiocre." Mr. Roth's rendering of this is: "All his rules on this subject Talma reduced to one striking maxim: Every artist that lets himself run out of breath is nothing more than mediocre." From a desire doubtless to reproduce freely the spirit of the lively original, Mr. Roth resorts now and then to unpleasant colloquialisms. His translation includes the author's latest utterance on the subject published in Paris about a year ago, and it might be supposed that Mr. Roth would be satisfied with his completeness; but such is not the case. In writing for French readers M. Legouvé, of course, cited many proper names more familiar to Frenchmen than to us. His teaching is perfectly intelligible without any great knowledge of the writers and actors whom he mentions—without any knowledge of them, indeed. An anecdote of Ponsard is scarcely more instructive when we are told in an elaborate note that "a little more life and movement infused into his action, and a little more firmness into his style, would have perhaps raised him to the first class of dramatic authors." But Mr. Roth thinks otherwise, and he gives us more than two pages of a biography of Ponsard, and nearly a hundred other notes of the same sort, covering two hundred-odd pages, or about fifty more than M. Legouvé's text is made to fill. Unfortunately, Mr. Roth has had to cram for his notes—he tells us as much—and they abound in errors, bad taste, and faulty appreciation. Those on Diderot and Sainte-Beuve are perhaps the worst. It is not creditable, after Carlyle's essay and Mr. Morley's biography, that any one should write of Diderot as Mr. Roth does (pp. 205–7), in language such as one may imagine an angry Jesuit to have been capable of when the successive volumes of the 'Encyclopædia' were coming forth. Only a little better is the account of Sainte-Beuve (p. 250).

Epochs of Ancient History. The Roman Empire of the Second Century; or, The Age of the Antonines. By W. W. Capes, M.A. (New York: Chas. Scribner's Sons. Pp. 226.)—Mr. Capes's 'Age of the Antonines' is a worthy account of that period in the history of the world in which Gibbon declares that "the condition of the human race was most happy and prosperous," being "governed by absolute power under the guidance of virtue and wisdom." Without forgetting the occasional acts of cruelty ascribed to Hadrian's old age, the incapacity of Lucius Verus, and the melancholy presages of future disaster with which the reign of Marcus Aurelius was filled, one must admit that this encomium was deserved. Hardly another line of sovereigns in history presents so fair a record. Mr. Capes is equally good in narration, in depicting character, and in descriptions and reflections of a more general nature, which last fill up more than one-third of the volume. The noble rulers whom history has singled out as "the five good emperors" pass before us with distinct individuality; there was no sameness or dulness in their virtues. And, although the military events of this period do not possess the graphic interest of the campaigns of Marius or Cæsar or Germanicus, the narrative portion of the work is nevertheless very readable—eminently from the personal and human interest which attaches to them in a high degree.

These narrative chapters, five in number—one for each emperor—are followed by four chapters of a more general nature, which treat respectively of the Christians, of the other religions of the time, of the literary currents, and of the imperial administration. These are all very good—least good, or at any rate least complete, that upon the administration. Its lack of completeness is, to be sure, rather in scope than in treatment. It did not come within Mr. Capes's plan to give a complete account of the government of the empire—that he had already done in his previous volume, 'The Early Empire'; and the reader need only turn to this to find the deficiencies of the present account for the most part supplemented. But this only proves what we said in reviewing that previous volume—that the attempt to make "Epochs" out of the Roman Empire is a mistaken one. As the external history of five reigns forming a definite and independent group, this is all that one could wish; as the account of an important period, the author could not make it complete without repeating what he had said in a former volume. What strikes one most in reading these chapters, especially those upon the religions of the time, is that modern character which has so often been noticed as belonging to it.

Of course, this is so with Christianity; this is the one element that most divides modern from ancient society. But it is equally true of the religious spirit of the age in general. It is not necessary to undervalue the contrast which Christianity presented to the pagan religions, and the epoch which it made in the history of the world; at the same time, it is remarkable how clearly it appears in these pages as part of a great current which was carrying with it all that was best and most hopeful in society. It was indeed destined to become the main stream of the current, and absorb into itself the life and promise of all the rest.

There are two good maps—one of the lands upon the Danube, the other of the East.

A Bundle of Papers. By Paul Siegvolk. (New York : G. P. Putnam's Sons. 1879.)—Occasionally commonplace confronts the world undisguisedly in a book like this, introducing itself carelessly with something from Montaigne, as in this preface : "Ce fagotage de tant de diverses pièces se faict en cette condition, que ie n'y mets le main que lorsqu'une trop lasche oysifveté me presse"—and so on indefinitely with assurance. These papers are such as might form the padding of a third-class magazine without offence. They are concerned usually with the conduct of life, and contain such advice relative thereto as would form the worldly wisdom of a country gentleman, easy-going, observant, well-read, in his lighter hours inclined to garrulity, and in his heavier afflicted by a labored striving after antithesis, in which the distinction is perhaps as frequently in the *but* as in the thought. A legend of the Hudson, a mystery of Narragansett Heights, and the musings of a street-railway conductor vary the subject without varying the interest. It might be prescribed in small portions to tender consciences for absence from church of a Sunday morning in remote country districts.

Fine Arts.

WOOD-ENGRAVING.

MR. W. J. LINTON'S paper in the June *Atlantic*, entitled, "Art in Engraving on Wood," which contained very unsparing denunciation of the style of illustration for which *Scribner's Monthly* has become celebrated, and specially unfavorable mention of some of the more elaborate cuts, has been answered briefly in the editorial pages of the July number of that journal. The question really at issue is as to the proper task of the designer and engraver of book illustration by means of relief engraving. The wearing out of the block is no longer a consideration, as practically all the prints are made from electrotypes. The wood-block is like the sculptor's clay from which the plaster and the bronze are moulded ; and the artist-engraver on wood has before him the duty of producing the most effective possible expression of his idea, whether original or taken from another artist's design, under the conditions, generally, of the printing of many copies rapidly rather than a few with especial care. The discussion of this interesting subject demands space, and is the business of the monthlies and the quarterlies, perhaps, rather than ours ; but let us see, at least, what Mr. Linton says, and what the editors of *Scribner's* have to say in answer.

Mr. Linton, it should be stated, is a man of ripe years and long experience, an engraver on wood of very great and widely-spread reputation, and of forty years' standing ; an engraver occasionally of his own designs. These last, as they have come under our notice, we have had to speak of without praise or approval; but no student of art can doubt that he has done excellent wood-engraving in his time. He has also been known as a radical reformer, and has edited and helped publish journals of very "advanced" views on politico-philanthropic subjects, and through a long and busy life has enjoyed wide experience of men and of events. Such a life as his has been awakens every faculty of the able and vigorous man, and ensures the interest and suggestiveness of his matured opinions upon the subject of his continued study, and, accordingly, the *Atlantic* article is good reading, in spite of a not very lucid literary style, and is crowded with valuable material. It begins with the statement that art in wood-engraving is young as yet—less than a century old—inasmuch as the cutter of the blocks upon which Dürer or Holbein drew was a skilful workman only, following with care the black line traced by the artist, careless of all except faithful workmanship, and, indeed, responsible for nothing more. With Bewick and Branston art in wood-engraving begins, soon to separate into two schools, of which the Branston school, in spite of its powerful origin and the early appearance in it of the greatest of wood-engravers (not of artists in wood-engraving), Thompson—or perhaps because of that very excellence of workmanship—went off soon into mechanical graces and the display of mere dexterity, as in the illustrations to Lane's 'Arabian Nights.'

All this is very good, and very well put. Mr. Linton is perhaps more fit than any one else to write the history of wood-engraving, especially of the development of the art in the later years of the seventeenth century, and its decay in our own, from Bewick's first coarse labels and advertising cuts up to his consummate work, and such work of the other school as that of the "Northcote Tables" and the "Tower Menagerie," and then down again to the cuts of twenty years ago after Birket Foster and Creswick. And now, in the pages that follow, we begin to find faintly shadowed forth, but never directly expressed, that which we take to be Mr. Linton's conception of art in wood-engraving. This we think can be fairly expressed as follows : As it is assumed that most wood-engravings are to be made after the designs of artists other than the engraver, the duty of the artist-engraver is that of the translator, of the poetical translator of poetry, who takes the thought and as much of the form of the original as, without spoiling his own work, he can, and of it makes a new poem. He should, therefore, be left free. The original artist should not draw upon the block. If he draws upon the block *in line*, he compels the engraver to follow the line, and this is bad because "the true province of engraving on wood" is the white and not the black line, the line cut out by the graver and not the ridge left standing while the wood is cut away from both sides of it. If he draws upon the block in "the more effective and painter-like method" of tints washed in with the brush, this will prevent the engraver from faithfully translating these very tints into line, as it is his business to do, because the picture, as a whole, disappears as he works, and the relations of its parts are destroyed by his first few touches. Then, too, whether the drawing is made on the block or photographed upon the block, in either of these cases the little accidents and the trifling parts of the picture are made too prominent, press upon the engraver too closely. In short, to have the picture on the block in any shape tends toward mere fac-simile work, and is not for the artistic engraver. For him let the picture be set up in front of him, and let him at his will translate its color into black and white, and its gradations into line-work, "faithful to the good which he is not asked to excel, and not caricaturing what is bad."

Now, if this is a faithful translation of Mr. Linton's original (and we repeat that it is hard to be sure, in all cases, just what he means to assert), then this article we are considering contains very sound doctrine. In the properly-made wood-engraving the engraver is "an artist in exactly the same degree in which the translator of poetry is a poet." Excellent ! It is "worth while," as the children say, to have an artist tell us in uncompromising fashion just what he thinks good in his art, and what he considers its proper aim.

But just here we reach the limits of satisfaction, and undergo the experience usual to him who tries to get the whole meaning out of a practitioner's writing about the art he practises. The critical faculty is not given to most men ; the life of an active artist does not encourage the development of the critical faculty. Mr. Linton picks holes in the engravings of Mr. Cole and others in *Scribner's* with a cleverness which comes of perfect familiarity with the mechanism of the art ; he is up to all the dodges, there is no deceiving him as to what is difficult and what is easy, what is the engraver's own and what is taken direct from the original ; Mr. Linton makes the task of the critic (when he shall come) more easy, but in no respect is he the critic himself. The faults he finds in Mr. Cole's work may be the besetting faults of that way of work—he

may be trusted to fix upon them and make the most of them—but what about the virtues of that way of work? what about relative merits? what about the faults of his own way of work? as shown in the illustrations of Bryant's poems, the Christmas books of the last two years, which we spoke of in their place? We name them here not to push the *tu quoque* argument, which is itself the worst style of criticism, but only to ask what we are to think of a criticism that assumes the practical rightness of that spiritless light and shade, that tame and poor designing, that work without force or delicacy, while it sees nothing to admire in Mr. Cole's engravings in *Scribner's*. We repeat that the weak points in those engravings are shrewdly seized; we are not of those who care about the full-page engravings of Bryant and Emerson—they are mere *tours de force* which we do not wish to see repeated. Moreover, the opinions of this journal in art matters have always been based upon the constant reiteration of the importance—the necessity—of developing each art in its own native direction. Thin iron cornices that simulate cut stone, lithography that tries to pass for painting, woodcuts that ape the graces of other arts, are all an offence to us, and are to be characterized as not art at all in the true sense. And "the white line is the true province of engraving on wood"—that is true, and *vivat* Bewick! Only if we should limit our interest in wood engraving to that which shows care for the white line, we should find few modern woodcuts to admire, whether by Mr. Linton or other workmen, while the work of the Anthonys, which he praises and seems to believe in, is about as far away from that "province" as are the black lines of Holbein himself.

The editors of *Scribner's* begin their answer by a "counter," to the effect that Mr. Cole is a very much better engraver than Mr. Linton, at least in the sense that any painter would prefer to have his picture reproduced by the former—in which perhaps they are right. Then they set forth that there are few artists in America who know well how to draw upon the block, and that *Scribner's* has done good service to the artists and to the public by pushing the practice of photographing upon the block drawings of any size, so that the artist is left to his usual habits and his freedom, and the engraver, with the photographed design under his tool, has also the original before his eyes. In this also they are right; but here there should have been notice taken of Mr. Linton's position that an untouched block is the only medium for the artist-engraver, and that no one but him ought to touch it, whether with pencil or brush in preliminary laying out of the work, or with the graver. This position is not clearly stated in the *Atlantic* article, and we take credit to ourselves for having discovered it; but it is certainly there, and needs and deserves careful consideration. Next, attention is called to the successful attempts made in *Scribner's* pages to engrave realistic and literal translations of drawings in charcoal, modellings in clay, bas-reliefs, bronzes, and the like, so that a charcoal drawing can be known from a washed and stippled drawing even in the engraved copy; and there is claimed for these literal translations a merit and a value somewhat more akin than Mr. Linton would allow to the free translation which he prefers. And finally, it is charged upon Mr. Linton that his rigid theory allows of no recognition of originality, the proof being in the absence of any mention by him of Henry Marsh, whom *Scribner's* seems to think, as we do, the greatest of living wood-engravers, and an artist who might have ranked with the few great men known to wood-engraving had his lines been cast (by fate or by his own act) in other places.

There are two old styles of wood-engraving beloved of purists and critical students of this art, and each of them is noble and good—the plain black-outline work, best known to moderns in Dürer's and in Holbein's designs, and the white-line work known as Bewick's, in which the untouched surface of part of the block gives strong blacks, into which the white is carried by touches of the graver, every one of which tells. We might add to these the so-called "chiaroscuro" prints of the Italians and others, but their large scale and use of tints, of color and of shade, put them to one side. The black-outline style and the black-mass-and-white-line style are both excellent, and those who love them may be forgiven for feeling a certain repulsion from modern work; but it is clear that modern work cannot follow both those styles at once. No person can conceive a combination of the two. We agree with Mr. Linton's definition of the first as a mere mechanical cutting out of an outline-drawing made by a master, and of the second as the earliest and greatest development of fine art in wood-engraving—provided always that we except the chiaroscuro prints. And we think there is a tendency visible through the exaggerations and mistakes, and even the affectations, of the new and peculiar style of engraving which is now being developed by *Scribner's Monthly* and *Harper's Monthly*, to work back towards the conception and handling of the Bewick school. Its noble simplicity it may not be for the nineteenth century to attain, but its directness of method we may reach; and if we do, it will be through such work as Mr. Linton either assails with violence or passes with contemptuous silence.

SUMMER READING.

LEISURE-HOUR SERIES.

16mo, $1 per volume.

DELICIA. By B. M. Butt, author of 'Miss Molly.' *(Nearly ready.)*

COUSINS. By L. B. Walford, author of 'Mr. Smith.'

MAID, WIFE, OR WIDOW? By Mrs. Alexander.

THE FIRST VIOLIN. By Jessie Fothergill.

WANDERINGS IN PATAGONIA. By J. Beerbohm.

HENRY HOLT & CO., New York.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." Cloth, 12mo. A separate volume for Boys and for Girls. Price, singly, 75 cents; for two, $1 25. Sent, post-paid, on receipt of price, by the Publisher of the *Nation*.

DAVID G. FRANCIS, 17 *Astor Place, New York*, Dealer in Valuable Second-hand Books, has always on Sale 25,000 volumes or more of Ancient and Modern Books in various departments of Literature, for Public and Private Libraries.

PRICED and DESCRIPTIVE CATALOGUES of portions of the Stock are issued from time to time, and will be forwarded to book-buyers *free of postage*.

Orders for any obtainable books, American or foreign, promptly filled at the lowest prices.

Heliotype.

Permanent Photographic Book Illustrations.

THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.

For terms and specimens apply to the

HELIOTYPE PRINTING COMPANY,

220 Devonshire Street, Boston, Mass.

BINDER for the Nation, *convenient for receiving* the current numbers, also for permanent binder. Holds one volume. Price, in cloth, 50 cents; half-cloth, 25 cents (stamps). If sent by mail, 15 cents additional. Address THE NATION, Box 25, New York.

Atlantic Mutual

INSURANCE CO.

NEW YORK, January 22, 1879.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1878.

Premiums received on Marine Risks rom 1st January, 1878, to 31st December, 1878	$4,009,309 47
Premiums on Policies not marked off 1st January, 1878.	1,848,697 36
Total amount of Marine Premiums	$5,858,006 83

No Policies have been issued upon Life Risks, nor upon Fire disconnected with Marine Risks.

Premiums marked off from 1st January, 1878, to 31st December, 1878	$4,186,024 72
Losses paid during the same period	$2,012,784 45
Returns of Premiums and Expenses	$859,960 58

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks	$10,086,758 00
Loans, secured by Stocks and otherwise	704,200 00
Real Estate and Claims due the Company, estimated at	619,034 50
Premium Notes and Bills receivable	1,529,259 74
Cash in Bank	381,210 92
Total Amount of Assets	$13,320,463 16

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fourth of February, next.

The outstanding certificates of the issue of 1875 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fourth of February, next, after which date all interest thereon will cease. The certificates must be produced at the time of payment and cancelled.

A dividend of thirty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1878, for which certificates will be issued on and after Tuesday, the Sixth of May, next.

By order of the Board, J. CHAPMAN, Secretary.

THE

Meriden Britannia Co.

THE LARGEST MANUFACTORY OF ELECTRO-PLATED WARE IN THE WORLD.

Salesrooms, No. 46 East Fourteenth Street,

UNION SQUARE,

NEW YORK.

We take much pleasure in referring to the reputation we have for many years maintained for manufacturing SPOONS AND FORKS BEARING THE TRADE-MARK "1847, ROGERS BROS."

Particular attention is invited to our *Patented Process of Electro-Plating Spoons and Forks*, by which the parts most exposed to wear receive an EXTRA COAT OF SILVER. This feature renders these goods more economical and durable than those of any other manufacture, while the increased cost is relatively small. This method of plating we apply to the 4, 8, and 12 oz. plate, as required.

To protect the purchaser against imitations, it should be observed that the Improved Spoons and Forks bear our Trade-Mark, "1847, ROGERS BROS., XII."

FIRST PREMIUMS awarded at all Fairs where exhibited, from the World's Fair, 1853, to American Institute Fairs, 1873, 1874, and 1875, inclusive, and at the Philadelphia Exhibition, 1876.

Extract from the American Institute Report:

"Their Porcelain-lined, Double-walled Ice Pitchers are A1, and possess *all* the qualities the company claim." . . . "We consider the goods made by this company to be by far *the best* made in this country, and we believe in the world."

The Nation.

NEW YORK, THURSDAY, JULY 10, 1879.

The Week.

THE subject of State sovereignty and national supremacy which the political platforms are just now taking so much interest in could hardly avoid engaging the attention of some of the Fourth of July orators. It appears to have been discussed from an ideal and independent standpoint rather than with any practical recognition of circumstances such as the Constitution and the Laws. Senator Hoar referred to it in his Social Union Address at Amherst we infer from the report of the Boston *Advertiser*, which says that he "dwelt with force upon the principle of national unity found in the Declaration of Independence, and in the constitutions of Massachusetts and Virginia," which must have been a dangerous view to take, implying, as it does, the validity in any degree of State sanction in national questions. The address of Mr. Stanley Matthews at Mr. Bowen's Woodstock celebration had less to say of objective sanctions of any sort, and seemed to rest confidently upon its rhetoric. Mr. Matthews said, in answer to a hypothetical enquiry as to who "we are," that we are an organized body whose "identity is single and consists in its oneness," a people "dwelling in one land, speaking the same tongue, thinking the same thoughts; with similar tastes, affections, sentiments, and hopes, . . . reconciling subordinate discords of diverse interests and passions into the richer, loftier, and deeper harmonies of a choral unity," etc., etc. Mr. Henry Cabot Lodge, however, who must be acknowledged on all hands to have made an otherwise sensible and straightforward review of our history and statement of our present condition, delivered an oration in the Boston Theatre for certain expressions of which he has been roundly taken to task. "The injury then suffered by the rights of States is the gravest result of the war, simply from its effects upon our minds and habits of thought," he observed, which leads the *Transcript* to refer to Webster's reply to Hayne, and to reproduce part of Harrison Gray Otis's inaugural address as mayor of Boston. Nevertheless Mr. Lodge's address seems upon the whole especially worth reading at this time.

Tammany Hall on Independence Day is apt to be filled with an enthusiastic rather than a critical audience, a circumstance which possibly Senator Ben Hill was aware of when he made his "long talk" there on Friday. He could hardly have found elsewhere more sympathetic listeners to his statements that "We have accomplished more for the liberties of the people than has ever been accomplished in any four months of your history," and "if you continue in power in times of peace a party which owes its success to war you wreck your liberties," etc., etc. What the specific liberties likely to be thus wrecked were Mr. Hill did not mention, but it will doubtless seem to his Stalwart critics that some unwitting reference to them was suggested in what he had to say of the liberties curtailed by Commissioner Davenport so ruthlessly every November. It may, however, be said that the whole address was successful in the course which alone the Democrats have left open to themselves—namely, of taking the bull by the horns. The "satisfaction" expressed by Senator Hill with his party's conduct during the past four months is expressed perhaps somewhat feverishly, but it is very clear that anything like timid expressions of it have become quite useless.

The Fourth of July oration has been a source of trouble in Springfield, Mass., where the Committee invited Mr. Daniel H. Chamberlain, some time governor of South Carolina. The selection was an unfortunate one for divers well-known reasons, but Mr. Chamberlain had the good taste to avoid Stalwart matters and confine himself to reflections in which men of all parties could concur. The Springfield *Republican* very properly objected strongly to the choice of the Committee for reasons, among others, drawn from the history of Chamberlain's official career in South Carolina. This drew forth a defence of him from Mr. M. P. Knowlton, which is a curiosity in its way—viz., that he was a "very young man" (thirty-three) when elected attorney-general; that he behaved well when governor in 1875 and 1876; and that the thefts and frauds of the commissions on which he served were known before he was elected governor. The inference here suggested is that the constituency which elected Moses, when "Speaker and thief," to be "Governor and public robber" (New York *Times*), would not have elected Chamberlain had they believed him guilty of complicity in the Scott-Kimpton frauds. The Springfield *Republican*, we see, makes no mention of Chamberlain's published letters to Kimpton and others, which are all but conclusive evidence against him, and the authenticity of which he has not dared to deny. In fact, the efforts of the party to keep him afloat as a martyr are an odious reminiscence of one of the most disgraceful episodes in political history.

The "arithmetic men" of both sections have begun their predictions in regard to the effect of the next census on the political strength of the South in Congress. The Stalwart reckoners rely chiefly on Kansas; the Brigadiers on Texas and Arkansas. When these examples are departed from the guessing is of the loosest. It may be that the "solid South" will become of small importance after the readjustment of the representation, though it will make no contemptible part of the Senate; but morally it will exist just so long as sectional dissensions growing out of the war are fostered by one party or the other. The editor of the Kansas *Nationalist* has reprinted in his paper a warning article, bearing date of Christmas, 1875, in which the danger to the country of a "political Macedonian phalanx" from the South was pointed out, and an *internal* remedy proposed instead of the external so fruitlessly applied by Grant's Administration. Mr. Griffin urged the systematic colonization of selected States in the South, with a view to introducing a fresh Northern or European population which would "nationalize" them. He now, *à fortiori*, renews his exhortations to this effect, and shows how easily Florida and Arkansas, for example, could be won over, not to Democracy or to Republicanism, but to sympathy and co-operation with the North on national questions, by an Emigrant Aid Society like that which rescued Kansas from being a slave State. Mr. Griffin has perfectly sound ideas in regard to the mode of colonization—in masses, or by accretion where Northern settlements have already established themselves, and with no party distinctions or noisy propagandism; and he certainly gives reasons for thinking that those Eastern philanthropists who are contributing money to General Conway's exodus steamboat, would better employ their money in some such scheme as he advocates.

The Mississippi Valley Cotton Planters' Association held its second monthly meeting at Vicksburg, July 1, and its aims and achievements appear in a long and interesting address by the president, which the Vicksburg *Herald* publishes. The association, to which several State bodies report monthly, is devoted to securing that protection of common interests and that furtherance of common plans which co-operation only can secure; and its prospects, even thus early, seem good. It arranged at its recent meeting to found, in an indirect way, a "Planter's Journal," which will be its official paper; to subscribe $3,000 to the Mississippi Valley Immigration Company; to "ascertain the best method of cultivating cotton, corn, and grasses," and to have a "general trial of agricultural machinery and implements some time this fall." The president's address and the speeches of different members were marked by enthusiasm, for which, however, ample statistical basis was set forth. Cotton was not, indeed, referred to exactly in the terms nor with

the arrogance which mention of it used to provoke at the South before the war; but so far from expressing discouragement at the "exodus," or bemoaning the bankruptcy brought about by "carpet-bag rule," a feeling of confidence and courage was evident, and it is clear that, so far as the Association represents the mass of Southern planters, these are devoting themselves quite as heartily to the business of rehabilitation as to conspiracy against the Federal Government. "To say nothing of the increased wealth and prosperity otherwise," said the president, "if the cotton we raise was manufactured in the South it would save the planter nearly $50,000,000 annually in transportation"—a statement which is suggestive certainly, whether or no its economic implication be sound.

The ladies of Cincinnati have begun a very important movement which concerns the entire population west of the Alleghanies. In the interest of domestic cleanliness, and of the fair appearance of a city possessing many natural and architectural attractions, they propose to discover by experiment the surest and most economical mode of suppressing the smoke which now obscures and begrimes everything. A public meeting was held last week under their auspices, with ex-Secretary Cox in the chair, at which some account was given of smoke-consuming methods already in use in Cincinnati, and much information concerning the various devices (some nearly two centuries old) by which in this and in foreign countries the end has been sought to be attained. As in the case of all new inventions, especially those of which the first cost is considerable, the difficulties in the way of adopting any particular method lie in demonstrating that it is economical—or will pay, in other words—and that its chances of being superseded by something cheaper and more effective are remote. The local tests appear to be very satisfactory as regards the saving of fuel, which one firm set down at 14½ per cent. No arrangement of flues and draughts seems to be so promising as some of the recent contrivances for the complete consumption of fuel by sub-division. When this has been achieved railroad travelling will be robbed of half its annoyance, and the locomotive cease to be the greatest incendiary of the age.

Mr. John F. Seymour, a cousin of Bishop Seymour, was shot and killed on the evening of the third inst., in this city, while making his accustomed tour of the grounds of the General Theological Seminary, in which he resided. The "suicide theory" of the police in explanation of this occurrence, aside from its outrageousness in causelessly wounding the sensitiveness of Mr. Seymour's afflicted relatives, is noteworthy for its illustration of the detective incapacity of the force. It is the familiar explanation given by the police of every "mystery" which they are called upon to investigate and which can possibly admit of it. It is not that there are commonly any reasons for inferring suicide, but that suicide is, under the circumstances, a physical possibility, that determines their notions. The truth is that the police are utterly unfamiliar with the mental processes of any one to whom the "Habitual Criminals Act" does not apply, and it seems to them just as reasonable that a well-to-do Christian gentleman should commit suicide as that one of the "loose characters" who lodge in the station-houses should do so. Under the system by which the New York detectives are selected this is natural enough. So far as there is any test at all which they are supposed to answer, it is that of familiarity with the methods and habits of habitual criminals. Intellectual capacity is never in the least demanded of them. It may be said, since the recent Scotland-Yard scandal and the scandal concerning the Paris police, that the New York force is not more generally corrupt, nor more subservient to political uses, than that of other large cities. But it cannot be maintained that it is not essentially stupid. Imagine a London or Paris detective assuming that Mr. Seymour committed suicide, before any search had been instituted for a possible murderer, or the circumstances of a Fourth of July celebration had been considered with any care!

We are sorry to see that the Brooklyn *Eagle* attempts to justify its course in the matter of the Blair homicide. It devotes a column and a half to the case, and again finds Blair guilty of wilful murder, aggravated by the fact that he has been defending himself in "the spirit of Ananias," and put a low value on his coachman's life because he was a coachman. We should be sorry to follow the *Eagle* through its vituperative analysis of the evidence. We shall only point out once more that if trial by newspaper be proper or sufficient the courts are a useless expense. If the process which the *Eagle* is performing in the Blair case be justifiable, and its judgment worthy of attention, criminals ought to be taken before a managing editor instead of a magistrate, and be sent to the gallows or the State prison by his sentence, on a statement furnished by a reporter. If, on the other hand, trial by an unprejudiced jury and a learned judge, on a full hearing of the evidence, be the right mode of investigating crime, such articles as the *Eagle's*, published in advance of a judicial enquiry, deserve richly some sort of legal punishment. These are almost as reprehensible as corruption of jurors or subornation of witnesses.

The case of Blair, as well as many others during the past few weeks, is a striking illustration of the mischief of the pistol mania by which the community is so cursed that a religious paper has actually lately taken to giving revolvers as premiums for new subscribers. What with carrying pistols, and keeping pistols, and thinking of pistols as a means of defence, that reliance on the police which occupies, or ought to occupy, so large a place in civilized life has been with a large number, even of the most respectable people, seriously diminished among us. One of the most striking and most barbarous features of Southern life is the fact that when a man hears that somebody else is looking for him to kill him, far from going for a warrant and having him arrested and bound over to keep the peace, he gets a pistol or a knife and lies in wait, just like a savage, and then they stab or shoot each other. This sort of incident rarely occurs here, but larger numbers than is generally supposed of peaceable, well-behaved citizens carry pistols in their pockets, on the theory that they may be engaged in some kind of fourteenth-century encounter with a foe. Many deplorable murders result from having weapons at hand, but we think there does not occur once in ten years a case in which an honest man saves himself with a pistol from a robber. We wish some of the reforming fanaticism of the day could be turned against pistol-carrying; or that those who carry pistols could be compelled to wear them openly in front in an outside belt, and streak their faces with red ochre, like other heathen.

The Aldermen voted, Tuesday, to discharge the Committee on Streets, to which the report of the Rapid-Transit Commission had been referred, from any further consideration of it. A reconsideration of the vote by which this was done was ordered by the majority for the purpose of clinching the matter, and, of course, promptly voted down. Nevertheless, according to the Commission, the action of the Aldermen is "premature, and therefore nugatory," the proper time for action on their part being after the Commission has completed its work, which it has not yet done. It is not unreasonable to infer from the history of the Common Council that many things may happen before then, and the Aldermen feel very differently. Much sensitiveness was betrayed, or rather proclaimed, at Tuesday's session. Alderman Haughton, who could not tolerate the idea of considering the report, "would teach this man [Mr. Vanderbilt] that if he can buy up the Legislature of this State, he cannot do the same with this board." Alderman Morris, on the other hand, disliked to vote "to perpetuate the infamous monopoly formed by the two roads now running." Mr. Vanderbilt is said by an anonymous "legal friend" to have known nothing of the Fourth Avenue scheme before his recent return from Europe, and to have "positively taken no steps whatever towards promoting the matter." Cynical persons may find some connection between this circumstance, if it be true, and the action of the Aldermen. At all events, nothing appears to have been decided positively hitherto.

It has been a barren week in the financial markets. The Stock Exchange adjourned from Thursday until Monday, and business has been on a restricted scale even at places which are at liberty to close only on legal holidays. The July disbursements, interest and dividends, amount to not far from $50,000,000, and a good part of this will probably be reinvested in securities. The demand for U. S. 4 per cents. has been active, and it is expected that it will be more so as the large amount of called bonds due in July matures. In London the accumulation of money is embarrassing, prime 3-months notes being discounted for less than one per cent. per annum (⅛). The price of silver there fell from 52⅛*d.* per oz. to 51⅞*d.*, and here at the close the bullion value of the 412½-grain dollar was $0.8739.

The various accounts of the effect of the news of the Prince Imperial's death in France, which have come out by mail, concur in the opinion that Prince Napoleon will make no attempt to assume the Bonapartist heritage, and that he will not allow his son to do so. He refused to see the Bonapartist chiefs after the news arrived, and only attended the funeral service on the understanding that it was to be strictly religious. Paul de Cassagnac at first announced that Prince Victor, Prince Napoleon's son, was now the head of the party, but he subsequently confined himself to alleging that the party had a prince without saying what prince it was. The inability of the Prince Imperial to dispose of the succession by will, in defiance of the Senatus Consultum, is acknowledged on all hands. That the blow to the Bonapartists is a serious one may be inferred from the fact that M. Rouher fainted under it. The Duke of Cambridge has produced the letters by which the Prince was accredited to Lord Chelmsford, and they show that he went simply as an amateur. His escort when killed was composed of colonial volunteer cavalry, but only six men in all. The unfortunate officer who commanded the escort is to be court-martialed, though what for it is hard to see. He and the Prince mounted or began to mount together, but the Prince's horse got away from him, a fact which the officer, who was by that time running himself vigorously, did not perceive for two or three hundred yards.

Such time as can be spared in London from hearing and discussing and entertaining the Comédie-Française, and the death of the Prince Imperial, has of late been bestowed on the alarming condition of British agriculture. On the motion of Mr. Chaplin, on the 5th inst., the House of Commons agreed to the formation of a royal commission to enquire into and report on the causes of the crisis, the gravity of which all admitted. The cause to which it was most generally attributed was the growth of American competition, but it was agreed that there was no way of meeting this by retaliation. Mr. Bright said the only way of meeting it was by a reform in the laws regulating the transfer of land. The great fear arising out of this agricultural crisis which now hangs over English society is, of course, that the conclusion may any day be reached that the land can only support the farmer and will yield nothing for the landlord. This, if true, would produce a social disturbance the like of which has not been witnessed in England since the Conquest, and would ruin at a blow perhaps the ablest political class which has appeared in history since the fall of the Roman Republic—the English landed gentry. But there are already sober-minded men saying that to this complexion it must come speedily. The Rev. Barham Zincke, who may be remembered as a very intelligent traveller in this country ten years ago, has an interesting article in a recent number of the *Nineteenth Century*, showing that the system of poor relief has ruined the character of the English poor, and the only remedy is the introduction among them of the land-hunger of the French peasant, by making the acquisition of small holdings in fee easy. In Ireland the mere talk about the matter has raised an anti-rent agitation which is causing a good deal of uneasiness.

The discussion in the Committee of the Whole in the British House of Commons over the Army Discipline Bill on a point of apparently small importance has revealed publicly the split in the Liberal ranks on which the Tory leaders have long based their hopes of being able to stay in power indefinitely. The Opposition were successful in having the legal amount of flogging reduced from fifty to twenty-five lashes, and in compelling the insertion in the bill of a schedule enumerating the offences for which flogging might be inflicted, instead of leaving it to the discretion of the court-martial, or, in the field, of the provost-marshal. But the Radical wing of the Liberals were not content with this, and insisted on the total abolition, and resorted to the policy of "obstruction" under the rules of the House to carry their point. The Marquis of Hartington, who occupies the recognized position of leader of the Opposition, thereupon repudiated their course, which led Mr. Chamberlain, of Birmingham, who heads the Radical wing, to declare, amidst the cheers of his followers, that the Marquis, "who was formerly the leader of the Opposition, was now only the leader of a section."

The importance of this is greater than appears on the surface, owing to the near approach of the general election. The Tories, who came into office largely owing to Mr. Gladstone's over-activity as a reformer, have always maintained that bad as Gladstone was, he was nothing to the Radical wing of his party, which was bent on disestablishing the Church, abolishing the House of Lords, and doing divers other dreadful things, and that they were gaining rapidly on the Moderates. The Liberals, by resort to nominating conventions in the large cities and other devices, have been making desperate efforts to keep this division in their ranks out of sight, or, at all events, to prevent its telling at the polls. But the resort of the Radicals to "obstruction," which is really a sort of appeal to physical force, and Mr. Chamberlain's repudiation of Lord Hartington's leadership are likely now to give the Tories a powerful weapon.

The news from Zululand shows that the prospect of peace is not nearly so assured as was supposed, and Cetewayo is again suspected of simply wishing to gain time by the late negotiations to get his crops in and destroy the grass on the line of the British advance. He is said, in the meantime, to be entrenched at Ulundi, in the north of his territory, in an impregnable position, but he is also said to believe that if he can get one chance at the British army in the open field he will finish it. In fact, it seems not unlikely that if battle is offered him on open ground he will accept it, and there is no doubt that defeat under these circumstances would crush him. The difficulty of reaching him, however, with existing means of transportation is enormous. Sir Bartle Frere, who brought on the war, and who is really responsible for all the disasters that have occurred, and who has been disapproved and removed by the home Government, appears to be not in the slightest degree abashed. He has been making a triumphal progress through the colony, delivering eulogies on his own policy and receiving the plaudits of the colonists, who rather like to have the English carrying on a great war for them and spending enormous sums among them.

Prince Bismarck has carried his tariff scheme very nearly in the form in which he presented it. It comes into operation part on the 1st of October next and part on the 1st of January. Fifty per cent. extra duty is to be imposed on the goods of countries which treat German goods unfavorably, which, of course, is simply an assertion of a claim to equality with the most favored nation. It is estimated that the new tariff will bring in an addition to the revenue of 120,000,000 marks, of which the Empire will get 22,000,000, the rest going to the separate states. There is not much likelihood, however, that the arrangement will stand very long. The tariff is too complicated and onerous to be administered without great vexation, and the duties on foreign grain and provisions are likely to increase discontent and disaffection in the great towns.

THE SITUATION AFTER THE ADJOURNMENT.

THERE has probably been no session of Congress since Congress began which has ended so miserably as that which ended last week. A large proportion of the members had gone home through sheer weariness and disgust, and the public had ceased to take the slightest interest in the debates, or, for that matter, in the measures passed or attempted to be passed. This is a not unnatural consequence of the insincerity on both sides which marked the proceedings since December of last year. The Democrats undertook, as soon as Congress assembled, a number of enterprises which they could only have expected to carry out by frightening their enemies. They were met by the Republicans in a similar spirit; they pretended to be terribly frightened, and declared that, bad as was what the Democrats *said* they were going to do, what they meant to do was far worse. The Democrats said that unless they had their way about the use of the Army at the polls, and about the powers of the supervisors and marshals and deputy-marshals at elections, they would leave the country without an army and without national courts of justice or sheriffs. This was a sufficiently horrid prospect, but the public left to itself would have had some difficulty in believing that any political party could be so desperately foolish as to do anything of the kind. The Republicans in Congress had, therefore, to fan the popular faith in Democratic recklessness, which they did in the best way by professing to believe that, bad as the legislative schemes of the Democrats were, they were really simply the opening of a "revolution" in which the Government would be entirely transformed, and which would fill every American household with gloom. The Democrats were evidently not prepared for this game. They had supposed that they would be allowed a monopoly of the business of "alarming the country" and "spreading anxiety among all classes," and that they could stop the process at any point they thought proper. When they found the Republicans trying to make the Democratic scarecrows even more hideous than the original designers intended them to be, they began the process of "backing down"—or, in other words, of pretending they never meant to do the things they had in the beginning threatened to do. This at first sight seemed likely to put the Republicans in an embarrassing position. They had maintained that the Democrats were even more desperate characters than they seemed, and that their avowed designs were mere covers for others still more hellish. Consequently, to the simple-minded observer it seemed as if a retreat on the part of the Democrats would be a very awkward thing for them. But the simple-minded observer was greatly mistaken, for when the Democrats did begin to retreat and passed the Army Bill with a very harmless modification, and passed the Judicial Bill without any change except the withholding of appropriations for the expenses of the United States marshals between now and December next, the Republicans began to crow as lustily over "the backdown" as if it was this, and not "revolution," which they had always predicted as the probable ending of Democratic operations.

In so far as the controversy has furnished material for stump oratory in the fall elections it cannot be denied that the Republicans have the best of it. Whatever may be said for the objects at which the Democrats have been aiming, it would be difficult to compose any better defence for the manner in which they sought to reach them than the *tu-quoque* argument that the Republicans had resorted in times past to similar means. But then the Democrats constantly forget that the Republicans are in the position of a man who has enjoyed a good character, and although people are beginning to suspect him, nevertheless has all the presumptions still in his favor, while the Democrats are in the position of a desperate reprobate who is trying to persuade people that he has reformed and may now be trusted to any amount. There are certain things which, however desirable in themselves, it is not judicious for the reprobate to call for. It may be that people in his neighborhood are spending too much money on the police, and on bolts and bars for their houses, but he is hardly the person to decide on the urgency or the futility of it, and to demand economy in this direction. It may be, too, that the temperance legislation of his community is too stern in its prohibitions, but he is hardly the person to declaim against it on this score. There are, in fact, most cogent reasons of party policy why the Democrats should attempt nothing which looks like a diminution of the powers of the general Government. There is still a generation on the scene in whose mind Democrat is a synonym for rebel, and who cannot believe that a Democrat is serious when he talks of reforming the United States Government. There is still another—a younger one which has grown up since the war and is making money—which believes Democrats so eager for power that they are willing to seek it through anarchy, and in order to get it are quite ready to leave property without protection. To alarm or offend both of these classes together is, for a party in the position of the Democrats, little short of suicide.

Matters are not much mended, either, by "backing down." This only causes alarm to be succeeded by contempt. One of the United States surveying parties has an amusing story of an attempt on the part of a desperado in one of the mining towns to rob their negro cook of his mule as he rode in with one member of the party. The desperado fiercely demanded the mule, with a cocked pistol, and the cook's teeth were chattering; but the surveyor warned him that it was dangerous to meddle with them, as they belonged to an armed party with an Army escort which was close behind. At this moment the rest of the party with the soldiers came round the corner; whereupon the robber lowered his pistol, accepted the situation, and exclaimed cheerfully, "All right, cap; can I do anything for you?"—and then busied himself with providing them with an oven. They took the oven, but the desperado had won neither their confidence nor respect. The story has some application to the present political situation. That the Democrats have not attempted, and probably never intended to do, all the dreadful things which Messrs. Chandler and Gorham assured us they were going to do, is plain enough. But the way in which these charges have been disproved has done nothing to make people willing or ready to see all three branches of the Government in Democratic hands. On the contrary, we believe a very large proportion of the more sober-minded Democrats themselves have been thanking their stars during the past three months that there is a Republican President. That this state of things is a great misfortune for the country there is no denying. The Republican party will probably never be a whit better led than it is now until there is an opposition in whose fitness for power, as far as honesty and capacity go, the sober and intelligent classes of the people have confidence. Nothing can be more demoralizing to a party than to know that there is nothing to take its place. It affects it very much as the inheritance of a fortune affects a lazy man.

COLLEGE EDUCATION AND "THE EDUCATION OF CIRCUMSTANCES."

THE annual college commencements have called forth the usual amount of comments from the press upon the usefulness of a college education, and if we were to infer the state of public opinion from what the press says, we should conclude that the community as a whole disapproved of universities, and considered the time passed in getting a college degree for the most part wasted. The new graduates are greeted on their appearance in the outside world with a storm of warning that their acquirements have little real value; that they have still to learn everything which they are likely to need in the battle of life, and that in our time the most successful men are those who have spent least time in their youth over books. Part of this discouraging criticism is undoubtedly due to a desire to console that vast majority of youths whose parents cannot afford to send them to college; but much of it is justified by observation of the difficulties in which college graduates who do not intend to follow any of the professions, so called, find themselves when they try to engage in trade or industry. That they enter these fields at a consid-

erable disadvantage there is no denying. Not only are they matched against competitors who have been learning the business for at least five years, but employers think them too old for beginners, and are loath to give them those places at the bottom of the ladder for which alone they are suited. A man is not so teachable at twenty-one as at fifteen. It is more difficult to give him orders, and more difficult to exact from him the needful accuracy in the execution of them. But this is not all. The graduate is in some respects worse fitted for business than a man of twenty-one who has had no business experience whatever. The education he has received naturally and inevitably gives him a self-confidence and unteachableness which the wholly uneducated man does not feel, and disposes him to studious rather than to active life. It gives him, too, what is in business one of the worst of defects, a dislike and even contempt for details, and yet a love of details and a strong sense of their importance may be said to be the foundation of business capacity. Nor does he acquire in his college course—or, in other words, during the period in which habits are most easily and firmly formed—the method, the punctuality, and the sense of order which are so important a part of a business man's equipment, and to which successful administrators in every field attach so much value.

The undergraduate is, in fact, during his college life exempt from discipline to a degree which to young men who are beginning to learn any trade is unknown. As long as he presents himself at prayers and recitations he has complete command of his own time, and all his work is literary work. He may do it during the night if he pleases, or at any hour of the day not devoted to recitations or examinations. He may do it in bed, or in an easy-chair, or in a dressing-gown. Nor is there anything practical in it, or which brings him in contact with persons who have the right to exact anything of him. His associates in his daily life are young men of his own age and of his own tone, so that he may pass weeks and months without, except during the recitation hours, ever finding himself exposed to a critical eye, or compelled to obey anybody, or be accurate or painstaking in speech or conduct.

The disadvantages of a college training for those who are desirous of entering on a business career of course grow more and more striking as trade and industry play a larger and larger part in human affairs. Nor is it in this country only that they attract attention. The reluctance of parents in England who wish their sons to go into business—that is, to engage in commerce or manufacture—to send them to the universities, notoriously increases. In the discussion which has been recently going on there over the project of erecting Owens College into a great northern university, the fact was brought out very prominently that the great industrial chiefs of Lancashire and Yorkshire, who did not intend their sons to be rich idlers, looked on the universities with no friendly eye, and were less and less disposed to send their children to Oxford and Cambridge.

What the universities seem to need to meet the demands of the business world is what military schools like West Point supply—namely, machinery for taking possession of a young man with something like completeness between the ages of sixteen and twenty, and giving him not simply good mental habits but good physical and moral habits, teaching him not simply how best to acquire knowledge, but how to be prompt, punctual, regular, orderly; how to be ready with his hands and feet and eyes, as well as with his mental attention. There is hardly any administrator in the country to whom a West Point education would not recommend a young man, or, at all events, who would not vastly prefer taking a West Point graduate into his service to taking a Harvard or Yale or Columbia graduate. This, of course, is somewhat due to the difference in the course of instruction; but it is due in a still greater degree to the difference in the discipline, to the fact that the West-Pointer has passed four years learning to be exact, to obey cheerfully, quickly, and to use his hands and feet and eyes, and to attach great importance to the small details of material life. It would, of course, be very difficult to assimilate all colleges, even in a moderate degree, in their discipline to West Point or any military school. The machinery of a military school is necessarily far more elaborate and costly than that of any university. Such an education as is there given could not be paid for fully by any but well-to-do parents, and it would have to be supplied by a very different class of men from the quiet scholars who now fill the professorships elsewhere. The attempts which are made to approach it in the colleges by subjecting students to more supervision and stricter rules, or any unusual interference with their habits or mode of life, are apt to be great and irritating failures. In fact, it is difficult to avoid the conclusion that there is no way of making a university course a good preparation for a business life in the great majority of cases. We say in the great majority of cases, because for a man who has real force of character and is determined to succeed, although it may make the beginnings of a business career a little hard, and even bitter, a university education is a great possession. There is no doubt it makes it easier for him to learn afterwards everything he is resolved to learn, and there is no successful business man who has taken a college degree who does not regard it all through life as the best of his possessions. Nothing does more to sweeten business success and increase the enjoyment of fortune.

But those who decry university education as a preparation for life overlook the fact that it is not often taken by persons who mean to follow a business career. In other words, a process of selection is performed before boys enter college, and, as a general rule, only those enter whom a college education will help; that is, those who are about to take up some intellectual pursuit—theology, or law, or medicine, or natural science. It is very doubtful, indeed, whether for these a better training could well be devised than that which our leading colleges now give, though the defects in it, which we have pointed out above, are obvious enough. They are taught to acquire knowledge, and to arrange it in their heads in such a way as to be able to produce it when called on, and are made familiar with the experience of the race in all fields of activity by methods which could not readily be bettered, and under highly favorable conditions as regards society and surroundings. It may not be the best preparation for buying and selling, or manufacturing, or farming; but those who take it rarely intend to be traders, or manufacturers, or farmers. They intend to be teachers, lawyers, legislators, doctors, and discoverers; and all these classes play a very prominent part—many people think the most prominent part—in carrying on the work of civilization.

There is a view of the matter, too, and a very important one, which was mentioned by Senator Hoar the other day in his address at Amherst College, which most of those who decry college education disregard. They assume, almost invariably, that the youths who get no college education, but begin to earn their bread at the age of sixteen in trade or manufactures, surely succeed in life. This is a most singular and mischievous delusion, as Senator Hoar pointed out. The statistics of trade, in so far as they show the percentage of failures on the part of those who, even in this, the most prosperous country in the world, try to acquire wealth, or even a decent competency for their latter years, are the most melancholy reading we know of. The great mass of the poor boys who begin "the education of circumstances" in a store never make a fortune, or if they make one fail to keep it, and simply make a poor subsistence for themselves and their families, and die in obscurity. The number of successful business men is, in fact, vastly smaller in proportion to the whole number of those who try business as a calling, than the number of successful professional men. A profession is really in our time the best gift a father can bestow on his son, because it is the only thing in which a man succeeds by his own character and capacity simply, and the only possession of which nothing but his own negligence or misconduct can deprive him. The lawyer or doctor or minister or professor may never become rich, but he need care nothing for panics; he never becomes "rotten wood," and he "walks on the bottom" all the time. Even in adversity he is apt to have mental resources and consolations which are only rarely within reach of the unfortunate business man.

FREEDOM OF TEACHING IN FRANCE.

PARIS, June 13, 1879.

THE great struggle of the parliamentary session is about to begin. It is a struggle of paramount importance, not in its immediate effects, but as a mark of the tendencies of the new republican Government. A report has been read to the Chamber on the subject of the new law on public education. It seems somewhat absurd to me that I should have been condemned to read this report, as I have for a long time known its author. M. Spuller has the sort of notoriety which attaches itself to the shadow produced by a great light. The luminary which he has always followed is Gambetta; he is the Pylades of the new Orestes. He followed Gambetta in the days of the Empire; he went up with him in a balloon; he followed him to Tours, to Bordeaux, to San Sebastian; he became the principal writer in the *République Française*, the paper founded and inspired by Gambetta. Spuller is not an Alsatian; he has been accused of not being a Frenchman; but his father was naturalized, and the fact that he sits in the French Chamber of Deputies shows that he has all the rights of a French citizen. He is a good-humored, hard-working giant, with a very big head, little humor but some drollery, a fountain of political small talk, always ready to develop ideas on every subject. He has written a voluminous report on the great question of the day. With a truly German fondness for the "Literatur" of his subject, he has cited an immense number of authorities, with title and page—Montesquieu, Domat, Troplong, Cousin, Laboulaye, Guizot, Dupin, the Duc de Broglie, etc., etc. He has made citations from the edicts of Francis I., of Henry IV., of Louis XIV., and proved in the most peremptory manner that the state has always had a right of control over public education. Nobody denies the rights of the state, but the limitation and definition of these rights is not an easy matter. The reporter of the Chamber says that freedom of public teaching is a novelty in France; it does not even date from the Revolution, and the Revolution, in his eyes, condemned it by the mere fact that it did not establish it. Bonaparte, who disciplined the Revolution, organized public education as despotically as he organized his regiments. M. Spuller confesses that this new liberty "appeared for the first time with its name, and with all the pretensions and claims which it conceals, in the *Charte* of the constitutional monarchy of 1830." He confesses candidly his surprise at seeing this recent liberty accepted in principle, and inscribed in 1850 and in 1875 in laws "which assumed the character of contracts between the state and certain religious and political interests, cleverly concealed behind the rights of the individual and of the father of a family."

In good French this means that M. Spuller considers the liberty of public teaching as a "clerical and monarchical" liberty, therefore as a danger to the Republic. He takes great pains to prove that such a liberty cannot be found in his own political gospel, the famous "Declaration of the Rights of the Man and of the Citizen" of the Revolutionary period. To be sure, the fourteenth article of this declaration says: "The free communication of thoughts and of opinions is one of the most precious rights of man; every citizen can therefore speak, write, print freely, while he is called upon to account for all the abuses he makes of this liberty in the cases determined by law." Yes, says he, "this involves the liberty of teaching, *lato sensu*, but positively, *stricto sensu*, it does not." This *lato sensu* and *stricto sensu* will probably not have much effect on the readers of the report; it would amuse Pascal, if Pascal was still among us; it will make the Jesuits smile.

The Constitution of 1848 was made after the downfall of the monarchy of July, by a Republican Chamber named by universal suffrage. This Constitution said: "Teaching is free (*l'enseignement est libre*); the liberty of teaching is exercised on the conditions of capacity and morality determined by law under the control of the state; this *surveillance* is extended to all establishments of education and of teaching without any exception." Under the reign of Louis Philippe, with a chamber elected by a restricted suffrage, the French University, instituted by Bonaparte, was represented in the Government by very eminent men, such as Cousin, Villemain, Guizot. The freedom of public teaching was in the *Charte*, but it could not become a reality, notwithstanding the efforts of Montalembert in the House of Peers. The Revolution of 1848 gave two things to France: universal suffrage, and this liberty of teaching which M. Spuller considers a dangerous novelty. This liberty has been completed since 1870 by the permission given to lay or clerical corporations to create faculties and universities, and to give what we call "secondary and high" instruction. It would be difficult to say what has been the moving spirit of the Republicans who wish to undo now what has been the work of the last forty years. Nobody contests in reality the state's right of control and supervision; nobody denies that the state has a particular right of control over the examinations which are made for degrees in law and in medicine; nobody denies that the state has the right to claim certain guarantees of morality and of instruction from the men who open schools, either primary or secondary. All these matters can be settled without difficulty, the laws can be amended and corrected; but hitherto there has been no ostracism pronounced in matters of education against any members of the civil society.

The gravity of the new law presented to the Chambers lies in this fact, that some Frenchmen would be by this law declared *incapable* of teaching; and for what reason? For the reason that they belong to religious associations not recognized by the state. Now, in what does such a recognition consist? It consists merely in the fact that some associations have not corporate rights; they cannot, as corporations, buy, sell, sue or be sued, borrow, mortgage, etc. But this absence of corporate rights is not a privation of individual rights; the Jesuits, since their name must be pronounced, cannot, as such, act in any corporate capacity, but individually why should they be deprived of all the common rights which are enjoyed by all? If they take the degrees which are required by the state from the schoolmasters or directors of high schools, why should they not become schoolmasters and directors of such schools? All the declamations of M. Spuller against the ambition of the Catholic Church, against the Syllabus, cannot alter the main facts of the case; the intolerance of the Church does not justify the intolerance of the enemies of the Church; in order to rob the Jesuits of the right of teaching, M. Spuller goes so far as to make such citations as these from the work of an unknown writer:

"We have seen the clerical passions unchained after the 24th May, 1873, and the 17th May, 1877. Convoys of fanatical pilgrims have crossed France in every direction. The clergy has been mixed up with the electoral struggles. The bishops have given their opinion on the making of the laws, have written letters to the ministers on the incidents of our interior policy, have written pastoral letters in which they have warned foreign powers, without fearing to create diplomatic difficulties."

The animus of this passage is very transparent; if the Jesuits must be persecuted, why should not all pilgrimages be forbidden, why should not all the bishops be condemned never to write a line? I can, I confess, only see in the present movement the old despotic, Jacobin spirit of the Revolution. The French clergy can very easily be maintained within the bounds of the famous "Concordat"; if a bishop ventures out of the limits of it he is at once stopped by the Council of State. As for the inferior clergy, there is no cause of complaint against them; the war begun against the Church has really no excuse, as it has no cause. It has not even a political cause. The Republicans distrust the Church, and think it hostile to republican institutions. This is an error; the Church of Rome has always professed the greatest indifference to kings and emperors; it knows no earthly crowns; it does not attack the republic in America nor in Switzerland. The Church, by its very nature, must of course feel an inclination for old institutions, old dynasties, and have a certain dread of innovations in politics. But Lacordaire appeared in his Dominican's white robe in the Republican Chamber of 1848; the doctrine of the Church has always been, "Render unto Cæsar the things that are Cæsar's, and unto God the things that are God's." The Church of France could not feel much sympathy for the Commune of Paris, which took its choice victims from its ranks. But even the dreadful massacre of the archbishop, of the curate of the Madeleine, of the Dominicans of Arcueil, did not turn the French bishops into open enemies of the Republic, though M. Paschal Grousset, the Minister of Foreign Affairs of the Commune, is now writing articles in an English review under the title, "How the Commune made the Republic."

Of course M. Spuller defends his party against the imputation of attacking the Church; his friends only mean to attack what they call the "Counter-Revolution," and they do the Jesuits the honor of identifying them with this "Counter-Revolution." Spuller cites these words of Sainte-Beuve:

"If you insist and tell me that the Jesuits are gaining visibly every day, that there is no longer among our modern Catholics any spirit of opposition to them, that it is now almost the same thing in France to think as a Jesuit or as a Catholic, I will tell you, with much regret, that if it is so, it is very well for the Jesuits, but not so for the Catholics; . . . that it would be very serious if all the French Catholics seemed to hold as a principle, that on any question more or less Roman they must, at the first word received from Rome, be like 'the staff in the hand of the old man'; that such a thought has always seemed anti-French, and that, if ever it becomes popular, there are many dangers ahead."

Since Sainte-Beuve wrote these lines the "old man" has lost his temporal power, a Protestant power has gained the ascendant in Europe; new dangers of which Sainte-Beuve did not dream have appeared before the eyes of the world; sects of assassins are trying to undermine all the governments of Europe; and I cannot help thinking that the fear of the Communists has not been without its influence on the policy adopted against the Church. If you go along the boulevards now and look at the kiosks, you will see everywhere caricatures against the Jesuits; the black hat and soutane of Basil is the loaf thrown to Cerberus.

At the end of his long report M. Spuller gives an official list of the unauthorized congregations which by the new law would be declared unfit for public teaching. There are, in all, in France 59 establishments of Jesuits, with 1,502 Jesuits; 23 establishments of Dominicans, with 327 Dominicans; 19 establishments of Marists, with 222 Marists; and 14 establishments of Benedictines, with 230 Benedictines. A few other orders have very few members: Eudists, 193 members; Basilians, 65; Barnabites, 22; Oratorians, 14; Congregation of St. Bertin, 91; Congregation of the Holy Hearts of Jesus and Mary, 105. The Dominicans are almost exclusively given to preaching, the Benedictines to preaching and to works of erudition. The famous Article 7 of the Ferry law, which says that "no man can be allowed to direct an establishment of public or private teaching, of whatever order this establishment may be, nor admitted to teach in it, if he belongs to a non-authorized religious congregation"—this article is almost exclusively levelled against the 1,502 Jesuits who are now living in France. The whole force of the state, with its Chambers and Senate, its army of soldiers, gendarmes, and officials, is in line against a thousand men. And when these thousand men leave France and go to Jersey, or Guernsey, or Belgium, or Ireland, the Jesuit will disappear in the caricatures of the kiosks; and what shall we see then? what will Cerberus devour next?

THE RESULTS OF THE WAR IN AFGHANISTAN.

London, June 16, 1879.

THE war in Afghanistan is over, and the English people, absorbed in the excitement of the Zulu war, have dismissed it from their minds as if it had no more of a practical interest for them than the siege of Troy. The peace, however, which has been arrived at is but a patched-up affair dictated by political necessities at home—settling nothing, and effecting nothing beyond the placing of the British Government in a position which leaves them no alternative except to evacuate Afghanistan altogether, or to incorporate it with the British Empire in India. The former course cannot be adopted without a loss of *prestige* (and is, therefore, certain not to be adopted); nor the latter, without placing in jeopardy the existence of British rule. Such is the agreeable dilemma into which Lord Beaconsfield and his colleagues have brought the country. It is the peculiarity of the present Cabinet that they seem—every man of them—utterly incapable of calculating either the consequences of their policy or the means requisite for carrying it out. They are full of bluster and brag till the moment for action arrives, and then eat their leek with beautiful resignation and go off in search of other adventures. Thus, having posed before Europe as the "defenders of her imperilled liberties" and the upholders of "the sanctity of treaties," when required to vindicate their position by corresponding action they can do nothing beyond the transferring of 7,000 Sepoys from India to Malta. This producing no result, they eat their leek in the form of a number of secret engagements annihilating the treaties of which they had constituted themselves the defenders, and call this discreditable proceeding "peace with honor." It would occupy too much space to enumerate all the leeks which, in one way or another, have been devoured by Lord Beaconsfield and his colleagues since first they determined to electrify the world with a "spirited foreign policy." But there is not a people with whom they have come into contact that has not administered this leek-diet in considerable quantities. Turkey, Egypt, Greece, the new Bulgaria, not less than Russia, have either presented or are at present presenting their leeks to the English Cabinet, nor is there now any doubt but that all such presentations will be duly honored. In Afghanistan they rushed into a war without a pretext of any kind, and for some time past the whole strength of Indian diplomacy has been put forth in order to persuade Yakub Khan to make peace and so preserve the English Government from the humiliation of publicly eating one more leek. The peace has for the moment concealed the failure of the invasion of Afghanistan, but the far-reaching consequences of this disastrous campaign cannot be so lightly conjured away.

The Afghanistan war of 1838 demonstrated two facts—the one, that it was physically impossible for an army under the modern conditions of war to march from Herat to the Indus, via Candahar and the Bolan Pass; the other, that a permanent occupation of Afghanistan was impossible by reason of its costliness. Without the incidents of the retreat and destruction of General Elphinstone's army, we should have had to withdraw from the country on account of the enormous charge which our presence there entailed upon the revenues of India. Undeterred by the experience of the past, the British Government resolved to repeat the experiment. Your readers must not imagine that the pretexts which have been assigned as justifying the war had anything to do with it. The war had been resolved on fully eighteen months before the Russian Embassy appeared in Cabul; and no concessions on the part of the Amir, short of yielding up so much of his dominions as the Government thought necessary for the construction of a "scientific frontier," would have sufficed to avert it. We know now that the one man in Afghanistan sincerely desirous to maintain a friendly alliance with the British Government was the Amir Shir Ali, whom Lord Beaconsfield and his colleagues have hunted to death. And to preserve that friendship he was willing to concede anything short of an actual surrender of territory. But nothing less than this would content the English Government. Still, as robbery pure and simple is a little too strong meat even for a party educated and disciplined by Lord Beaconsfield, it became necessary to devise means for throwing upon the luckless Amir the responsibility of bringing on the war. This was effected by the now famous "repulse of our mission" from the Khybar Pass. In truth, there was no repulse. Every one in India is perfectly well aware that had ordinary time been given to the Amir to think over and respond to our announcement that a mission was about to proceed to Cabul, he would have consented to receive it. But the Government of India wanted the mission to be repelled, not to be received; and, therefore, Sir Neville Chamberlain was ordered to proceed through the Khybar, when it was known that the Amir's officer in command there must, in the fulfilment of his duty, request him to return. This request, by the confession of the officers with the mission, was made with the utmost courtesy; and the veracious Indian Government thereupon telegraphed to England that he had threatened to open fire upon the English troops. Thus was the British nation committed to a war as wicked as any recorded in the annals of mankind. Lord Beaconsfield, with characteristic cynicism, frankly avowed that the war had nothing to do with any indignities that we supposed had been inflicted upon us by the Amir, but was undertaken in order to construct a "scientific frontier" at the cost of that luckless sovereign.

The "scientific frontier" was, it need hardly be said, supposed to be necessary in order to protect India from a Russian invasion. Notwithstanding the experience gained in our former campaign in Afghanistan, a number of military and political wiseacres had again got frightened by this bogey, and this wretched war was the result of their poltroonery. Well, now we have got our "scientific frontier," and it is found to consist in a right to administer the revenues of, and quarter troops in, the district of Sibi, the Kurram Valley, and the Peshin Valley. Of these, Sibi is a small district wholly detached from Afghanistan proper, and surrounded on all sides by British possessions. It has nothing to do with any frontier line, good or bad. The Kurram Valley is a mere *cul-de-sac*, closed in on every side by lofty mountain ranges, and conducting nowhither. For what purpose, scientific or other, we have taken upon ourselves the burden of collecting and administering its revenues it is impossible to divine. This, however, is well known. Among the Indian officials who have been most urgent in their demands for a forward policy in Afghanistan is Dr. Bellew, a well-known traveller and linguist, and a man who is, probably, better acquainted with Afghanistan and its people than any Englishman living. Throughout the late war he has been in the confidence of Lord Lytton and one of his principal advisers. Regarding the acquisition of the Kurram Valley he expresses himself as follows:

"The Kurram Valley would involve the addition of about one hundred and fifty miles of hill-frontage to our border, and would bring us into contact with the independent Orakzais, Zaimukhts, Toris, Cabulkhel, Waziris, and others, against whose hostility and inroads, here as in other parts of the border, we shall have to protect our territory. By its possession, as we are now situated, we should be committed to the defence of a long, narrow strip of land, a perfect *cul-de-sac* in the hills, hemmed in by a number of turbulent robber tribes, who are under no control and acknowledge no authority. In ordinary times its acquisition would add to the serious difficulties of our position. In times of trouble or disturbance on the border its possession would prove a positive source of weakness, a deadweight upon our free action. In it we should run

the risk of being hemmed in by our foes in the overhanging hills around, of being cut off from our communications with the garrison at Kohat, by the Orakzais on one side, by the Waziris on the other. These are the disadvantages of the step. In return, what advantages should we derive? Not one. With Kurram in our possession, we certainly could not flank either the Khybar or the Goleri Pass, because between it and the first intervenes the impassable snowy range of the Sufed Koh, and between it and the other intervenes the vast routeless hilly tract of the Waziris. From Kurram we could neither command Cabul nor Ghazni, because the route to either is by a several days' march over stupendous hills and tortuous defiles, in comparison with which the historical Khybar and Bolan Passes, or even the less widely known Goleri Pass, are as king's highways."

This testimony is decisive. Whatever its advantages, the Kurram Valley has no more reference to a "scientific frontier" than has the district of Sibi. There remains, then, only the Peshin Valley. The "scientific frontier" must be discovered here, or the search for it abandoned altogether. The only line by which an invading army could ever hope to penetrate to India from Central Asia is by way of Herat, Candahar, the Bolan Pass, and across the Sinde Desert to the Indus. There is no difference of opinion as to this. If an invasion is attempted, it must be attempted along this line or not at all. Hitherto the Russophobists have considered that they made out their case if they could establish that along this route there were no physical obstacles sufficient to detain an army. They argued that if it could be demonstrated that an invasion of India was not physically impossible, it ought to be assumed as a certainty that it would be attempted. And what the march of General Stewart to Candahar has, for the second time, demonstrated is, that an invasion of India along this route is physically impossible. Starting from Sukkur on the Indus, the first fifty miles of this line of march extends over a level country which during the rainy season is flooded to a depth of seven feet. From that point up to the hills which form the southern boundary of Afghanistan extends a bare and arid desert. At all times of the year, along this tract of country—about one hundred and forty miles in breadth—there is neither water nor food sufficient for even a few thousand men; while for six months of the year it is traversed by a pestilential hot wind fatal to man and beast. In the former war with Afghanistan, a force of about six or seven hundred native soldiers with fourteen officers made an attempt to cross this desert after the hot wind had begun to blow. In four days, out of the fourteen officers, nine perished, together with one hundred of the native soldiers and three hundred camp-followers. This desert is therefore an absolutely impregnable obstacle between India and any invasion from Central Asia. On the outer margin of the desert, and immediately below the southern Afghan hills, is situated the town of Dadur. The Bolan Pass begins at three miles distance from this, Quetta marks its terminating point at the other extremity, and the intervening space is about seventy miles in extent. Road there is none through the Bolan. The line of march winds along the dry bed of a stream which during the rains is filled from bank to bank with a swiftly-rushing torrent of water, effectually severing all communication between the uplands of Afghanistan and Sinde. There is, moreover, neither food nor forage in the Pass, and an invading army would have to carry all supplies with it; while in the winter the Pass is liable to be swept from end to end with terrible storms of wind and snow. From Quetta on to Candahar the country is open and practicable enough, but supplies sufficient for a large army are not procurable. General Stewart's troops had to be fed almost entirely from India.

Such was the country across which General Stewart had to conduct 14,000 men to Candahar. The difficulties of transport and commissariat were so great that had he met with any opposition it is certain that the attempt to reach Candahar would have failed. As it was, no less than twenty thousand camels perished on the march; and when Candahar was at last occupied, ten thousand men had immediately to be withdrawn to India to preserve them from starvation. The four thousand men who remained at Candahar were literally nailed to the spot on which they were encamped. The want of carriage was such that they could not have moved, in a body, for thirty miles in any direction. A further advance upon Herat, had such been necessary, would have been totally beyond our power. Without any active opposition the mere physical difficulties of the march had been found to be such that all the resources of the Indian Empire had only sufficed to place four thousand men in Candahar, and to leave them there helpless and isolated. The demonstration was complete. If we could not move an army of 14,000 men half way to Herat, it was absurd to suppose that the Russians could move for the whole distance an army sufficient to meet and conquer eighty thousand British troops in an entrenched camp upon the Indus. The revulsion of feeling was as sudden as it was complete. The folly, the madness, of the war was recognized and confessed even by those who had once been most emphatic in demanding it. The natural frontier of India was conclusively shown to be also the "scientific frontier"—and, in truth, a frontier literally impregnable. But having gone to war in order to obtain a "scientific frontier," the Government were compelled to appropriate something and declare *that* to be the "scientific frontier"; and the English nation is consequently required to believe that by the acquisition of the Kurram Valley and the Peshin Valley the Indian frontier has been rendered scientific, and that Lord Beaconsfield to his other claims on popular gratitude has added that of being the saviour of India.

Here, then, are the material results of the war in Afghanistan: We have acquired the right to locate troops in the Kurram Valley, a privilege entailing heavy responsibilities and large expenditure, but destitute of any advantage to us either present or prospective. We have also acquired a similar right with regard to the Peshin Valley. The Peshin Valley lies about midway between Quetta and Candahar, and the troops quartered there will be removed from their base of supply and support by a tract of difficult country nearly three hundred miles in extent. The Sinde desert now lies behind us, instead of being, as heretofore, an insurmountable barrier, guarding the line of the Indus. In return for the concession of these two costly and dangerous privileges we have undertaken to pay Yakub Khan a subsidy of £60,000 a year, and to defend his throne against all foreign aggression. This last is the provision in the treaty of peace which is fraught with such incalculable danger to the Indian Empire. But the length to which this letter has extended compels me to defer the explanation of this for a second letter.

Correspondence.

MR. C. A. COLE AND THE *ART AMATEUR*.

To the Editor of The Nation:

Sir: I hardly know whether to be amused or annoyed at Charles A. Cole's communication to the *Nation* in regard to his connection with the *Art Amateur*. A person not acquainted with him might suppose that he had written one-half of the July number and inspired the other half. As a matter of fact, let me say that he was for the most part employed on simple routine work, chiefly outside of the office, and it was while thus engaged he became acquainted with most of the gentlemen whose names he quotes so glibly as those of his "friends." He failed to give satisfaction, and I had to dispense with his services. But Mr. Cole positively refused to be discharged, and since his dismissal has systematically annoyed me. This in itself would not have been worthy my notice; when he went to the extent, however, of writing to my contributors, telling them to forward to *him personally* their articles for the *Art Amateur*, as if he were still connected with it, and tacitly giving other persons having business relations with the publication to understand that he was in my employ, I found it necessary for my own protection to publish the paragraph to which he takes exception, informing the public that he has no connection whatever with the *Art Amateur*.

Respectfully yours,

Montague Marks.

New York, July 8, 1879.

NATIONAL ELECTIONS.

To the Editor of The Nation:

Sir: In your article on "Politicians and State Rights," in the issue of your paper dated June 26, you say: "Among these principles the one at which Republicans have professed most alarm is, that under our system there can be no such thing as an United States election, but that all elections, those of *President and Representatives* as well as of governors and State legislators, belong exclusively to the State."

Unless I misunderstand you, you put the election of the President and the election of Congressmen on a par, as far as "national elections" go. As I understand the Constitution, the election of Presidential electors is a State election, and the electors are State officers. The Constitution says: "Each State shall appoint [them] in such manner as the legislature thereof shall direct." "Congress may determine the time of choosing the electors," but has no other control over them; they may be elected by the legislature itself or by the State Senate, or be appointed by the Supreme Court of the State. In Massachusetts they are paid by the State, and if the whole number is not chosen in the manner pre-

scribed by statute, then the governor must call the General Court together to choose the rest.

Congressmen, on the contrary, are by no means "State officers"; they are only, and the only, United States officials chosen by the people. Their election must not of necessity be held under and by the State authorities, but "the Congress may at any time by law make or alter such regulations" as now exist, and have their election held under and by its own officers.

Hoping that you will enlighten me with your views on this subject, I remain yours, very truly, SUMNER CHASE CHANDLER.

EQUITABLE BUILDING, BOSTON, July 1, 1879.

[The Democrats maintain the principle that all elections are State elections. *We* have not said that they were, but have said that this doctrine alarmed the Republicans. We also said, or suggested, that the cheating or negligence of the State authorities at the election of Congressmen, against which Republicans have been seeking with such eagerness to provide on utilitarian grounds, was no more dangerous to the Republic than the cheating or negligence of the State authorities in the election of Presidential electors, against which the Republicans held in 1876 that they were solemnly bound not to provide. It must be remembered that in that year they were not asked to take the election of electors out of the hands of the State, but simply to enquire whether it had really been conducted in the manner provided by the Constitution, by State officers, in accordance with State law. Mr. Hoar and Mr. Garfield were then, however, so sensitive about State rights that they held it to be improper even to ask a question as to the authority under which Wells and Anderson and Company acted, or as to the manner in which they discharged their duties.—ED. NATION.]

THE LATE GENERAL TAYLOR'S HISTORICAL ACCURACY.

TO THE EDITOR OF THE NATION:

SIR: Under ordinary circumstances the recent death of an author should, perhaps, in a measure shield him from severe criticism, but when a man puts on record and calls "history" such wild and reckless statements as the late General Richard Taylor has uttered, his writings should not be suffered to pass unchallenged.

Except to the readers of that magazine it is not generally known, probably, that General Taylor preceded his recent extraordinary book (which has been so justly rebuked at all hands) by a series of articles on war subjects in the *North American Review*. These were, most of them, characterized by the same spirit that pervades his book, and seem to have been fired off as "range-finders," as it were, before opening fire with all his guns. It is one of these to which attention is invited in this note.

In the March-April, 1878, number of the magazine referred to, on page 238 *et seq.*, is the third of his papers, entitled "Stonewall Jackson, and the Valley Campaign." The article pretends to give the history of the Shenandoah Valley Campaign of 1862, and particularly that part of it covered by the retreat of the small command of General N. P. Banks before the largely superior force of the rebel army under General Thomas J. Jackson, familiarly known by the sobriquet of "Stonewall."

While by no means endorsing General Taylor's account of this affair, I do not propose now to enter into any general criticism. Facts alone are what I intend to handle, not opinions or beliefs. He says (p. 243):

". . . Jackson had struck the Valley pike at Middletown—twelve miles south of Winchester—along which a large body of Federal cavalry, with many wagons, was hastening north. He attacked at once with his handful of men, overwhelmed resistance, and captured prisoners and wagons."

In general terms this is not a proper, nor even a true, statement of the result of the engagement at Middletown; but let that pass.

He then goes on to say:

". . . The cavalry was from New England—a section in which horsemanship was an unknown art—and some of these centaurs were strapped to their steeds. Ordered to dismount, they explained their condition, and were given time to unbuckle. Many breastplates and other protective devices were seen here, and later at Winchester. We did not know whether the Federals had organized cuirassiers, or were recurring to the customs of Gustavus Adolphus. I saw a poor fellow lying dead on the pike, pierced through breastplate and body by a rifle-ball. . . ."

All this I pronounce absolutely false, even when General Taylor asserts, as he does, that these things are what he himself *saw*.

There was no one, officer or man, in the cavalry of Banks's army, or in any part of Banks's army, who wore at that time or any other time "breastplates and other protective devices," or anything that could, by the remotest probability, possibly give the most careless observer the impression that any such thing was worn or thought of. When General Taylor says he "*saw* a poor fellow lying dead on the pike, pierced through *breastplate* and body by a rifle-ball," he states what he knew to be a deliberate falsehood.

I am quite well aware this is strong language, but so is General Taylor's, and this is a case deserving heroic treatment. That it may be seen I was in position to know, I may say at once that I was present and on duty through this whole campaign as the adjutant-general of Hatch's brigade of cavalry, which comprised *all* the cavalry in Banks's army. It would have been impossible for a single man to have worn a breastplate or anything that looked like a breastplate without my knowledge. The officers and men wore the ordinary uniform which all the rest of the United States forces wore, first and last; and nothing more, nothing less. The troopers of my brigade wore either the ordinary loose blouse or the cavalry jacket of coarse, dark-blue cloth, trimmed around the edges and collar with narrow, yellow worsted lace, light blue pantaloons, and light blue army overcoats, and black rubber talmas or ponchos when the weather required. Every man was armed with an ordinary sabre and one Colt's revolver (cal. .44), and some of the command (I don't think all) had breech-loading carbines of the Sharps or Burnside pattern in addition, nor had they any "protective devices" whatever against the bullets of the enemy but these arms and their own gallantry and valor.

General Taylor says:

". . . The cavalry was from New England—a section in which horsemanship was an unknown art—and some of these centaurs were strapped to their steeds. Ordered to dismount, they explained their condition, and were given time to unbuckle."

Except that three of the nine regiments composing our unusually large brigade were from New England, every word of this is absolute falsehood, without shadow of foundation, and "was cut" by General Taylor "out of whole cloth." No officer or man, no bugler boy even, in the whole command was *ever* "strapped to his steed," at any time, for any purpose whatever. Every man sat and rode in his saddle, and mounted and dismounted as occasion required, much as other people do, and quite as well, no doubt, as did General Taylor or any of the other numerous rebels in arms, who to this day have very lively recollections of "Hatch's Cavalry." Any man to-day who served in 1862 in the cavalry opposed to us, commanded by that gallant rebel leader, Colonel Ashby (who was himself killed in a fight with our brigade), will agree with me in saying that the sharp chases we sometimes gave them, as they, in turn, gave us, were not made by men to whom "horsemanship was an unknown art." It is undeniable that our cavalry in 1862 was not so effective as that arm of service afterward proved itself (nor was any other part of the army for that matter), but defective horsemanship was no part of our deficiencies. People in the North certainly do not ride horseback as universally as they do South, and for the good reason that as we here are half a century in advance of most of that region in civilization, as a consequence among other things we have good carriage roads everywhere where we haven't steam transportation, so that horseback riding, save as a recreation, is unnecessary. Still, out of the cities, and particularly among the farmers, the men and boys are all familiar with horses, and as much at home on their backs as any Southerner. All the regiments of our cavalry brigade but *one* were country organizations, and the whole command had been well drilled in riding as well as in other matters before taking the field at all. The single city regiment, the Fifth New York Cavalry, was, singularly enough, an exceptionally fine and effective cavalry regiment. Nor am I sure that all of the troopers were city men. My impression is that several of the companies were from the country round about New York City.

To show what utter nonsense this is of General Taylor's, at the risk of tediousness I give the list of the organizations composing our brigade, by which any one may judge, from whence the men came, whether they were people likely to be found "strapped to their steeds":

Fifth New York Cavalry, commanded by Colonel O. De Forest; First Vermont Cavalry, commanded by Colonel Chas. H. Tompkins; First Michigan Cavalry, commanded by Colonel Brodhead; First Maine Cavalry, commanded by Lieutenant-Colonel Doty; First Rhode Island Cavalry, commanded by Colonel Lawton; First Virginia Cavalry, commanded by ——, and composed of loyal West Virginians; First Maryland Cavalry, commanded by ——, and composed of loyal Marylanders; First Battalion "Potomac Home Brigade Cavalry," recruited along the

banks of the Potomac, besides the Eighth New York Cavalry, which at that time had not received its mount, and hence took no part in the campaign.

The whole was commanded by Brigadier-General John P. Hatch, United States Volunteers, at that time a captain in the Mounted Rifles (now the Third United States Cavalry) and at present the lieutenant-colonel of the Fourth United States Cavalry, who since 1845 has been a distinguished cavalry officer in the regular army of the United States.

Colonel Brodhead was killed at the head of his regiment at the second battle of Bull Run; Colonel Lawton and Colonel De Forest have died since the war; Colonel Doty, I understand, is still living, and Colonel Tompkins is now a lieutenant-colonel and one of the deputy quartermaster-generals of the Army. The other colonels I have forgotten entirely, even their very names, it is so long ago, but these surviving commanders of the troops, together with General Hatch, will, I have no doubt, corroborate all I have said.

I look upon this matter as an unwarranted attack upon the soldierly honor and military character of this gallant brigade, and I have taken the trouble to write this not for the purpose, in turn, of assailing the memory of General Taylor, but rather because duty to my comrades requires that *truth* should be substituted on the record for what I cannot but regard as malicious and silly falsehood. Others may not attach to this the importance I do, or would, at least, pass it by in contempt. But the exposure of these falsehoods of General Taylor's at this late day is in one sense timely, since it serves to brand with suspicion every statement he makes in his recent astonishing book entitled 'Destruction and Reconstruction: Personal Experiences of the Late War.'

It is to be presumed, were General Taylor still living, he would attempt proof of the statements quoted, since he was at such pains to give them utterance. It would, however, be interesting to know if any of his fellow-rebels now living who were with him in the Valley campaign of 1862 also saw any Yankee cavalrymen, dead or alive, in "breastplates or other protective devices," or any Yankee cavalrymen "strapped to their steeds."

In common with other reasonable people I entertain the highest respect personally for all the gallant soldiers of the South who sternly followed what *they* believed to be the right. As a rule they have, like true soldiers, accepted their defeat, conquered though not convinced. General Taylor would also have proved himself a true soldier had he quietly followed the meritorious example of his comrades-in-arms.

Respectfully yours, J. A. Judson,
late Capt. and Asst. Adjt.-Gen. U. S. Vols.

Newport, R. I., June 24, 1879.

[We print the above, with the exception of one phrase, as the writer sends it, but we must say that, considering that General Taylor's article in the *North American Review* appeared a year before his death, some of the severity of language expended on it would have been more appropriate at an earlier date. The statements criticised struck us at the time as extraordinary, and we have never been able to understand why none of the many surviving officers and soldiers who know them to be untrue has come forward before now to contradict them.—Ed. Nation.]

Notes.

DIXON & SHEPARD, publishers of the Chicago *Alliance*, will shortly issue 'In the Toils,' a romance of Mormonism.——A. Williams & Co., Boston, have ready 'Summer Vacations at Moosehead Lake and Vicinity,' a tourists' guide-book, edited, with illustrations and map, by Lucius L. Hubbard.——'Appleton's General Guide to the United States and Canada' is so far without a rival that it might have been less well edited than it is and still have been indispensable to tourists dependent upon guide-books of equal scope. It is a conveniently bound 12mo, of some five hundred pages, elaborately indexed, and modelled upon the Baedeker hand-books. Its standpoint is very properly that of the traveller and not that of the statistician, and in the ordinarily irreconcilable elements of conciseness and completeness it is unusually successful. It is copiously illustrated with maps and woodcuts of noteworthy places and objects, and is especially arranged for the use of European travellers and others, to whom the smallest details are useful so long as they are practical.——No. 10 of the *Pennsylvania Magazine of History and Biography* deserves mention for an excellent article on General Henry Bouquet, prefacing some hitherto unpublished letters of his to a young lady of Philadelphia. These, if they do not add much to the meagre details of his personal history, confirm his reputation for amiability and reveal a thoughtful and philosophic mind. His correspondent's desire to charm him back to civil life extorts from him a rational defence of war, and some uncomplimentary remarks on Pennsylvania society. Mr. George H. Fisher, who edits the letters, shows that society was then in a transition state, owing to the necessary withdrawal of the Quakers from the government of a commonwealth which their principles unfitted them to maintain.——Miss K. M. Rowland, 225 Fremont Street, Baltimore, will receive subscriptions to a proposed collection of poems by the late Dr. Frank O. Ticknor, of Georgia. A third of the eighty or ninety poems in the volume were written in war-time, but ought not, it is said, to give offence to Northern readers. J. B. Lippincott & Co. will be the publishers.——The Concord (Mass.) "Summer School for instruction by conference and conversation in literature and the higher philosophy" will reopen on July 15, at the Orchard House of Mr. Alcott, and continue for five weeks. All the course tickets have been taken, but single tickets can be procured at any time. Mr. F. B. Sanborn, Concord, is the Secretary of the Faculty.——Some recent English announcements are: the fourth volume of Kinglake's 'History of the Invasion of the Crimea'; 'Europe and Asia: Discussion of the Eastern Question in Travels throughout Independent, Turkish, and Austrian Illyria,' by Mr. Stuart-Glennie; 'Rotamia and British Guiana, with a Glance at Bermuda, the West Indies, and the Spanish Main,' by J. W. Boddam-Whetham; 'The Life and Work of Mary Carpenter,' by the Rev. J. E. Carpenter; and 'The Music of the Bible,' with an account of the development of modern musical instruments from ancient types, by Dr. John Stainer.——A Berlin bookseller has made a list of translations from the German published during the previous four months in countries between which and Germany there is no copyright treaty. Altogether, 108 translations have been issued, the Netherlands having published 38, the United States 23, Russia 18, Scandinavia 17, Spain 11. As regards the character of the works translated, 30 belonged to the department of belles-lettres, 14 to medicine, 11 to theology, 8 to natural science, 9 to juvenile literature, 6 to the stage, 3 to pedagogics, 2 to law.

—Harper & Bros. have published the 'Annual Record of Science and Industry' for the past year, 1878. According to the later plan of its editor, Professor Baird, it consists of general reviews in the respective domains of astronomy, physics, geology, agriculture, technology, etc., by well-known American scientists, to all the information in which an index gives ready access. Comparing it with Louis Figuier's 'L'Année Scientifique et Industrielle' (New York: F. W. Christern), its greater fulness is apparent, at the same time that the French work is a by no means superfluous addition to the scientific library. Thus, even in the matter of the New York elevated railroads, M. Figuier goes much more into details of construction and operation than does the *Record*, intended primarily for American readers, and, again, M. Figuier gives a minute account of a Pennsylvania cyclone from which one of his countrymen (M. Faye) deduces conclusions which alone find their place in the *Record*. In the one volume we find Alluard's observations on temperature, in the other, on atmospheric pressure, at different altitudes. M. Figuier has nothing about anthropology, and his natural history is a poor substitute for the *Record's* zoölogy and botany, but he gives a section to medicine and physiology, and a special account of the Paris Exposition, with a useful plan. His annual lacks the bibliography which is so important a part of Prof. Baird's. His necrology is also much more meagre numerically, but it contains many French names not likely to be known outside of the country and not found in the *Record*, and the lives are much more elaborate. This department of the *Record* is least well executed. It omits Claude Bernard, Robert von Meyer, and Aug. Petermann, to mention no others; while misspelling occurs too frequently, reaching its climax in "Hoffner" for "Hoefer," and "Seine-et-Pise" for "Seine-et-Oise."

—The Third Library Convention has been the most successful of all. The weather was perfect, the attendance large, the papers interesting, and the social gatherings unceremonious and cordial. The fault of this, even more than of the London Conference, was that the papers were too many and too long, and that there was not enough discussion. The Convention took no action, decided nothing, and the general impression left on the mind of the listener was that there are two sides to everything; that it is not so easy to decide just what is best to be done in regard either

to the building or the catalogue or the book-supply. Whether one shall build on one floor only, with the disadvantages of high ground-rent and wide dispersion of the books—the latter evil to be remedied by telephones and railways—or whether lofty buildings shall separate the books vertically, with a remedy and an expense in elevators, is not yet settled. Housekeepers know the advantage of a single story; but a lot 200 by 800 feet is not readily obtained in the centre of a city rich enough to need a large library. The expense of foundation and roof increase in almost exact proportion to the superficial extent of the building; and there is no compensation in any diminished cost for the side-walls. No doubt the Providence Depot would be better than Bunker Hill Monument for a library, but in this matter, as in regard to fiction, a middle course would have got the most votes if the librarians had voted.

—The second day was the most interesting and the most profitable. The great fiction question was not left, as it might have been, just where it was before. Three ideas—only one of them absolutely new, to be sure—were brought forward with unusual force. It was urged by Mr. Adams that a city has no right to use the tax-payers' money to furnish mere amusement. It might have been replied that it has as much right to provide entertainment throughout the year as on the Fourth of July. But it must be confessed that we are coming here dangerously near the *panem et circenses*. Another argument of the advocates of fiction—that it is an assistant of the police, and keeps the people from the street-corners and from grog-shops—if pushed hard, leads to the municipal establishment of coffee-rooms and Holly-Tree Inns. Mr. Adams would exclude all fiction that is not educational, leaving the rest to the circulating libraries, so that the public libraries should contain only standard literature ; a course which he confessed would reduce their circulation one-half. He might have added that in some communities it would breed an unpopularity for the libraries that would reduce one-half the means at their command for the purchase of the standard literature. Mr. Adams's forcible views will hardly prevail, but they may support the more moderate suggestions of Mr. Green, that the quantity of fiction be gradually diminished with a view of substituting better reading, and his original proposal that fiction branch-libraries be established in quarters of the city which cannot yet bear a very high standard, the main library and the branches in better neighborhoods being left comparatively unprovided with light literature. The third noteworthy idea was Miss Bean's, that school children should not be allowed to take out more than one novel or story a week. The evils of the present unlimited reading of stories by children are very great. The mischief done by sensational stories in diverting their thoughts entirely from their school studies, and occasionally—very seldom—sending a boy to sea, or off on a tramp, or inducing him to join a band of juvenile pirates with their headquarters in a lumber-pile, have been sufficiently insisted upon. Quite as much harm is done, to girls especially, by the reading of unsensational, idealess trash, and of what a clergyman lately complained of as "silly pious stories." It is a favorite idea that the young novel-reader is going to develop into the lover of sound and improving books. But children who skim a volume of this milk-and-water every day and remember nothing of it the next, are sedulously cultivating non-attention and non-retention to an extent that is more likely permanently to incapacitate them for anything better than a newspaper. It is a serious question for educators, because the process is going on by wholesale. Miss Bean's remedy would be more promising if it were not certain that the children would club together and lend one another the books they borrow, and so get their daily dissipation as easily as now. The true remedy would lie in parental oversight if parents were not themselves offenders. There is, in fact, no single remedy.

—An article entitled "The Flooding of the Sahara," in the July *Scribner's*, lends currency to errors which are worth, perhaps, the pains necessary to expose them. The French engineers do not propose "to flood the great desert with the waters of the Mediterranean," but simply the submersion of what is known as the region of the *shotts*. This is an extensive valley, with isolated areas below the sea-level, enclosed by two mountain ranges, extending eastward through the southern parts of Algeria and Tunis, and believed to be a part of the great Atlas range. The west end of the valley, where the two ranges separate, is near the intersection of the meridian of Paris with the 34th parallel of latitude. The southern range forms an effective barrier between the Sahara and the region of the shotts. The number, the width, and the depth of the river-beds that descend from the *south* to the region of the shotts prove that the watershed on that side is very extensive, and the formation of these beds indicates that the sources of the rivers are far distant from their mouths and their courses not those of torrents. The reverse of this is observed on the north side of the shotts, where the southern slopes of the mountain range are precipitous and the water-shed towards the Mediterranean, with all its beds now dry. Everything, therefore, confirms the well-founded opinion that flooding the Sahara by admitting water into the shotts is not only "visionary and impracticable" but impossible. The writer informs us that "at a meeting of the French Academy of Sciences, held December 9, 1878, M. de Lesseps gave an account of his visit to Tunis in company with Captain Roudaire and his expedition. The exploring party arrived in the Gulf of Gabes in the latter part of November of the same year. *The tidal rise and fall was ascertained to amount to two and a half metres in the gulf*, while the average tidal variation of the Mediterranean is only three-tenths of a metre." The italics are ours. The observations of Captain, now Admiral, Mouchez in 1876, during his admirable survey of Gabes Gulf, prove conclusively that its maximum rise and fall, or greatest difference between the high and low-water levels, is one metre and four-tenths. The result agrees with that derived from the observations made by British surveyors in the early part of this century, and also with those made since Mouchez's survey by competent officers. Tidal observations do not require genius, and therefore it is justifiable to accept, as correct, results which differ from those obtained by M. de Lesseps and his party.

—The writer continues :

"Midway between the extreme limits of the Gulf of Gabes is the mouth of the Melah, a small river selected by Captain Roudaire to permit the flow of the water into the shotts. The tide ascends this river for several kilometres, retiring with such force that, at a distance of 500 metres from the shore, opposite the river's mouth, it has scoured out a channel forty fathoms deep."

The river Melah is really the dry bed of what was once a stream. Mouchez's chart, Roudaire's report, and other equally good authorities give it a course of about three miles ; and from Roudaire's map we find that at its source the ridge has an elevation of fourteen metres. The mean fall is, therefore, about two and four-tenths metres per kilometre. How is it possible for a tide that only rises one and four-tenths metres to ascend this river *several* kilometres? Perhaps we are indebted to M. de Lesseps for adding to the many brilliant achievements of his busy life the discovery of a novel tidal phenomenon or natural law that will enable him to cut ship-canals and flood deserts until everything is either an island or an ocean. The influence of the Suez Canal has been felt in many ways, and it may be that this influence has extended even to natural laws governing the action of fluids. But the most extraordinary feature of this wonderful tidal phenomenon is the "retiring with such force that at a distance of 500 metres from the shore, opposite the river's mouth, it has scoured out a channel forty fathoms deep." The discovery of this hitherto unknown force stored up in an ebb tide may lead to important results. Before accepting the statement as strictly exact it would be well to examine the charts of Gabes Gulf made from different surveys, and especially those from Mouchez's survey in 1876. Such an examination will prove conclusively that at 500 metres from any spot on the shore of Gabes Gulf the greatest depth is seven metres or *four* fathoms ; and that a depth of forty fathoms (seventy-three metres) is not found anywhere in Gabes Gulf, nor within a radius of ninety miles from the mouth of the river Melah, opposite to which a bank of rock and gravel extends off two miles from the beach, where the depth is about three fathoms. We are told, finally, that "MM. de Lesseps and Roudaire ascended the river Melah a distance of fifteen kilometres," but their mode of ascent is thoughtlessly omitted. It would be interesting to know whether they ascended in a boat floated up an incline with the wonderful tide of the region, or whether they rode or walked along the dry bed. It was very thoughtless, too, of the chemist to have too many parts in his analysis of the "compressed sand" taken from the banks of the river, for even M. de Lesseps cannot make us believe that 109.9 = 99. In Number 694 of the *Nation* (Oct. 17, 1878) the report of Captain Roudaire was convincingly reviewed, and to this we refer our readers for information about the shotts. It should be understood that faith in M. de Lesseps, and the desire of the French to create a water-way through their favorite colony and effect some amelioration in its climate, are not the only reasons for the persistent pushing of the scheme of flooding the shotts, in spite of conclusive proof that it is impracticable. The strongest argument presented in its favor is that, the shotts once flooded, the valley would become the most productive cotton region in the world. Cheaper labor and transport to the markets of Europe would enable the producers

of North Africa to undersell those of America, who would be driven out of the European markets.

—A subscriber writes us from St. Louis as follows:

"The *Nation* has exposed the mischievous attempts at tying the hands of Government in the matter of election supervision and of control by the United States courts of inter-State questions. Perhaps, in that connection, the *Nation* may make good use of the opinion of that good Democrat, Jefferson, who advocated the organization of a navy for the immediate purpose of punishing the piratical Barbary States, and the ultimate purpose of 'arming the federal head with the safest of all the instruments of coercion over its delinquent members.' Of course at that time a naval force was sufficient, as the coast was the line of densest population; also, transportation by sea was doubtless more expeditious. The extract is from 'Memoir, Correspondence, etc., from the Papers of Thomas Jefferson,' edited by Thomas Jefferson Randolph, 1829 (vol. ii. p. 37, Letter to John Adams). Vol. i. p. 47 sets forth Jefferson's views as to the proper mode and spirit of discussion in Congress which might instruct our 'statesmen' of the day. I give but one of the many golden sentences, and it is really more questionable than may at first be thought, whether Bonaparte's dumb legislature, which said nothing and did much, may not be preferable to one which talks much and does nothing."

—In No. 618 of the *Nation* we noticed the first number of the *Rivista di Letteratura Popolare*, conducted by G. Pitrè and F. Sabatini. Since then the first volume has been completed by the issue of three more numbers, the last of which has recently appeared. The most valuable articles in the new periodical are those devoted to popular songs. One of the editors contributes three articles on the popular songs of Rome, and A. Gianandrea completes his work, 'Canti popolari marchigiani' (Turin: Loescher, 1875), by three articles on the songs and games of the children of the same locality. The curious class of songs peculiar to prisons is illustrated by some from Calabria, collected by A. Lumini. From beyond Italy are 'Chants populaires du Pays Messin,' contributed by Th. Puymaigre, and serving to supplement his well-known work (Metz, 1865). Next in value are the popular tales represented by stories from Tuscany and Bergamo, including a Tuscan variant of Tom Thumb. Connected with the same subject are articles by Th. Braga, 'Litteratura dos contos populares portuguezes,' and by R. Köhler, 'Das Räthselmärchen von dem ermordeten Geliebten.' Other important articles are F. Liebrecht's 'Croyances et superstitions populaires norvégiennes' and C. Mayreder's 'Die polyglotte Sprichwörterliteratur.' The department of customs and usages is weak, being represented by two articles only. The value of the *Rivista* is further increased by its reviews, contents of periodicals and announcements. We trust that its first year has been successful enough to ensure its continuance.

GAIRDNER'S RICHARD III.*

II.

THE usurpation entailed, almost inevitably, another act for which only the most thorough-going positivism could find a plea. By the fundamental law of the monarchy Richard, when his title had been recognized by Parliament and he had been duly crowned by the representatives of the Church, became king, just as the claimant of an ordinary estate became the legal owner when his title had been recognized by a court of law, though all the world might be convinced that his claim was morally unjust. When Richard, on his progress to the North, visited Oxford and lodged in Magdalen College, Bishop Waynflete, the founder of the college, a saintly man, who had been the chancellor of Henry VI., came up expressly to do honor to his sovereign, creating thereby a precedent which the Nonjurors of later days might have found as much to the purpose as that of the Thundering Legion. But a rival claim, while unextinguished, was sure to breed rebellion, especially a claim so manifestly valid as that which Richard and the Parliament under his influence had thrust aside. Henry IV., though by no means a man of blood, had not ventured to let Richard II. live, and the same fear had impelled the heads of the house of York to the assassination of the discrowned Henry VI., though he was imbecile and childless, while his party had sunk into utter ruin. In the reign of Charles II. the skeletons of two young lads, corresponding in appearance to the ages of the two princes, were found buried beneath a heap of stones under the staircase leading to the chapel of the White Tower, the place of sepulture indicated in the confession of the reputed murderers. If any one is still sceptical enough to doubt that these were the skeletons of the two nephews of Richard III., murdered by order of their uncle, a perusal of Mr. Gairdner's pages on the subject will probably set his doubts at rest. Some of the objections to the current story, as Mr. Gairdner shows, are based on the assumption that Richard was extraordinarily cold-blooded and unimpulsive, whereas he seems to have been liable to transports of passion, and his end at Bosworth was that of a Berserker. The fact appears to be that at Warwick, on his Northern tour, he became alarmed and exasperated by the conspiracies which were hatching against him with the special object of liberating the princes; and, perhaps without reflecting very carefully on the consequences, despatched Sir James Tyrell on the fatal errand. If he exercised forecast, his judgment was miserably at fault; for the murder, as soon as it was known, kindled the most violent indignation throughout the country, caused the smouldering fires of disaffection at once to burst out at all points, and was the principal cause of the murderer's overthrow. Hardened as that generation was in all ordinary crime, carelessly as it would have viewed the erection of a hundred scaffolds by ambition or revenge, and even a hundred assassinations of the common type, regard for the tie of blood and the pity due to helpless innocence still found access to its heart. Perhaps Richard was to some extent the victim of an *idolon specus;* he mistook the moral condition of the class immediately around him for that of the nation at large. The princes and nobles who actually took part in the long train of mutual conspiracies, murders, and confiscations had, no doubt, become thoroughly depraved. It is evident that the wavering of the Stanleys, for instance, between the standard of Richard and that of his rival, arose entirely from a policy in which morality had no part. But the mass of the people, who had merely followed their feudal superiors to the field, thereby keeping the allegiance which was their political morality, were probably in a more normal state, and less ready to condone a crime against which nature appealed in every peasant's breast.

The story of Perkin Warbeck, even if it were true, would not acquit Richard of the murder; it would only show that one of his victims had escaped. But the story of Perkin Warbeck was not true, as we are more than ever convinced after seeing the facts once more set forth by Mr. Gairdner with a little additional light from the Spanish and Venetian archives. In such an age as the fifteenth century the secret murder of a royal personage with a title to a throne was certain to be followed by the appearance of a personator. Even in our time if the body of "Napoleon IV.," instead of being recovered from the Zulus, had been lost in the bush, we should be prepared for a claimant, who, even if he were of the size of an elephant, with no more education than a butcher and unable to speak French, would, as we see from the Tichborne case, find plenty of dupes. Henry VII. had enemies enough ready to embrace any means of shaking his throne. The policy of courts was dark, and in that of Scotland, where Perkin's story found most credence, the hatred of England was so intense that no imposture would have been too gross if it could have furnished an instrument for giving her trouble. But evidence of Perkin's identity with the Duke of York there is none. The Duchess of Burgundy, to put the case in the mildest form, was biassed both by interest and feeling in the highest degree; she was ready to countenance Lambert Simnel as well as Perkin Warbeck. Moreover, it appears that she could only have seen the Duke of York once, when he was six years old. At that time she had paid a visit to her brother, Edward IV., but with this exception she had been, when Warbeck came upon the scene, resident on the Continent for twenty-five years. The sagacious Ferdinand of Spain came ultimately to the conclusion that the story was "a jest." Henry VII. himself, not less sagacious than Ferdinand, and well served in the department of secret intelligence, was evidently satisfied that he had succeeded in identifying the Pretender with the son of John Warbeck or Osbeck, a citizen of Tournay, and of Katherine, his wife. His treatment of the prisoner is entirely in accordance with that belief. Full details of the Pretender's parentage and early life were given in his confession. Copies of a letter written by Perkin in prison to his mother have also been found in the archives of Tournay and Courtray. The confession may have been dictated, and the letter, supposing it to be authentic, as Mr. Gairdner believes it to be, seems to us not free from the same suspicion. But in publishing such details the king must have appealed to the knowledge of a multitude of living persons, in face of enemies able and more than willing to expose a fabrication.

One more count of the long indictment against Richard remains, and it is the most revolting of all. He has been accused of poisoning his wife to make way for his marriage with the Princess Elizabeth, whom, by the murder of her two brothers, he had made the heiress of the House of York, and whose hand it was a vital object of his policy to prevent his

* 'History of the Life and Reign of Richard the Third. To which is added The Story of Perkin Warbeck, from original documents. By James Gairdner, Author of 'The Houses of Lancaster and York,' Editor of 'The Paston Letters,' etc.' London: Longmans.

rival, Richmond, from obtaining. At Christmas the king, triumphant for the time over his enemies, gave a splendid ball at court, and it was noted as ominous that Elizabeth danced in a dress of the same shape and color as that of the queen. People asked whether it was intended that she should be queen indeed. On the 16th of March the queen died. There seems to be no doubt that the king then thought of marrying his niece, but was dissuaded by his principal adherents, who saw that the incestuous marriage would give the greatest offence in itself, and would be taken as a confirmation of the charge of murder. That Queen Anne had died by poison was, however, mere surmise, and perhaps the eclipse which took place on the day of her death was as much the ground of the dreadful rumor as anything else. The queen dowager appears to have favored the marriage of her daughter with Richard. Hence it is inferred that she could not have supposed that Richard had murdered her sons. But what did she think had become of them? If she believed them to be alive, why did she carry that secret with her to her grave? Her conduct, and there is some reason for adding that of her daughter also, in this disgusting affair was simply a proof of the extraordinary demoralization which has been already noticed as prevailing among her class. Queen Anne herself was Warwick's daughter and the affianced wife of the prince whom Richard was believed to have stabbed at Tewksbury. Marriage was a matter not of affection but of policy, and followed the turns of policy, whatever they might be.

"Was ever woman in this humor woo'd?
Was ever woman in this humor won?"

So Richard is made to exclaim at the close of the scene in which he woos and wins the daughter of Warwick. But of wooing there was very little in any of these cases. The purchaser of a wealthy or highly-connected wife paid his addresses to the vender, not to the article which he wished to buy.

Descriptions of the tyrant's personal appearance penned by his enemies after his fall were naturally not flattering. In his countenance, it is certain, nature had not effectually warned the beholder, for he was able to fascinate a good many people, and some who might have been supposed to be little susceptible of his fascinations. His portraits, which are pretty well authenticated, represent intellect of no mean or vulgar kind, with a strong shade of what, knowing his history, we call severity, but if we did not know his history we might call sadness. We need not expect to find in the face of a cruel and unscrupulous politician the glare of savage wickedness for which we should look in the face of a man-eating tiger, such as Eccelino or Ivan the Terrible. It may be taken as certain that Richard's fiery spirit was enclosed in a puny frame. But the hump which Lancastrian prejudice raised upon his back has gradually subsided under the treatment of impartial criticism into a slight inequality between the shoulders. He had certainly no bodily defect which could prevent him from fighting like a demon.

The record of Richard's government, both administrative and legislative, is undeniably good. But we must remember that during his brief reign he was compelled assiduously to court popularity in order to win support for his tottering throne. We cannot tell what he would have been had fortune at Bosworth made him securely master of the kingdom. No doubt, on the morrow of the victory there would have been plenty of work for the headsman. Those who care to ponder over the unfulfilled contingencies of history may speculate on the line which a king of the popular house of York, and one greatly in need of money, would have been likely to take with regard to the new religious opinions and the property of the Church. But the prolongation of Richard's reign could hardly have made any material difference in the course of political events, because it could not have altered the main elements of the political situation. The feudal aristocracy had been decimated and ruined by the civil war. The middle class was not yet in a condition to aspire to political power. The monarchy stood alone, and, whatever the dynasty might be, a period of personal government was sure to ensue. It had, indeed, already commenced. Autocracy and its curious attendant, etiquette, were as fully developed under Edward IV. as under any one of the Tudors, though the series of dynastic revolutions was not exhausted till the factions were united and their feud brought to a close in the person of Henry VII.

RECENT NOVELS.*

'LES FRÈRES ZEMGANNO' is a peculiar and interesting book, in which the realistic method is appropriately and effectively employed. It is a monograph of a carefully limited subject, and the reader moves contentedly within limits so exclusive that one half forgets the outside world, and looks at life for a moment from the *saltimbanque* point of view. The opening chapters describe a migratory troupe of wrestlers, dancers, and jugglers—travelling in wagons; stopping to-day where the director thinks fit; setting up the scaffolding, pitching the tent, and giving an exhibition of their faculties, and to-morrow off for fresh ground.

"One day the troupe encamped in a steep-sided road in Berry; another day it had halted at the foot of a Calvary in Anjou; next they were picking up chestnuts in a chestnut forest in Limousin; then pushing their wagons up a steep road in Franche-Comté; and now travelling in Languedoc during the vintage, where the white oxen were crowned with vine-leaves. . . . This fashion of life gave them always a free space before them and the purest light of heaven around them; fresh air to breathe, scented with hay and sweet-brier, and the daily beauty of dawn and of twilight. They ate by the side of the hedge, they drank of the freshest springs, they rested on the wide-spread grass with the birds singing over their heads."

This is the pastoral prelude which introduces us to a world of acrobats, spring-boards, sawdust, and trapezes. Stepanida, the gipsy wife of Tommaso Bescapé, the director of the troupe, is a powerful sketch, and there is effective contrast between her half-savage passion for her youngest child, Nello, and the boy's joyous, petted existence. Tommaso and Stepanida die, so the troupe breaks up, and the two brothers, Nello and Gianni, begin their independent lives together. They are devotedly attached to each other, but Gianni is a silent enthusiast and Nello of the enjoying, unambitious temperament. It is hardly worth while to tell the whole story, and M. de Goncourt lacks *vraisemblance* in his description of one character; but we lay down the book with a sense of enlarged sympathies, and a hearty desire that M. de Goncourt's "system" might always find subjects as fit, and as much of the imaginative be mingled with his pitiless method.

Mr. Sturgis has given us in 'An Accomplished Gentleman' a story which makes rather more of a claim than his first book, and yet which hardly has the charm of 'John-a-Dreams.' It is ironical—always—except for a few pages, and the deepest touch of irony, perhaps, lies in the fact that all the important events in the story, the material of the plot, are brought about by the absurdities or the selfishness of his characters. A love-story gleams through the book like the old simile of a golden thread in a dark tapestry, the rest of woof and warp being not so much gloomy as factitious and a touch fantastical. The author is, perhaps, trying the different strings of his instrument, and by and by we shall have the full harmony; and it would be very unfair not to acknowledge the delicate, if somewhat cool and scientific, analysis of that stratum of character which he elects to represent in 'An Accomplished Gentleman.' We take it to be Mr. Hugo Deane who is personified in the title, a man who is essentially a fiction, without the gifts which alone might be thought to justify his assumptions, lying like a mildew on the lives of his family, and utilizing his wife's devotion as he would so many yards of list to quiet a noisy door. The description of his gentlemanly person and the luxurious comfort which at last surrounds him, through the admiration of a foolish woman, leaves a sort of dull ache in the reader's mind, which instinctively requires some retribution for him.

Mr. Sturgis may fairly say that he does not propose to redress the balance of eternal justice, and that since such people inhabit the world it is his vocation to describe them; but the number of lives like Mr. Deane's lived to the end without the retribution of consequences are few and exceptional, perhaps too exceptional to be a fit subject for art on a small scale. The scene of the story is laid in Venice, and the descriptions of the town and its sea and sky are charming; sunshine and moonlight illumine the pages, and there is the light touch of the man who, however strong his sensations may be, dreads above all things to be "heavy in hand." There is a piratical countess, a stout female devotee of art, a boyish, knowing young British peer, a foolish society man for whose marriage we predict no good, and then an enchanted island, a youthful divinity and a gallant wooer, whose failure (not with his divinity) works to his greater good, a friendly friend and a maestro full of good intent; these last and the Venetian setting make the charm of the book. There are many felicities of phrase, as when we hear of Mr. Bonamy Playdell "throwing back his coat and, as it were, baring his waistcoat to the breeze"; and some too elaborate similes, one of which tells us of a breeze on the Lido which "comes cheery and debonair as a courtier of Elizabeth"; also, when the author gets tired of his countess he drops her rather suddenly. Whatever criticisms we make

* 'Les Frères Zemganno. Par Edmond de Goncourt.' Paris: Charpentier; New York: F. W. Christern.

'An Accomplished Gentleman. By Julian Sturgis.' (Handy Volume Series.) New York: D. Appleton & Co.

on the book are, in fact, indications that we believe the author is preluding and running over the strings, and that with a little searching he will find his true note.

'Just One Day' is a lively little book, which will appeal to many mammas who, like the heroine of the book, persist in the attempt to combine fashionable dress, expensive housekeeping, social activity, and devotion to their husbands with the almost entire care of four unruly young children, with ungoverned tempers and tongues, and no training to good habits. We have no doubt that this story gives a true picture of the struggle to reconcile the incompatible and achieve the impossible in which it pleases large numbers of American women to waste their lives. The author is far from any active moralizing; perhaps she thinks that such futile incoherence "to be hated needs but to be seen." "So mote it be!"—but, on the contrary, we apprehend there will be room for a second volume in which political muddles and excitements will be added to the restless hurry of many Mrs. Mayburns' lives.

There can be no need of saying any word more concerning Mrs. Burnett's earlier stories, of which two are just published. "Miss Crespigny" is quite unnatural, but both that and "Theo" can be easily read and composedly flung away when finished.

Henry Gréville's stories follow one another so rapidly that the author's fertility becomes one of her most marked traits. 'Dosia,' 'Markof,' and 'Dournof' are all Russian stories with a certain amount of local color, but not dyed in grain. Of the three 'Dosia' is the liveliest and 'Markof' the most interesting. One would call 'Markof' a very clever story did it not leave on the mental palate a final flavor as of a *purée* of many French novels. This makes the earlier part of the story, which describes the hero's youth in a little Russian hamlet and his father's house, much the best. One gets side-lights as to the rural priesthood, and of the chances which mitigate the absolutism of the Seigneur. 'Dournof' gives us the biography of a rather weak-minded young man, who succeeds better in his worldly ambitions than in his matrimonial ventures, and who, finally, finding his home intolerable, kills himself on his first wife's tomb. Mme. Durant has some excellent qualifications for her work. She is a very good story-teller; the plot moves on with no hitch or pause, her personages talk and act with fluency, there are no troublesome insertions of philosophy or metaphysics, and she has the advantage of telling us something of a little-known country and society; but, with all due recognition of her good gifts, one may grow quite tired of various and vivacious action in a stratum about an inch deep.

'The Abbé's Temptation' is a specimen of M. Zola's powerful method, and also of its indiscriminate use. He describes the half child-like, half saint-like life of a lonely country priest, his devotion, his simplicity, and his *selfless* innocence. The author shows us the wide landscape, the homely vicarage, the wild bloom of wayside flowers, the dilapidated church, and with the same vivid detail gives the growth of a forbidden love and the stirrings of physical passion. The power of truth, the force of genius, run through it all, but since it has pleased Providence (or whatever represents that notion to M. Zola) to cover the human body with a non-transparent skin, is it art or is it surgery to expose the bleeding, quivering nerves and fibres of our lower mental organization? The exposure, the vivid presentation of social evils may lead to their cure, since "of knowledge cometh sympathy, and of sympathy help"; but to work among those less honorable portions of human nature which undoubtedly exist, brings the writer into close correlation with the Jesuit director.

'Rudder Grange' is an amusing extravaganza giving the adventures of a young couple in search of a house. High prices and poor accommodation send them to housekeeping in an old canal-boat. Hence the title. They finally settle in the country after many amusing adventures, the story of which is quite amusing, not too violently extravagant, and not vulgar at all.

In Mrs. Forrester's world all men, married or single, flirt and gamble; most of them swear at women who are certainly foolish, ignorant, and *exigeantes*. Fascinating scamps of both sexes pervade the best society and are received by the most careful hostesses. There is a great deal of promiscuous kissing, many fine clothes, and a general sense that in respectable households the wife is the victim and the husband an unrestrained *vaurien*, while in the less decorous the wife retaliates in kind, and that nothing better is to be looked for until people grow old and stupid, and contrive to be very well off. It is all poor stuff, but one can read it and is likely enough to finish it.

'Cousins' is something very near pure comedy. It is thoroughly English in material: Sir John Manners, the whimsical country baronet, with a passion for shooting; his charming wife, who is a model of domestic virtue, such as the British aristocracy is famous for; his sons and daughters and their cousins at Lutteridge, are all personages to be met with nowhere else than under the rule of the British constitution. But the treatment of this material is far more artistic in manner and method than the treatment it usually receives at the hands of British novelists. The book is a picture of English country-life simply. Its author's fancy is occupied solely with its subject, and is almost constantly held in check by the subject's natural requirements and capabilities, is never allowed to succumb to any temptation to transcend natural limits, and never to concern itself with anything other than the best representation possible. And as the author is a person of keen observation and simplicity of mind, it results that her picture is a distinct and true one. Her characters are very vivid and very real. They are of a sort that a well-bred Englishman meets in his daily life, and nothing in them is in any way distorted to excite the reader's sensibility. Any one fortunate enough to be invited to such a house as Wancote would be likely to meet just such nice girls and tolerable young men as Sir John's sons and daughters. And nothing happens to them which is not likely to happen to just such people. Moreover, the narrative of their rather uneventful life is not only real and vivid, but it is vivacious as well. Its tone is gentle, and at the same time fresh and of a charming humor; it is, in truth, sparkling, without in the least losing the undercurrent of seriousness which a true picture of any phase of life must have. So far as treatment goes, nothing could be more satisfactory from the point of view of literary art than such a picture so painted.

The difficulty with it is that when one has done his utmost with such material as is here treated his accomplishment is far from important. And, however perfect her manner and method, Mrs. Walford is prohibited by the very nature of her attempt from producing a really notable work of fiction. We all know the English upper class and its life, how unstirred by any deep emotions this is liable to be, how unlikely is anything really eventful to occur in it. It is, to be sure, not full of "hideousness and immense *ennui*," as the English middle-class life is accused of being; it is eminently free from the lower-class tendencies to "gin, beer, and fun," and is, perhaps, further from vulgarity than that of any other class in the world. But it is not to be denied that its elements are not romantic, and that its emblem will for a long time to come remain the gig of respectability. Consequently, any real representation of it, any truly artistic picture of it, will hardly be a dramatic picture, will hardly attract wide attention or awaken deep interest. This is why 'Mr. Smith,' which dealt with bright young girls of the English *bourgeoisie*, was so much more piquant and inspiriting than this its successor; and why 'Cousins' so perceptibly drags that after one has read two hundred pages the five-hundredth seems a long way off.

"It was not, in short, Sir John's hobby, and he could not understand it. Would his guest have talked of breech-loaders, muzzle-loaders, setters and pointers, he would not have found his companionship wearisome. Would Mrs. Cotterill have laid down for half an hour of the day her canvas-work, Lady Manners would have been better able to endure her smile. She was no needlewoman, Sir John no antiquarian; and thus all sympathy between them and their guests was wanting."

And it is for a similar reason that all sympathy of a quick kind between Mrs. Walford's personages and her readers is wanting. The nature of the subject is as important as the execution in any work of art. All the same, few persons, we imagine, who begin 'Cousins' will fail to finish it, or to notice what a clever and genuine contribution it is to the better class of English comedy.

The Lover's Tale. By Alfred Tennyson. (Boston: Houghton, Osgood & Co. 1879.)—This youthful poem of Tennyson's, written in his nineteenth year, is founded upon a tale of Boccaccio. The lover, Julian, relates the story of his childhood, passed in constant companionship with

his cousin and foster-sister, Camilla, who was of the same age and received the same care as himself. In his eighteenth year one summer day when they were wandering together, and he seems to have been on the point of declaring his love for her, she confided to him her love for his cousin Lionel. Julian goes into solitude, and there hears sounds of funeral and of wedding-bells and sees strange visions, such as haunt a half-distracted mind; at last the event, which has been before narrated in "The Golden Supper," comes, and is told by Julian's friend. This story is wrought out with care, and, although Tennyson in his preface calls it "boy's work," and apologizes for printing it on the ground that it has been widely pirated in imperfect form, it shows quite as clearly as the early work of other great poets his characteristic virtues as well as the faults from which he has freed himself—the thought overweighted by the phrase, the word-play of which he is now a master, but which in this poem reminds one of battledoor and shuttlecock, the passion diluting itself with too voluble language, and other blemishes easily discerned. The natural description especially suffers from the attempt to heighten beauty through mere words; compare, for example, the opening description of the Lover's Bay with that of the port in "Ulysses." But in spite of this excess and luxuriance that reminds one of "Endymion" sometimes, in spite of the need which the inexpert workman feels of looking as much to his management of his tools as to the work itself, the strain of melodious verse and the flash of poetic thought are frequent. Such a simile as this, for example, is more than promise:

> "There be some hearts so airily built, that they,
> They—when their love is wreck'd—if Love can wreck—
> On that sharp ridge of utmost doom ride highly
> Above the perilous seas of Change and Chance;
> Nay, more, hold out the lights of cheerfulness;
> As the tall ship, that many a dreary year
> Knit to some dismal sand-bank far at sea,
> All thro' the livelong hours of utter dark,
> Showers slanting light upon the dolorous wave.
> For me—what light, what gleam on those black ways
> Where Love could walk with banish'd Hope no more?"

Or this, where Julian is speaking of his whole life contracted into the compass of one past hour, so that he lives in order to remember that early time, and is indeed

> "A portion of the pleasant yesterday
> Thrust forward in to-day and out of place,"

and compares himself to the camel:

> "And like the all-enduring camel, driven
> Far from the diamond fountain by the palms,
> Who toils across the middle moon-lit nights,
> Or when the white heats of the blinding noons
> Beat from the concave sand; yet in him keeps
> A draught of that sweet fountain that he loves,
> To stay his feet from falling, and his spirit
> From bitterness of death."

Lines of music and of that almost dainty fitness of words so frequent with Tennyson abound, and careful readers will distinguish the germs of favorite passages in later poems. But the "Golden Supper" would have been as entire without this prelude of the "Lover's Tale." Piracy, which the curiosity of the public encouraged, made the publication necessary, for a poet is to be excused for wishing his boyish work to appear as good as it really was; but Tennyson has taught an excellent lesson, would any youthful aspirant heed it, in setting the standard of his work so high that he rejects this poem as unworthy.

The Botanical Text-Book. Sixth edition. Part I. Structural Botany, or Organography on the Basis of Morphology. To which is added the Principles of Taxonomy and Phytography, and a Glossary of Botanical Terms. By Asa Gray, LL.D., etc. (New York: Ivison, Blakeman, Taylor & Co. 1879.)—It is twenty-one years since the fifth edition of Dr. Gray's 'Botanical Text-Book' was published, and forty-three since the appearance of his 'Elements of Botany'—a work which may be regarded as the precursor of the several editions of the 'Text-Book.' Each former edition, in its turn, has been regarded as the standard American treatise on structural botany, and it may be safely assumed that this volume will for many years rightfully hold the same position. The former editions included parts or chapters on "Vegetable Physiology and Anatomy," on "Cryptogamic Botany," and on the "Natural Orders of Flowering Plants"; but now these subjects are to be treated of in separate volumes, of which Professor Goodale is to write the first, Professor Farlow the second, and the last, we are told, it is rather the hope than the expectation that Dr. Gray himself may prepare.

Since the 'Botanical Text-Book' was last re-written the various departments of botanical science, as structural, physiological, cryptogamic, and even systematic botany as applied to flowering plants, have been studied more deeply, and correspondingly with more satisfactory results, than ever before. Up to the year 1859 structural botany was, in the main, only descriptive. In that year Darwin's 'Origin of Species' was given to the world; and from that time the teleological signification of form and structure has been studied with the closest scrutiny. Darwin's successive works on teleological morphology in vegetation, such as his 'Fertilization of Orchids,' 'Insectivorous Plants,' 'Climbing Plants,' 'Cross and Self Fertilization,' etc., have followed one another in quick succession, and have nowhere met with a more appreciative interest than they found with Dr. Gray. In preparing this new work on structural botany, therefore, the author has had to review the wonderful outcome of twenty years' labor, not only of Darwin, but of Sachs, Eichler, Von Mohl, Hermann Müller, and many others, and to treat carefully of subjects which were not even known by name twenty years ago. Though much of this new science is a part of physiology rather than of structural botany, and will be treated at greater length in Professor Goodale's volume, yet, as far as it concerns *form*, it claims a place in this book, and the reader will find in the fourth section of chapter vi. a masterly review of "Certain Adaptations of the Flower to the Act of Fertilization."

But it is in chapter x., on Phytography, that the author's pre-eminence as a systematist has enabled him to treat the subjects of nomenclature, glossology, and description, not so much in the way of a seeker after truth as in the manner of one who makes enduring laws. Even here, where he is entitled to speak in his own right, his modesty has induced him to introduce a quotation from an illustrious English systematist. This whole chapter is so excellent and so timely in these days, when a misapplication of the "laws of priority" has seemingly bewitched the reason of many naturalists, that it may well be commended to the careful perusal not only of students in universities and colleges, but of those who are considered masters in their respective branches of natural history.

A History of the Mass and its Ceremonies in the Eastern and Western Church. By Rev. John O'Brien, A.M., Professor of Sacred Liturgy in Mount St. Mary's College, Emmittsburg, Maryland. (New York: Catholic Publication Society Co. 1879.)—The arrangement of this book is somewhat peculiar. It does not present the history of the Mass as a whole in chronological order, but rather a separate history of each particular detail. It commences with a short dissertation on the different liturgies in use in the East and West at the present day. It then gives an account of the origin and meaning of the word Mass, and of its different kinds, such as "High Mass," "Low Mass," "Bridal Mass," etc. It then takes up the ceremony as it is ordinarily performed in Catholic churches, and beginning with the preparations of the priest for its celebration, it follows each step minutely down to the dismissal of the congregation, which is also the conclusion of the book. If a person who had never attended a Catholic church were to take his seat in one at the commencement of the ceremony, and at every step in its progress the priest were to stop and give a history of its origin, a full description of the instruments employed, an account of the different customs in different churches, and of the mystical meaning which the Church attaches to the minutest detail, the listener would come away with very much the same impression that is left by the perusal of this book.

One thing is throughout apparent, the unyielding rigor with which the Church insists upon a strict adherence to the minutest detail of her ritual, while at the same time with wonderful skill she dispenses with almost any part of it when she is satisfied that the object to be attained is worth the sacrifice. Thus, at the altar, when in actual celebration of the Mass, no one, "not even the highest dignitary," may have the head covered, but the missionaries in China are exempted from the rule because the Chinese regard it as "indecent for a man to appear in public with his head uncovered." In chap. xi., which treats of "Crucifixes and Crosses," is a passage to which we invite the attention of the publishers of 'Webster's Unabridged.' Under the word "Cross" the latter work says: "3. Triple cross; carried only before the pope." Prof. O'Brien says (p. 127):

> "Triple Cross.—A cross with three transverse bars or transoms is generally denominated the Papal cross; but this is nothing more than pure imagination; for no such cross ever existed among papal insignia and it exists nowhere to-day. When the Holy Father moves in procession nothing but the simplest kind of cross, viz., that with one transverse beam, is carried before him. . . . A triple cross, therefore, is a misconception, invented by painters, but never authorized by the Church."

As everything connected with Russia has at the present time special

interest, we will mention that the ceremonies of the Russian, generally called the Greek Church, are treated with nearly as much fulness of detail as those of the Roman Church. The author has, in one respect, precluded all criticism. He says that no attempt whatever has been made at what is usually called *style*, but only to give a plain and intelligible statement of facts. In this he has certainly succeeded, and the book will prove hardly less interesting to the general reader than to the members of his own Church.

NEW YORK, THURSDAY, JULY 17, 1879.

The Week.

THE death on the 10th inst. of a citizen of Memphis from undoubted yellow fever, followed speedily by three cases of the disease in another family, naturally produced a panic in the Southwest. There was a general rush of frightened people to get out of Memphis; the governor of Texas issued a proclamation quarantining the State against "Memphis and other points which may become infected"; quarantine was generally established at all points along the Mississippi River; the Cincinnati Board of Health at once appropriated $16,000 with which to "place the city in the best possible sanitary condition," and similar precautions were taken where similar need for them was felt; the Chicago grain and provision market declined largely—mess pork, for example, 9 per cent., short-ribs 13½ per cent., wheat 2½ to 3 per cent. Altogether, for a time the recurrence thus early of last year's epidemic was looked for. The panic has, however, subsided, and it seems clear that the danger, if not over, is at least postponed. There have so far been six cases, and no new ones since the 10th inst. The first is said to have arisen from fever-germs shaken out of clothing that had been packed away last year; but there is no explanation given of the others. Memphis is reported "as clean and in every respect in as good sanitary condition as any city in the Union." Nevertheless, aside from the circumstance that this is not perhaps high praise for it, Memphis and the Southern cities generally will probably be all the cleaner for this scare. The National Board of Health, through its executive committee at Washington, has issued a warning circular, advising the free use of disinfectants, pointing out the necessity of cleanliness, and containing instructions as to the proper method of conducting sanitary inspections. The Board, however, has not yet, so far as appears, committed any serious outrage upon the liberties of sovereign States.

Secretary Sherman is enjoying experiences the spectacle of which must make the public financiers of the European despots pale with envy. His estimates of the receipts for the fiscal year which has just expired have been exceeded by $9,500,000. The customs have brought in $4,500,000 more than he expected, which we consider a sign of growing prosperity, but which to many people means that the American people is once more plunging into a course of unbridled luxury, and contracting debts to the foreigner which will some day cause the sale of their houses and lands at auction for a mere trifle. The internal revenue has decreased by about $2,000,000, owing to the proposal in Congress to reduce the tax on those old friends of the politician, whiskey and tobacco, which caused the distillers and tobacconists to hang back from the market. Congress did reduce the tax on manufactured tobacco from twenty-four to sixteen cents a pound. There was a gain from miscellaneous sources of over $6,000,000, but this consisted largely of profits on the coinage of silver, and therefore as long as the silver lies in the Treasury is not realized in fact. In considering the increase in receipts, the net surplus for the year being $7,946,664, it must be remembered that the expenses were increased by the payment of $5,500,000 on account of the Fisheries Award, the same amount on account of arrears of pensions, and $1,800,000 paid to Captain Eads for the improvement of the mouth of the Mississippi. No government in the world can exhibit such a magnificent basis of credit as the taxpaying powers of this people supply, and, in fact, their credit has nothing to fear from any quarter but Congress itself.

Public announcement was made last week that the Government engineer inspecting the Mississippi jetties had certified the existence of a channel whose central depth between them is thirty feet, and at the head of the passes twenty-six feet. This means the completion of the great enterprise, though not, we suppose, the cessation of dredging to keep the channel clear of lumps; and it is still too early to settle the original question in dispute between Captain Eads and the U. S. Engineers about the re-formation of the bar and the consequent necessity of indefinitely extending the jetties. Should this contingency arise, however, we may hope that we shall already have found our profit in the temporary relief to commerce, as well as be able to overcome at a less expense any renewal of the obstacles to navigation. The moral and political consequences of Captain Eads's success are visible in a closer union of feeling and interest between the interior section and that lying along the lower Mississippi and the Gulf, and in numerous ill-considered schemes of internal improvement, partially staved off in Congress, in which the Mississippi occupies the first place, and in which Captain Eads is greatly relied upon. In other words, we might say that the jetties have contributed their share to the "nationalizing" of the Government, just as the yellow fever has done; the South, by a sort of poetic justice, being the chief agent in both cases.

The month has been further signalized (more strictly the event occurred on the last day of June) by the opening of the famous Sutro Tunnel, completed after unremitting labor for ten years. Intended as a drain-tunnel to the richest mines in the world, it surpasses in extent all other constructions of the same kind. It taps the deeper mines of the Comstock lode at the level of 1,750 feet, leaving a remaining depth of some 450 feet, which can now readily be pumped out. Prospecting of course can hereafter be carried 2,000 feet lower, and whether the lode will maintain its richness or the veins be found to "pinch out," as the expression is, is a question of some scientific interest, but of still greater "speculative" interest, involving as it does the duplication of values in the mines of the region. The water from the Savage and Hale & Norcross mines was an hour and twenty minutes in reaching its discharge at the mouth of the tunnel. The cost of this immense achievement of man over nature has been six millions of dollars, mostly furnished by German capitalists. Drainage is only one feature of its usefulness, though not the least. It had as an incidental object the exploration of the formations through which it passes, and this does not cease with the completion of the tunnel. But besides, it provides for the transportation of the ore removed from the mines to mills situated on the Carson River, at a cost sufficiently low to make deep mining profitable.

The steady growth of the New York *Times* in rationality and truthfulness on all Stalwart matters is, to those who remember its state of mind from 1876 even to last year, a most hopeful sign as regards the political outlook. Even two years ago it would have gone into the "exodus" movement with as much tender credulity and holy indignation as General Conway or Wendell Phillips, would have sworn that half a million suffering blacks were assembled on the banks of the Mississippi and prevented from embarking for Kansas by ferocious planters, and would have encouraged Conway and Phillips to go down, as they have threatened, with an army and navy and raise the blockade of the river. It now, however, evidently shares the belief of the judicious that there are no negroes prevented from leaving Mississippi for Kansas by any other agency than the too common one of inability to buy passage tickets, and it makes the following truthful statements with apparent indifference to the Ohio election:

"Reports from Kansas are not favorable to its revival [the exodus]. Some of the persons avowedly connected with it as promoters are not of the kind that commands implicit confidence. Ex-

pectations sedulously cultivated will not be realized. With all its resources Kansas is not the promised land, and its population are not inclined to give the impoverished new-comers a very hearty welcome. Nothing less than the persistent use of the forcing process will enable the professional philanthropists who have the matter in charge to renew the movement with anything like its original vigor. The humane interest awakened by representations conveying the idea of a genuine flight from cruelty, oppression, and want ceased the moment politics were found to be at the bottom of the movement. Honest sympathy with suffering refuses to be perverted for the purposes of vulgar partisanship."

This is hard on the exuberant Conway, but it is the gospel of politics. It is in talk of this kind—plain, wholesome truth—that salvation both for the black and white American lies. Surely the *Tribune* will be moved before long into imitating its rival, and will sell out the theatrical "properties" of Stalwartism, and lead a simple, sincere, and healthy life. The worst of Stalwartism is that it degrades a man to the savage level by the gross credulity it exacts of him. In telling lies one's self there is a certain play of mind which keeps the faculties awake and makes the perception of the beauty of truth still possible. But the effect of pretending to believe other people's lies is altogether besotting and benumbing. Nobody who has passed a year, for instance, swallowing the stories of a Louisiana Custom-house Republican probably ever feels the same again. He may grow tired of these tales and shut his ears to them, but he finds his appetite for ordinary provable facts gone, and his reluctance to reproduce them or reason from them all but unconquerable.

The canvass in neither Maine nor Ohio has reached anything like excitement as yet. In both States the Republicans profess confidence of success. In Maine the Democrats, after a futile attack upon Mr. Davis's "war record," appear to have fallen back upon his obscurity as a statesman. It is asserted that Governor Garcelon forced his nomination upon them, and perhaps this is the reason for the defection of the Democratic *Belfast Journal*, the accession of whose "able and brilliant editor" the *Maine State Press* "hails with unaffected delight." The reason assigned, however, is the Democratic financial unsoundness. In Ohio the two parties have agreed to wait until the 20th of next month before firing the first salvo of campaign artillery. Meantime "Tom" Ewing is to deliver some speeches in Maine, probably to the end of persuading the Greenbackers; and during his absence it is intimated in Democratic circles that "Charley" Foster will devote himself to electioneering of the Colfax sort—a method said to consist in chucking babies under the chin and acquiring an encyclopædic knowledge of voters' given names. Secretary Sherman, however, who is now on his way to Maine, is already announced to deliver some speeches in Ohio after the ball has been fairly opened, and possibly Senator Blaine may be heard from. Mr. Conkling's rumored declination of an active part in the campaign is perhaps accounted for by the latter circumstance.

The Washington correspondent of one of the Stalwart papers reports an interview with "Zach" Chandler, which, if correctly given, makes us fear that there will be rough work in the Senate yet if this statesman does not have his way, and it goes far to account for his bold and defiant attitude towards Jeff. Davis, which many ill-informed people thought so singular. He says that twenty years ago he employed Heenan's trainer to give him boxing lessons for six months, "became an adept in the use of his fists, and got up a first-class muscle, *which he has preserved to this day.*" The italics are ours. "No person," he says, "in the Senate suspects that he is a boxer, and that he can strike a blow of iron," but "if he is ever assailed his assailant will discover that he can defend himself without resorting to weapons." The reporter then by request felt his muscle, and "found it hard as iron, and of enormous size." We shall only observe on all this that it was a dastardly thing to sit a whole session in the Senate with the Brigadiers without letting them know that he was a boxer, and could deal these frightful blows. The Brigadiers thought him an elderly politician like some of themselves, saturated with whiskey and tobacco-juice, and utterly out of condition. They might, consequently, have been readily betrayed into incautious expressions which might have brought on them a fatal blow from his terrible arm. The crowned heads of Europe, too, who have listened with indifference to his scathing attacks on their system of government, had they known that he could knock any male monarch of them out of time in a single round, would have caused their ministers plenipotentiary to take notes of everything he said, and would even have tried to laugh over his pot-house "stories."

The Legislature of this State at its last session passed an act reducing the legal rate of interest from seven to six per cent. The penalties for usury were left as they stood in the Revised Statutes, and a question has been raised what the effect of the change is. The Mutual Life Insurance Company has published a legal opinion furnished by its solicitor, Mr. O. H. Palmer, which shows that the Legislature has introduced great confusion into the subject. The act just passed follows the section of the Revised Statutes relating to interest, merely changing the rate, but provides that no contract made before "the passage of this act" shall be affected by it. By another section it is provided that the act "shall take effect on the first day of January, 1880." The act was passed, of course, on the day it was signed by the Governor; and the first question arising under it is, What is the effect of the law on contracts between the date of passage and January 1, 1880? The answer seems to be that loans at seven per cent. may still be made until that date. The second question is, What penalties, if any, exist for the violation of this law? The penalties in the existing law are all against the taking of interest above 7 per cent., and the only change made is in the *rate*. The penalties were all made to attach to the old rate, and the question is whether the change in the rate changes the penal enactment. The statute as it now stands seems to be open to this singular interpretation, that after January 1, 1880, the legal rate of interest will be 6 per cent., but that there will be no penalty for usury unless more than 7 is charged. That is, any rate between 6 and 7 is illegal, while at the same time no punishment for taking it will be enforceable. But, further than this, Mr. Palmer expresses a doubt whether under the recent law there is anything left of the penalties for usury at all. The State Constitution provides that "no act shall be passed which shall provide that any existing law, or any part thereof, shall be made or deemed a part of said act, or which shall enact that any existing law, or any part thereof, shall be applicable except by inserting it in said act." From this it might appear that the penalties now in force cannot, by implication, be made applicable to the new interest law. But Attorney-General Schoonmaker regards the act as an amendment of a single section of the older enactment, and this section is explicitly quoted.

Tammany Hall has found an unexpected ally in the Rev. Howard Crosby, who is betrayed into saying that Governor Robinson has in the pardon of a recent criminal "thwarted every effort of the Society for the Prevention of Crime at securing the good order of the city." This is a grave charge, and we trust his Tammany opponents will admit it to be graver than anything they have yet been able to bring against Governor Robinson. Mr. "Jake" Berry undoubtedly maintained a very disreputable variety theatre in this city, and managed to exasperate the Society for the Prevention of Crime by his repeated evasions of their attempts to suppress him. But the daily papers show apparently ample reason why he should be considered to have by this time expiated his offence. Both the judge who sentenced and the district-attorney who prosecuted him favored his discharge, and there were humanitarian reasons also which Dr. Crosby may not have had in mind when he denounced the offender's pardon. Now, Tammany does not hate Governor Robinson for himself, for his vetoes of Tammany legislation, and his supposed reliance upon the rural democracy, so much as for his personal and political intimacy with Mr. Tilden. Neither does the

Commercial Advertiser. Both Mr. Kelly and the machine Republicans of this city are now engaged in an anxious effort to prevent the renomination of Governor Robinson, which to them would mean Mr. Tilden's ascendency in the State, and a consequent acceleration of his "boom." Against this consummation Dr. Crosby has a perfect right, of course, to labor, and we are far from criticising the wisdom of such procedure; but if his intention is otherwise, it must be a matter of surprise and chagrin to him that his apparently hasty criticism of Governor Robinson has been so profoundly satisfactory to Tammany Hall.

Another week of dulness has succeeded in the financial markets, excepting that for U. S. bonds and other strictly investment securities, which were active and strong by reason of the reinvestment of July disbursements. The Secretary of the Treasury gave notice that he will prepay without rebate all 10-40s falling due on the 18th and 21st inst., the total amounting to $184,556,300. Holders of these bonds, by promptly sending them to Washington, will therefore get full interest up to their respective dates. Silver in London ruled at 51¼*d.* to 51⅜*d.* per ounce. Here the bullion value of the 412½-grain silver dollar at the close of the week was about $0.8759. The Treasury has resumed its weekly purchases of silver bullion for the Philadelphia mint. As to the general drift of speculation in "the Street," there is but little to be said, except that the volume of business keeps well up to the average, and that prices as a rule are well supported. Some of the leading operators who have been absent at the watering-places have returned to the city, and their presence has been signalized by increasing activity in certain lines of stocks, more especially the grain-carriers of the Northwest, the future business of which, it is believed, is assured under the improving prospects of the harvest. In mercantile circles, as usual "between seasons," there is a very perceptible lull, but on every hand the feeling, as regards the autumn trade, is very hopeful.

It appears that the story of the existence of a political codicil to the will of the late Prince Imperial was true. M. Rouher brought the will back with him to Paris, and it was read at a select meeting of the Bonapartists. The codicil bequeaths the Bonapartist claim to Prince Victor, the son of Prince Napoleon, passing over his father, and disregarding the Imperial law of succession in a way which has drawn forth many comments on the testator's ignorance or his insouciance. Of course the party cannot abide by this disposition of their cause—a fact which M. Rouher recognized by announcing his withdrawal from public life, as he cannot act with Prince Napoleon. A deputation communicated the contents of the will to the Prince, and acknowledged him as the head of the party, but did not succeed in extracting anything from him beyond an acknowledgment of their courtesy, and to this day he refuses to say whether he will become a Claimant or not. In fact, it is generally believed that he will make no declaration of his intentions, knowing that if he did so he would be promptly expelled from France, and there is nothing he dreads more than exile. This puts the party in a wretched position, but one from which there is apparently no escape so long as Prince Napoleon lives.

Full accounts of the manner of the young Prince's death have been received, and it seems to have been a wretched business. He was present in the British camp simply as a guest, but with every indulgence necessary to enable him to see the war, and he went about seeing it in a most hair-brained spirit. The reconnoissance in which he met his death he undertook at his own desire, and Lieutenant Carey, who accompanied him, was directed not to interfere with him in any way. He started with a small escort of six men, rode off ten miles into the enemy's country, and dismounted, unsaddled, and rested in a place surrounded by thickets; remained over an hour, so that the Zulus had ample time to see him and collect a party to attack him; started for home at his own pleasure; was fired on as he was mounting, and his frightened horse getting away from him, he was speedily overtaken and slain. The affair was, of course, a most mortifying one to the British officers on the spot, and as somebody had to be blamed, Lieutenant Carey and the escort have been selected for that purpose, because they did not see that the Prince was safely mounted or else return to die with him as soon as they perceived he had fallen —for death was certain had they stayed. Carey does not appear to have comported himself very coolly or heroically, but he probably behaved as ninety-nine men out of a hundred would have done under like circumstances, though not as people who were not there think they would have done. A small party bolting from an ambuscade does not rally readily, and is seldom cool; but then nearly everybody who reads about an ambuscade thinks he himself would have faced about and performed prodigies of valor had he been on the spot, and poor Carey will probably have no defender. There are, however, signs in the English press of shame over the young man's having been allowed to go there at all. The three men of the escort who were killed were as recklessly sacrificed to enable the Prince to play his political game as the dead who died at Saarbrück in 1870. This trip to Zululand was simply an adventure intended to dazzle the French public, and it is not creditable to the British army to have been mixed up in it. The Prince was buried with much military and other parade.

The sensation in England over his death, and the semi-official honors paid to his remains, naturally cause more or less annoyance to the French Republicans, who cannot be expected to see nothing in it but expressions of sympathy with a bereaved mother and sorrow for a young man who fell under the British flag. It was the British alliance which first gave respectability to the perpetrator of the *Coup d'état*, and it is unfortunate but true that the demonstrations in England connected with the Prince's death have given a sort of revival to Bonapartism. The Queen has been most devoted in her attentions to the ex-Empress, and they are doubtless a natural expression of sympathy with a sorrowing woman on the part of a woman who has known much sorrow; but they none the less grate a little on the feelings of those whose brothers and fathers and sons fell in heaps at Gravelotte and Sedan, in a war undertaken at the Empress's instigation for the simple purpose of giving the youth who has just perished a better chance of succeeding his father.

The session of Parliament in England is drawing to a close, for the Chancellor of the Exchequer has made the usual announcement in the House of Commons as to the measures he will attempt to pass and those he will abandon. The only one of importance actually pending, however, is the bill creating a new university in Ireland on the model of the London University, an account of which we gave some weeks ago. The dissolution, it is now acknowledged, will come this fall, and although the Government is probably better prepared to meet the elections than it was before the Afghan war closed, the prospect is not bright. The Cyprus venture is an admitted failure; Lord Carnarvon called attention once more the other day to the indefinite postponement of the reforms in Asia Minor, which the Convention with Turkey provided should be made "without delay," and Lord Salisbury had nothing to answer except that they had done the best they could; the Zulu war is not over, and is full of terrible possibilities, and has revealed the collapse of the British army under the present system of recruitment, which nobody now denies; and though last, not least, Turkey is slowly drifting to ruin, Russia looking on and being now fully aware of the emptiness of the threats with which Lord Beaconsfield stayed her progress last year. Mr. Forster has made an attempt to give the Liberal programme in case of Liberal success. He said they would give household suffrage to the counties as well as to the boroughs; would make a redistribution of representation; they would reform the county government; they would seek to relieve the farmers by facilitating the legal transfer of land, and apply the law of commercial contract to the relation of landlord and tenant, and restrict gamekeeping. These are not bad bids, as the times go.

WHAT THE WAR SETTLED WITH REGARD TO "STATE RIGHTS."

WE drew attention some weeks ago to the remarkable extent to which the opinions of the politicians of both parties with regard to the powers of the General Government are affected by the politicians' own relation to the General Government. When they are in opposition, and can get nothing from it either for themselves or their constituencies, they are very apt to be champions of "the reserved powers" of the States. When they are in power, on the other hand, or are seeking some grateful application of Federal funds, there is hardly any length to which they are not prepared to go in defence of "the implied powers" of the United States. In fact, the principle on which they appear to interpret the United States Constitution is that the Federal Government is a very strong government when it is in the right hands, but that when the wicked men get hold of it it is little better than a temporary league. There is, consequently, not much to be learned from the late debates in Congress as to the real position of either party with regard to the line between national and State sovereignty. We gave some illustrations of this in the article referred to. We may here add another which is more striking than any of those we mentioned. The Republican Convention at Chicago in 1860, which nominated Abraham Lincoln, put this plank in their platform, which now appears in other terms in all the Democratic platforms of our own day:

"That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of powers on which the perfection and endurance of our political fabric depend; and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest of crimes."

Should the Democrats get possession of the Government within the next ten years, and begin to use the various powers with which the Republicans have armed it since 1860, for the realization of their own political ideals, there can be little doubt we shall see the Republican party planted solidly once more on the ground of 1860. Nor do we think there is anything to be regretted in this apparent inconsistency. On the contrary, the readiness with which both parties fall into it is perhaps one of the most useful of all the safeguards of our political system. The party in possession of the Government is always disposed to stretch its powers to their last limits, and to disregard or belittle all checks or restraints in the use of them. It is, therefore, part, and a very important part, of the business of the Opposition to resist this tendency, and to insist on strict construction, and it is not in human nature for it to base its resistance upon purely selfish grounds. It naturally supports it with a theory of constitutional interpretation and with the argument of danger to the public liberties, and in so far as it forces the majority to pause and deny itself, it does good service.

What we wish more particularly to point out to-day, however, as in some sense supplemental to our article of June 26, is the exceeding vagueness of the notions apparently entertained by a great many Republican writers and orators of the Stalwart school as to the effect of the war on State rights. *Harper's Weekly*, for instance, seldom refers to State rights except as a "pestilent heresy" or noxious doctrine, which the war is supposed to have killed, and in the eyes of all right-minded people did kill, but which the Democrats are trying to resuscitate. Now, it so happens that the "State rights" which the war killed are not the State rights which are now under discussion, and have not, so far as we have observed, been revived by any Democratic orator of prominence or by any Democratic platform. The State-rights theory which brought on the war, and which the war did undoubtedly dispose of, was the theory that a State has a right to secede from the Union at its pleasure, and *à fortiori* to refuse to permit the execution within its limits of any Federal law to which it objects. This was the old ante-bellum State rights which the Southern Democrats were always preaching and finally took up arms to enforce. To call this doctrine "pestilent" is to use a mild term. It was simply anarchical, and gave the Constitution the air of a farce. It was impossible, too, to put it down or extirpate it by argument. There was only one way to get rid of it, and that was a resort to force. The war reduced it to the rank of a rather foolish speculative opinion, like the opinion that a man would be justified in killing his father when he gets old, or ought, if he is poor, to have a house rent-free from Mr. Astor. Opinions of this sort are held by large numbers of people, but they are not considered dangerous, or worth notice by the law, because the holders are pretty sure not to try to put them into execution. In fact, the old "State rights" occupy now with us exactly the same place as the right of revolution. Everybody believes that he has the right to revolt if the government he lives under becomes intolerable to him; but nobody considers this a dangerous doctrine as long as there are police and courts. Everybody, too, believes that a State has the right to leave the Union if it can, under certain contingencies; but the war has made the exercise of this right so difficult, and put the contingency which would justify an attempt to exercise it so far off, that it has no practical importance. Discussion of it is hardly more serious or profitable than discussion of "the things that might have been."

The Republican writers and orators of whom we have spoken, however, by a curious bit of mental confusion, treat all denials of Federal power and all attempts to restrict it through interpretation of the Constitution, as assertions of the old right of secession and nullification. They are apparently under the impression that arguing or legislating about a strict construction of a section or clause of the Constitution is necessarily indicative of a desire or intention to overturn the Constitution, and that anybody who talks of "State sovereignty" means thereby to declare that each State is completely and exclusively sovereign; which is absurd and really inexcusable. All Americans are taught in their school-days the nature of the arrangement by which the Federal Government was set up. Each State parted with a portion of its sovereignty and reserved the rest, which constitutes its "rights," and there is nothing dangerous, disreputable, or "pestilential" about them, any more than about a man's right to equal taxation, or to the ordering of his own home. The line which separates the rights of the States from those of the Union, however, as laid down in the Constitution, was somewhat vague. No human ingenuity could make it otherwise. As Chief-Justice Marshall said:

"The Constitution unavoidably deals in general language. It did not suit the purposes of the people in framing this great charter of our liberties to provide for minute specifications of its powers, or to declare the means by which those powers should be carried into execution. It was foreseen that this would be a perilous and difficult, if not an impracticable, task. The instrument was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence."

No mode has been provided by which the interpretation of the Constitution can be protected against those differences of opinion which attend the interpretation of every human convention under which conflicting interests arise. All that can be done is to interpret it reasonably, or, as Judge Story says, "by the aid of maxims which have found their way not only into judicial discussions, but into the business of common life, as founded in common sense and common convenience."

As the nation grows and as its affairs multiply, new applications of the Constitution will constantly be called for; and as often as they are called for, the old dispute as to where the State sovereignty ends and where the national sovereignty begins will break out afresh. There is nothing hurtful in this; on the contrary, this is the proper way of settling in every generation where the line lies. There is, therefore, nothing "pestilential" in contending for a strict construction of the Constitution, or a construction restrictive of Federal powers, any more than for a liberal construction. The war did not decide that strict constructionists were public enemies, or that any view of State rights which told against the exercise of any

power by the Federal Government which the party in office thought useful, was dangerous to the public peace. It simply relegated the right of secession to the limbo of speculation and added certain amendments to the Constitution. But it did not, as some of us seem to imagine, change the rules by which the Constitution is to be interpreted. These remain just what they were before the war, and they furnish now, as before the war, materials for controversy which is in all ways healthy, and promises, we are glad to say, to last as long as the Constitution lasts.

FRENCH ACCEPTANCE OF CÆSARISM.

THERE is still a good deal of doubt expressed in the European papers outside France as to the possible effects of Prince Napoleon's death on the fortunes of the Bonapartists. Paul de Cassagnac declares that Gambetta, whom he admits to be a sagacious man, exclaimed, on hearing the news, that the Republicans "had lost their counterpoise," and the story, if not authentic, is probable. It means, if true, that the fear of a Bonapartist revival or reaction helped to strengthen the moderate wing of the Republican party, and that this fear removed, the Radicals of the Clemenceau school would be encouraged and gain ground which the moderate Republic cannot afford to lose. There is no doubt that there is a considerable body of its supporters which it has not carried with it in the Ferry Education Bills, and which the execution of these measures will be very apt to alienate. It may or not be true—it probably is true, if we may judge from the experience of Belgium—that the retention by the priests of a powerful hold on the schools of the country would cause the next generation to be brought up in greater or less hostility not exactly to the Republic, but to the ideas on which the Republic must rest if it is to endure. The Catholic clergy never relished either the social or the political ideal of the Republicans, and since the growth of Ultramontanism they are less likely to relish it than ever, and it is not in human nature for them to refrain from communicating their dislike of it in a thousand subtle ways to the children whom they teach.

Unfortunately, however, it does not seem as if the bulk of the French people, certainly the bulk of the middle classes, were as fully alive to the danger as the politicians. In fact, it would seem as if the Catholic clergy and Catholic monks and nuns were as yet, in spite of all their faults, to most French parents the fittest persons to teach their children. The French public, even the sceptical portion of it, has apparently not as yet got used to the idea of lay instruction for youth, and refuses to believe in its moral safety, so that the Republicans in attacking the teaching orders of the Church touch the prejudices of a very large body of persons who do not ordinarily give much attention to politics, and like or dislike a government rather by reference to its influence on their domestic comfort than to its fundamental principles or its foreign policy. Consequently the Republic is just now, before it is really a year old, for it was only in October last that its existence was assured, weakening its hold on the popular confidence.

This hold has not yet grown strong enough, or lasted long enough, to cause people who dislike the present policy of the Cabinet to look for relief in the regular constitutional way through a change of ministry. In fact, it is doubtful whether the expectation of relief in that way has ever yet obtained a secure lodgment in the political department of the average Frenchman's brain. He is still inclined to fancy that when things are going wrong they must be righted by a change in the form of the government; or, in other words, by a revolution. Many foreign friends as well as enemies of the Republic are now disposed to believe that he is beginning to tire a little of the Republic, and would not be sorry to see it go if something else offered itself in its place that would give him a quiet life. The thing to which he turns when he is dissatisfied with monarchy is the Republic, and so also when he is dissatisfied with the Republic it is feared that he will turn to monarchy, and the kind of monarchy he most easily takes to is, say these critics, not exactly Bonapartism but Cæsarism. To use the words of one of them, the London *Economist:*

"The Imperialist party in France is a considerable one, with a great idea for its creed. That idea is the notion that a large and democratic community, devoted to the theory of equality, compelled by circumstances to remain permanently armed, and exposed to serious social dangers, requires a stronger and simpler instrument to express its will than a large public meeting; that it must, in fact, speak and act through a representative individual and not through a representative assembly. It must both give and receive orders as they are given and received in an army or a ship, and must, therefore, in the common interest, delegate immense powers to an individual, who, for the sake of dignity in Europe, and of the permanence essential to all useful authority, may as well be called emperor as dictator. The desire for such a man is very strong in France, and if the Republic became paralyzed, or if it assailed or threatened the passion of property, or the passion of religion, might become temporarily irresistible."

Now, it may be quite true that this idea is powerful in the French mind, but its force as an agency in shaping events at any particular crisis can only be estimated through historical experience, and this certainly does not entitle it to great weight in making a forecast of the political future of France just now. As a matter of fact, however strong the liking of Frenchmen for a Cæsar may be, they have never either set one up or accepted one after he had set himself up, when any other alternative presented itself. The most prominent fact in French post-revolutionary history is the power of the army, and the only certain conclusion we can draw from it as to the workings of the French political mind is that Frenchmen believe the man who commands the army to be irresistible. They accepted the first Bonaparte as a dictator when he announced himself as such with the army at his back, and they accepted the second Napoleon under like circumstances. The plébiscites by which the seizure and transformation of the Government in these two cases were condoned cannot be taken as an expression of French opinion, for the reason, as we pointed out a fortnight ago, that no choice was open to the voters. If they had all voted No the dictator would not have resigned, and if he had resigned he would have been followed by anarchy. All French revolutions have been essentially an application of the force test to the existing Government, and as soon as it was found not to possess the needful overwhelming physical might no friends remained to it.

There is no good ground for believing that any pretender has a chance in France who is not able in some way to obtain control of the army, and the Republicans have recognized the fact that their great danger lies on this side by the pains they have taken to weed the army of Bonapartist generals. If by any accident or combination of accidents—and any such combination becomes every year less and less probable—the army should escape from the control of the Republican executive, an appeal would very probably be made to the Imperialist idea with success, but only on the principle "Heads I win, tails you lose." It would be sure of success if nothing else offered, and nothing else would offer. No Cæsar presents himself to the people as the competitor of anybody; he presents himself after he has crushed all competitors. In truth, all that can be said of the attitude of opinion in France towards Cæsarism might be said of it anywhere under similar conditions. The desire for "a strong man," and "a steady hand at the helm," shows itself in every country when there is such an uprooting of political traditions that the form of the government has become a subject of debate. It has shown itself even here, owing to the weakening of the Constitution at the South, and would show itself rapidly in England if Parliament had lost its authority. Cromwell had just as little difficulty as Bonaparte in taking possession of absolute power. Of course the part absolutism and centralization have played in French history makes the tendency to accept accomplished facts much stronger among Frenchmen than among other people, as they have really lost the very notion of a *de-jure* government; but it is none the less true that if the Republicans show themselves ready to use the army vigorously to repel opposition, they will never find the Imperialist idea searching for a dictator, or dictators offering themselves for popular acceptance. We must, too, in judging of the possibilities of French politics make some allowance for the influence of the experience and education the country has passed

through since 1849. Much of the reasoning about the future of France takes no account of this whatever, and treats the various factors in the problem as if they remained the same as thirty years ago. But the agitation which followed the 16th of May, 1878, revealed clearly the fact—the testimony on this point was overwhelming—that a new political force had made its appearance on French soil, to which we can give no better name than an intelligent shame about trying frequent experiments in government. That this now powerfully influences French opinion there is no doubt, and the Republic gets the benefit of it for the present.

THE LATE PRINCE IMPERIAL.

PARIS, June 30.

I REMEMBER as if it were yesterday the day when the unfortunate young Prince who has just fallen under the hand of the Zulus was born in the Tuileries. His birth nearly cost his mother her life. The Senate, the Council of State, the great dignitaries of the court were all assembled at the Tuileries when the guns of the Invalides announced to Paris that a new "Roi de Rome" had come into the world. The young Prince was delicate in his childhood and in his youth. He was educated with much care and surrounded with much pomp. Napoleon III. thought it necessary to surround his son with much prestige. While he himself often went out with a friend, General Fleury or another, in his phaeton, driving his own horses, the "little Prince," as he was always called by the people, never went out without a military escort and without equerries. How many times did I not see the brilliant troop of horsemen with the fine state carriage, and looked in the midst of the dust and the uniforms for the little, pale, delicate, and thoughtful face of the boy who was condemned to all this splendor. He could not enter the Tuileries nor leave them without hearing the beating of drums. He knew that the Pope was his godfather; he played with all the great *cordons* of the European kings and emperors as a child plays with the gown of a doll. I was told that one day, when the Queen of Holland was at the palace, he went out for a drive with the little Prince Alexander, who has now become the heir-apparent of the Kingdom of the Netherlands since the recent death of the Prince of Orange. The guard, as usual, was out; the soldiers presented arms, the drums were beating. The young Dutch Prince touched his cap; the "petit Prince," who was quite a child then, turned to him and said, "This is not for you, it is for me," and bowed.

Little was known outside of the Tuileries of the education of the child. The mystery of etiquette surrounded him on all sides. It was vaguely known that the young Prince was not strong, that he underwent a malady of long duration. It was said that riding had been the cause of it, as he sometimes rode with his father in the Bois de Boulogne. That he was delicate then was quite clear; he had a very fine but very pale complexion. He grew stronger with time, and his education began in earnest. His preceptor was a M. Filon, the learned son of a learned father, who belongs to the French University. His governor was General Frossard, a very honorable but very stern man, an officer of artillery, who had been for some time at the head of the Polytechnic School. The Prince did not attend any lectures in the colleges, but the *devoirs* were sent to him from the Lycée Fontanes. He made the versions and themes at home, and his *devoirs* were sent to the Lycée to be compared with those of the other boys. It is probable that the comparison was not always in his favor; his intelligence was not of the Parisian, quicksilver sort; his illness and his solitary life had been real disadvantages.

He was from childhood a soldier; his portrait was sold in the somewhat ludicrous uniform of a guardsman, with a miniature gun in his hand and a gigantic *bonnet à poil*. His promotion was rapid; he held reviews. I remember his reviewing, by the side of his father, on the Place Vendôme, opposite the famous column, the regiments of the Army of Italy coming from Magenta and Solferino. Such men as Canrobert, Pélissier, and MacMahon were his courtiers. He had few comrades—young Conneau, the son of Dr. Conneau, who had helped his father to escape from the prison of Ham; young Fleury, the son of the general who was the most intimate friend and adviser of the Emperor.

Napoleon felt that the rule of his son could not be of the same nature as his own. He was a fatalist; he would take a calm survey of his own career. He knew how he had made the *Coup d'état*, how the *Coup d'état* had given its color to all his reign. He had been, he was, a dictator: he was obliged to strike terror; he dreamed of something better for his son. *He* was to be a liberal, a constitutional emperor; *he* would give liberty to France as well as glory. Alas! what becomes of such dreams? There is a terrible logic in the affairs of the world. Many an adventurer who is trying to make a fortune by foul means thinks that he will leave this fortune to spotless and virtuous children. There is in the paternal and maternal instinct a purity which is not easily destroyed even among the most profligate and the most corrupt.

There is little doubt that the moving force in Napoleon's mind during the latter part of his reign was the desire to leave to his son a firm tenure of power. He reformed the constitution of the empire in order that his successor should hold the position of a liberal sovereign; he plunged into the German war in order to win for the young Prince, who was to share the triumphs of the campaign, the affection of the army. He had himself given Savoy and Nice to France; the "petit Prince" would perhaps give to France the provinces of the Rhine. The "innocent cause of the war" was sent to Saarbrücken, and among the first telegrams of the campaign one is well remembered which described the young Prince before Saarbrücken picking up spent balls on the ground. Then came other telegrams, which have since been made public, one among the others: "We start for Montmédy. (Signed) Filon." The Prince disappeared soon in the great turmoil of the campaign, and we did not hear of him till he arrived in England, where he remained first at Hastings. The Empress joined him there. It was at Hastings that the young Prince was accosted on the beach by the famous Régnier, who asked him for his photograph. It is certain that Régnier entered Metz with the permission of the Germans, and showed to Bazaine this photograph signed by the young Prince, as well as a letter of a person who holds the position of lady-in-waiting near the Empress.

The "little Prince" had fallen from high. He could hardly understand at his age the events through which he had passed. He found himself an exile in England; it must be said to his credit that misfortune gave him an early maturity. After the death of his father he had become the only support and the only hope of one who, though she had not been born for the throne, has shown since her misfortunes that she was not unworthy of it. Those only who have lived in exile can well understand the life which the young Prince led at Chiselhurst. Did he fully appreciate the vanity of all the hope which was still offered to him by interested, ambitious, and needy partisans; did he measure the inanity of his own efforts; did he understand the events which were passing across the Channel, in the country which he considered still as his own? Exiles draw round them in their little courts what is best and what is worst in humanity; the hand of the police is often offered to them as the hand of friendship; their life becomes contracted, it is spent in frivolous correspondence, in useless plans, in imaginary constructions of impossible events. Hospitality itself becomes a deceit; and the respects paid by an old aristocracy are sometimes made to cover the most frigid interest, if not hostile sentiments. It is the honor and pride of England to offer her hospitality to all the great misfortunes as well as to all the glories of the world; but it requires more philosophy than can be found in the heart of a youth to fathom all the sentiments which are covered by this hospitality.

The "little Prince" became popular; he entered the military school at Woolwich, and went through all his duties with a modest seriousness which was much to his credit. In English society he made for himself an excellent position; he was described to me by some English friends as a quiet, serious, virtuous young man; a good son, a good friend. When the war broke out in the East he thought that he had found an opportunity for learning the art in which a prince, a Bonaparte, ought to be proficient. He did not wish, however, to give offence to any European power; he could hardly fight with the Russians without giving offence to England; he waited, therefore, till Austria was allowed by the Treaty of Berlin to enter Bosnia and Herzegovina, and he asked permission to join the Austrian army of occupation. This permission was not granted to him; very wisely, in my opinion, the Emperor of Austria told the young Prince that he could not accept his services. The campaign was conducted with much rapidity by the Austrians, and was not very eventful.

The Prince thought then of going to Afghanistan; why this new plan did not succeed I could not say with any degree of exactitude. It seems to me probable that the French advisers of the Prince, such as M. Rouher, were afraid at the time that eventually there might be difficulties in Afghanistan and in Central Asia between England and Russia, and they desired the Prince to remain neutral between these two Powers. The Emperor of Russia had always shown some personal sympathy for the young son of Napoleon III. The heir of the Bonapartes was, in fact, barred in every direction; he represented in a certain sense France, or

thought he represented it, and he could not make enemies for the country which it might be his fate to govern. He was, so to speak, an outlaw in politics; if he wished to win his spurs in a war, he was perforce condemned to choose such unworthy enemies as the Zulus. He could not fight against any civilized nation.

I cannot, I must say, condemn the sentiment which prompted him to ask permission to join the English army at the Cape; it was a chivalrous sentiment, a sentiment of gratitude towards the country which had received him in his misfortunes, where he had received his military education, where he had many friends. Nobody will probably ever well know what other feelings were mixed up with this. I doubt myself if there was much ambition, much desire to be noticed for brave deeds in France; this sentiment, though it would have been natural and honorable, was probably not the strongest in a young heart. It was certainly a strange play of fortune to see a young Prince Bonaparte embark in such an adventure. The founder of the fortunes of his family had begun life as a young lieutenant of artillery; he who was to be Napoleon IV. died in the uniform of a lieutenant of artillery. Napoleon I. was the enemy, the prisoner of England; his successor died in the cause of England. "Et nunc Reges intelligite; erudimini, qui judicatis terram," as Bossuet says in the words of the Psalm, at the beginning of the funeral oration of the Queen of England. It would require the eloquence of a Bossuet to do justice to this subject; in the short life of the poor young Prince who fell under the savage arms of an African tribe, he would see united in the smallest possible compass all the extremities of human affairs. "La félicité sans bornes, aussi bien que les misères . . . tout ce que peuvent donner de plus glorieux la naissance et la grandeur accumulé sur une seule tête, qui ensuite est exposée à tous les outrages de la fortune . . . l'océan étonné de se voir traversé tant de fois en des appareils si divers et pour des causes si différentes."

It is not time to speculate on the effects of this event on the future of France, or the possible changes in our politics. It seems superfluous to meditate on such things when a higher power shows us the vanity of all human calculations. It seems odious to draw any selfish hopes out of an abyss of sorrow and misfortune; no words can well answer to such a subject; there are things that speak for themselves.

Correspondence.

ENGRAVING ON WOOD.

To the Editor of The Nation:

Sir: Have you had enough of wood-engraving; or will you spare me room for yet some words: not to defend my commissions or omissions, my violence or silence, the lucidity of my style or the correctness of my judgment in matters of engraving; but only to clear away, if it may be allowed, some misapprehensions as to what I did write, and as to what are my opinions when not reformed in the alembic of your review?

Where does your reviewer find in my writing that "the original artist should not draw upon the block," or that "an untouched block is the only medium for an artist-engraver"? On the contrary I, not very indistinctly, claimed praise for my endeavors to obtain "drawings from Leitch, Duncan, Dodgson, and others of our painters in water-color, whose style and character I sought to render faithfully, *so that the work of the painter rather than that of the engraver should be paramount.*"

Why also does your reviewer attribute to me the dictum of my gracious opponent in *Scribner:* that tints washed in with the brush prevent the engraver's faithfulness, "because the picture, as a whole, disappears as he works, and the relations of its parts are destroyed by his first few touches"? This—not exactly in these words—is *Scribner*, not *Atlantic*. Neither I nor any other engraver could have written it. We know, on the contrary, that tints washed on a block remain, and the effect remains, and the relations of parts need not be destroyed. With some little care a pencil drawing (rubbed in—I do not speak here of fac-simile) may also be sufficiently preserved.

"In short, to have the picture on the block in any shape tends towards mere fac-simile work, and is not for the artistic engraver." These are your reviewer's words, but intended to express my opinion. How can a washed drawing tend toward mere fac-simile work? And for mere fac-simile, I wrote, not depreciating it, but giving a remarkable instance of its difficulty—"it took the best *artist*" (as distinguished from the most accomplished *engraver*) "to do justice to a bare outline."

Let me protest that I did not "pick holes" in the engravings of Mr. Cole and others. I did not notice any exceptional shortcomings. I wrote only of errors in my opinion pervading the "new style" (which is not new), and unavoidably resulting from the use of the multiple graver. I did not stint praise of Mr. Cole for his artistic work, while sharply distinguishing it from the unartistic—*i.e.*, the mechanical.

As your reviewer says, there may be few modern wood-cuts worth admiring if we "limit our interest to that which shows care for the white line"; and I do not hold up my own for admiration. Nevertheless, I hold up the supremacy of white line. Of twenty wood-cuts by me in this year's National Academy, there were but two (engraved thirty years ago) not entirely in white line; and I cannot recollect having done a single engraving during the last ten years which has not the same distinction. I claim only this virtue for my work. And though "the critical faculty is not given to most men" (I am sure of so much), I may as a practical engraver be able to perceive that the multiple graver will *not* "work back towards the conception and handling" or the "noble simplicity" of the Bewick school.

Of imitations of charcoal and clay, brush-marks, etc., as "akin to" free and poetical translation, and of the real object and worth of the application of photography, because "there are few artists in America who know well how to draw upon the block," I could say something; but I have already, I fear, trespassed too much upon your space.

W. J. Linton.

New Haven, Conn., July 7, 1879.

[When a writer expressly disclaims having meant so-and-so, there is nothing to be said in answer. Our review of the article in the *Atlantic* contained several allusions to the difficulty we found in comprehending it, and, as an illustration of that difficulty and of the kind of utterance which made us think that Mr. Linton meant what he now says he did not mean, we quote a part of one long sentence: "Well, but, I am told, the artist (the 'artist' meaning always the painter, whose picture is photographed, or, worse, drawn on the wood by himself), the artist insists on strict adherence, an exact copy even of his brush-marks," etc. As for the multiple graver, we give it up to Mr. Linton's indignation. Not a word in our review claimed any merit for that contrivance.—Ed. Nation.]

THEOLOGY IN COLLEGES.

To the Editor of The Nation:

Sir: Your recent article on "The Cultivation of Theology in Colleges" suggests one or two questions:

1. Is not the hitherto narrow and denominational treatment of theology due to the fact that it has been *left* to the several sects, or at best to sectarian colleges, and that the university proper has made it a matter of so "little concern"? The denominations which take the narrowest, least scientific view of theology are notoriously the ones which would withdraw the study of it from the university and isolate it in some petty cloister of the sect. When the recently-founded Episcopal Seminary at Cambridge was projected the University proposed, if I mistake not, that it should be incorporated with the other professional schools of the University, and be put in every way on a par with the (so-called) Unitarian school, with all the rights and privileges pertaining to a corporate part of the whole institution. The offer was, unhappily, declined, and the result was one more petty sectarian school of (one phase of) theology, whereas the other course would, by the unavoidable interplay of views, doubtless have made still less sectarian the only school in the country, so far as I know, which professes to deal with theology as a science.

For (2) is not theology a science as truly as law or medicine, and as worthy of a place among the studies fostered at the university? That the theological school is "a professional school, like the schools of law and medicine," does not seem a good reason for depriving it of the privileges, and, if you please, the dignity, accorded to them. That "the Christian world is divided radically" on certain doctrines, the majority refusing even to consider the views of the minority, does not seem a very good reason for perpetuating a system which, by encouraging one-sided and prejudiced investigation, is largely responsible for such narrowness.

That theology deals with subjects, ethical and others, already in part covered by recognized studies of the university is perfectly true; but the same is true of all the sciences—not one of them but at some point comes in contact with, and at times includes, some other. Certainly it is true of the acknowledged university departments, law and medicine. If theo-

logy includes branches of history and ethics, so also does law ; so also does medicine include in part botany, microscopy, and several of the physical sciences. And if the *practical* aspect of law as teaching how to defend the rights of society and the individual, and of medicine as teaching how to heal the body, does not exclude either of these sciences from the "concern" of the university, why should theology be excluded because in its practical relations it teaches how to lift men to God, when in pursuing its divine calling it needs quite as much as its sister sciences the ballast of discretion and a sound mind, and *all* the light the race has yet acquired ?

H. D. Catlin.

Northumberland, Pa., July 7, 1879.

To the Editor of The Nation :

Sir : An editorial paper on this subject in your issue of July 3 is interesting as the most striking illustration I have lately seen of what Herbert Spencer has so well described as the "anti-theological bias." Spencer tells us that the progress of social science is seriously impeded by two opposite tendencies of thought—the theological bias on one side and the anti-theological bias on the other. The chief purpose of your article seems to be to oppose, as unwise and unnecessary, the attempt of President Eliot to endow the Divinity School of Harvard University with larger funds for its professional work. Perhaps "the anti-theological bias" has never before gone the length of inducing a journal which claims to be friendly to education to grieve over the success of a college in getting larger funds for purposes of instruction in theology. It is therefore curious to look at the argument used for this object.

The reasoning of your article may be thus stated : The purpose of all Protestant churches is to teach denominational doctrine, and the work of a divinity school is to train ministers to give this teaching. There is no other theology which can be taught in the divinity schools, for unsectarian theology does not exist (except in the Roman Catholic Church, where unsectarian theology, it seems, is taught !). Theological schools, therefore, are not wanted in connection with universities.

This is a brief but I think correct résumé of your argument against President Eliot and his endowment. Now, I object to it because (as the French say) it *pèche par la base.* Its foundation is defective. The object of a church is not to teach doctrine, nor that of a divinity school to train men to teach it. The object of a church is to vitalize the hearts of men by showing them the divine truth and love. Its object is, in the first place, religious. Now, it is found more and more that the truths which awaken the religious nature are common to all theologies. Therefore a divinity school which teaches these truths may have an unsectarian theology.

No doubt a great deal of sectarian theology is still taught, and the sharp contrasts of doctrine indicated in your article are still made. But in all denominations the best men reach over these boundaries, take each other's hands, and realize that they are one in Christ. The question, then, is whether there may not be one place where this broader, this inclusive theology, shall be taught—and if so, is not Harvard University good ground for this teaching ? "There is no science of Protestant theology." You might as well say there is no science of optics, because there are different theories on certain optical questions ; no science of medicine, because there are different schools of medical thought. Because much is yet in discussion it does not follow that there is nothing settled. Shall we shut up the medical school of the University because homœopathy and allopathy have not yet settled their dispute ?

You assume that educated people have greatly lost their interest in the Church since they have discovered that no one can teach religious truth with authority, and that ministers cannot throw much light on religious questions. No doubt if the purpose of educated people in going to church is to be taught with authority by a minister what they did not know before, they are quite justified in staying away. But the church, I believe, will long continue a home to those who, educated or uneducated, seek religious communion. Life is cold and dreary to all men, be they ever so highly cultured, who live an individual life outside of the sympathies of their race. The true work of the Church is to unite their souls in a common faith, hope, and love.

The men capable of leading in such communion do not get their power in a divinity school. No, but they go there to have their minds enlarged by the broadest culture ; to be taught judgment and tolerance by the large surveys of history ; to be purified by contact with superior souls ; and to be lifted by each day's study into warmer enthusiasm for helping forward the progress of their race. It is hardly worth while to object to the gift of a few thousand dollars for such purposes as these.

Perhaps, as a Unitarian minister, I should add a word concerning the suggestion that no more Unitarian ministers are wanted. You tell us that there are already "more Unitarian ministers than can find pulpits." The same state of things, however, exists in all denominations and in all professions. There are many lawyers and doctors who can find neither patients nor clients ; but we do not on that account refuse to graduate new classes of practitioners. You also inform us that "the younger generation of Unitarians find their spiritual wants better supplied in the orthodox churches than in their own." Sometimes they do, and sometimes also the reverse is the case. Numbers of young persons educated in Orthodox churches are attracted to religious faith in Unitarian churches. We perhaps receive from the other side as many as we lose—perhaps more. At all events, there is no such movement at present as to call upon us to close our divinity schools.

James Freeman Clarke.

Jamaica Plain, Mass., July 12, 1879.

[Dr. Clarke's "résumé of our argument" is "brief" but hardly "correct." We pointed out that President Eliot thinks it a good thing for a university to be "undenominational" in its attitude towards religion, in which we agree with him. We then endeavored to show that Harvard University carried on a divinity school for the education of ministers of one denomination cut off by a more than usually broad line from all other denominations, and that as long as it did so, and proclaimed that this school was an object of peculiar interest to the Governing Body, it could not obtain either the credit or profit of being undenominational. We did not say pure and simple that "unsectarian theology" was taught in the Roman Catholic Church, and Dr. Clarke's putting this in our mouth in this shape makes us fear he is not good at résumés. We said that there was in the Catholic Church "a theology abstracted from denominational belief" which "it was worth while [for an undenominational university] to keep up a divinity school to teach," because from its resemblance to a body of law interpreted under a court of last resort it was capable of being taught systematically as a science, while Protestant theology consisted in the main of a Collection of the opinions of independent denominational thinkers and commentators. The likeness of the theology taught in the Harvard Divinity School to optics and medicine is something about which we really must let Dr. Clarke have his own way. But we repeat, in the interest of the University, that one of the hindrances to its usefulness lies in the fact that a large body of Christian parents believe it to be a hot-bed of Unitarianism, and do not like the Unitarian mode of "vitalizing the hearts of men" ; indeed, they think it very hurtful, and are unwilling to have their children exposed to it. It is difficult to get people in Massachusetts to understand the force of this feeling in other parts of the country ; but it ought, as it seems to us, to be recognized and allowed for by the managers of the College. We shall be glad to receive from Dr. Clarke a definition of "nonsectarian theology," describing in detail the manner in which it is taught and the view it takes of such questions as the Atonement, the Trinity, Original Sin, Future Punishment, the Nature of the Sacraments, the Relation between Faith and Works, and telling us whether the chair or chairs from which it is to be taught in the Harvard Divinity School can be or will be filled by Congregationalists, or Episcopalians, or anybody but Unitarians. Some explanation of this kind is due both to the subscribers to the endowment, and to parents throughout the country who are asked to consider the College undenominational.—Ed. Nation.]

WHERE COLONEL ASHBY WAS KILLED.

To the Editor of The Nation :

Sir : Captain J. A. Judson is in error when he states, in his article on "The Historical Accuracy of the late General Taylor," published in the *Nation* of the 10th inst., that Colonel Ashby was killed by Hatch's Brigade. On the contrary, Colonel Ashby was killed by a detachment of Bucktails (the rifle regiment belonging to the Pennsylvania Reserve Corps) commanded by Colonel Kane, in a sharp encounter on the evening of the 6th of June, 1862, which occurred in a strip of wood about a half-mile west of Harrisonburg, Va. Colonel Kane's detachment was at the time attached to General Geo. D. Bayard's brigade, which consisted of the First Penn-

sylvania and the First New Jersey Cavalry regiments and a battery of artillery. The First Pennsylvania Cavalry was drawn up in an open field on the right of Kane's Battalion, as support, and witnessed the whole affair. The action lasted but a few minutes, but the slaughter was terrible on both sides, as it was at very close quarters. Colonel Ashby's body was removed by his men, but his horse lay dead on the battle-line where the colonel fell. Colonel Kane was wounded and made prisoner. Colonel Wyndham, of the First New Jersey Cavalry, was also captured the same evening. This fight occurred two days previous to the battle of Cross Keys, which was fought eight miles west of this point.

Very respectfully, WM. PENN LLOYD,
late Adjutant First Pennsylvania Cavalry.

MECHANICSBURG, PA., July 12, 1879.

ARMY BREASTPLATES.

TO THE EDITOR OF THE NATION:

SIR: The intemperate language of your correspondent, charging General Taylor with deliberate falsehood in his statement that breastplates and other protective devices were worn by Federal soldiers, is probably best met by the fact that there is in the State Library here such a breastplate, found on a Federal soldier. It is formed of two steel plates, made to wear and look just like a waistcoat, the plates being covered with blue cloth, with United States army buttons. Whether this breastplate came from any of Banks's command I do not know; but an item in a Richmond newspaper of the time, May 27, 1862, states that a major of Banks's army, brought prisoner to Richmond, had on his person one of these breastplates.

An editorial comment in the Richmond *State* of to-day gives living testimony to seeing such breastplates on Federal soldiers, not, indeed, in this instance at Middletown, but at Gaines's Mill or Cold Harbor. Perhaps many persons may be surprised at the wrath awakened in your correspondent's bosom by General Taylor's statement; for the fact that protective devices were used does not necessarily reflect on the courage of those using them. A good Confederate soldier tells me that he knew of their use in our ranks.—Very respectfully, A. P.

RICHMOND, VA., July 12, 1879.

BI-METALLISTS AND BI-METALLISTS.

TO THE EDITOR OF THE NATION:

SIR: There are two classes of so-called bi-metallists. They are distinct even to antagonism. Do not let the readers of the *Nation* longer suppose them identical in either theory, method, or object, because of a cognomen to which one of them has no rightful claim.

One class demands free coinage of silver equally with that of gold, irrespective of conditions, for all nations if they will have it, or for one nation though alone in adopting the measure. Of such were a majority of the Monetary Commission appointed under Act of Congress in 1876–7, the supporters of the Bland Bill, and a majority of the voters in the West and South of this country; and of such are those who now urge upon Congress the repeal of all restrictions upon free coinage of silver having the quality of legal tender. They are, some of them consciously but most of them ignorantly, advocates of a mono-metallic *silver* currency in the United States—the inevitable result of the success of their efforts, should it be attained while European governments hold their present attitude on this matter of metallic money.

The other class calls for universal or international bi-metallism. They believe that full use of gold and silver as money is desirable and attainable by concurrent legislation of the commercial nations, fixing a ratio of value common to them all, between the two metals, with the mints of each country open to free and unlimited coinage of both metals. Desiring the concurrence of all the great nations, they believe the desired result can be accomplished by co-operation therein of Great Britain, France, and the United States, because of their united commercial supremacy. Holding that a merely commercial restoration of the old relation of value, 15½ weights of silver to 1 of gold, being fortuitous, an effect of temporary conditions, could have none of the permanence necessary to a useful equalization of value, they believe that bi-metallism proper is not attainable except by the proposed international action.

The former, demanding unlimited and unconditioned free coinage of silver legal-tender in any one country (our own, for instance), would practically cut silver loose from gold, and subject its relative money value to its relative bullion value. It is but just to say that these silver theorists claim that their policy, carried out even in this country alone, would, by its demand for silver to be coined, added to the normal movement of silver to the East, eventually, and at no distant time, restore to silver its old European ratio of value—*i. e.*, would carry silver about three per cent. in market value above the ratio value by our laws. It is not necessary here to argue against their idea that the 400 millions of silver coin in the United States—supposing all money here to be of silver standard, and using so much as 400 million dollars—could raise the value of 1,000 millions in Europe, when its holders in Europe would be only too glad to sell of their stock more and more largely at each advance of one penny per ounce caused by the silver policy of the United States. Just here the international bi-metallists confront the silver-standard men by saying the only true and prompt way to bi-metallism, and elevation of silver to its proper rank and function as money, is by stopping its coinage until it be international; and then by tying gold and silver together at a ratio made steadfast under international agreement. The latter would hold all the silver up to gold value, or gold and silver to one ratio of value in the coinage of both. True, the purchasing power of 4,500 millions distributed in 6,000 millions would be less than if confined within a bound of 4,500 millions that could not be expanded. What the difference in effect on prices between one and the other sum of metallic money would be is not yet known, for silver is yet in part supplementing gold in popular impression, and the separation of gold from silver in money power is not complete. May it never happen that gold shall hold all the purchasing power, even when sharing it with other forms of currency redeemable in gold. It would be a deadly constrictor. Yet, to just that condition is the argument for the gold standard alone leading the world.

The gold standard would confine the transactions of the world, in volume and value, within its own capacity, impossible of expansion as that is, and the capacities of its representatives, all depending on itself.

The true bi-metallist standard would broaden the money basis to include all silver and all gold, with, of course, a corresponding capacity of carrying safely all the many forms of sound credit that must have a basis of good money.

For the present, and probably until experience of suffering shall reverse the popular opinion, it is and will be impossible to change our coinage laws for the better. Let us be thankful for the wisdom that has stayed a further change for the worse. But now bi-metallism offers a great boon and blessing. Accepted by all or a majority of the leading nations, it could do harm to none; it would save us from the impending calamity of *silver standard currency;* and it is believed by many men of large knowledge and position in Europe that its usefulness and beneficence there will be no less than its protecting agency here.

Each of those nations must decide for itself. If they happen to favor that measure which would do us good service, surely we need not hasten to dissuade them. B. F. NOURSE.

BOSTON, June 26, 1879.

THE *ART AMATEUR.*

TO THE EDITOR OF THE NATION:

SIR: May I further trespass on your kindness by asking you to inform my friends that all the statements in my letter of July 3 were literally true, and that for remedy against the assertions of Montague Marks, in his reply in the *Nation* of July 10, I have commenced an action at law?

Yours respectfully, CHARLES A. COLE.

NEW YORK, July 14, 1879.

Notes.

MACMILLAN & CO. will publish immediately a volume of essays by Mr. John Fiske on the subject of Evolution, and have also in press Sir Samuel Baker's 'Cyprus as I saw it in 1879,' and 'A Ride in Egypt,' by the Rev. W. J. Loftie. They have just issued Part VII. (first of vol. ii.) of Grove's 'Dictionary of Music and Musicians' (Improperia—Libretto). Some of the chief articles are Intermezzo, Intonation, Inversion, Key, Leit-motif (with interesting illustrations, mostly of course from Wagner), Ionian Mode, Irish Music, Kyrie, Leipzig, etc. Living composers and artists like Alfred Jaell, Joachim, Kirchner, and Miss Kellogg are included in the present number; among the dead, Jullien, R. Kreutzer, Lablache, Henry Lawes (who composed the songs for the masque of 'Comus'), and Lassus. To this Netherlands master an almost disproportionate space is allotted, and both his portrait and Lawes's are given—a practice that would have been more honored in the observance than

in the breach throughout this work.——Mr. A. T. Rice, editor of the *North American Review*, has selected a dozen essays from that periodical ranging from 1832 to 1868. Longfellow's "Defence of Poetry" is the earliest production; Lowell's "Shakespeare Once More" the latest. Prescott, Irving, Cushing, Bancroft, Emerson, Motley, C. F. Adams, G. W. Curtis, Dr. Holmes, and F. Parkman are the other contributors. The number of volumes of this sort derivable from the *Review* is almost unlimited. D. Appleton & Co. are the publishers.——Houghton, Osgood & Co.'s reissue of the standard edition of the 'British Poets' has been augmented by Shakspere and Jonson, and Wyatt and Surrey, each in one volume, Shakspere's poems alone, of course, being here printed. We have more than once called attention to the cheapness of this excellent series.——Mr. Whitelaw Reid's address on "Some Aspects of Journalism" will be brought out by Henry Holt & Co.——A translation of Pastor Borel's 'Memoir of Count A. de Gasparin' is announced by A. D. F. Randolph & Co.——D. R. Locke, Toledo, Ohio, announces the publication in book-form of a serial story which has been appearing in his paper, the *Blade*, called 'Andersonville: a Story of Southern Prisons.' Its fidelity is vouched for, and the book will be "illustrated with several hundred engravings, largely taken from Rebel photographs" in the author's possession.——The summer meeting of the National Educational Association will be held at Philadelphia, as we have already announced, July 29, 30, 31. We hope its proceedings will not resemble in one particular those of the American Institute of Instruction lately convened in the White Mountains, at which, according to the press despatch, "after reading 'Love in a Balloon' and 'How We Captured a Mouse,' by Prof. Hibbard, a song was sung by Mrs. West, and the exercises closed."——Prof. A. S. Packard, jr., Providence, R. I., asks on behalf of the U. S. Entomological Commission for information concerning the habits and mode of breeding of the Hessian Fly, the losses it causes, the preventive remedies, etc., and for specimens of the insect, its parasites, and the wheat affected, to be sent as above.——The Seventh Cincinnati Industrial Exposition will be opened for the reception of goods from Aug. 18 to Sept. 9. We believe smoke-consuming devices will form a prominent feature of the display.——The Kalamazoo *Telegraph* states that Professor Alexander Winchell has just been reappointed to the chair of Geology in the University of Michigan. Since leaving this post, some years ago, he has been Chancellor of the Syracuse University and professor of geology in the Vanderbilt University "The latter position he was compelled to leave owing to his views on the antiquity and geological place of man not agreeing with those of the Southern Methodists."——An historic phase of the Eastern Question is treated by Camille Rousset in his 'Conquête d'Alger' (Paris: Plon, 1879).——Vol. i. and part of vol. ii. of a valuable collection of 'South-Slavic Melodies' has been published in Agram. The collection thus far embraces over 500 songs, from Dalmatia, Herzegovina, Bosnia, Servia, and the adjacent countries.——A German translation of Cesnola's 'Cyprus' is shortly to appear, with an introduction by Georg Ebers. The translator is the Egyptologist, Ludwig Stern.

—The Woodruff Scientific Expedition, in spite of its second failure and the death of its projector, is once more being attempted, under the ostensible management of Mr. William S. Clark, late chief of the "faculty." The programme is essentially unchanged: 40,000 miles of travel are to be achieved in not less than eighteen months, and after doing Europe, Egypt and Palestine, Malaysia and China, "Japan is to be studied carefully." The financial estimate contemplates 200 students at $3,000 each, payable in advance. This number is to be raised by premiums to agents, and free scholarships to those who secure 600 cash subscribers to a paper to be published on board the vessel; and if such chromo devices fail, a smaller expedition may be despatched experimentally. It is further stated that "a gentleman of culture and large means has undertaken to furnish the funds required to place the claims of the expedition before the public, believing that such an educational institution can be put into successful operation, and rendered permanent." Can it be that this philanthropist is none other than the creditors of the late J. O. Woodruff?

—*Harper's Magazine* for August is a number appropriate to the season both in the subjects of its articles and in the absence in most of them of any serious demand upon the reader's thoughtfulness. Sometimes, as in the case of the opening paper on Lake George, so copiously and felicitously illustrated by Mr. J. D. Smillie, nothing would be lost by disregarding the text altogether. One must speak much more civilly of Mr. W. H. Gibson's "Snug Hamlet and Hometown," in which the writer's literary sense rather heightens his claims to respect as the designer of the accompanying illustrations, remarkable as they are both for draughtsmanship and engraving. Two other illustrated articles are pretty sure to contain novel information for nine out of ten readers of *Harper's*, viz., Mr. Rideing's account of the New York "Nautical School *St. Mary's*," whose official designation is "Public School No. 90," and the paper entitled "Chautauqua." Chautauqua is a lake in the westernmost part of New York, near Lake Erie, and there an annual summer meeting is held in a sort of camp-ground. Originally designed for the instruction of Sunday-school teachers, especially of the Methodist Church, its aim now is "to give a 'twist' toward learning and culture to minds which would not be apt to receive that learning under ordinary circumstances"; of course, "in the interest of evangelical religion and Biblical truth." Lectureships (including the "Boston Monday") and text-books (specially prepared as well as borrowed), schools of languages and *conversazioni*, a park in which one learns the topography of the Holy Land by walking through it, a sectional model of the Great Pyramid, stereopticon exhibitions, etc., are some of the features of this curious Yankee notion, which has a student membership of more than 8,000 persons. Dr. E. G. Loring discusses in a somewhat alarming way the "Consequences of Defective Vision," and proceeding from the indisputable premise that a near-sighted eye is a diseased eye, he states his belief "that in a great number of near-sighted people the general average of physical vigor would be less than in the same number of those who possessed long sight"—a fact, if it be a fact, which ought to appear in German longevity tables. He furnishes some easy tests for astigmatism and for abnormal vision.

—The July number of the *American Law Review* contains a valuable article on "Common Carriers and the Common Law," by Mr. O. W. Holmes, jr., of Boston, who during the past few years has contributed to the *Review* a number of interesting essays on the development of fundamental legal conceptions. They deserve more than a passing notice. Germany for a long period, as England, though to a less extent since the time when Austin became a familiar name, has been the field for a vast amount of profound research into the origin and nature of those fundamental legal notions, the analysis of which lies at the basis of every system of jurisprudence properly so called; but there are many reasons why it is greatly to be hoped that in the future we may more and more rely on English and American scholarship in this branch of knowledge. All Germans are necessarily Roman lawyers at bottom, and notwithstanding all that has been said about the beauty and system of Roman law, it must be remembered that its system is not that of the common law, and that many of the primitive notions in the latter are to be traced historically to a totally different source from the conceptions which go by the same name in the former. Besides being a civilian, too, every German is a Kantian or Hegelian, while English or American lawyers (if they consciously profess any philosophy at all) belong generally to a widely different school. Everybody knows how in the classical Roman period the discussion of first principles by the commentators was colored and distorted by the prevailing philosophical ideas imported from Greece; and it is consequently easier to understand how a commentary by a modern professor on such a subject, let us say, as Possession, may be profoundly affected by his Kantian or Hegelian education. With regard to common carriers, the law of England and the United States is very peculiar, and it is Mr. Holmes's object in the essay before us to show that it is not Roman but Teutonic in its origin, and may be traced back to the period of the folk-laws, when the German races were still in a pastoral condition; when cattle formed almost the only known species of property, cattle-stealing the most serious offence against property, and a regulated self-redress the only remedy known to the law. As we understand his argument it, is that the curious and anomalous rule of law which makes (for example) the New York Central Railroad absolutely responsible for the loss or destruction of every piece of freight entrusted to it, unless this is due to an "act of God" or the public enemy, or unless a special contract is made with the shipper, is merely a survival from primitive times in the case of a particular class of persons (common carriers) of a principle of law which once affected all persons entrusted with the keeping of the property of others. We cannot here do more than give the barest hint of the drift of Mr. Holmes's essay. We trust that it may with its predecessors be soon collected into a volume. The publication would redound greatly to the credit of American legal scholarship.

—One of the papers read at the recent Library Convention spoke of

the exclusion of "immoral and French fiction" from the libraries as quite a matter of course. The current *Blackwood* has an elaborate critical and homiletical article upon "French Novels," the sixth in its "Contemporary Literature" series, from which a similar conclusion might be drawn. The question of admitting this literature to public libraries is, of course, a practical and a complex one, and we do not mean to discuss it; but the two circumstances associated furnish an apt illustration of the customary Anglo-Saxon attitude towards French fiction, and that, so long as it is the attitude of immaculateness towards pitch, is worth attention. Of course there is an explanation, if not an excuse, for it. There are many things which they order differently in France; a young girl in a good French family would no more be permitted to look into one of Octave Feuillet's novels than a young English or American girl would be permitted to read 'The Age of Reason.' Consequently, the limitations of its audience being well understood, the French novel is more plain-spoken than the English, and it is in great part from its plain-spokenness that the unwarrantable assumption of its immorality proceeds. There are, indeed, plenty of immoral French novels, but perhaps not more than there are of immoral English ones. For the matter of that, a pretty long argument might be entered upon as to whether 'The Wide, Wide World' and its sort are not more immoral at bottom than 'Les Amours de Philippe' and its sort. It is certainly a misfortune to quarantine what may be called a whole literature, and includes such literary artists as Balzac, George Sand, Flaubert, Mérimée, Cherbuliez, by stigmatizing them as immoral. But it is a ridiculous misfortune to do it on such grounds; for the superiority of the average French novel, which the writer in *Blackwood* admits, though with a very wry face, is largely due to the opportunity that it has and the English novel has not of being plain-spoken; it occupies itself strictly, almost always, with painting life as it is, and not with the production of romance which has no relation to reality except in the novelist's imagination, unchecked by any considerations of literary art. "Since the author of 'Tom Jones' was buried," says Thackeray, "no writer of fiction among us has been permitted to depict to his utmost power a man. We must drape him and give him the conventional simper." Absolutely nothing stands between truth and the writer of French fiction, and he does depict men and things to the utmost of his power. The real objection to French novels lies in the application of the maxim, "The truth should not be spoken at all times." That is the reasonable ground for the libraries and English essayists to take, and not the untenable one of maintaining that a romantic idyl of André Theuriet is less pure and sweet in itself than 'The Vicar of Wakefield.'

—Americans, even more than his own countrymen, will be interested in an article which Mr. John Wisker contributes to the *Fortnightly Review* for July upon "The Colored Man in Australia." The title might as well have been "The Chinese in Australia," since what is said of the black aboriginal and the brown Polynesian is both brief and, from the nature of its subject, of small comparative importance. The Chinese question, however, is in Australia even more prominent perhaps than it is in California. The Celestial is as great a nuisance and a terror to the Australian as he is to the San Francisco "hoodlum"; the slang term for his invasion is "the Yellow Agony," and though no Australian Kearney appears to have arisen, and the colonial governments seem to have respected treaty provisions, what are called "repressive measures" of great stringency and efficacy have been adopted to the end and indeed with the result of apparently, and temporarily at least, settling the question. The history of these measures Mr. Wisker gives at length and with great dispassionateness, although he attempts no disguise of his substantial sympathy with them. As a matter of fact, the Australians seem to have much more ground for complaint than the Californians. There are 4,000 Chinese in Sydney alone; 20,000 out of a population of 200,000 in Queensland; in Cooktown they are in a majority. As Mr. Wisker says, "these figures do suggest a serious question," which is, as he goes on to show, whether or no the European population unassisted by repressive legislation will be able even to hold its own. He does not dispute the "general right of the employer to get his work done at the cheapest rate," nor does he favor any violation of Great Britain's treaty obligations, but he maintains "the undoubted right of the colonies to self-preservation," and with this, it seems clear to him, unchecked Chinese immigration would seriously interfere. It must be admitted, however, that since the recent colonial legislation in the matter, the danger is not imminent. "The Chinese Immigrants Regulation Act has achieved its object," he says, "that of preventing immigration altogether" in Queensand; and similar measures elsewhere will undoubtedly have the same effect. To most Englishmen, Mr. Wisker acknowledges, this legislation which does indeed seem both grotesque and tyrannous, will appear "monstrous." But he says that "the Australian is fully convinced that the issue is one of life or death, and that where the Chinese are the Europeans will sooner or later cease to be," and it is plain that he agrees with the Australian. "For the yellow men to settle down amongst a people with whom they can no more amalgamate than oil can mix with water, is merely tempting Providence." And he advises the Chinese to colonize by themselves. The whole pith of the question both in Australia and in California is certainly here: whether or no the yellow men's hostility or indifference to white men's civilization is likely sooner or later to imperil that civilization. Abstract economic propositions as to "cheap labor," etc., are slight in comparison.

—Bishop Gilbert Haven's "boom" for Grant at the Woodstock Fourth of July symposium, contrived by Mr. Bowen, of the *Independent*, contained many passages which we should like to transfer to our columns. We reluctantly pass over the glowing tributes to Boss Shepherd and Mullett and their works, and the complete if not hearty sanction of the San Domingo job, in favor of the more general whitewash applied in the following paragraph:

"The splendor of that height of national sovereignty and human equality which was attained in the administration of Ulysses S. Grant will be yet more illustrious as we wriggle at the base of the mountain from whose summit we have descended, in vain efforts to scale its heights and bask again in its sunshine. Even as the foaming, writhing, idiotic mouthings of the weak lad possessed with the devils, from which neither himself, nor his father, nor even the disciples and associates of the Lord could deliver him, contrasted painfully to the three apostles with the glories of the Mount of Transfiguration."

This comparison, to those who have still some regard for moral standards and some recollection of Grant's administration, will appear as shocking as Mr. Froude's recent likening of Cæsar to Christ, and, coming from a dignitary of the Methodist Episcopal Church, even more disgusting.

—The London *Week*, a weekly paper established two or three years ago by Mr. Louis J. Jennings, formerly editor of the New York *Times*, has just died. The *World*, of this city, made gallant efforts to sustain it by referring to it and quoting it as one of the highest authorities on British affairs, but in vain. All the serious weekly papers in London are suffering more or less from the competition of the new "society papers," which are, owing to a curious and sudden depravation of the public taste, having a prodigious run, their main ingredient being social gossip, mostly mendacious. Mr. Jennings's *forte*, however, lay neither in the judicial-mindedness of the serious weeklies nor in the flippant gaiety of the society papers, and there is no market in England for heavy "slogging," as the pugilists say, such as he used to deal out on his enemies here. The support of him by the *World* is a most curious case of magnanimity. Mr. Jennings used to express in the *Times* the lowest opinion possible of the present editor of the *World*, and when the late editor was supposed to be on his death-bed he referred on one occasion not sympathetically, but exultantly, to the tortures of anticipation with regard to the future life which he supposed him to be suffering. Journalism is certainly becoming a sweeter and tenderer calling than it used to be, at least in these parts.

THE STUDY OF PSYCHOLOGY.*

THE student in psychology who goes to this first posthumous volume of George Henry Lewes in search of new inspiration and direction will be disappointed. Nothing that has not already been written in the 'Problems of Life and Mind' appears here. There are the old warnings against the erection of Abstractions into Realities, and the dangers of Analysis unsupplemented by Synthesis; the familiar insistence on the importance of the Social Medium, and the hollowness of "hypothetical physiology"; while the reduction of Body and Mind to different Aspects of the same ultimate, Feeling, reappears and permeates everything. But Mr. Lewes was too experienced a literary workman to repeat and capitalize without a purpose. The present Problem, "published separately in obedience to an implied wish of the author," is evidently in some degree intended for the general public, and so reasserts with considerable amplification what were believed to be the needs of a scientific psychology.

Perhaps Mr. Lewes's chief merit as a philosopher was a continuous insistence on penetrating the significance of words. Certainly his most valuable and characteristic contributions to psychology show him con-

* 'Problems of Life and Mind. By George Henry Lewes. Third Series. Problem the First, the Study of Psychology: Its Object, Scope, and Method.' London: Trübner & Co.; Boston: Houghton, Osgood & Co. 1879.

stantly in the attitude of watching his own stream of thought, and investigating the credentials of each word in the sequence. Highly abstract thought is carried on almost wholly with verbal signs, and these are generally accepted as ultimates. The philosopher is too apt to question everything but the words he questions with; their subtle trickery goes unsuspected as they float him along the stream of inference.* This perennial error is so disastrous that one who had probed it might well repeat and re-repeat warnings against its manifold forms, as Mr. Lewes did in every 'Problem of Life and Mind,' and continued to do in the volume just issued.

The first and third chapters of this work, under the titles "The Object" and "The Position of the Science," define the relation of psychology to physiology; insist on the biological standpoint, from which mind is to be viewed as a function of the organism; and criticise the views of Mill, Comte, and Spencer as to the subject-matter of psychology. "The place of Physiology is that of the organic *conditions* of production; the place of Psychology being that of the *products*." "Psychology is a branch of Biology, having for its special province the analysis and classification of the facts and laws of Sensibility viewed in their subjective aspect." "It is not the presence of Consciousness that marks off the phenomena as those of an unique science, but the presence of a particular point of view, a theoretic attention to the feelings *as* feelings."

Function and Faculty are then placed in luminous antithesis: function is what is fixed, unalterable, the instinctive, the mechanical; faculty is what is modifiable, acquired in the individual experience. Function is the connate constitution, the inherited mechanism; faculty the acquired constitution, a modification impressed upon the inherited mechanism by experience. Here lies the difference between man and animal. Speaking broadly, animals have functions; they build nests, seek food, shrink from pain; men have functions *and* faculties; traditional inheritance endows them with language, music, all the post-natal culture. (The songs of birds are undoubtedly a case of traditional inheritance.) This brings into view the importance of the Social Medium (chap. v.) The stuff out of which the faculties are built is not the experience of isolated individuals, but the collective experience of the race. Even were our knowledge of the organism enormously extended, "it would still be incompetent to furnish an explanation of moral sentiments and intellectual conceptions, simply because these are impersonal and social, arising out of social needs and social conditions, involving, indeed, the organism and its functions, but involving these in relation to experiences only possible to the collective life."

Animal psychology, on the surface so promising, is considered for the present infertile; partly because of the inaccessibility of animal subjective life, and partly through the constant liability to anthropomorphic misinterpretation. And since animals possess no developed society, there cannot be studied in them that General Mind (chap. ix.) which has been the efficacious environment of humanity. The General Mind traces itself in the intellect, the moral sense, in what are significantly called the *Humanities*—in all forms of culture; and has its record in history.

Concerning the Method of psychology little that is new is brought forward. The need of using both introspection and observation (objective) is emphasized; no one questions that now. Indeed, one of the chief deficiencies of this work in the eyes of special students will be that just nothing is said of the immense amount of observational work accomplished during the last fifteen years in objective psychology. Fechner, Helmholtz, Wundt, in Germany; Sully, Grant Allen, Romanes, Galton, in England, and Stanley Hall at Harvard have labored with admirable results. There is great need now that some one should sift these results, show their general significance and drift, and formulate a method and a programme for future work. It would be impossible to estimate the future importance of scientific psychology too largely; and that full efficiency may most quickly be attained psychology must pass the stage of individualism and be constituted a science.

Mr. Lewes had already shown the misfortune of subjective psychology in having been born of Metaphysics, and taught us what ancestral traits might profitably be retained and what called for eradication. This last volume, with the "Physical Basis of Mind" as a groundwork, might very appropriately have contained the much-needed systemization of objective psychology. It is sufficiently seen that the "longing to get behind things" is little else than a desire to find the centre of a circle outside the circumference, and there are enough who believe that if this universe does not suffice for our activities and our interests the fault lies not in the shallowness of things, but in the shallowness of our vision. What is wanted is that those who labor in this belief should be guided and inspired by a common conception of their object and their method.

* For example: Explanation is the resolution of a phenomenon into its ultimates. These ultimates are explained by reduction to a lower grade of ultimates. When the final, the true ultimate is reached, further resolution becomes impossible. Now, philosophy attempts to explain that last ultimate, not seeing that the question of explanation is irrelevant, resolution being at an end. The office of explanation is a vanishing factor that becomes zero when Existence, which, as such, cannot be resolved, is reached. Here the word *explanation* is not sufficiently questioned; like many others, it is allowed to extend beyond its proper area.

Memoir of the Life and Episcopate of George Augustus Selwyn, D.D. By the Rev. H. W. Tucker, M.A. (New York: Pott, Young & Co. 1879.)—George Augustus Selwyn, Bishop of New Zealand for twenty-six years and of the ancient diocese of Lichfield for eleven more, ending in 1878, was born in 1809, of an ancient family, to which George Selwyn, the wit and friend of Horace Walpole belonged. At Eton he was a classmate and intimate of Gladstone, and he was a member of the Cambridge crew in the first of the now famous races with Oxford. He took kindly at once to the idea of a clerical life. His first parish was Windsor, where he attracted notice by a pamphlet or two and by his distinct organizing talent, and at the age of thirty-two was selected as the man to be the first missionary bishop of New Zealand. He was personally handsome, athletic, skilled in many practical occupations not usual to his profession, and quick to turn his hand to others. Had he not been a good bishop he might have made a capital farmer, carpenter, weaver, or printer, it is said. Something of all these, as well as the Maori dialects, he learned in order to start them properly in his colony. He sketched, but by no means so well as to justify the praise that "he was a born artist"—praise founded upon letters, with pen-and-ink illustrations of natives, their huts and landscapes, one of which is lithographed in *fac-simile*, and run in among the text. He was in particular a sailor. He began to familiarize himself with the details of navigation on the long voyage out from England, and afterwards had plenty of use for them. A part of the episcopal outfit was a small schooner, and in this he made constant voyages, often three thousand miles at a time, visiting in turn the numerous islands belonging to his spiritual domain. The mission ship, *Border Maid*, is described coming up to Auckland with the bishop at the helm. "Luff, my lord!" cries the captain. "Luff it is," my lord bishop sturdily replies.

His piety was not of the mystical order, but he gave too many proofs to allow its sincerity to be doubted. It is pervaded, like all his transactions, with a strong Anglo-Saxon common sense. He had, as we have said, the organizing faculty. He saw definite points and devoted himself to reaching them in the directest manner. In all his memoranda, sermons, propositions for this and that, he is fond of putting down the paragraphs with numbers, 1, 2, 3. It was a natural tendency, strengthened no doubt by the childish simplicity in point of intellect of his savages. One only of his speeches to them is given in full. It is short, but too long to reproduce here. There is something quaint and very pleasing, partly in its directness, partly in the turns of expression borrowed from them. It was on the occasion of his appearance in a grand conclave of the Maoris, who were meditating war, to endeavor to persuade them to better counsels:

"Here am I, a mediator for New Zealand. My work is mediation. I have eaten your food; I have slept in your houses. The council of Waikato has agreed that to-day I should be allowed to speak my mind to you. Well, then, carefully weigh these special thoughts:

"Let the law be one.
"Let the Waitara question be decided by law.
"Let Tataraimaka be occupied quietly by the English owners.
"*First*, let the law be one."

He goes on to show that there should not be one law for one Maori and another for another, or a different law for Maoris and Englishmen—nothing special, but general laws applying fairly to all alike.

"Therefore I say to you, agree to this first thought of mine, 'Let the law be one.'

"Now for the second point, 'Let the Waitara case be decided by law.' This is not my idea alone. It is yours, William Thompson (a chief); it is yours, Ngatikahungunu; it is what we all said. The fault Governor Brown committed was that he did not try the Waitara question by law. This was my sickness, that it was not tried. This is my medicine, that it should be tried by law. It was one man of yours who began the wrong, namely, Te Teira. It was one man of ours who continued the wrong, Governor Brown. Now all of us together, the whole body, will set right the wrong of one member."

Here follows again, like a kind of refrain: "Agree, then, to this second word of mine, 'Let the Waitara question be decided by law.'"

The first missionary bishop was not the first missionary. The coun-

try had been in hand thirty years, and very tolerably Christianized by Catholics, Dissenters, and what not, together with Church people. The picture given of the natives—it is tantalizingly fragmentary—represents them in an attractive light. They were gentle, easily amenable to ideas of law and an orderly life, humane in war, and at the same time of fearless courage. The troubles were all about the tenure of land. There were no individual, but only tribal proprietorships. Transfers were continually being made, under the inducement of that eternally seductive "British gold," by unauthorized persons. Indeed, it must have been rather difficult to tell just who had the authority. At any rate, some of the land was paid for three times over, and then had to be fought for besides. The bishop was very active in these disturbances. Passing from one side to the other in the interests of conciliation, he managed to lose the favor of both. He was hooted by the settlers at Taranaki, who said he was greedy of power and was truckling to the natives to get all the land for his churches. Then the natives refused him passage on his journeys, saying he was only coming through their country as a spy. But he sat down imperturbably on his bundle, and said good-humoredly: "This is very fine. The Pakehas (the settlers) grind me at Taranaki, and now you grind me here."

The old difficulty of the conflict of Christian sects among themselves, from which no missionary field is quite free, was a very tangible retarding influence to evangelization. In one place the natives were found warned against Hahi (Church) and in favor of Weteri (Wesley). At another a fierce dispute was raging as to whether the reformatory fires at Smithfield, of Queen Mary or those of Queen Elizabeth, were the most orthodox. "Here have I come," says a logical old chief, in substance, stretching out three fingers, "to a point where three roads branch forth. This is the Church of England, this is the Church of Rome, this is the Wesleyans. I am sitting here. Which shall I take?" They took their religion in a rude way at the best, as benighted intellects must. A youth who had completed his education at the college wished to take home poison from the laboratory to administer to his enemies, and was surprised to learn that it would make any difference, inasmuch as they were not Christians. When the troubles came Christianity was identified with lack of patriotism, and there was a great backsliding. Some few even went to the extreme of relapsing into cannibalism.

We fear we may have given a more attractive idea of the book than it deserves. It might possibly be little less than dreary to the general reader. The great bulk of its contents is letters such as are written by millions every year, and what may be called the *technique* of a denominational religious life—the spreading of communion tables, and the administering of confirmations. It manages, by a lack of imagination, to make the least possible of the strange, remote archipelago, and at the same time to avoid presenting the bishop as the stirring model for the imitation of youth which his career would well have warranted.

Life and Adventures of Ernst Moritz Arndt. Compiled from the German. With a preface by John Robert Seeley, M.A., Professor of Modern History in the University of Cambridge. (Boston: Roberts Bros. 1879.)—The basis of this compilation is Arndt's autobiography ('Erinnerungen aus dem äusseren Leben'), which has been on the one hand abridged, on the other usefully supplemented from his other personal writings and from numerous biographies. The result is a work of lasting interest, and one of the best possible introductions to the history of Germany during and immediately after the Napoleonic era. The charm of the narrative fully justifies Prof. Seeley's comparison of it, in his preface, to the historical novel, which it far surpasses in value. Arndt's life was at every stage romantic. Born on the island of Rügen, under Swedish rule, with *Platt-deutsch* for his mother-tongue and High German, blunderingly spoken, the etiquette of festive occasions, at a time when, as he says, people were less educated but "possessed more individuality, more variety, and more poetry" than they did half a century later, his happy boyhood was passed by the sounding waters of the Baltic within sight of the Pomeranian shore. Education in the universities of Greifswald and Jena took him to the mainland; in the early days of the French Revolution he "was still at heart more Swedish than German"; but "when Austria and Prussia had fallen after vain struggles, then first I began to love Germany truly, and to hate the foreigner with an utter hatred." Before this catastrophe he had travelled in Sweden, Italy, and France, of which he gives lively pictures. Afterward, as the apostle of German nationality, of that unity which was not attained till 1871, he followed Stein to Russia, where, as Gortchakoff said of his own country after the Crimea, that part of Prussia which would not submit was gathering itself for the recoil; and thenceforth, till the overthrow of Napoleon, he had the singular honor to be the instrument and associate of Stein, who knew how to employ his great gifts as poet and prose-writer in kindling the patriotism of an overridden people, and preparing it for the tremendous sacrifices which at last enabled it to drive out the invader for ever.

The amount of incident and reminiscence of famous personages in these pages is very great. Perhaps the most valuable observations are those of Russian character; most graphic and horrible the account of the French retreat from Moscow, with Stein and Nemesis following close behind. All that we learn of Stein is conveyed in that language of affectionate admiration which he inspired in all his chosen "family." There was a special bond between Arndt and his chief in their hatred of serfdom. Arndt's early 'History of Serfdom in Pomerania and Rügen,' though it caused him to be regarded as a seditious person by his aristocratic neighbors, fixed the attention of Gustavus IV. upon the evil, and probably hastened as well as preceded the edict abolishing serfdom (1806-1810). Stein's first act as Prussian minister, after the Peace of Tilsit, was to put an end to attachment to the soil, and to make ownership in land a common privilege. The reaction, too, which began with the Congress of Vienna compelled Stein's withdrawal from affairs, and for twenty years kept an official seal on Arndt's lips under which he chafed away the prime of his life. Their friendship remained unbroken to the last.

The modesty proper in an autobiography and natural to Arndt prevents the reader of this volume from forming a just idea of his peculiar services to his country and his age. Even such of his lyrics as are here introduced are tamely translated, Professor Seeley himself being responsible for a version of

"Der Gott, der Eisen wachsen liess, der wollte keine Knechte,"

which begins—

"Who underground the iron stored
Cared not to see a slave."

In all other respects the translation, and in nearly all the editing, is to be praised. Copious foot-notes contain brief and generally satisfactory biographies of the more noteworthy characters mentioned in the text. In the spelling of proper names there is the usual want of consistency, but nothing is quite so bad, or so likely to escape detection by the ordinary reader, as "Nicholas Durjeneff," on p. 300, for Nicholas Turgeneff, the Russian secretary of Stein, and colleague of Arndt in the Central Administration at Frankfort; the one Russian whose name should be mentioned before Alexander II.'s in celebrating the emancipation of the Russian serfs, and whose 'Mémoires d'un Proscrit' deserve to have been consulted by the present editor. Finally, there is no index—a grave omission.

We might stop here, but shall be forgiven, we believe, for making two extracts from the autobiography for their psychologic rather than their historic value; the first from p. 194:

"During my Russian night-journey I made an observation which amuses me still when I think of it. It was only a recurrence of a sensation which I had experienced in similar nights, never in Germany but often in Sweden, when my senses were over-excited through wakefulness. I think it was partly caused by the strange lights and shadows of the northern nights, whose starlight and moonlight is quite different from that of Germany, and has a magic proper to itself. Anyhow, the trees, the rocks, the houses, and other lifeless forms seemed suddenly to come to life and to spring forward as we passed, like magic monsters. I do not know whether this effect is produced by the action of outward objects upon the mind, or of the mind upon outward objects. About this philosophers will probably dispute till the end of time, but the fact remains the same, and in my opinion accounts for much of the belief in supernatural appearances in Sweden, and also for Swedenborg's spiritualism."

The other is from p. 25. Arndt's father lay dangerously ill:

"I applied myself diligently to the only source of comfort I knew of, and read hymns from the hymn-book, and the Gospel for the week, aloud to myself over and over again, and offered devout prayers with all my heart. At last in my great trouble I began to ask myself whether there was nothing which I could offer up to God as a sacrifice for my father's life. I considered everything in the house and all my brothers and sisters, but I felt that I had no right over their lives. At last I came to myself, but found that I did not wish to die yet. So there was nothing left but my doves, and these I offered to God with fervent prayer and many tears."

The next morning his father was out of danger, and the dove-cote was found desolated by a marten. This coincidence of course made a great impression on the boy's mind as a manifestation of Divine Providence; but what will strike readers who remember the case of Freeman,

the Cape Cod Adventist who murdered his child as a sacrifice which he hoped the Lord would not exact of him at the last moment, is that Arndt's first thought of a victim was among his brothers and sisters. That he would have been content with *offering* the life of one of them, in no way distinguishes his fanaticism from that of Freeman, whose views about the millennium may accordingly be suspected not to have been at the bottom of his dreadful crime.

The Æneid of Virgil. Translated into English. By John D. Long. (Boston: Lockwood, Brooks & Co. 1879.)—*A Rhythmic-Prose Translation of Virgil's Æneid.* By Henry Hubbard Pierce, U.S.A. (Philadelphia: J. B. Lippincott & Co. 1879.)—There appears to be a connection between politics and translating from the classics which leads men who are engaged in the former to employ their leisure with the tasks of the latter. In late years, especially, several English statesmen have shown a marked preference for such work, and perhaps it was their example that induced Mr. Long to set the same fashion for American politicians by printing this translation of the Æneid. He accounts for it himself by a wish he felt to pay "a mite of tribute to the old studies," and he found that the principal pleasure which he derived from his labor lay in renewing "the happy morning of the school-boy's shining face and eager heart." Some stronger motive than having once read Virgil, some deeper pleasure than being a boy again, is needful for a good version of such a poem, and it goes without saying that not much is to be expected from a translator upon whom his work has taken so little hold that he can speak in his preface of this "immortal poem, though the world could better lose it all than a psalm of David or a verse of Whittier." The translation is usually accurate and sometimes spirited; but the graces of the most elegant of poets do not readily lend themselves to Mr. Long's abrupt and doubtful English. Anachronisms are boldly acknowledged in the unfortunate preface, but there are graver faults. Defective taste has made several passages inharmonious and unnatural. Virgil would not have spoken of the "cowed household gods" of Troy, *victosque Penates*, nor of the "sacred wares," *sacra*. The "fallow heart" of Dido for *desuetaque corda*, "chuckling" Cupid for *gaudens*, "milling ware" for *cerealiaque arma*, are all unpoetic, and these are examples taken at random. For minute criticism we have no space, but what is to be said of such lines as the following:

> Quam mille secutæ
> Hinc atque hinc glomerantur Oreades.
>
> "A thousand mountain nymphs
> *In bosky clusters* following here and there."
>
> Liquefactaque saxa sub auris
> Cum gemitu glomerat.
>
> "While the air
> *Glooms* ever with the hissing molten ball"
>
> Pedibus celerem et pernicibus alis;
> Monstrum horrendum, ingens: cui quot sunt corpore plumæ
> Tot vigiles oculi subter, mirabile dictu.
> . . . . . .
> Nocte volat cœli medio terræque per umbram
> Stridens."
>
> "If swift
> Of foot, yet swifter with *malicious* wings,
> A monster huge and *shapeless* she, with eyes
> That lurk, but never close, as many eyes
> As feathers on her *trunk*. . . .
> She sweeps at night half way
> 'Twixt heaven and earth, and *buzzes* as she goes."

These examples of inaccurate or tasteless renderings might be continued indefinitely, but enough has been adduced to show the defective scholarship and unrefined poetic feeling with which the translation has been made. Force and spirit are not infrequent, but these go but a little way in making a good version, and they alone will not make this one a rival of the many already before the public.

Captain H. H. Pierce's translation is more unpretending, and, in our opinion, more valuable. It was the work of his leisure hours in garrison, and was a labor of love. It is written in versified prose, a form of translation the capabilities of which have never been sufficiently worked out; in reading it there is some difficulty in avoiding a sing-song incidental to all writing of this sort, but on the whole a better music is conveyed than in the rough-hewn blank-verse which is more commonly the medium of translators. We have noticed some doubtful renderings, but none which it is worth while to specify. It was intended for the author's children to lead them "to a greater zeal in classical pursuits," and it is excellently adapted for such a purpose, as well as for older readers.

The Life and Letters of Madame Bonaparte. By Eugene L. Didier. (New York: Charles Scribner's Sons. 1879.)—The recent death of Madame Bonaparte, and the still more recent death of Prince Louis Napoleon, and the consequent newspaper gossip and speculation, give this volume the interest of timeliness at the least. The readers of such of Madame Bonaparte's correspondence as has been published lately in *Scribner's Monthly*—quite as much because it was a literary "find," perhaps, as because of its merits as magazine literature—need not, however, look to the additional matter here printed for anything new or different, although at least two-thirds of the book now appears for the first time. There is much repetition in the letters, and Mr. Didier's editing of them seems to indicate that he saw no reason for any real editing at all. His work is, at all events, of the most superficial sort, and bears the same relation to the text that an argument bears to a play. He does, indeed, observe that "this Baltimore girl, married at eighteen and deserted at twenty, seems to have possessed the *savoir vivre* of Chesterfield, the cold cynicism of Rochefoucauld, and the practical economy of Franklin," and he prefaces and supplements the correspondence with an historical account of some length. But the reader would have been quite as well satisfied if more careful journeyman work had replaced his magniloquence. As it is, the reader will have to do his own editing without even the comfort of being able to "skip" with security. And it may be added that the circumstances which give the book its interest of timeliness, united to its previous substantial publication, prevent its having in any noteworthy degree the interest of freshness. Nevertheless, it contains the materials in abundance for an entertaining volume, and has the charm which always attaches to the correspondence of a witty woman—especially if she has had the varied and interesting experience which Madame Bonaparte had in such extraordinary measure. The intimate personal habits of thought and views of life and the world, the whims and peculiarities of individuals with whose exterior life alone history can concern itself, are disclosed with a frankness and naïveté never to be found, of course, in premeditated publications; and it is these, naturally, which form the main attractiveness of the letters. One may know all about the external history of Madame Bonaparte's picturesque career, and still find himself following the intimate narrative of it here given with a new zest and pleasure in the views which its side-lights afford of several characters intrinsically as well as historically interesting.

Practical Boat-Sailing. By Douglas Frazar. (Boston: Lee & Shepard.)—This is a useful little book, evidently written by a sailor. Its purpose is to afford instruction to the amateur yachtsman in the art of handling small craft in inland waters, and there is no attempt made to teach the science of navigation. The names of sails, ropes, and rigs are given and explained, the meaning of the simpler nautical terms stated; and there is much clearly expressed advice to beginners about sailing a boat. The rules of the road at sea are lucidly explained by diagrams, and there is also instruction in the use of charts. Tables are given for determining the distance at which objects on the water can be seen, for finding the difference between the true and apparent direction of the wind, and for ascertaining the length of miles of longitude at different latitudes. The remarks about ballasting a boat, about the management of the sheets, sounding, anchoring, and steering, and the explanations of how to make bowlines, hitches, and knots, are capital. The amateur is shown how to "box his compass," how to throw the log, and how to steer in and out of port by buoys and bearings. There is, finally, a good vocabulary of sea-terms.

The only criticism we have to make is that the author seems over-confident as to the possibility of *teaching* seamanship out of a book. He says the book is written "for the purpose of enabling any person, after a perusal of its pages, to feel confident of handling a boat so as to be perfectly safe." This is to claim too much, for of all arts that of seamanship must depend on experience. Nerve, resource, and presence of mind make the sailor, and these qualities cannot be acquired from books. The author also speaks of pulleys instead of "blocks," which grates on the nautical ear.

The Great Fur Land; or, Sketches of Life in the Hudson's Bay Territory. By H. M. Robinson. (New York: G. P. Putnam's Sons. 1879.)—The spirit of trade and adventure which has been the dominating characteristic of the English people for so many centuries, has had no more striking illustration than in the two mammoth corporations which came into existence towards the close of the seventeenth century, under the names of the "United Company of Merchants Trading to the East Indies" and the "Governor and Company of Adventurers of England Trading into Hudson's Bay." Both of these companies are similar in the

great extent of power they have wielded, extending far beyond the mere limits of trade and embracing all the functions of government, in the influence which they have had upon the political fortunes of the mother country, and in their subsequent fate of transferring their lands to the Crown and returning to their normal functions of trading corporations. In these respects they stand without rivals in the history of the world. But no greater contrast can be imagined than the two countries to which the respective companies directed their trading energies. One opened up a warm southern land with all the rich, varied productions of the East, and the other penetrated a howling wilderness extending to the Arctic Ocean, whose only product desired by civilization was furs. One has added nearly two hundred millions of subjects to the English Crown, and thrown the course of English politics into a direction full of complications, of which no man can now foretell the result; the other has acquired and surrendered to the Crown a territory larger by one-third than the whole extent of Europe, but peopled only by a few hordes of savages and a few thousands of such settlers as were imported into it, and their mixed descendants.

It is with this latter company, the lands occupied by it, and the life of its servants and their employés that the present book deals. In an easy, pleasant style of narrative the author describes these cold, barren lands; the modes of travel, by dogs and sledges in winter, by canoes and Red River carts in summer; the organization of the Hudson's Bay Company, the character of its officers and the dreary life which they lead at their remote posts; the thoughtless, devil-may-care nature of the half-breed voyageurs, and the admirable way in which they serve the company's purpose; the Indians living within the company's lands, and their customs and habits. Taken altogether, it gives to persons who have passed their lives in cities or thickly-settled communities a glimpse of a life so wholly different from their own that they will either throw the book aside as containing nothing which can in any way interest them, or else will follow it to the end with the keenest curiosity. The subject is by no means a new one. Its more solid features have been long since presented to the world by McLean's and Martin's accounts of the Hudson Bay Company, by the reports of Dawson's and Hind's explorations, by Archbishop Taché's sketches of the inhabitants; its romance and adventure have been delineated at great length by Butler in his 'Great Lone Land' and 'Wild North Land,' and by other books and sketches. The present book occupies an intermediate place between these; it has little or none of the solid information of the exploration reports, and it is altogether free from the overworked sentiment and doggerel which are so disagreeably frequent in Butler's books. But, on the whole, it seems to us to give a crisper and truer picture of the life in that cold, weird region than any of them. The description of the great autumn hunt of the half-breeds, for example, leaves nothing to be desired in order vividly to portray the whole scene to the mind. The style is generally pleasing, though in a few instances in descriptions of scenery it is a trifle florid.

Lettres de Jean François Ducis. (Les Classiques français, édition nouvelle, publiée sous la direction de M. Paul Albert, Professeur au Collège de France.) (Paris, 1879. 8vo, pp. 390. New York: F. W. Christern.)—The name of Ducis is familiar to all who have studied the career of Shakspere's works in France as that of the author of the wire-drawn French tragedies of "Hamlet" and "Macbeth," in which Talma proved himself the first actor of his time. It may fairly be doubted whether anything more than his name is generally known. To the present edition of his letters M. Paul Albert has prefixed an interesting biographical sketch. Born in 1733, Ducis brought out in 1769 "Hamlet," the first of his eleven tragedies, and, like the most of them, the result of Le Tourneur's translation of Shakspere. As M. Albert aptly says, all that Ducis saw in a play of Shakspere's was a situation, a strong scene, and a moral to be drawn, for all his tragedies are written with distinct moral purpose. The moral of "Hamlet" was the duty of filial devotion. The success of his first play brought him into notice, and the court offered to adopt him as a successor to De Belloy, the author of the royalist "Siége de Calais," and to take him up as a tragic rival to Voltaire. But the gentle and modest nature of Ducis shrank from a courtier's life and he declined. On Voltaire's death he was elected to the vacant chair in the French Academy. The Revolution found him a sincere republican, who followed with interest and hope the career of the young Bonaparte. But when Napoleon seized the supreme power the poet opened his eyes, and his love for the hero gave place to a contempt and hatred of the tyrant. Napoleon, who liked Ducis, tried in vain again and again to bribe him; he offered him the cross of the newly-founded and highly-prized Legion of Honor; he nominated him as Senator, a position to which a fine salary was attached. Ducis was seventy years old and poor, but he declined the offers of the emperor as he had before declined the offers of the king. Ten years later, in 1810, Napoleon tried again, and had the name of Ducis put on the list of authors who were to receive a decennial prize, but again the aged dramatist refused. With Napoleon's favorite actor, Talma, Ducis was most friendly; the tragedian may almost be called a collaborator in the author's plays, so many were his hints and suggestions; and at last, in 1810, Talma's sister married the nephew of Ducis. In his later years (he died at the age of eighty-three) he was almost the sole survivor of his generation, and as such the younger authors looked up to him with veneration and affection, of which a most singular proof was given in 1801, when he brought out his last tragedy, "Fœdor et Wladamir." The play failed the first night, and without consulting him four of the most prominent tragic poets of the time, including Joseph Chénier and Legouvé, the father of the living dramatist, united in revising the piece and in trying to get it into shape, and with such success that on the second performance the tragedy was received with favor, although its life was not long. The two hundred and thirty-five letters M Albert has gathered together show clearly the simple nature of the poet, and occasionally shed a little light on the society and usages of his time. It is sometimes urged as an evidence of the decline of the drama in our day that the scene-painter is unduly important, but Ducis writes to a friend that the scene of his "Abufar" is so fine that it calls forth a round of applause on the rising of the curtain; and this was in 1795.

DELICIA.

By B. M. BUTT, author of 'Miss Molly.' 16mo (Leisure-Hour Series), $1.

Some Newspaper Tendencies.

An Address delivered before the Editorial Associations of New York and Ohio. By WHITELAW REID, Editor of the New York *Tribune*. 16mo, paper, 50 cents.

COUSINS.

By L. B. WALFORD, author of 'Mr. Smith.'

HENRY HOLT & CO., NEW YORK.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." Cloth, 12mo. A separate volume for Boys and for Girls. Price, singly, 75 cents; for two, $1 25. Sent, post-paid, on receipt of price, by the Publisher of the *Nation*.

WALLACE'S Guide to the Adirondacks. Maps, illustrations, etc. New (7th) ed. Paper, 75 cents; cloth, with *large* map, $2. WAVERLY PUB. CO., Syracuse, N. Y.

G. P. PUTNAM'S SONS,

182 FIFTH AVENUE, NEW YORK,

Publish this week:

1. *STUDIES OF PARIS.* By Edmondo de Amicis, author of 'Constantinople,' 'Morocco,' 'Holland,' etc. 12mo, cloth extra, $1 25.

A series of wonderfully vivid and dramatic pictures of the great world's metropolis, by a writer whose previous books have gained a reputation for exceptional clearness of perception and facility in description. There is hardly a writer who can rival him in his power of reproducing for his readers the very atmosphere of the places he describes. These 'Studies' include original and characteristic papers on the two authors whom he considers especially representative of the Paris of to-day—Hugo and Zola.

2. *BI-METALLISM.* A Lecture delivered at Harvard University by the Hon. Hugh McCulloch. (Economic Monographs, No. XVII.) Paper, 25 cents.

TWO STRONG NOVELS.

3. *THE BRETON MILLS:* A Romance of New England Life. By Charles J. Bellamy. 16mo, paper, 60 cents; cloth, $1.

"A story showing, in addition to great skill in delineation of character, unquestionable dramatic power."

4. *UNDER THE BELLS:* A Story of Life in France in the Sixteenth Century. By Leonard Kip, author of 'The Dead Marquise.' 12mo, cloth extra, $1 25.

*** The above are for sale by all booksellers, and will be sent, post-paid, upon receipt of price, by the publishers.

☞ *PRICE REDUCED.*

THE BEST

American Guide Books.

BY M. F. SWEETSER.

NEW ENGLAND. 6 Maps, 11 Plans.

THE MIDDLE STATES. 8 Maps, 15 Plans.

THE MARITIME PROVINCES. 4 Maps, 4 Plans.

THE WHITE MOUNTAINS. 6 Maps, 6 Panoramas.

☞ *Reduced from $2 to $1 50 each.*

"Faithful and picturesque in description, furnishing every needed detail as to railroad routes and fares, routes of steamboat travel, hotel rates, and hack charges, and liberally supplied with maps and plans of cities, these books contain everything which the traveller wants to know in precisely the shape he wants to have it."—*Boston Journal.*

ROYAL MAIL STEAMSHIPS

FROM BALTIMORE TO HALIFAX, and vice versâ.

The A 1 British Iron Screw Steamships
HIBERNIAN, 3,200 tons, Capt., Lieut. Archer, R.N.R.,
NOVA SCOTIAN, 3,200 tons, Capt. Richardson,
CASPIAN, 3,100 tons, Capt. Trocks,
Leave Baltimore every other Wednesday for

HALIFAX, NOVA SCOTIA.

Cabin Passage to Halifax, $20 gold; Round-Trip ticket, $35 gold, including everything except wines, etc.

This is an excellent opportunity to enjoy a brief ocean trip on *First-class Transatlantic Steamships* and the charming summer climate of Nova Scotia.

First Cabin to St. John's, Newfoundland, $35 gold; First Cabin to Liverpool, $75 gold.

For further information apply to

A. SCHUMACHER & CO.,
5 South Gay Street, Baltimore, Md.

Or to
EVE & ALDEN,
271 Broadway, New York.

To Tourists.

The Lake Superior Transit Company's Excursion Rate Book for 1879 is now ready. Copies can be obtained of

T. P. CARPENTER, Gen. Pass. Agent,
Atlantic Dock, Buffalo, N. Y.

CUNARD LINE.

ESTABLISHED 1840

FOR QUEENSTOWN AND LIVERPOOL.

Sailing from New York every Wednesday. From Boston once a week.

RATES OF PASSAGE:

CABIN—$80, $100, and $130, gold, according to accommodation. Return tickets on favorable terms.

STEERAGE—$28 currency. For freight or passage apply to

C. G. FRANCKLYN,
Bowling Green, New York.

NORTH GERMAN LLOYD STEAMSHIP COMPANY

FOR SOUTHAMPTON AND BREMEN.

The Steamers of this Company will sail every Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

First Cabin, $100; Second Cabin, $60 gold. Steerage, $30 currency. For Freight or passage apply to

OELRICHS & CO., AGENTS,
2 Bowling Green.

The Nation.

NEW YORK, THURSDAY, JULY 24, 1879.

The Week.

THE confidence generally felt that the cases of yellow fever reported last week at Memphis were the first and last, for the present at least, speedily proved ill-founded. The distinction made between "sporadic" and "epidemic" cases of course induced in no one a feeling of security; and as soon as, on Thursday, five new cases and one death were reported the panic but just allayed began again. Mississippi ports were generally closed against Memphis, whose citizens renewed their flight at once, and everywhere the most thorough precautions seem to have been taken. On Friday there were five new cases and one death; on Saturday, seven new cases and one death; on Sunday, ten new cases and four deaths; on Monday, thirty-six new cases and six deaths; and on Tuesday, seven new cases. Still, the Howard Association has not yet assumed the disease to be epidemic, and there are hopes that the vigorous system of quarantine may prevent the plague-proportions which it reached last year. There is, however, a case announced in Shelbyville, Tenn.; but that and a case in Brooklyn, reported Wednesday morning, seem of no consequence.

The condition of the city of Memphis seems to be greatly aggravated by its complete financial paralysis. Owing to its inability to pay its debts, it has in fact for some time ceased to be a municipal corporation, and has sunk to the level of a "taxing district." Its property is, we believe, in the hands of a receiver. Of course under these circumstances it is shorn of most of the rights of self-government, and sanitary work seems out of the question. The *Bulletin* of this city reads it and other parts of the South a sound lesson on the connection between insolvency and yellow fever, which is closer in reality than might at first sight appear. The cities of the South will never really be properly policed and guarded from pestilence until they are filled with a new, progressive, and prosperous population, who will make the necessary improvements, take the necessary precautions, and raise the necessary taxes. But no such population will ever move into the South until the South is made attractive to them; which it never will be as long as the Southerners play fast and loose with their obligations, scale, compromise, and consolidate their debts, and involve themselves further and further in the degradation of a ruined credit. It is certainly not at all unsafe to prophesy that yellow fever and repudiation will both disappear from the South together.

The Pennsylvania Democrats held their convention in Harrisburg last week, and nominated Mr. D. O. Barr for Treasurer. The platform, which is said to have been the work of Judge "Jerry" Black, insists on the subordination of the military to the civil authorities; denounces all interference with "the right to a free ballot"; declares that Mr. Hayes is the "representative of a conspiracy only," and his "claim of right to surround the ballot-boxes with troops and deputy-marshals to intimidate the electors," and his abuse of the veto-power, "an insult and a menace to the country"; affirms that the Democratic party as a whole favors a Constitutional currency of gold and silver, and of paper convertible into coin"; denounces the Republican system of rings, subsidies, and misappropriation of the public moneys; renews to the workingman the party's expression of sympathy for honest labor, "and its promise of protection in its rights"; insists that the railroads of Pennsylvania must "accept the constitutional amendments of 1873"; denounces the recent attempt made "under the personal direction of ruling Republican leaders" to pay for the Pittsburgh riot losses out of the State Treasury; and declares that the present condition of the State finances is "a sufficient illustration of the reckless financial mismanagement of the Republican party." The Greenbackers nominated a candidate on the same day with the Democrats, but it seems to be admitted on all hands that their vote will not this year affect the result.

The chief significance of the Democratic platform lies in the financial plank, which is taken as a formal abandonment by the party of all financial lunacy and a return to the straight and narrow path. The Barr family have always hitherto been greenbackers, and the acceptance by Mr. D. O. Barr of the nomination is therefore considered as a formal recantation through him by the soft-money Democrats. Besides this, the result appears to have been a victory for the Randall-Tilden wing of the party, a victory made doubly sure by the action of the Convention in placing the selection of the next State Committee in the hands of Mr. Barr and the permanent chairman of the Convention. One of the Wallace party offered an amendment to the resolution proposing this, to the effect that the Convention should select a man to manage the campaign, but it failed to secure a majority of the votes. The new State Committee has not been fully made up, but the Randall-Tilden Democrats are believed to be sure of the control of it.

In commenting on the new California constitution we pointed out what seemed to us to have escaped many of its critics, that, instead of talking of the danger of communism, we must recognize the fact that in any community in which the political machinery once actually falls into the hands of a party impregnated with the ideas of Kearney or Justus Schwab, communism is an accomplished fact. A curious illustration of this is given by some recent operations of the Board of Equalization of the city of Toledo. The Nationals control a majority of the Board, and as soon as they got possession they went to work to raise the returns of personal property according to their fancy. According to the Cincinnati *Gazette*, the principles on which the "raising" has been done have been partly political and partly commercial. Democrats are said to be "raised" only slightly, unless they are such Democrats as stand out against both Ewing and the Nationals. Economically, the rule acted upon is to make the "money kings" disgorge. To show how "raising" works, we may mention that some of the returns have been altered as follows: $550 to $30,300, $500 to $22,600, $225 to $15,275, $8,900 to $236,473. This last was in the case of a national banker, a member of a class whom it was found necessary to deal with severely. Another is "raised" from $3,910 to $100,615. Among the merchants, manufacturers, and bankers affected a good deal of consternation has been caused, and they propose to contest the matter in the courts.

Except a spasmodic reference to the stock candidacy of Chief-Justice Church and to Mr. Dorsheimer's forlorn hope, no one has been mentioned for governor among the opponents of the renomination of Governor Robinson during the week. This, both so far as it refers to the Tammany Democrats and to the "machine" Republicans, is tantamount to a confession of weakness and perplexity. Meantime, Governor Robinson's friends have been cheered by an investigation conducted by the *World*, partly on principles of its own, partly in imitation of the similar polling of the country done some time ago by the *Times*. The *World* says that it endeavored to ascertain "the feeling" as to the governor's record and renomination among rural Democrats of prominence who are the reverse of active or "machine" politicians. The replies to the circulars it addressed to these gentlemen were favorable and singularly unanimous; but the *World* maintains that it had no guaranty of this in advance, and addressed its questions impartially. What makes it especially easy to credit this is the circumstance that

there is no earthly reason for any Democrat, not a "machine" politician, to object to the renomination of the Governor. The *Evening Express* of this city, to be sure, being asked by the Utica *Observer* if Tammany Hall would support Mr. Robinson in the event of his nomination, replies confusedly that "we are not a member of Tammany Hall," but that it feels at liberty to prophesy the defection of the entire 60,485 voters who supported Augustus Schell for Mayor. But this dire threat does not strike terror into the hearts of the rural Democrats, who remember that the present management of the *Express*, after vituperating Mr. Tilden most scandalously in 1876 up to the time of his nomination, took all the more credit to itself for supporting him immediately thereafter. Neither does it comfort the *Commercial Advertiser*, which declares that Tammany will swallow anything.

The *World* a short time since published a story furnished it by Mr. John F. Mines (the interviewer who made his first mark by "exposing" Mr. Conkling's views as to his fellow-statesmen in Washington) with regard to the means taken in 1876–7 by Grant and Robeson to preserve the country from violence. Mr. Mines got his information from Mr. Stewart L. Woodford, who was at the time, as he still is, United States District Attorney for the Southern District of New York. According to Mr. Mines, Mr. Woodford told him that after the election in 1876, when civil war was threatened, and it was rumored that in some sequestered retreat Mr. Tilden was preparing to inaugurate "revolution" by taking the oath as President, Mr. Woodford was sent for and informed that the Administration felt that it had need of a man ready for any emergency in New York; that the sort of man wanted was a soldier, a man who had smelled gunpowder, a man ready for bloody work. The bloody work proposed was that if any disturbance was made at 15 Gramercy Square, he should immediately seize Mr. Tilden and convey him on board a swift gunboat, which the energetic Robeson would have in readiness in the harbor, and which should land the traitor at some convenient fort.

Mr. Woodford accepted the trust, and his commission as District-Attorney was at once made out. Fortunately he was spared by Mr. Tilden the necessity of acting upon his instructions. At the time this story appeared Mr. Woodford was in Europe, and therefore on his return he was at once interviewed by a number of reporters to ascertain the exact truth. But now comes the startling part of the whole affair. The Republican papers say that he denies the whole story; the *World* maintains that he substantially admits the truth of the interview with Mr. Mines, though he denies that the Administration proposed to him to abduct Mr. Tilden, or that he was made District-Attorney for that purpose. In other words, the *World's* view of his denial is that he admits that the District-Attorney for the Southern District of New York poured into the credulous ear of Mines a tale made up out of the whole cloth; that he invented this determination of the Administration to "bag" Mr. Tilden, the choice of himself for the work, the swift gunboat and all the other details. The story will no doubt appear next summer in the usual double form of "the true story of the plot to abduct Mr. Tilden" and "another Democratic lie nailed to the counter."

The investigation now going on before Mr. George T. Curtis into the charges against the Sheriff will probably result in his removal by the Governor. The evidence taken has a general tendency to show, what we suppose no one in his senses doubts to be the fact, that the charges of the Sheriff's office have not been regulated by law, but have been a tax graduated partly by custom and partly by the accidental circumstances of each particular case. Whatever political motives there may be at the bottom of the investigation, the system is an altogether bad one and ought to be broken up, and the lawyers who come forward and testify on the subject deserve the thanks of the public for their boldness in doing so; for no small amount of boldness is required in any lawyer to expose any abuse practised in an office like that of the Sheriff. Besides evidence of exorbitant charges, there appear to be also facts looking like a direct fraud in a double payment of the same bills. Ludlow Street Jail seems to be carried on in a way that recalls the days of the old Fleet in London, a condition of things which will not be surprising to any one who remembers the sort of incarceration that Tweed had there. However, this is perhaps the least important of all the subjects under investigation, as a debtor's prison without abuses would probably only be possible in a city governed by "idealists."

The conviction of the negro Cox, of murder in the first degree, shows that in aggravated cases juries may be still relied upon to bring in a fair verdict without regard to sentimental considerations. No doubt the prosecution was helped to obtain a verdict by the callous indifference which the accused displayed. This caused great disgust in the minds of all concerned in the trial, especially in that of Judge Cowing, who addressed a serious remonstrance to the prisoner on the subject in sentencing him. But we think Cox's behavior has been, on the whole, a public service, because it has served to bring out the peculiar cold-blooded hideousness of his crime. In ordinary cases the sympathy of the public at the time of a murder trial is apt to centre about the murderer himself, particularly if he behaves with solemnity and appears to realize the awful nature of his situation. But Cox seems to have been designed by Providence to show the public exactly what sort of character murder implies in persons of his class—that is, in untaught, reckless ruffians, between whom and society there is no barrier possible except that of the criminal law rigidly enforced. We should like to be told by some humanitarian brother what precise steps he would take to improve Cox if, instead of hanging him, society were to undertake to reform him. The case also shows the value of the old principle of Anglo-Saxon law, which makes the taking of life by any one engaged in the commission of a felony murder in the first degree.

The Rapid Transit Commission has made another report to the Mayor and Aldermen, accompanied by an explanatory and apologetic letter. The Commission seems to have been convinced by the extraordinary exhibition of aldermanic virtue last week that it had managed seriously to offend the public sense; and accordingly it pleads in excuse two considerations: first, that it had the power both under the original act and under the Mayor's commission of appointment to lay out another down-town road; and, secondly, that this road was expedient, since the rates charged by the present monopoly are too high, and since the Manhattan Company has shown no disposition to deal generously by the new wards. To this the answer is easy: first, that the Commission was appointed with the express intention that it should confine its labors to the new wards; and, secondly, that it will be hard if better ways than surrendering another avenue and more streets cannot be found of bringing the Manhattan directors and justice into more perfect accord. In other words, the excuse of the Commission is labored and unconvincing; and considering the necessity it was under for furnishing an excuse that would hold water, so to speak, we are only surprised that some one of the daily papers has not printed the names of its members in the full-faced type of unenviable notoriety. Perhaps it was not worth while, as the Aldermen show no signs of softening towards Mr. Vanderbilt, and until they do, the reports and letters of the Rapid Transit Commission are of course only so much waste-paper.

A correspondent of the New York *Times*, writing from Alabama, describes the so-called "Black Belt," or the cotton-raising district in the south-central portion of the State, whose black population outnumbers the white from two to four to one. In this district the Ku-klux operations of 1870–74 effectively drove the blacks out of politics and the Republican party out of existence, and left the former nothing to do, in the words of this correspondent, but to "apply themselves steadily to their work and secure property." This, strange as it may appear to Mr. Boutwell or Mr. Dawes, they were allowed to do; and, stranger still, they actually thought it the best way to regain their political rights—better even than relying

on their party or on the Administration at Washington. "The great cry made against them as a controlling element in politics, was that they possessed no property; that they did not sympathize or have any interest in common with the property-owners of the State." Whether they saw the justice of this complaint or not, they perceived that the difficulty was one which they themselves could overcome, and the result has been self-government in the best sense of the term. They have become the owners of valuable and well-stocked farms, their credit is good for all needed advances when gathering their crops, and in default of free schools maintained by the State for the common benefit, they are able and willing to support excellent schools of their own, employing both white and colored teachers. Their churches, too, are well sustained and attended. They understand the advantages of co-operation in cultivating plantations belonging to the whites, as well as in purchasing and dividing them, and they are so well contented with their condition and prospects that the "exodus" excitement "did not affect Alabama in the least," beyond making the whites more considerate. The growing intelligence and prosperity of the blacks are as observable in the cities as in the country. On the whole, it is impossible not to agree with the correspondent in regarding as "reasonable," and characterized by "much good sense," the abnegation which has led them to submit to their own exclusion from the control of public affairs, with a view to "providing their children with the means of asserting these rights hereafter."

In the financial markets it has been a week of activity for all investment securities. U. S. bonds were strong in price, and the demand for them exceeded the market supply. This was the result of the final closing out by sale to J. S. Morgan & Co., of London, of the entire holding of the First National Bank syndicate, which had been reduced to $12,500,000. This transaction between New York and London not only advanced the price of U. S. bonds, but it lowered the price of sterling bills, since to the extent of $12,500,000 it lessened the demand for remittances to cover called bonds. The settlements during the week of the enormous bond transactions between the Treasury and the Syndicate were all so smoothly made that there was not a ripple in the general money market, which remained easy at 2 to 3 per cent. The failure of the European harvests has directed attention to our own, as it is evident that Europe will be a free buyer. Accounts as to the Western crops are conflicting, and they appear to be colored to suit Chicago and New York speculation; but it is evident that there will not be what may be called a failure of our crops, and that they will in amount not vary much from an average yield. If there is such a yield full prices are expected, which mean good returns to the farmers, without, however, implying increased tonnage for the railroads. Silver in London has declined to 51½*d.* per ounce, and the bullion value of the 412½-grain dollar has fallen to 87 cents ($0.8701).

The Fourth of July was unconsciously celebrated in England by a debate in the House of Commons on the agricultural distress, in the course of which it was admitted that America was underselling the home food-producers and the manufacturers alike, and that the price of food in England must hereafter be "the least price at which American food, including cost of freight and transport, could be supplied there with a profit to the importer." These were the words of Mr. Chaplin, on a motion for a royal commission to enquire into the depressed condition of the agricultural interest. He referred to the failure of the expectations and predictions of what free-trade would do for this interest, and while not professing to be in favor of protection, hinted that the commission might find it a necessary remedy. No provision could be made against the bad weather which caused bad yields, and if the low prices were equally beyond control, the failure of agriculture in the United Kingdom was inevitable. Mr. Bright confirmed Mr. Chaplin's statements as to the alarming competition of American produce, and said he hoped the commission would enquire how it happened that the farmers were afraid of corn and cattle brought four or five thousand miles across the Atlantic. Liverpool is now as near the wheat-fields of Minnesota as New York lately was, and the fate of New England agriculture, under the influence of Western production, might overtake the English system. Mr. Bright compared the burdens of the farming classes in the two countries—ours having "no rent, no tithes, no poor-rates"—and declared the fundamental difference between them to be that in America the farmer owns the land he tills, while the English laws, "as they now are," would make the laborer's condition perpetual. He hoped the commission would not be afraid to examine the land monopoly, and declared his belief that "it would increase the price of land all over the country if you would abolish all the ancient and stupid and mischievous legislation by which it is embarrassed in every step you take in dealing with the land." The motion was agreed to.

The Ferry laws regulating the freedom of instruction continue to occupy the attention of the French Chambers. The author of them himself made in a recent sitting an able defence of them, maintaining the validity of the legislation from 1790 to 1825 prohibiting religious congregations, as shown by the uniform decisions of the courts, and pointing out that the law of 1837, introduced by M. Villemain in the House of Peers with the support of Thiers, Guizot, and the then Duc de Broglie, refused the privilege of teaching to members of unauthorized congregations. Passing on to the question of the urgency of his own measures, he gave some statistics of the increase of the congregations since the eve of the Revolution of '89, and especially from 1861 to 1877. Those of males had multiplied in the latter period from 1,706 establishments to 3,184, and from 11,877 persons to 22,207; those of females from 90,343 persons to 127,000, of whom 14,000 belonged to non-authorized congregations. The Jesuits, on their part, who numbered 200 in 1845, and 1,085 twenty years later, now (*actuellement*) number 1,509, while their residences have been widely extended in the departments, and have even been carried to the colonies. M. Ferry created a genuine sensation by quoting from the text-books which his inspectors obtained, not without difficulty, from some of the leading establishments. These were proved to be filled with praise of feudal rights, whitewash of the Inquisition, justification of the revocation of the Edict of Nantes, and denunciation of the Revolution. A 'Contemporaneous History,' by M. Chantil, inculcates the doctrine of the submission of the State to the Church, calls civil marriage a species of legal concubinage, and religious toleration a *nécessité de circonstance*, and a sign of the weakening of authority. These books have hitherto escaped scrutiny, and as they attack the body of fundamental principles which the State (as the Republicans understand it) is bound to defend and not allow to be contested, they are worth a good many arguments to the cause of the Minister of Public Instruction.

It is perhaps to be wondered at that the Stalwart conception of the State and its functions has not caused some of our Southern text-books to be cited in Congress in proof of the failure of Mr. Hayes's policy. Mr. Blaine used one the other day out of pure malice, to disturb the equanimity of Mr. Voorhees, who suddenly found himself called upon to deny that the Indiana volunteers were cowardly at Buena Vista, as certain portions of the Southern youth are now being taught to learn by rote. No doubt, if Mr. Hoar's plan of a Government educational subsidy in proportion to the illiteracy of the several States prevails, we shall have in due time complaint of the instruction in regard to the causes and incidents of the rebellion, and the constitutionality and justice of its suppression, and the validity of the Amendments and of Mr. Hayes's title to the Presidency, which some of the Southern partakers of the national bounty may be tolerating or encouraging. On this as well as on other accounts it is to be hoped that the manufacture by the State of its own text-books, which is being attempted in one or two quarters at the North, may be abandoned. While every civilized society is full of "lost causes," political and religious, peace not less than truth is best subserved by decentralizing the instruction given in the public schools as much as possible.

"MACHINE" POLITICS AND THE GOVERNORSHIP.

IT is obvious already, from the discussion of the subject in the Democratic press, that the Tammany Hall faction has little or no hope of defeating the nomination of Mr. Robinson as the candidate of the party for governor. The *World* has published within a week or two a quantity of replies to a circular sent out by it to "leading politicians" through the State, who all declare with one voice that he is the only possible candidate, that his popularity with Democrats and "no-party" voters is unbounded, and that even by Republicans his administration is conceded to have been successful. Under ordinary circumstances we should not attach much importance to such information as this, but we believe it is corroborated by all sorts of other evidence. Indeed, the Tammanyites have not as yet been able to bring any one into the field against him, much as they would like to do so. Mr. William Dorsheimer, who has made a good "record" as Lieutenant-Governor, was a possible candidate until recently, but his chances have apparently been ruined by one of the most comical accidents which have befallen a politician of late years. Being charged with the duty of delivering the "long talk" at Tammany Hall on the 4th of July, he was so injudicious as to refer to the danger of popular education making the masses discontented with their lot, and assured his audience that the differences of "condition," which he added were every day getting wider and deeper, were the best guarantee against any misfortune of the kind. Now this, which would have been harmless speculation in a newspaper or in an "Old Bay State" lecture, was in Tammany Hall little better than treason; for the theory of Tammany government is that there are no differences of social condition in the United States, and that Augustus Schell, John Kelly himself, and the last naturalized immigrant from Ireland all stand on exactly the same social plane. This pleasant illusion, of course, is not carried into private life, where any assertion of such social equality would be regarded by a Democratic statesman much as it would be by a Republican; but on the stump and in Tammany it is absolutely necessary to keep it up. Mr. Dorsheimer has made several attempts to explain away his unfortunate language, and his apologists have even undertaken to show that by differences of "condition" he meant differences in the condition of the European monarchies and the American Republic; but all to no purpose. It is generally felt that the language could be effectively "used against" Mr. Dorsheimer on the stump, and he could be held up to scorn, or at least suspicion, as not a "Democrat at heart," and as being engaged in an attempt, under cover of a profession of Democratic principles, to introduce European ideas "in our midst."

Another difficulty which the Kellyites experience in getting a candidate who can make a running before the convention is that Mr. Robinson has fairly earned, as we just now said, a substantial popularity throughout the State. He has done this by very simple means—that of honestly using his powers for the benefit of the public. He is not in any respect a statesman; indeed he is a man of narrow-minded views on some points; but he has had the wisdom to see what very few governors of this State have seen, that what the public needs far more than brilliant schemes of economic reform, or revisions or codifications of the laws, or legislative innovations, is the honest enforcement of the laws that we now have on the statute-book, and the watchful supervision of the annual work of the Legislature. The community of this State has been ever since the war in the position of a very rich corporation continually increasing in wealth and extending its business, but in constant danger of being plundered by its directors. The first necessity for it is to have a manager who will protect it from spoliation. This is precisely what the public here has found in Mr. Robinson, a shrewd, hard-headed lawyer, thoroughly familiar with all the tricks and devices of politicians, and altogether too honest to allow them to have their way. His use of the veto power is a striking illustration of this. There is no power more serviceable to protect the public than this, and none that the average politician more dislikes to exercise, because it is always sure to offend those interested in the measures vetoed. To use it, as Governor Robinson has steadily done, to defeat a very large proportion of the acts passed at Albany, and to make himself really, instead of nominally, a branch of the Legislature, required no small amount of courage. The result may be seen in the steadily diminishing volumes of laws passed in this State; and it must be remembered that with a legislature such as ours a diminution in the amount of legislation means a diminution in the amount of bad legislation.

That Mr. Robinson is the best candidate that the "Tilden" wing of the Democratic party can put forward this fall seems to be beyond doubt, and this brings us to the question to which the Republican press does not appear to be giving the attention which the matter deserves—we mean their own nomination for governor. The election in this State this fall will be for them one of the most important political events of the year, as on it will turn the possibility of carrying the State next year in the Presidential election. For though just at present everything appears to favor them, the loss of New York next year might be quite enough to decide the result, and the adoption of a hard-money platform by the Democrats in Pennsylvania shows that they are beginning to learn something from their disastrous blunders of the past year. In other words, the Republicans will make a great mistake if they count on the folly of the extra session to help them too far, and if they wish to make sure of a Democratic defeat in 1880 it is absolutely essential that they should make a vigorous effort in New York this fall.

Now, a vigorous effort may be made by them in either one of two ways. They may put up a strong candidate of their own, a man of character and reputation, or they may try to take advantage of the hostility between the Tildenites and the Kellyites to split the vote of the Democrats and get in a candidate of their own. There are good reasons to fear that they are much more likely to take the latter course than the former one.

In the first place, the Conklingites are naturally averse to putting forward any man of real distinction and merit as candidate for governor, because such a man would be dangerous to the existence of the "machine" which now manages the Republican party in this State. The "machine" politicians cannot afford to nominate as a candidate a man who might develop such a genuine popularity in a contest as to impair the control by them of Republican votes. It seems far simpler to nominate a man of neutral character of the "available" sort, counting upon him to poll the regular party strength, and relying on a split between the Tammanyites and Tildenites to draw off strength from the regular Democratic nominee, or helping the split by one of those adroit bargains at which the Republican managers in this city are such adepts.

It is precisely this sort of a campaign that the Republicans cannot really afford to undertake in this State this fall, and we wish we could believe that the leaders of the party were sagacious enough to perceive it. But the Republican managers have been so long accustomed to regard their party as necessarily representing to the average voter the cause of reform and good government, that they apparently have wholly failed to observe that in New York within the last few years all this has been wholly changed. Down to the time of the overthrow of the Tweed Ring, and even later, almost all the hopes of good government in the city and State were centred in the Republican party, and most reforms in the administration of affairs were carried out by the reformers securing in addition to the natural support of the Republicans the temporary assistance of some Democratic faction. This lasted until the complete establishment of the Conkling "machine" during the Grant régime, and since that the connection between the Republican party and reform in the State has gradually been growing less and less distinct until it has finally disappeared altogether. The political career of the Republican *management* in the State and city since that time has simply been one of intrigue and barter of offices, not excelled in depravity by anything ever done by Tammany or anti-Tammany. That it should have so long managed to persuade the regular Republican voters that their operations are conducted in the interest of reform, is a singular instance

of the powerful effect of party traditions. While the Republican management has been sinking lower and lower every year, the so-called "Tilden" wing of the Democrats have really managed to give the State and city some very good government. And it is natural that this should be the case, for the "Tilden" Democrats are simply the most enlightened and honest leaders of the party in the State, who stand with reference to "Tammany" in precisely the position that the better class of Republicans stand to the "machine." Their connection with the Tilden campaign of 1876, of course, has nothing to do with this; but the fact that they have gradually come to represent to the public and the press the idea of good government and administration within the State, can hardly be disputed. It is this fact that the Republicans have got to consider in their campaign to regain the control of New York this fall. If they are to have the least chance of carrying this State, it will not do for them to rely on the party traditions any longer to help them through. Of course the difficulty of nominating any but a "machine" politician this year will be greater than ever, but we think that Republicans who are not connected with or enslaved by the "machine," ought not to conceal from themselves to what sort of an end "machine" politics are bringing them in this State. On many accounts one would like to see a strong Republican governor and legislature elected this fall. It would ensure the defeat of Tilden's nomination in 1880, and would make it absolutely necessary for the Democrats, and consequently the Republicans, to put forward their best man for next year's campaign. But it must be confessed that it is easier to see reasons why it is desirable than to see means by which it can be done. The complete silence of the Republican press on the subject shows pretty conclusively that the Conklingites control the whole matter, and that discussion is regarded as out of the question. If it is so, it is of course perfectly clear that the only way for independent Republicans to manifest their displeasure at this condition of affairs is to desert their ticket.

THE LATE BRAZILIAN CRISIS.

ACCORDING to the charter of the Polytechnic School in Rio the Government has the appointment of its director, but in case of the director's absence the law provides that the oldest professor shall act as such. The permanent director being in Europe, Dr. Galvão was *ex-officio* presiding over the faculty when the Minister of Public Education ordered him to enforce at once some of the reforms promulgated last April, which refer not only to the Polytechnic School, but also to all "superior education" in Brazil. Among these reforms were some with which Dr. Galvão and other professors were far from sympathizing—as, for instance, the abolition of the oath of fidelity to the Roman Catholic religion, which has heretofore been exacted from those about to obtain diplomas. The acting director therefore summoned the faculty together to discuss the enforcement of the reforms. The faculty by a large majority decided to obey the order of the Government, but the minister relieved Dr. Galvão from duty as director and appointed to the place a professor from another institution. The faculty thereupon refused to acknowledge the appointment, on the ground that it was illegal, and that by the constitution of the Empire it was a crime to obey illegal orders. The students, much as they sympathized with the Liberal reforms of the minister, joined their professors, and in a body went to the Senate Chamber and cheered the two senators who attacked the minister two days after the dismissal of Dr. Galvão. The senators—two very ordinary politicians—addressed the students *from the portico of the Senate*, and the whole city of Rio was thrown into much agitation by these events.

Now, the Minister of Public Education had been for some time making himself very obnoxious to the Cabinet, not only for his too radical reforms in matters regarding his own department, but also for his too defiant position towards the Senate, the Conservative majority of which the Government, backed up by a Liberal Chamber of Deputies, needs to handle delicately in order to carry on the great electoral reform now under discussion. Besides these reasons, Councillor Leoncio is but a second-rate party-man, and the new Secretary of the Treasury, the most influential of the Liberal politicians, found great fault with him and was only too glad to throw him overboard. The premier asked him to resign, and upon his refusal presented to the Emperor the decree of his dismissal, which was signed, according to constitutional usages in Brazil. Councillor Leoncio had very properly objected that his colleagues were aware of his intentions and acts regarding the Polytechnic School, and that they, as well as the Emperor, had approved of them. The premier, however, maintained that he and the other ministers assumed that the dismissal of Dr. Galvão had not been illegal.

When these facts were announced in the Chamber of Deputies there had been a great change in public sentiment regarding the whole matter. It would seem that the first act of the Government should have been the reappointment of Dr. Galvão, or else the dismissal of the director of the school, now in Europe, and the appointment of a new one. But the Government did neither thing. It confided the school to an outsider, just as the ex-minister had done. The faculty again refused to acknowledge the appointment, and the agitation by the students continued to be very intense, the Government being obliged to suspend the whole school for thirty days. It is not to be wondered at, therefore, that the session of the Chamber in which the Ministry, as reconstituted, gave explanations of the case, was one of the most violent in the history of parliamentary government in Brazil. The people in the galleries hissed the ministers, and the confusion was such that the Speaker was compelled to interrupt the session. The excitement was intensified when it was discovered that the ministers did not return to the Chamber upon its reassembling.

It is worthy of remark that the disorder was caused altogether by the people in the galleries, and principally by the students and their friends. The Brazilian House of Deputies, having only one hundred and twenty deputies, is not very difficult of management by the presiding officer, inasmuch as it is composed in a great majority of members favorable to the Government, in whose hands, after all, is the police of the House itself. But the people who habitually frequent the galleries are very inflammable. They are the "practical workers" out of office, men only too anxious to obtain from some of the hot-headed deputies of the Opposition the signal to cause a tumult. The material that furnishes these parliamentary listeners is very abundant in Rio, and the Government is always very cautious in its selection of the means to suppress any acts of hostility from them; for the fact is that, whatever may have been said of the meekness of the Brazilians, they are nearly as excitable as the average Spanish-American, and the Emperor, who has ever been proud that his country, because it is an empire, is not subject to the chronic revolutionary disease of its neighbors, is always fearful of riots, mobs, and whatever may be construed abroad as revolution. Moreover, the Emperor knows very well that it was an orderly mob of Rio that compelled his father, the founder of the monarchy, to abdicate in April, 1831. Dom Pedro, therefore, is rather deferential to the Rio mob.

It is unnecessary to show at length how precarious is the condition of affairs in a country controlled by the mob-rule of its capital—a country whose senators address a parcel of revolutionary students while the session is going on in the same building. The recent travels of Dom Pedro, and the respectable show of Brazil in the Philadelphia Exhibition, have produced a wrong impression of the country not only here but in Europe. The truth about the condition of the Empire is anything but agreeable. Its sole industry is taxed enormously, both by the system of labor and by the mismanagement of the finances. Coffee pays about thirteen per cent. of export duty; and the non-existence of a territorial tax, combined with the duty on the production and the institution of slavery, acts as a premium to encourage idleness. The currency of the country is depreciated about thirty per cent., and a deficit of twenty-two millions of dollars is announced for the current fiscal year. Public education is as yet very backward. For the ten millions of inhabitants there are hardly 5,000 schools. Parliamentary government is almost a mockery. The ministers designate beforehand who shall

be elected as deputy, and the ministers are made by the Emperor and the politicians in Rio. Reform after reform is decreed, but the mass of the people never understand the changes, which of course are never put to a practical test. The statesmen are impracticable when patriotic; but they are seldom patriotic, being more engaged in procuring places for themselves, their brothers, uncles, and nephews, than with the public good. If to all that we add the very low condition, both moral and mental, of the Catholic clergy, mostly made up of ignorant and debased Portuguese and Italian priests, we shall have given a true sketch of the present state of Brazil.

The Brazilian constitution, which dates from 1824, has not been amended since 1834, when the attempt was made to give to the provinces the little self-government they now enjoy. But the Emperor is just now deeply anxious to see the fundamental law so altered as to limit the right of suffrage to those only who have a net annual income of two hundred dollars. Dom Pedro has probably experienced great difficulty in playing the rôle of a constitutional monarch in a country whose uneducated voters are so pliable in the hands of the ministers and politicians. He has very likely interfered in political contests much more than it would be safe to let his inexperienced daughter do after him. She is said not to be very popular in her own country, and is married to a French prince, the Count d'Eu, who is certainly distasteful to the Brazilians. Now, nothing could show better the confusion of parties in the Empire than the fact that the constitutional reform, whose object is to disfranchise thousands of Brazilians, is being carried on by a Liberal ministry. The present Government has refused even to allow an amendment making Protestants eligible as deputies to the Legislature, and yet for nearly fifty years the Liberals have been combating for the separation of church and state and the complete political equality of all sects. They are sacrificing all their faith to an inordinate desire for power. They are doing nothing to lift their country from the torpid condition in which it unfortunately lies.

THE DECAY OF THE POLYNESIAN.

AMONG the New-Zealanders, Mr. Darwin tells us (in 'The Descent of Man,' Part I. c. vii.), "it has hitherto been found impossible to take an actual census." Their more tractable kindred of Hawaii are, on the contrary, friendly to the census-taker, and they watch the spectacle of their own decline in numbers with a very intelligent interest. The latest enumeration of the people, that of December 27, 1878, lies before us. It is the eighth of the official censuses of the group, the previous enumerations having been made in 1832, 1836, 1850, 1853, 1860, 1866, and 1872 respectively. The present figures give us the means of studying the movement of the population in Hawaii during the past six years, and the apparent tendency of the movement for the future.

In the first place, while the total population of the group has made a slight gain (1,088), the decrease of the aborigines continues steadily and rapidly, though less rapidly than heretofore. In 1866 the pure aborigines numbered 57,125; in 1872, 49,044; in 1878, 44,088—the diminution being nearly fourteen and ten per cent. in the two sexennial periods respectively. Other Polynesians have been exterminated, like the unfortunate Tasmanians, by "hunting" at the hands of the English colonists, or more than decimated, like the New-Zealanders, in fighting them. The Hawaiian is being peaceably extinguished. The census of 1832 showed an aboriginal population of 130,000, more than two-thirds of which has disappeared under entirely peaceful civilization in the course of forty-six years.

The sight is one of some interest, scientific and other. We may even admit that it has a sentimental interest. If one is impressed by the extinction of a plant or a bird, how much more noticeable is the passing away of a finely-endowed race! The Polynesians are taller and the Hawaiians physically stronger, according to the measurements in Topinard's 'Anthropology,' than any European people, and their intellectual and moral character is more interesting than it has generally been represented to be. But the alteration of character and the consequent destruction of the people which is occurring in the Hawaiian group is happening throughout Polynesia wherever civilization has been introduced, while isolated communities, as on Pitcairn's Island, have multiplied rapidly; and there is an irony in the circumstance that in the one Polynesian country where the European civilization has been accepted without resistance, where the merchant's and the missionary's success has been the most vaunted and the most complete—precisely on that spot the Polynesian is the most rapidly passing away. Kuakini, the old converted governor of Hawaii, said in all simplicity to a missionary, the Rev. J. P. Green, "Why did not our children die as frequently in the time of our dark-heartedness as they now do?" "The question puzzled me," said Mr. Green.

It is one that has been nowhere asked more seriously than by observers upon the spot. The *Hawaiian Spectator* for January, 1838, for instance, contains a patiently reasoned article by the Rev. Artemas Bishop, a missionary then of twenty-five years' residence, and an intelligent writer, entitled "An enquiry into the causes of decrease in the population of the Sandwich Islands." Mr. Bishop enumerates first the causes which had been in operation from antiquity—namely, poverty, oppression by the chiefs, neglect and consequent mortality of children, infanticide, and unrestrained licentiousness. All these, however, he properly dismisses as quite insufficient to account for the more recent decay of the people, for these causes were in full operation before the arrival of the whites, and it has never been shown (though it has been argued) that the extinction of the population had then begun. The very practice of infanticide was, on the contrary, a cruel, but in one sense a natural, check upon a redundant population; it was the rude precursor of the checks pointed out by Malthus as in action under civilization, such as late marriages and the limitation of the number of children. Often, too, it was the fate of the Hawaiian child to perish from neglect; yet this was not so much due to the absence, as the missionaries supposed, of natural affection on the part of the parents as to its diversion into other channels. The Hawaiian mothers who would neglect, or even in a fit of passion destroy, their children, might be seen lavishing their tenderness upon "fat pigs, which ever and anon they take in their arms and press to their bosoms to still their deafening and prolonged lamentations" (Jarves, in *Hawaiian Spectator*, 1838). They would even give nurse to these favorite animals; pet dogs, too, actually supplanted the children in some cases, and these animals are still such favorites on the islands that no inconsiderable part of the Hawaiian revenue, until lately, was derived from a dog-tax.

Coming to the more recent causes of extinction, Mr. Bishop and the island writers in general find them two in number, alcohol and syphilis. Some years ago a series of 116 questions was addressed by Mr. R. C. Wyllie, for many years the Minister of Foreign Relations, to the various missionaries and planters resident in the group, with a view to obtaining a better "knowledge of the character, the capacity, and the wants of the people"; upon which knowledge, added the minister, "I consider that all good government must be founded." The now almost inaccessible document which contains the answers to these questions is perhaps the most important single source of information regarding the Hawaiian people. Among the answers to the 73d question, "Causes of the decrease of the population," we find the following in addition to those of the account just mentioned: 1. The change from native to foreign clothing; 2. Commerce, inducing the natives to stint their food in order to buy fine clothes; 3. Epidemics of foreign diseases; 4. Habits of licentiousness, . . . "often commenced at the age of two or three years"; 5. Barrenness; 6. "The mysterious will of God." If to these various maleficent causes we add that of the intellectual disturbance set up by a too rapid civilization, we shall have a pretty full list of the assignable causes of the Polynesian's decay. As in Vancouver Island (according to Mr. Sproat, quoted by Mr. Darwin), the natives "become bewildered and dull by the new life around them; they lose the motives for exertion, and get no new ones in their place." But the prepotent cause of the Polynesian's decay, though already named, has not been distinctly recognized as prepotent by the missionary observers.

Recent science, however, gives us a pretty clear answer to the question. In the first place, the Hawaiians had lived under uniform conditions for an indefinite time, and had acquired with an approximately perfect fitness or adjustment to those conditions the strictly correlated unfitness or weakness to resist the effects of any sudden change in the environment. Mr. Herbert Spencer tells us that the life and health of any organized body imply an equilibrium between the external or "incident" forces and the forces of the organization. The danger of this situation, in Mr. Spencer's view, is thus summarized by Dr. H. M. Lyman: "Exposed to a uniform succession of similar incidences, the living organism becomes exceedingly strong in its power of resisting the impact of that particular group of forces; but, experiencing no need of adjustment against other kinds of incident force, it becomes less and less complex in

its structure, and correspondingly less capable of resisting the shock of new and unexpected modes of motion" (Chicago *Medical Journal*, July, 1878). In a word, the constitution of the savage, however strong it may be at home, is fatally weak against foreign dangers. The first of these has been imported epidemic disease, which has already destroyed a large part of the Polynesian peoples. Beginning with the one which is the earliest introduced, the Hawaiians have acquired scarcely more fame as a civilized than as a syphilized race. The disease has spent its force of late years, but it was formerly very destructive. And even the milder epidemics are highly fatal when first introduced. The present writer saw the Hawaiians decimated by their first epidemic of measles, and far more severely treated soon afterward by the small-pox, which in 1853 ravaged the island like the plague; in the district of Ewa, for instance, near Honolulu, it destroyed 1,200 natives out of a total population of 2,800. The mortality in our community is about nine per cent. of the whole number of cases. More lately leprosy has become a formidable scourge; the disease is reported as infectious, increasing, and absolutely incurable. If to this list we add phthisis and alcoholism, we shall have mentioned the ailments that have been chiefly fatal under the new *régime*. Yet these are no longer the most effective cause of the decay of the island population; for the "tolerance" of most of them is now established—the weaker individuals and families, that is to say, have perished and the stronger remain. Nor are the ancient checks to population still in force. Oppression and infanticide have ceased, and rewards are offered by the Government for fertility, native families in which there are more than three children being exempted from paying taxes.

What, then, after these exclusions, is the persistent cause of the withering away of the people? The title of one of Mr. Darwin's discussions gives the answer—*sterility from changed conditions*. It has long been known that many plants and animals suffer from infertility as the result of even a slight change in their way of living. Mr. Darwin investigates the subject at length in the chapter just mentioned. Now, among the Hawaiians the changes are particularly great, because they have been welcomed and not resisted. Their food, their dwellings, their avocations, their dress, all have been modified where they have not been radically changed. The irregular use of dress was a fertile source of disease. The writer remembers seeing the native church-goers, when caught in a shower on approaching the meeting-house, throw off their finery, men and women together, and enter the building almost *in puris naturalibus*, with their coats and gowns in bundles under their arms. Within, the voice of the preacher could hardly be heard above the coughing and sneezing of the crowded audience. Carelessness in wearing wet clothes has been very fatal to them. The intellectual changes, less superficially conspicuous, were not less sudden and profound. To pass rapidly from the life of nature to the ideas of Puritanism; to abandon their old games, their songs, and even the wearing of flowers, at the instance or command of the missionaries, as a necessary breaking-off with heathen usages; to undergo the experiment of remaking their whole life, from the exterior details of it to the very processes of their consciousness, and to join, as very many of them joined, with pathetic simplicity in the attempt to transform their own bodies and souls—this was a more radical experiment than the savage had ever before undergone. Savage warriors were transmuted into Congregational deacons. In the consciousness of a Hawaiian prince, born under the old ideas and half converted to the new order of things, what an opportunity for a dramatic poet remains! All this transformation, however salutary it may have been for their souls, was less favorable for the long continuance of the Hawaiians in the church militant. The sum of the changes introduced, physical and spiritual, was overwhelming. One of Mr. Darwin's informants, Dr. T. M. Coan, says that "the natives have undergone a greater change in their habits of life in the course of fifty years than Englishmen during a thousand years" ('Descent of Man,' p. 187, Am. ed.)

In the infertility resulting from these changed conditions the sufficient cause of the decay of the Hawaiian is found. The number of children under six years of age is but 13 per cent., and under fifteen but 28 per cent. of the total population; and these figures include the children of the prolific foreign and half-breed families. In the United States the corresponding percentages are 17 and 41. The deaths far outnumber the births. But if we ask the difficult question: How do changed conditions of life produce infertility? we ask what cannot in the present state of our knowledge be fully answered. These conclusions of the matter, however, seem clear: 1. During the earlier years of the Polynesians' contact with foreigners the introduced diseases are the agencies most fatal to the islanders; "not civilization, but the vices of civilization," as the missionaries express it. 2. The introduced diseases, in course of time, spend their force, but a permanent and fatal cause of decay remains. It is infertility resulting from too rapidly changed conditions of life. The vices of civilization indeed begin the destruction; but the acceptance of civilization continues it, blighting the life of the aborigines at its source. Infertility will finish the work which disease began. It is before civilization and Christianity itself that the Polynesian is passing away.

THE RESULTS OF THE WAR WITH AFGHANISTAN.

London, June 25, 1879.

IN my former letter I showed that the war in Afghanistan had been undertaken to acquire a "scientific frontier." This was Lord Beaconsfield's statement of its object, and it is most important to bear it in mind. All the stories transmitted to Europe of insults inflicted on us by the late Amir, Shir Ali, of refusals to receive our mission, and so forth, are fictions. Unless the late Amir was prepared to concede to us as much of his dominions as the present Government considered requisite for the construction of a "scientific frontier," the war was determined upon from the hour when Lord Lytton was nominated Governor-General. It is a fact well known in India that eighteen months before the Russian embassy appeared in Cabul the Commissariat Department had received detailed instructions to prepare supplies for an invasion of Afghanistan. This "scientific frontier" we are now required to believe consists in the right to place five hundred troops in two valleys having no lateral communication with each other, and of which one—the Kurram Valley—is a mere *cul-de-sac* hemmed in on all sides by hostile and turbulent tribes, and the other—the Peshin Valley—is separated by nearly three hundred miles of difficult country from its base in British India. In return for this "scientific frontier" we have undertaken to pay the Amir, Yakub Khan, a yearly subsidy of sixty thousand pounds and to guarantee his dominions against all foreign aggression. Such is the lame and impotent conclusion which the Government and its supporters declare to be a "brilliant success."

They, of course, know well enough that it is not so, but it is the peculiarity of Lord Beaconsfield's Government that they never foresee the consequences of their actions. They rush into enterprises blind to the difficulties in their way, deaf to the warnings of those who can see; and so when the difficulty actually confronts them they are capable of nothing beyond backing out of the enterprise in a *sauve qui peut* fashion. This is what has happened in Afghanistan. It was in vain that from all sides voices were raised warning the Government that neither the finances nor the military resources of India were sufficient for an invasion and conquest of Afghanistan. They would pay no heed. Their "scientific frontier" they were determined to have. It was a fine election cry with which to go to the country. But when they had placed four thousand men in Candahar and ten thousand in Jalalabad they found they could do no more. At immense cost they might occupy Cabul also, but an occupation of Cabul would no more subdue the Afghans than an occupation of Jalalabad, and sooner or later the heavy financial drain upon India would compel them to evacuate the ground they occupied. What the Government would not learn from the warnings of others they were compelled to acknowledge from the teaching of experience. Then, as usual, arose the cry of *sauve qui peut*. Make any peace you can; only get us out of this difficulty, and whatever arrangement is made our faithful supporters in the press will be instructed to proclaim with one voice that this, and nothing but this, is the "scientific frontier."

The territory over which Yakub Khan nominally holds sway is about the size of France. The population is about four millions, collected in the few cultivable parts, the remainder of the country consisting of foodless deserts or ranges of bare, stony hills. It is menaced on two sides. On the west, about a thousand miles from British India lies the rich province of Herat, which the shahs of Persia consider to be rightfully theirs. On the north, at the foot of the Hindu Kush, and entirely cut off from British India, lies the province of Balkh, which is divided from Russia in Asia by the River Oxus. This treaty pledges us to defend Herat against Persia and Balkh against Russia. And as, if either is attacked, it is certain that both would be simultaneously—Persia acting under the instigation of Russia—this treaty pledges us to declare war against Russia and Persia in defence, not of the Afghans, but of Yakub Khan. An obligation such as this is similar to the obligation undertaken in the Anglo-Turkish Convention. It is undertaken with the

hope that we shall never be called upon to redeem it, and with the consciousness that if called upon we shall beyond a doubt repudiate. In truth, the defence either of Herat or Balkh from India is physically impossible, and, however much we might desire to do so, we could not get an army of any size to either of these places. So far, therefore, the treaty, beyond the stigma it affixes on British candor and honesty, may be regarded as inoperative for good or evil—a mere unmeaning form of words. It is the indirect consequences of an advance into Afghanistan which are fraught with so much danger to our Indian Empire.

There has been one fallacy present in all the discussions about this "scientific frontier" which, obvious as it is, has been uniformly overlooked. It has been assumed that British India constituted a base on which we could rely as securely as upon Great Britain itself. The real fact is that we require a "scientific frontier" far more to discourage sedition within than to repel attacks from without. All parties are beginning to perceive that our administration of India has resulted in grievous failure. So far from winning the confidence and affection of the people, every year finds them more distrustful, more entirely alienated from us. We have taxed them to their utmost powers of endurance, and what alienates them from us even more than our exactions is the hard, arrogant, and unsympathetic character of the Englishman. An Englishman is so entirely convinced of his "right divine" to rule over dark-skinned races that he cannot understand that this "divine right" is not equally apparent to the dark-skinned races. They, he thinks, must rejoice in being ruled over by such an admirable creature as he is, quite as much as he rejoices in doing the ruling, or, rather, a great deal more; for the Englishman cannot be said to rejoice in ruling over the Hindu. In general he merely draws his pay, does his official work during office hours, and then banishes the Hindu from his mind almost as completely as if he were not in existence. But the Hindu, the Englishman thinks, does, or but for the deep depravity of his nature would, regard his ruler with overflowing love and reverence. The Hindu, it need hardly be said, is animated by no such feelings; nor can any one who has been long in India doubt that the population there would welcome any change of masters as at least a change from masters whom they hate. These facts are all-important in deciding upon the expediency of an advance of our frontier line. Such advances, by involving a large increase of expenditure, necessitate extra taxation, and extra taxation produces an aggravation of angry and discontented feelings. But in advancing into Afghanistan a far more formidable danger is incurred than even this. There can be no question that the germs of the great mutiny of 1857 were sown in the native army during the first Afghan war. So unpopular was that war that some of the regiments actually mutinied when ordered thither. The late war has shown that this insuperable dislike to Afghanistan is as strong as ever amongst our native soldiers; and permanent garrison duty amid those bleak and barren hills would speedily culminate in open disaffection.

Now, the evil of any such partial occupation of Afghanistan as that which we have undertaken under the provisions of the present treaty is, that we cannot limit the extent of this occupation. The force of events will compel us continually to advance our frontier, till the whole country has passed into our possession. For our treaty, it must be remembered, is not with the people of Afghanistan, but solely with Yakub Khan. It depends upon his life and his retention of power. And the very fact that he leans upon us as his allies and protectors will alienate the bulk of his people from us. Afghanistan is never free for any length of time from internal troubles, from the struggles of rival competitors, from intrigues and counter-intrigues. What, then, are we to do in the event of Yakub Khan becoming unfriendly to us, or being deposed by some rival friendly to Russia and hostile to us? We must either withdraw our troops to India or march upon Cabul to maintain our ascendency. There is very little doubt but that we should choose the latter alternative, and thus in a short time we should find ourselves committed to an occupation of Afghanistan—an occupation which would require at least thirty thousand men, and an annual expenditure of six or seven millions. But the cost, ruinous as that would be, would still be the least of the evils we should have to encounter. So long as the inaccessible hills and deserts of Afghanistan extend between us and the Russian dominions in Asia it is impossible for Russia to participate directly in the politics of India. It is as impossible for her to march an army into India as it is for us to march an army to Herat. Invasion on either side being physically impossible, neither Power needs to take account of the other. But by advancing our frontier until it becomes conterminous with that of Russia, we give to Russia that power of direct participation in Indian affairs which, had we remained securely behind the Indus, she would never have obtained. Then, by simply assembling a few thousand men upon the Oxus, Russia may, whenever she pleases, convulse India from one end to the other. And then, should insurrection break out, we could not, as in 1857, concentrate all our strength upon its suppression; fully forty thousand men would have to be diverted from this end in order to show face against the Russians upon the Oxus. The supplies, the munitions of war for this frontier army could not be found in Afghanistan itself. They would have to be transported through an India in flames, through difficult mountain passes beset by hostile tribes—that is to say, they could not be transported at all.

To sum up, it is no exaggeration to say that the peace with Afghanistan, if its provisions are acted upon, jeopardizes the very existence of the Indian Empire. Upon a people poor, discontented, and heavily taxed it imposes fresh burdens; upon a mercenary army it entails duties which former experience has demonstrated to be so unpopular as to produce disaffection, and even mutiny. It places us in a position where the weight of circumstances will compel us to annex a country destitute of wealth and peopled by turbulent tribes. And, finally, it must eventually bring us into immediate contact with a great military power to whom the disaffected in our dominions will naturally look for encouragement and support. In saying this I do not wish to be understood as supposing that Russia has any deep-laid or persistent design of conquest in India. I do not believe the Russian Government would accept India as a gift; I cannot imagine any power being foolish enough to accept a present so dangerous and unprofitable. Could England disencumber herself of this terrible possession the day on which she stood emancipated would, in my estimation, be well-nigh the brightest day in her history. But Russia, without wish of her own, may find herself in a position which will compel her to threaten our empire in India. For more than a year have we been on the verge of a war with Russia, assuredly from no provocation offered by Russia to us. For more than a year were we in danger of incurring the unspeakable shame and infamy of a Turkish alliance, and for no other reason than our abject and unreasonable terror of Russian designs upon India. It is not probable that these terrors will diminish when by our own policy the designs (if such exist) have passed out of the region of wishes into that of attainable possibilities. And when the frontiers of the two empires are conterminous the rumor only of war between them would suffice to kindle the flames of insurrection in our Indian Empire. This argument is based upon the assumption that the administration of India will continue to be conducted with the extravagance and incapacity which have hitherto characterized it. It may, however, be that the nation will awake to a consciousness of the dangers accumulating there, and, instead of remaining in a "fool's paradise" soothed by the dulcet strains of official melodies, may be stirred up to ascertain for itself the veritable condition of the Indian Empire. What the results would be of such an awakening it is impossible to say, but it may be safely predicted that one result would be the cancelling of the treaty with Yakub Khan, and the resumption of the line of the Indus as being the natural and the "scientific frontier" of Hindustan.

Correspondence.

ARMY BREASTPLATES ONCE MORE.

To the Editor of The Nation:

Sir: Though a Confederate soldier, I have not read Gen. Dick Taylor's book, but I have read your valuable paper regularly for some years, and must say was somewhat astounded at what I saw in your paper of July 10 over the signature of "J. A. Judson, late Captain and Asst. Adjt.-Gen. U. S. Vols.," who says, in a criticism on Gen. Taylor's book:

"There was no one, officer or man, in the cavalry of Banks's army, or in any part of Banks's army, who wore at that time or any other time 'breastplates and other protective devices,' or anything that could, by the remotest probability, possibly give the most careless observer the impression that any such thing was worn or thought of. When General Taylor says he '*saw* a poor fellow lying dead on the pike, pierced through *breastplate* and body by a rifle-ball,' he states what he knew to be a deliberate falsehood."

Again, he says:

"It would, however, be interesting to know if any of his fellow-rebels now living who were with him in the Valley campaign of 1862 also saw any Yankee cavalrymen, dead or alive, in 'breastplates or other protective devices.'"

I was in the engagement spoken of, which took place near Middletown, serving as Adjutant of the Twenty-first Virginia Regiment, C.S.A., and then and there saw several breastplates on dead Federal soldiers; and, if some of Mr. Judson's comrades-in-arms have not already shown him his utter ignorance of what he attempted to write about, I can give him the names of a dozen men now living in the city of Baltimore who saw the breastplates as mentioned in the quotation from Gen. Taylor's book.

Mr. Judson says in his communication that he writes "because duty to my comrades requires that *truth* should be substituted on the record for what I cannot but regard as malicious and silly falsehood." If he meant what he said when he wrote the above words, his *duty now* to himself, it seems to me, will be to inform himself of the facts and then apologize for his unwarranted attack on the memory of the late Gen. Richard Taylor.—Very respectfully yours,

W. S. Symington.

Baltimore, July 14, 1879.

To the Editor of The Nation:

Sir: In confirmation of the statement made by Gen. Taylor in his 'Destruction and Reconstruction' in reference to "breastplates" having been worn by some of the Federal soldiers in the late war, permit me to state that a few days after the "Seven Days' Battles" under Lee and McClellan around Richmond, *I saw and carefully examined two steel breastplates* taken from the bodies of two Federal soldiers. They were made of solid steel plate about one-eighth of an inch or less in thickness, sixteen or eighteen inches in length, and twelve or fourteen inches in width, curved to fit the body and around the front of the shoulders. One had an ugly, jagged hole near its centre, made, as I thought, by a grape or case shot, and the other had a deep indentation made by a bullet with velocity insufficient to penetrate. They were worn *under* the clothing.

I have nothing to add in regard to its being "impossible for a single man to have worn a breastplate without my [Capt. Judson's] knowledge," or in regard to the justice of the "strong language."

Very respectfully, Wm. LeRoy Broun,
formerly Lieut.-Col. com'd'g Richmond Arsenal.

Vanderbilt University, Nashville, Tenn., July 14, 1879.

To the Editor of The Nation:

Sir: Mr. J. A. Judson is in error, in his communication to your paper of the 10th, in spelling Colonel Douty's name "Doty"; also in stating that he is now living. He was killed at Aldie, Va., June, 1863.

He is also in error in asserting that breastplates were not worn by cavalry soldiers in Banks's army in May, 1862. The writer found one which a soldier left in bivouac, and tested its quality as a "protective device" by fastening it to a tree and piercing it several times with carbine shots, much to the chagrin of the owner, who soon discovered his loss.

I am confident that many of our New England cavalrymen would have made steadier and more serviceable troopers if they *had* been strapped to their saddles the first year of their service.

S. W. Thaxter.

Portland, July 18, 1879.

[The case in regard to the breastplates seems closed. Mr. Henry C. Wayne, formerly in charge of the Bureau of Clothing, Equipage, and Equipment of the Quartermaster-General's Office, U.S.A., writes to the Savannah *Morning News* of July 19 that they were introduced into the army shortly before the rebellion by General McDowell, "for the protection of our officers and men in Indian fighting against lances, arrows, and *armes blanches* generally." He had borrowed the idea from the French Cuirassiers, during a trip to Europe for purposes of inspection.—Ed. Nation.]

COLLEGES AND THE BUSINESS LIFE.

To the Editor of The Nation:

Sir: It is a hopeful sign when those who are supposed to control or to have influence in matters of education show some signs of appreciating what is now lacking in our schools and colleges. If the education obtained in our schools were limited to the instruction therein given, we might well have cause to doubt our system. Our high-schools annually graduate a majority of their pupils utterly incompetent to write or speak good English, and painfully ignorant of English literature. Our colleges annually graduate large numbers of young men who must earn their own living, but who are partly disqualified for the pursuits of active business life by the very fact that they have been through college, and who are not qualified for what you are pleased to distinguish from other occupations as the "intellectual pursuits" of theology, law, medicine, or natural science.

Permit me to say that one of the reasons why the college training now in some degree disqualifies young men for what is called business life, and for the conduct of manufacturing enterprises, lies in the fact that you and others whose pursuits are of a literary kind are apt to consider the life of business men as not an intellectual one. In this estimation of the relative position of what are called the learned professions and the active business of life you are unwittingly, and I may say ignorantly, joined by the majority of the business men and manufacturers themselves. Is it not for the supposed reason that the learned professions confer more dignity and position upon those who follow them that their ranks are always crowded with candidates who have worried their way through college, and who then struggle for a few years to fill places for which they were unfitted at the start, to find at last that the most valuable years of their lives have been utterly misspent?

It is time that business men and manufacturers ceased to sustain the colleges and universities, so called, that fail to provide a course of instruction that will fit graduates for the pursuits in which they are themselves engaged, and that do not recognize these pursuits as of equal importance, equal dignity, and equal intellectual standing with the study of law, medicine, or theology. It is the function of the farmer, the business man, and the manufacturer to sustain the whole body of society, and without their right qualification for their calling the efforts of the learned professions even to keep up any intellectual activity outside their own limited circle would be utterly futile. Commerce is no longer a matter of chance and adventure as in olden times. The work of the great merchant, manufacturer, or railway manager is much more important to the well-being of society than that of any other class, and their work calls for intellectual capacity of the highest order; they keep the body corporate in health and vigor, while the members of the so-called learned professions are mainly engaged in curing the ills that have come from ignorance and vice. The instruction of the school and the college might well be given mainly to a preparation that shall fit men for the active constructive and productive work of life rather than for the practice of law, medicine, or theology; and when this need is recognized the growing prejudice against college life on the part of men in these pursuits will cease.

It will no longer suffice to say that a thorough training in the ancient languages and in the present course of studies offered, especially at Harvard, will fit a man for any pursuit. This is admitted, and is perfectly true; a young man who has more than ordinary capacity and plenty of time may well devote himself to a thoroughly abstract and purely intellectual course of study, and be the better able to take up any pursuit that he may choose in later life; but such young men are comparatively few in number. The question at issue is, How shall the college provide for an average man who must gain his own living as soon as he graduates? It is not enough to say that the studies at Harvard and elsewhere are to a great degree elective, and that the young man may choose his course for himself. To one who is watching the training of a son under the elective system it appears to have been carried to an absurd extreme, and to be likely to break down. What is needed is not a system of elective studies but *elective courses of instruction*, especially directed toward the active pursuits of business life or of manufacturing.

The technical schools thus far lack as much in the direction of literary and abstract instruction as the college lacks in the technical. To one who has gained what little education he possesses under the hard instruction of practical work from very early days the great need of the present day is a recognition of the fact that education to fit a man for business life is no more a mere "bread-and-butter" course than one directed toward any other mode of life, and that no institution can be entitled to the name of "University" that does not provide such a course. Business men and manufacturers should claim that the title of "Master of the Arts" belongs to them; and should assert their rights and provide for their fulfilment, leaving the titles of lesser degree to thoo who have so long assumed precedence.—Very sincerely yours,

An Uninstructed Philistine.

Boston, July 13, 1879.

Notes.

CASSELL, PETTER & GALPIN have nearly ready 'The Landed Interest and the Supply of Food,' by James Caird; a 'Handy Commentary' of the New Testament, in small volumes, for educational purposes; and 'Wild White Cattle of Great Britain,' by the late Rev. John Sterer, with illustrations.——Montgomery & Co., auctioneers, 87 Camp Street, New Orleans, offer for sale *en bloc* before August 10, for a fixed sum, a "collection of letters and documents mostly addressed to, or written by, General Daniel Morgan during the Revolutionary War." The collection embraces 245 numbers. After the above date it will be offered in parts. Autographs of Washington, Jefferson, Hamilton, Lafayette, Lee, Laurens, Steuben, T. Pickering, Greene, Gates, B. Lincoln, Lord Sterling, Patrick Henry, etc., are among its attractions.——We learn from the *Quadrat* that 'A List of the Reproductions, both imitation and in fac-simile, of the productions of the Press of William Caxton,' with some preliminary observations by Mr. B. H. Beedham, of Kimbolton, England, will be manufactured in this country by Mr. John Springer, of Iowa City. Only 125 copies (out of a total of 250) will be reserved for America, and Mr. Springer should be addressed after August 1 for specimen sheets and further information.——Mr. Albert Griffin, editor and proprietor of the Manhattan (Kansas) *Nationalist*, desires to send those who are interested in his scheme of Southern colonization, which we lately described, the printed details thereof and to correspond with them.——No. 7 of the Rhode Island Historical Tracts (Providence: S. S. Rider) contains a reprint of the 'Journal of a Brigade Chaplain in the Expedition against the Six Nations,' 1779. The diarist was the Rev. William Rogers, D.D., the first student of Rhode Island College, a member of three anti-slavery societies (Pa., Md., and R. I.), and the last surviving chaplain of the Revolutionary army. The expedition led up the Tioga River into New York State, and had important results. The Journal has both an historical and a topographical value, and on this account it is a pity that the compiler of the map accompanying this pamphlet did not avail himself of the Historical Map of Pennsylvania published in 1875 for fuller details. On the other hand, the Journal suggests additions that might be made to the Map.——B. Westermann & Co. have received Part IV. of Oncken's 'Allgemeine Geschichte,' which treats of the period in Greek history from the Ionian uprising against the Persians to the outbreak of the Peloponnesian War, and indeed carries us a little further. The age of Pericles affords an excuse for a number of choice illustrations from the Athenian art-remains and from nature, mostly engraved after photographs, besides plans of battle-fields, etc. The same publishers send us Parts 4 and 5 of the new edition of Stieler's 'Hand-Atlas,' with maps of part of Spain and Scandinavia and the United States (northwestern sheet), general maps of Europe and Africa, etc. The last-mentioned will no doubt be greatly modified in the larger-scale representations, which will be judiciously held back to profit by the discoveries of the host of explorers now occupied with Central Africa. For example, Major Serpa-Pinto's recent determination of the courses of the Cubango and Cuando Rivers will probably have been made available.——Seeley's 'Stein' has been added to the Tauchnitz series.—Translations of Thornton's 'Labor' and Cairnes's 'Fundamental Principles of Political Economy' form the first volumes of a 'Biblioteca di Scienze sociali' published by Leopoldo Franchetti and Sidney Sonnino (the latter one of the editors of the *Rassegna Settimanale*, and, together with Carlo Fontanelli, the translator of the above works).——Bernard Quaritch, Piccadilly, was, of course, a purchaser at the late Didot sale. He has just issued an annotated catalogue of the forty-one books and MSS. thus acquired.

—*Scribner's Monthly* for August is an exceptionally good number. Mr. Henry James, jr., begins a new tale in it—"Confidence," it is called—which is going to concern itself with the author's young countrymen and countrywomen in a foreign land. Mr. R. S. Stoddard continues his critical papers on the poets with one on Whittier, whose portrait, by Messrs. Eaton & Cole, seems rather more true to life than its predecessors in the shadowy series. There is a very careful study, by an admirer, of Mr. Whistler's rank as an artist in color and in black and white, illustrated in a beautiful manner with portraits and etchings after his own work, including his famous "White Girl," and some of the "symphonies" and "arrangements." Mr. W. H. Bishop nearly succeeds in giving an interesting account of a subject which seems to lend itself to that purpose, the Festiniog narrow-gauge railway in Wales—the oldest and narrowest in the world. His facts will be appreciated by practical railroad men in this country, and we believe his scepticism about the value of narrow-gauge roads is well-founded at least. This article also has several charming illustrations. A lighter paper is Mr. Allen C. Redwood's "Cook of the Confederate Army," one of several which promise when they grow into a book to be among the most agreeable contributions to the history of the great struggle. Mr. Stoddard, we may say, returning to his estimate of Whittier, does not conceal the hastiness of his preparation. Bibliographically he was poorly equipped with only the 'Complete Works' of 1876, and historically he was ignorant of the very beginnings of Whittier's muse; and it is clear that the Quaker poet was never much of a favorite with his critic. These drawbacks certainly impair the quality of Mr. Stoddard's performance, and invalidate his selection of Whittier's best pieces; but they do not make his criticism valueless. We do not know what authority Mr. Stoddard has for saying, "advisedly," that "the New England Quaker of forty years ago was rather a tolerated than a respected member of the community." Was this true of Newport, or Providence, or Lynn, or New Bedford?

—The *Atlantic* for August makes slight concession to the season and is one of the "solidest" issues of the month. None of its contributions, however, are justly to be termed heavy, and some of them, aside from the occasional pleasant trifles, are so far on the hither side of dulness as to stimulate reflection in the serious reader. Of these is the first paper, which is on "Preaching," and by the anonymous author of several recent articles on the "tendencies" of American life that have attracted attention. This may be called one of the same series, and it is as carefully considered and as little superficial as the rest. "Two Years of President Hayes," by Mr. Walter Allen, of the Boston *Advertiser*, is perhaps the conspicuous article of the number. It is, in brief, the case for Mr. Hayes, and a lucid and candid presentation of it. People who have a fondness for the practical application of high ideals will, it is possible, regret that this is all of the case, and that at a time when, as it seemed to them, the country needed to be saved over again the President, even in the opinion of so favorable a judge as Mr. Allen, has done little to demand any flinging up of caps. Not a few, perhaps, may be found who deem Mr. Allen's review of the two years somewhat over-favorable indeed, and regard that portion of his article which deals with civil-service reform, especially as exemplified in certain early appointments, as weak. But upon the whole even such may find good reasons given by Mr. Allen for their taking heart of grace and resting content with what the President has plainly accomplished, considering the obstacles in his way and the materials at his hand. The article is not free from a suspicion of special pleading, it is true; at the same time one must have, even in a discourse about Mr. Hayes's Administration, some distinct and positive idea to start with, and in this instance most fair-minded persons will probably admit it was better to incline to the side of eulogy. "The Negro Exodus" is the subject of an article of similarly candid temper by Mr. James B. Runnion, who has had personal experience of what he writes, although his conclusions differ from those of General Conway. Mrs. Lydia Maria Child has a short paper upon the late Mr. Garrison; Mr. Van Brunt writes of Hamerton's 'Life of Turner,' Véron's 'Æsthetics,' and Professor Falke's 'Art in the House' rather urbanely than incisively; Dr. Holmes's poem "Vestigia Quinque Retrorsum," read last month at Harvard, is printed, and is, naturally perhaps, the best of the poetry. The reviews—in contradistinction to the "Contributors' Club"—are longer and more important in every sense than usual.

—*Lippincott's Magazine* appears again with its cover whimsically plastered with illustrations—an expedient which can scarcely be depended upon to give it an æsthetic reputation. The mistake of supposing whimsicality a good working substitute for genuine taste penetrates also to the contents of the first paper, "Catskill and the Catskill Region," whose woodcuts are distributed and posed through the text in the purposeless and puerile fashion which there is a disposition just now apparently to make do duty as serious art. The number is a light one, and consequently seasonable. Fiction abounds; from the continuation of Miss Olney's "Through Winding Ways," to the flimsiness natural to expect from the "author of 'Molly Bawn.'" Mr. Oswald's second chapter of "Summerland Sketches," in which he chats about "Colima," is pleasant summer reading, and two personal articles, one containing Professor Boyesen's reminiscences of the late Bayard Taylor, and the other some account of Étienne of the *Neue Freie Presse* and Villemessant of the *Figaro*, by Edward King, are interesting, the former especially. 'Our Monthly Gossip' is extending its scope and approaching the *Atlantic*'s 'Contributors' Club,' without, however, acquiring a cathedral tone.

—Mr. S. G. Young's article on "Guignol," the French Punch-and-Judy, in the same number was worth writing. There are in Paris some ten of these little theatres, and they are not the least interesting of its dramatic amusements. Five of them grouped together in the Champs Élysées, just opposite the Palais de l'Industrie, are familiar to every young American who has been to Paris. These theatres are of two kinds, as Mr. Young points out, although he does not always keep the two classes as distinct as he might. They are either *jeux de triangle*, the actors being true marionettes, ingeniously articulated and skilfully moved by wires from above; or they are *jeux de castollet*, puppets of the familiar Punch-and-Judy type, animated from below by the inserted hand of the performer. The first kind are rarely seen in England and America, while even in Paris they are less popular. The typical French play in which they appear, 'The Temptation of St. Anthony,' with its peculiar spectacular sensations, is amply described and illustrated in Mr. Young's article. In Italy the marionette theatres are very elaborate, performing serious tragedies and graceful ballets with comic effect. Mr. Young might have drawn on Mr. Story's 'Roba di Roma' for a description which is as accurate as it is amusing. The extensive marionette theatre of Thomas Holden, an Englishman, has, strange to say, been among the favorite spectacles of Paris this last winter, and seems to have far surpassed the native *jeux de triangle*. The second class, which we know in America by the English name of Punch-and-Judy, requires an outfit far less expensive, and indeed often portable. It is seen to advantage in the streets of German and Italian provincial towns. Even in Paris the protagonist is provincial: *Guignol* is a Lyonnais. Mr. Young pays deserved praise to the superiority of the Vrai Guignol in the Champs Élysées, handled by M. Anatole, a most ingenious and inventive spirit, the author of his own half-extemporaneous plays, rarely twice alike; the MSS. of several of which, committed to paper for the first time at the request of a curious admirer, are now in this city, and go far to show that M. Anatole, like his predecessor the divine Williams, possesses a most variegated orthography. Excellent portraits of M. Anatole and of his two leading actors are given on p. 192; those of the two wooden-headed performers much more like than the profiles on p. 195, where their constant butt, the landlord, is also figured, his name being transliterated into "Proprietor" (Fr. *propriétaire*). It may be remarked also that to call the first cut (p. 186) "Polichinelle welcoming the audience at Anatole's theatre" is an obvious error, as the figure is a marionette moved from above, and not a puppet moved from below.

—The *Methodist Quarterly Review* for July contains nothing notable. The best articles in it are compends and reprints. But the *Review* itself is always interesting as representing the culture of the largest and so the most influential body of Protestant ministers in the United States. And it is highly honorable to its conductors that, side by side with a certain amount of theologizing in the rut of the traditions of its sect, there is given (in its synopsis of reviews, American and foreign) so frank an exhibition of critical views and arguments which it is a common policy with religious journals to treat only by dark allusions as dangerous. Of course, a "denominational organ" issued by a Church "Book Concern" is necessarily lacking in vigor and individuality. But the *Methodist Quarterly* is much better than might be expected. It is needless to add that the *Review* is stalwartly Republican in politics. We venture the suggestion to the editors of the *Princeton Review* or the *North American* that in default of other harrowing topics a slashing article on "The Methodist Church in Politics" might produce an effective sensation.

—Mr. Matthew Arnold contributes to the July *Macmillan* an essay on Wordsworth which we presume is to preface a volume of 'Wordsworth's Select Poems' announced by Macmillan as a forthcoming addition, edited by Mr. Arnold, to the celebrated "Golden Treasury Series." It is a charming paper, full of delicate perception and acute discrimination, and written with that just union of grace and incisiveness which no one needs to be told is characteristic of everything Mr. Arnold writes. It is, indeed, in one important respect the perfection of literary criticism, since it is itself literature. But from the general conclusion of it there are few persons, we imagine, who will not more or less sharply dissent. "I firmly believe," says Mr. Arnold, "that the poetical performance of Wordsworth is, after that of Shakspere and Milton, undoubtedly the most considerable in our language from the Elizabethan age to the present time." And he finds in the modern poetry of the Continent only the names of Molière and Goethe to add to those of Shakspere and Milton in the catalogue of Wordsworth's superiors. Comparisons of this sort are particularly hazardous, and Mr. Arnold has always shown a lively appreciation of the danger which is so exactly proportioned to their attractiveness. Nor is it to be supposed that this one is made without a sense of the need for supporting it. Hardly any one could recognize more clearly than Mr. Arnold Wordsworth's faults and shortcomings. The thick-and-thin admirers of Wordsworth—like Mr. Leslie Stephen on the one hand, and the survivors of Coleridge's school of orthodox transcendentalism on the other—will be as displeased with his admissions as persons distinctly not Wordsworthians will be with his claims. He expressly says that the grounds upon which Wordsworth's greatness are usually rested—his sound philosophy and his scientific system of thought—are not the grounds upon which it should be rested. "His poetry is the reality, his philosophy the illusion," he says, and "we cannot do him justice until we dismiss his philosophy." And he finds abundant fault with Wordsworth's "artificial arrangement" of his poems, and speaks frankly of "the quantity of inferior work which now obscures them." The ground upon which he himself rests Wordsworth's greatness is Wordsworth's "powerful application to his subject of ideas 'on man, on nature, and on human life,'" according to his old dictum that "the noble and profound application of ideas to life is the most essential part of poetic greatness." In nothing is Mr. Arnold more happy than in his definitions; in them are focussed his delicately just perception and his nice sense of form; and there is certainly much truth in this one. But the thing to be defined is here so large at once and so elusive that he would have been more fortunate than it often falls to the lot of men to be if his definition had included the whole truth. His very application of it to Wordsworth impairs it, one cannot but think; unless, indeed, one is to admit that to Wordsworth it does not largely apply. The pith of the matter is perhaps just here, and Mr. Arnold's estimate of Wordsworth stands or falls according to the truth or weakness of his judgment as to what is a "noble and profound application" of ideas to life. Mr. Tupper's application is not, surely. And wherein does Wordsworth's application differ from Mr. Tupper's? It does differ, but how much or how essentially Mr. Arnold neither describes nor illustrates; and all persons not Wordsworthians will naturally ask for something more than the mere assertion, even of Mr. Arnold, that Wordsworth does in any transcendent degree apply ideas to life profoundly and nobly.

—It is curious to notice, and it is certainly noteworthy, that this essay is, indeed, in the teeth of what Mr. Arnold has so long and so consistently preached—the necessity of looking at "things as they are," of eliminating, in the search for truth, all preconceptions and stock notions, and of holding ideas upon all subjects easily. This estimate of Wordsworth is certainly not the estimate of thick-and-thin Wordsworthians, but it is still less, perhaps, that of "the world in general," which is always Mr. Arnold's arbiter; he says somewhere that one should try to "keep one's self out of the way and let humanity judge." It may be said, it is true, that humanity takes time in which to make up its mind; that Shakspere waited till the eighteenth century for any adequate appreciation, and that it was not so many years ago that Mr. Carlyle was exalting the German romantic poets above Heine. But just as Heine's destruction of the romantic school proved, as Mr. Arnold long ago said, "a delicate chastisement" to Mr. Carlyle, the judgment of "the world in general," which after almost imperious and fanatical admiration of Wordsworth has now in great measure fallen away from him, is a delicate chastisement to Mr. Arnold, if he would but recognize it. Moreover, it has fallen away from Wordsworth while Mr. Arnold has clung to him, simply because, being impersonal, it has no personal interest in him; it has one of the highest qualities of criticism, disinterestedness, whereas nowhere, to our recollection, has Mr. Arnold shown so little disinterestedness as in his mention of Wordsworth now and heretofore. Nearly twenty years ago, in his 'Essays in Criticism,' speaking of the English poetry of the first quarter of this century, and accusing it of not knowing enough, finding Byron empty of matter and Shelley incoherent, he admired Wordsworth so much that, as he says, "I cannot wish him different." Elsewhere, when there is no question of Wordsworth, he can call Byron "the greatest natural force, the greatest elementary power, that has appeared in our literature since Shakspere." But of Wordsworth he always speaks as a disciple of his master; even in this essay, which is designed "to get Wordsworth recognized by the public and the world," he says: "I am a Wordsworthian myself. I can read with pleasure 'Peter Bell' and the whole series of 'Ecclesiastical Sonnets'—everything of Wordsworth, I think, except 'Vaudracour and Julia.'" It is impossible not to see that the critical spirit which recently prompted Mr. Arnold to call a good deal of Shakspere's writing "detestable," is entirely silent in confession that he can read the "Thanksgiving Ode" with pleasure.

—The Boston Public Library and the Boston Athenæum are about entering upon an experiment which, if it succeeds, will have a very important influence upon the reading of Boston. A "Library Delivery Company" undertakes, on receipt of a postal-card from a patron, to draw books for him from the library, deliver them at his house, and return any books which may be ready, all for five cents, including the price of the postal-card. The editor of the *Gentleman's Magazine* lately advised literary men to buy books rather than consult them at the British Museum, because, taking the average price of a volume as ten shillings, he could earn more than the cost of the book in the time consumed in going to and from the Museum and waiting to be served. Arguing in this way, what busy man is likely to go to the Boston Public Library when he can have some one go for him for less than the cost of two letters? The circulation will no doubt be largely increased by the new system, and we shall be greatly surprised if the use of the Athenæum is not confined hereafter to a smaller circle ; for one of the chief reasons with many for seeking the Athenæum has been the discomfort of the delivery-room in the Public Library. On the other hand, those who continue subscribers of the Athenæum will use it all the more. Shall we ever in this city have a system that will make library books as easily accessible as this ? We need it much more than compact Boston. To be sure, Mrs. Glass's famous rule about the hare applies to us—the city must first get its books. Moreover, it may be doubted whether New York is yet ready to support a library delivery company ; for such a service can succeed only by a popular use which shall approach that of the post-office.

—The tenth annual report of the Massachusetts Railroad Commissioners for the year 1878 is the latest of a series which have attracted marked attention, both from railway officials and from the more thoughtful part of the general public. Its characteristic features are unique for a public document. Everywhere there is evident an earnest wish to get at what may be called the natural truth of each question, *i.e.*, its actual relations with all natural laws—commercial, social, and financial—and this with a view to reaching a decision which shall not only seem to be just but which shall not run counter to those all-powerful forces. Joined to this wish, there is equally palpable an untiring patience, and a steadfast faith in the curative powers of public sentiment when properly enlightened and efficiently concentrated. There is not the slightest reference throughout the whole document to party, or to material for party uses. These are admirable qualities, and apart altogether from the particular service in which they have been exhibited, are wholesome studies for Americans, whether in or out of the public employ. A fine example of unprejudiced investigation, judicial consideration, and of the establishment of substantial justice and profitable concord between two embittered commercial foes, is given in the report upon a grade-crossing between the Boston & Maine and Lowell & Lawrence Railroads. The intelligence of the tribunal enables it successfully to preserve the essence and object of law, while dispensing with many of the obstructive forms deemed essential in ordinary courts, but which undoubtedly do much to hinder the speedy and economical accomplishment of true equity. The tables are careful and judicious digests of information, and are quite as necessary for the protection of shareholders in the roads as for the enlightenment of the shipping and the general public. The expense-accounts, while not given too much in detail, would be more serviceable if the details were better grouped under a few general heads. The great questions of discrimination and competition force their way into the report in several guises. They appear in the decision upon the Boston & Albany coal-rates, and again, on page 21, in the discussion of the mooted relations of competitive and non-competitive charges, and more largely in the review of the general railroad situation, at the close of the report. They are questions too little understood for the Commission to treat of with definiteness, but they are discussed with ability. They are questions full of peril to social order and the safety of capital, and to public equity. The fullest light possible must be thrown upon them, and for this purpose all parties should unite in measures that will oblige railway tariffs and accounts to be absolutely shorn of secrecy of any sort or on any plea. The Commission has well performed an important function in Massachusetts, and has furnished much food for careful thought to those beyond the borders of that State, and yet the expense of this excellent work for a whole year was less than $2,500. It would not be easy to parallel so good a service at so slight a cost.

—In the *Deutsche Rundschau* for June Karl Hillebrand gives a spirited account of the last days of Louis Philippe's reign, founded mostly on hitherto unpublished documents. Though not bringing to light any new facts of importance, he has collected many interesting details throwing light on the character of the last of the Orléans rulers. What is most striking is the astonishing ignorance and indifference of the king in regard to the state of affairs around him and the temper of the people over whom he reigned. Serious and far-seeing men were aware of the dangerous position. Léon Faucher, a warm friend of the July monarchy, wrote as early as 1846 : "The present condition of the country recalls, as far as the past can be compared with the present, in every feature the condition of France in 1826 and 1827"—viz., the last years of the reign of Charles X. Sainte-Beuve, De Tocqueville, even the king's own son, the Duc de Joinville, in a letter to his brother Nemours, took an equally despondent view. The king remained obstinately indifferent to all forebodings. The consciousness of having had for seventeen years his own way at home and abroad, in the face of the ministry, the Chambers, and the popular will, had only created in him an amount of confidence which nothing could shake in the infallibility of his statesmanship and superior wisdom. For years he had not read a French newspaper. The London *Times* was his favorite journal, from which he could learn all that was said and thought about him abroad. What was said and thought about him in France, outside of the cabinet and the Chambers, was to him nothing but child's talk. When, shortly after the opening of the last Chambers, in December, 1847, the prefect of the Seine wished to enlighten him about the threatening mood of the Paris bourgeoisie, he answered petulantly, almost rudely: "M. de Rambuteau, you don't understand such things." To the earnest entreaty of a rich Parisian manufacturer, a member of the Lower Chamber and a devoted partisan of the Guizot ministry, to make some concessions in the Election Bill, he replied smilingly with the question : "Are your carpets selling well, M. Sallandrouze ?" Even when his old friend and confidant, Marshal Sébastiani, brought to the king the last warnings of his dying sister, he interrupted his unpleasant remonstrances with the words : "You are getting old, Marshal." When at last Louis Philippe's eyes seemed to be opened, with heavy heart he reluctantly decided to dismiss Guizot. Towards nine o'clock in the evening, when Molé was informing the king of his inability to form a cabinet, a troupe of over 500 workingmen moved towards the Ministry of Foreign Affairs, to say good-by to Guizot, as they pretended. At their head a mechanic of gigantic stature carried the ominous red flag. Being stopped at the Place Vendôme by a battalion of infantry, the commanding officer is taunted and insulted by the furious mob. One man brings his torch close to the face of the officer, "to singe his moustache." A devoted sergeant of the regiment, the Corsican Giacomoni, indignant at this brutality, fires on him without command, and the torch-bearer falls in his tracks. This fatal shot was the signal for the whole regiment to discharge their muskets, and eighty-two of the crowd—men, women, and children—were stretched dead on the ground. The February revolution had begun.

HEILPRIN'S HEBREW POETRY.*

THOSE who are best able to judge of Mr. Heilprin's scholarship and general force of mind will not go far in these pages without being convinced that he is completely at home in this department of research. Everywhere there is unmistakable evidence that he is speaking out of the fulness of his knowledge. His name has not, we believe, appeared upon the title-page of any book before, though he has already reached "the arm-chair period of life." So much the better ; we have here the ripe result of a whole lifetime's careful and enthusiastic study and investigation. But Mr. Heilprin has long been known among our metropolitan scholars as one of the most learned of their company ; a man whose encyclopædic knowledge, especially in the field of history, has amply provided him with that historical sense without which studies like the present are apt to be almost entirely vain.

Any one at all well informed in Biblical studies is not deceived as to the tendency of modern Jewish scholarship, but to many others it will be a surprise to find a "Hebrew of the Hebrews" maintaining the most radical convictions concerning the Old Testament writings. They have probably imagined that such convictions were the special property of Protestant Christians or ex-Christians. But no,

> "The current sweeps the Old World,
> The current sweeps the New."

Be it a good or evil sign, modern Judaism, equally with modern Chris-

* 'The Historical Poetry of the Ancient Hebrews. Translated and critically examined by Michael Heilprin.' New York : D. Appleton & Co. 1879.

tianity, is affected by the scientific tendency, and applies the scientific method to the Old Testament writings with equal if not greater boldness. Mr. Heilprin has the advantage, which many scholars have not, of being equally at home in Jewish and in Christian studies of the Old Testament literature. He is entirely catholic. The Jewish critics, Graetz and Zunz, are no more authoritative with him than the Protestant Christians Oort and Kuenen. In Protestant circles the latter are commonly esteemed, so far as known, as our least conservative critics; but they are somewhat more conservative than the former. Judaism has never had the same logical necessity for an infallible scripture with Christian Protestantism, and so it has been easier for Jewish scholars to apply a scientific method to their sacred books.

It has been lately urged against certain attempts to subject the Bible to a scientific method of investigation, that without an exact knowledge of the Hebrew tongue no one is competent to sit in judgment on these things. An exact knowledge of Hebrew has been proclaimed to be an effectual antidote to the Dutch school of critics, albeit the members of that school are perhaps quite as well up in their Hebrew as their conservative critics. But in Mr. Heilprin we have a scholar whose study of Hebrew began in his infancy and has continued ever since; who has the Hebrew Bible at his finger ends; who nevertheless has not been preserved in this way from conclusions very much at variance with the popular conception of the Old Testament writings. In one other particular, too, Mr. Heilprin's book is exceedingly instructive. The notion has somehow got abroad that the scientific study of the Bible is inconsistent with the most tender reverence for its contents or with their persistent fascination. But the reverence of Mr. Heilprin for the subject-matter of his criticism could hardly be surpassed, and that it has not lost its power to interest and charm, his book itself is ample evidence, which will be reinforced by the experience of every intelligent reader of its too brief contents.

The present volume is only the first of a series which must inevitably contain two or three more to bring it to a natural completion. The poetry of the prophets, as yet untouched, is almost exclusively historical, and, treated with as much amplitude as the fragments to which the present volume is devoted, will demand no inconsiderable amount of space. Mr. Heilprin plunges immediately into his subject without any preface or introduction, and leaves the reader to discover his method from his book. The first section is, therefore, somewhat misleading. It treats of the address of Lamech to his two wives, Adah and Zillah. The passage containing this address being the first poetical passage in the Bible, the reader is led to expect that the poetical passages are to be taken up in the order of their occurrence. But Mr. Heilprin's method proves to be quite different. He takes the accepted order of Hebrew history and brings to its illustration the poetical passages that are concerned with it wherever they occur. Thus it happens that his second section deals with Psalm cv.: "It is, if not surprising, worthy of notice," Mr. Heilprin remarks, "that not a single piece of Hebrew poetry has been preserved in the Scriptures of which the subject is either Abraham, Isaac, Jacob, or Joseph, all of whom are heroes of extensive prose narratives, and all of whom were revered by the Hebrews as national patriarchs." The author of Psalm cv., however, does late and scanty justice to these heroes by introducing them into a poetical summary of the history of Israel from the earliest times down to those subsequent to the captivity in Babylon. This summary includes the two following psalms. The three, argues Mr. Heilprin, belong to the same period. Mr. Heilprin's translation of the first is full of force and beauty, and is a new evidence for the necessity of a revised translation of the Bible, if we really care to know the thoughts expressed in the original. It has been acutely argued that the religion of modern Protestantism has been founded upon the King James translation, not on the original, and that to change the translation is to change the religion of the English-Protestant world. It may be so, but the argument comes with an ill grace from those who accept the original Hebrew as peculiarly the word of God.

By way of introduction to the so-called "Blessing of Jacob," Mr. Heilprin discusses at some length the patriarchal legends, quoting with undisguised approval the monograph of A. Bernstein, the central idea of which is that there were originally three centres of patriarchal legend, and that the ultimate shape which the different legends assumed resulted from the clumsy harmonizing of much that was antagonistic and incongruous. The different centres corresponded to the tribes Judah, Simeon, and Ephraim, and were deeply colored by their rivalries and hostilities. We cannot follow out this scheme into its details, but many of them are exceedingly interesting. Abraham was the favorite patriarch of Judah, Isaac of Simeon, and Jacob of Ephraim. The story of Judah and Tamar, according to Bernstein, was originally a lampoon on David and his house. The marriage of Judah with a Canaanitess corresponds to David's with the Hittitess, Uriah's wife. There are other points of correspondence. David's line is made to originate in the disgraceful connection of Judah with Tamar. But such was the *naïveté* of the harmonists that this lampoon was ultimately included in the Davidic legend as if it were the simple truth.

"The Blessing of Jacob," to which we are introduced by this discussion, is regarded by Mr. Heilprin, who in this instance also has the acute criticism of Bernstein to support him, as an Ephraimic retrospect of a time subsequent to the disruption of the kingdom. To this disruption is referred the famous text, "Until Shiloh come," commonly spoken of as a Messianic prophecy. Mr. Heilprin translates "Until he [Judah, the tribe] come to Shiloh and there is a gathering of tribes around him." This, of course, makes it a prophecy *post eventum*.

Mr. Heilprin's translation of Miriam's Red Sea song is full of spirit. He is disposed to consider it of later origin than the corresponding narrative, finding allusions in it to the temple. But some of its verses have "the ring of great antiquity." The story of Balak and Balaam given in the Book of Numbers has long been one of the most fascinating for the critics, conservative and radical alike. It is as fascinating for Mr. Heilprin as for any of his predecessors. The episode of the ass and the angel he considers an interpolation of a later writer. The Balaam of this story is a noble figure; but the Hebrews had another Balaam in their legends who was very different—a vulgar soothsayer. Which of these legends is the older it is difficult to determine. The latter has the advantage of being embedded in a dry historical narrative. Mr. Heilprin apparently sympathizes with the almost startling suggestion of Seinecke that the Macedonian power was already in the ascendant when the concluding lines of this superb fragment of Scripture were composed.

"The Blessing of Moses" (Deut. xxxiii.) is carefully compared with "The Blessing of Jacob." It breathes a much more amicable and gentle spirit, and belongs to a later period, when the animosities of Judah and Israel were somewhat softened. The omission of Simeon from this blessing is a notable fact, on which the commentators have spent, not to say wasted, an immense amount of ingenuity. Mr. Heilprin, following Graetz, who in his turn follows the Talmudist Rabbi Eliezer, argues that we should read, "Hear, O Jehovah, Simeon's voice," and not "Judah's," and gives plausible reasons for such a change.

"The Song of Deborah," Kuenen's readers will remember, is regarded by him as a document more nearly contemporary with the event recorded than almost any other in the early Hebrew history. But Mr. Heilprin, while admiring this splendid fragment as heartily as possible, is inclined to assign it to a much later period than that of the Judges, and to be exceedingly doubtful of its historic value. He discovers Aramaisms in it which point to the Babylonian period of Hebrew literature. Instead of a spontaneous outburst, we have here a finished work of art. The victory of Thothmes III. on the battle-field of Megiddo is perhaps the most considerable element of fact in this fascinating mixture of Israelitish and Egyptian war reminiscences.

In treating the legend of Samson Mr. Heilprin does not depart widely from the interpretations of Goldziher and Oort and Steinthal, all of whom, with many others, regard the story as a solar myth, and Samson as a sort of Hebrew Hercules. Whether there was, as Oort supposes, some Danite hero of herculean strength and prowess who furnished a point of attachment for the solar myth, is not easily determined. There can be little doubt, however, without going the length of Goldziher, that personal and solar myths had strong attractions for each other; that the attributes of solar heroes were often borrowed from the fame of actual persons of great popular renown, and that the converse of this process was equally natural.

David's lament for Jonathan opens up to Mr. Heilprin the whole question of David's character, and his relation to the extensive literature in the Old Testament which has always been associated with his name. The conclusions to which he arrives are decidedly adverse to David's literary claims. Of the seventy-three psalms ascribed to David in the Old Testament Ewald admitted the genuineness of fifteen only. Prof. Robertson Smith, in the 'Encyclopædia Britannica,' contends for the undoubted genuineness of two. Mr. Heilprin prefers to either of these judgments that of Kuenen and Oort, to the effect that nowhere in the Psalms have we the workmanship of David, and that the lament for Jonathan must go the way of all the rest that is ascribed to him. The

grounds on which he bases this conclusion will not of course be generally satisfactory, but they are not trivial and deserve careful consideration.

It is to be hoped that this volume will meet with such a reception as will encourage Mr. Heilprin to publish the complementary volumes at an early day. When the whole is completed there should be an index, the lack of which in the present volume is a matter of regret, especially as there is not even a table of contents.

COLOR-BLINDNESS.*

THIS book is based upon another which, in its province, is an "epoch-making" work—Professor Holmgren's 'Color-Blindness and its Relations to Railroads and the Marine,' published at Upsala in 1877. Dr. Jeffries tells us that he had agreed to translate that work into English when the Smithsonian Institution translation appeared (by M. L. Duncan, in the "Annual Report" for 1877), occupying the ground. In the present treatise, however, he gives "a good part of Professor Holmgren's book"; and he contributes, on his own part, the results of over ten thousand testings for color-blindness, made by himself according to Holmgren's method with colored worsteds among New England teachers and scholars.

Both works are, first and foremost, "practical," having in view the elimination of color-blind persons from the railway and marine services. Neither the Swedish professor nor the New England physician has discussed the subject at length from the point of view of physics. But for the sake of "a very simple and clear explanation of the phenomenon of the physiology of color," Holmgren gives a short preliminary account, repeated by Dr. Jeffries, of Thomas Young's theory of vision, now rehabilitated as "the Young-Helmholtz theory"—that is to say, briefly, that in the eye "there are three kinds of nerve-fibres; stimulation of the first produces the sensation of red; of the second, that of green; of the third, that of violet." All three kinds of fibres are excited, however, by each color of the spectrum, as there is no spectral color "into which but one primitive color enters exclusively." The interaction or overlapping of the three fundamental colors in the spectrum is shown by the familiar diagram of three intersecting curves upon a horizontal line; the constituents of each compound color being indicated, at any point in the scale, upon a line drawn through that point at right angles to the abscissa, and their ratios in the composition of that color by the spaces they respectively occupy upon the perpendicular. Now, the most frequent forms of color-blindness are those of insensibility to red or to green—violet-blindness being exceedingly rare. The insensibility is due to the absence of the nerve-fibres requisite to the perception of the given fundamental color; and it is a structural defect which, when congenital, no amount of training or practice can cure, though there are means of alleviating the resulting inconveniences. The defect itself is not without its compensations, as we shall see. Professor Holmgren points out that it is not merely the fundamental color, or colors, that the color-blind cannot recognize, for each one of them, whether red, green, or violet, enters in a greater or less degree into every one of the thousand hues of the spectrum. Thus, for the color-blind "the whole chromatic system will be upset," though of many colors, as of yellow and of violet, their perception will not greatly differ from that of the normal vision. Dr. Jeffries summarizes the point as follows: "All colors containing their defective one will be greyish, and this in proportion to their individual amount of defect." The red-blind, for instance, will see only such colors as can be produced by the combination of green and violet. "Spectral red," says Helmholtz, "which feebly excites the perceptive organs of green, and scarcely at all those of violet, must consequently appear to the red-blind a 'saturated' green of a feeble intensity. Feebly luminous red does not excite the perceptive organs of green, and it therefore seems to them black." In the same way we can analyze the color-impressions throughout the whole scale of deficiency in any given case. It is always the luminosity of the given color, and not the color itself, that the color-blind person recognizes; "a mixture of white and black in proper proportions to represent the luminosity of any shade of red or green, will give the color-blind the same sensation as that shade." This leads to curious results. The color-blind having thus a specially trained appreciation of luminosity, or of light and shade, "can sort and place in order a series of shades, red or green, much better than the normal-eyed, because to them the color is but so much light or dark."

The color-blind shopkeeper lets his customer pick out the colors he calls for. "When he makes mistakes enough to lose his place he can take refuge in the mourning-stores, where his defect is an advantage." On the other hand, the color-blind purchaser "is asked by a lady friend to buy a skein of red worsted to match this pattern. Such good 'shopping' forbids the idea of any chromatic defect. But the worsted attendant is away, and another, who is color-blind, hands over the greens to the purchaser; the latter will then complacently select the one which matches in luminosity his *red* pattern." For the same reason "a color-blind engraver has an advantage over his fellow-workmen." Painters finding themselves using vermilion or green indifferently for spring foliage have succeeded well as engravers; the just translation of colors into light and shade, the most doubtful and difficult part of the engraver's task, being already accomplished in considerable part by the color-blind engraver's defect. This acute sense of luminosity in part explains the fact that many of the color-blind remain undetected. A color-blind railway guard learns to distinguish red from green lights by their comparative brightness; while the color-names of common objects are learned and used mechanically. Dr. Jeffries's chapter upon "The Concealment of Color-blindness in Practical Life" is one of the most interesting in the book. A physician whom he was testing by Holmgren's method, "after sitting some time with the one hundred and fifty little skeins of worsted before him, finally said, 'I have tried so hard to supplement my defect by every possible means, and catch other attributes than color to recall the names of them, that if you will give me two or three days to study over these worsteds, and tell me what their colors are, I will afterwards pick them all out correctly, but I shall *see* them no differently.'" Can this be the same case that is mentioned upon page 104 as that of "one of the first and greatest of American poets now living" who is unable to distinguish red from green, or "one tune from another"?

Professor Holmgren's method, simple in principle, requires skill and caution in applying it, and Dr. Jeffries transcribes it in full. It consists in requiring the person examined to match a sample color with shades from a large number of colored worsteds, avoiding any mention of the *names* of colors; for the nomenclature is so imperfect and so imperfectly or differently understood by most people that it becomes a sure source of confusion in the examination, which, indeed, is best conducted in silence; the average time required for each case being, in skilful hands, less than a minute. The ratio of the color-blind among white males seems to be pretty nearly settled at from three to four per cent. Among females it is very much lower. Dr. Jeffries found but 0.52 per cent. among Boston school-girls; the percentage of all observations being 0.26 per cent. No satisfactory reason for this great disparity has been assigned. We may add that Dr. S. M. Burnett, of Washington, finds a similar disparity in his recent examinations by Professor Holmgren's method of colored school-children (aged from six to eighteen) in the District of Columbia. He examined 1,359 boys and 1,691 girls—3,050 in all. "Of these, twenty-two boys were color-blind (or 1.6 per cent.) and two girls (or 0.11 per cent.) The negro appears, therefore, to be less liable to this defect than the white race."

This subject, but recently well understood, will offer a new line of self-contemplation to our more introspective readers, disclosing, as it does, a little-recognized hiatus in the subjective experience of many. Those who are curious to enquire further into the matter may be interested to learn from Dr. Jeffries that the proper colors for conveniently testing color-blindness in assorted worsteds may be "obtained directly from Fräulein Letty Oldberg, in Upsala, Sweden, for about five crowns sixty-three pfennigs."

Gleanings of Past Years. By the Right Hon. W. E. Gladstone, M.P. 4 vols. 16mo. (New York: Charles Scribner's Sons. 1879.)—The unassuming title under which the author of these papers has collected the occasional productions of thirty-six years of an eminently busy public career, seems an almost conscious plea for some measure of forbearance in the critical estimate which must be made respecting them. The earliest of the series carries us as far back as 1844, while the most recent, the article on "Kin beyond Sea," was published in the *North American Review* of last September. And not only do these essays cover a long period of time, they also exhibit a very wide range of intellectual effort. Perhaps their most striking feature is the breadth of genuine intellectual sympathy, of which they afford such abundant evidence. The first volume deals with subjects connected with politics and government, the second is biographical and literary, the third historical and speculative, while the fourth is confined to foreign questions. Thus we pass from a glowing delineation of limited monarchy as administered under

* 'Color-Blindness: Its Dangers and its Detection. By B. Joy Jeffries, A.M., M.D.' Boston: Houghton, Osgood & Co. 1879. 12mo, pp. xiii. 312.

Queen Victoria to an appreciative estimate of the working of American democracy; we have side by side studies of men as opposite in character and influence as Blanco White and the late Bishop Patteson; we have a candid criticism of 'Ecce Homo' and a tribute to Wedgwood; an unsparing denunciation of judicial atrocities at Naples, and an almost poetic picture of the Homeric virtues of the Montenegrins. That with such a variety of subjects there should be coupled considerable diversity of treatment is to be expected, yet there is one marked characteristic which pervades all the volumes, and lends a certain charm to whatever question the author handles, and that is his own evident and hearty interest in it. He seems always drawn to his subject by a real sympathy, and though a writer of unusual literary accomplishments, the merely literary seems always subordinate to the moral motive. The attraction of his theme lies in some connection which it has, at least in his own mind, with an accepted body of truth.

Perhaps for the most discerning readers of these volumes their chief value will consist rather in the help they furnish in forming a fair estimate of the personal opinions and mental habits of a famous man than in any positive contribution that they make to our stock of knowledge. Coming as they do from so liberal a statesman, so accomplished a scholar, and so eloquent a speaker, it is needless to say that they abound with generous sentiments, with apt quotations and trenchant discussion; and yet in the venturesomeness with which they explore, at times, fields with which the writer is evidently but partially acquainted, and in the fondness for strong, if not strained, expression, we are reminded rather of the eager parliamentary debater than of the careful thinker. Many passages might be selected from these volumes which read like fragments of a speech in the House of Commons, and they illustrate, as it seems to us, not only the author's rhetorical but also his intellectual method. With great liberality of sentiment and with great breadth of sympathy, he is inclined to handle questions with the passion and imagination of the orator rather than with the calmness and precision of the philosopher.

To our mind the least satisfactory of these papers are those which deal with subjects in which Mr. Gladstone evidently feels a peculiar interest, namely, those connected with the grounds of opinion and belief. Even his interesting survey of the "Courses of Religious Thought" can hardly be accepted as a very profound analysis of the tendencies of modern religious opinion. Nor do his discussions on foreign politics throw as much light on the great changes of the past twenty years as we might expect from one so intimately versed in affairs. Among the literary essays the best without doubt is the estimate of Macaulay, in which the tone of admiring eulogy inspired by a sincere personal attachment is throughout tempered by a most just recognition of the intellectual and moral limitations of the famous Whig historian. But the portion of these volumes which will awaken the most interest among readers of the present day, and which will constitute their most permanent contribution to literature, are the essays in the first volume upon the court of Queen Victoria and the character of the Prince Consort. By no former writer has the theory of English monarchy been so eloquently and effectively presented, and in no other portions of these volumes are the author's own characteristics so clearly revealed. His ruling habit, to look at all subjects so much in the light of his imagination—a habit which he shares in common with another great orator of a past generation, Mr. Burke—is shown in his enthusiastic delineation of the moral and social function of a court. It recalls the famous passage in the "Reflections on the Revolution in France" in which Marie Antoinette is pictured. Without questioning the substantial accuracy of Mr. Gladstone's account of a society with which he was personally familiar, we cannot but feel that he was under the influence of a natural illusion when he endowed the late Prince Consort with such supereminent excellence. We are not disposed to deny that he was a most amiable, high-toned, and accomplished gentleman, but we are unable to detect any striking likeness between him and the younger Pitt; and when Mr. Gladstone declares that the career of the Prince was "the most conspicuous life of public duty that the nineteenth century has witnessed," we can but feel that there is a certain influence in a court which perhaps the ex-premier himself has not fully appreciated.

How to Get Strong and How to Stay So. By William Blaikie. (New York: Harper & Bros. 1879.)—This useful little book begins with a sharp attack on the physical condition of American boys and girls, and perhaps overstates their inferiority to English and German children of corresponding ages. The former are unequally developed; they use the right hand and side more than the left (as they always will, Charles Reade to the contrary notwithstanding), and some apparently symmetrical exercises, like rowing, are not the cure for this defect. A chapter is devoted to the duty of daily physical exercise on the part of girls; grown women and grown men are next told it is not too late for them to begin; then more or less simple domestic apparatus is figured and described, and the book ends with specific instructions how to exercise any given muscle, and with prescribed modes of exercise for every day for children, young men, women, business men, and consumptives. An appendix shows by authentic statistics how great progress may be made in bodily expansion by very moderate but regular exercise.

The merit of this work lies in the stimulus it is sure to give to thought on a subject almost universally neglected; in demonstrating that a few inexpensive fixtures may be used, in the privacy of one's bed-chamber, to affect every part of the body; in enumerating the exercises appropriate to each; and in emphasizing the fact that the whole operation makes almost no demand on one's time. In fact, a couple of chairs, a pair of dumb-bells, and a bar or trapeze in a doorway, used for ten minutes before going to bed, will make every one his own gymnast, whether man or woman. The health-lift may perhaps not be a superfluous adjunct, though Mr. Blaikie depreciates it, unduly as we think. The rowing-weight would certainly be a positive gain, and it might easily be made an architectural feature of the sleeping-room. It remains, we think, to point out that every one who has the opportunity should acquire the "gymnastic habit" in the usual way, by means of parallel bars, ladders, the horizontal bar, the horse, the rings, etc. The experience thus gained, however slight, will greatly lighten the burden of solitary exercise at home, as well as help to direct it aright.

Spain in Profile. By James A. Harrison. (Boston: Houghton, Osgood & Co. 1879.)—"A series of profiles projected more or less vaguely by a Spanish sun," is what Mr. Harrison calls his book, in a modest prefatory note disclaiming any guide-book or other utilitarian value for it. The figure is characteristic both in its fancifulness and its inaccuracy, although neither trait is more serious in the book than it is here. Mr. Harrison is by no means "a voluptuary in rhetoric," as he terms Castelar, but he is fond of his phrases and is inclined to pursue picturesqueness a little deliberately; his style is sometimes a little turgid and ecstatic—as in his description of the Seville Cathedral: "Here are the Scriptures dyed blood-red, purple, and amaranth; it is an incarnation in flesh-tints; it is a 'Pilgrim's Progress' and a martyrology in colors" (page 160)—and now and then it leads him into conceits which a sure taste would have preserved him from; for example: "The Cock and the Bull form a large part of the Spanish story" (page 270). And the main defect of his volume is that it is not "a series of profiles," but discursive and rambling past the verge of inexactness occasionally; not perhaps in positive errors of fact, but in a looseness of style which prevents the reader from going along with him trustfully. Nevertheless, despite these obvious shortcomings, Mr. Harrison's sketches are not only agreeable reading but they have a distinct charm. He has in a very perceptible, if not very conspicuous, degree the quality of an artist; he sees things picturesquely and depicts them sympathetically. With Spain itself he seems thoroughly familiar; its history, traditions, customs, people, and literature all serve to illuminate his pages pleasantly and without disclosing any pedantry. Moreover, few books of a similar scope have appeared recently so thoroughly free from the taint of premeditated and gratuitous book-making. "The blonde light of yellow Spain!" exclaims Mr. Harrison at the outset, and it is a light of which he is evidently very fond and which shines upon a land that has quite won his heart. It is not to be supposed, however, that he sees everything *couleur de rose;* he can denounce the national pastime for its frequent Sabbath-breaking as well as for its cruelty, and in various respects in which there is more room for diversity of opinion his discrimination is keen and apparently just. There is but a slight thread of narrative, but the reader will be all the more pleased for that; and upon sufficient provocation, such as a visit to Mr. Lowell at Madrid, the interest of personality is abundantly supplied. Upon the whole a notice that did not cordially commend his book to others than "the light skimmers of summer books," to whom alone Mr. Harrison hopes it will prove entertaining, would be inadequate if not churlish. It is a prettily-bound 16mo, with red edges, and of four hundred and thirty-nine pages.

Bodine's; or, Camping on the Lycoming. A Complete Practical Guide to Camping Out. By Thad S. Up De Graff, M.D. (Philadelphia: J. B. Lippincott & Co. 1879.)—It may be doubted if any one about to engage

for the first time in any such venture as "camping out" would hazard the attempt of relying solely upon printed advice and instructions in so practical a matter; and of course to any one who has already had the experience advice would be an unendurable impertinence. Nevertheless, Dr. De Graff's book contains much that will be useful to both tyros and old hands at the business. It is the product of fifteen years' experience, written by a physician to whom "camping" was almost a hygienic necessity, and who contrived to rid it of most of its discomforts and endue it with new charms. He discovered that to accomplish this it was by no means needful to go into the Adirondack country, but that proximity to the milk and fresh eggs of civilization was quite compatible with more or less adventurous and romantic enjoyment. The manner and means of his successful and long-tried experiment he communicates with great detail and in a lively, narrative way designed to entertain as well as to instruct. More or less of his book naturally resembles the roseate prescriptions common to the literature which aims to supplant personal instruction, and we earnestly recommend its readers carefully to avoid following some of its cooking recipes, which involve the profuse use of baking-powder, for example. But almost any one will be able to distinguish between its wise and unwise directions, and to use it with advantage as a kind of "camping-out" *vade-mecum*. It is illustrated with woodcuts, which are fortunately as few in number as they are puerile in art, but that is a point upon which publishers are apt to be as uncritical as they are strenuous, and it should not be allowed to detract from the merits of the text.

Conversations on Art Methods. By Thomas Couture. Translated from the French by S. E. Stewart, with an introduction by Robert Swain Gifford. (New York: G. P. Putnam's Sons. 1879.)—In 1867 was published 'Méthode et Entretiens d'Atelier. Par Thomas Couture. Paris: Rue Vintimille, No. 22, avec la signature de l'auteur.' That is the whole title; no name of publisher appears, although at a point half-way through the book the author is found counting up the pages he has achieved, and lamenting the *exigeance* of his publisher, who insists on three hundred pages of print. The amusing chapter which contains this account of the dissensions of author and publisher (it is called, by the way, *Aurea Mediocritas*, which the translator only half renders in his chosen words, "The Golden Medium") is full of the reiterated assurance that the writer knows nothing of literature, nothing of the art of expressing himself in words; that he has not much more to say and cannot spin it out much longer; and, on the suggestion of the publisher that he should tell some more little stories like those he has told before, he goes off into an anecdote whose connection with the subject is certainly remote. There are also an introduction and a preface, which exist chiefly for the sake of the same protestations. It is clear that our author is proud of not knowing much about the expression of his ideas otherwise than on canvas. It must also be said that the style of the book throughout is fragmentary, not merely in the sentences but in the chapters. The subject of the first part of a chapter does not always lead to the subject of its third page; and in like manner the chapters are almost as detached one from another as if they were gathered together long after being written, instead of being the successive steps of a carefully-prepared argument. Sentences begin fairly and wind up with "etc.," or with a row of points (. . . .). What seem to be sentences suddenly pull up without their verbs. It is a book expressly fitted to baffle the translator, and, but that this translation lies, in its covers, beside the original, one would say that the words opposite the title-page, "Droits de traduction réservés," were rather a joke on would-be translators.

Under these circumstances the present translator has done better than might have been expected. The English text seldom fails to render the author's meaning; it would appear that the terms of the language of art are familiar to the translator. Delicate distinctions of meaning, however, are sometimes missed, and sometimes wholly avoided by the leaving out of words or phrases; and there are instances of mere carelessness, as if in copying or proof-reading, as where the title of a chapter is tacked to the end of the previous one, and where *Chambertin* is translated by "Champagne," *merveilleux* by "first-class," *fade* by "flat," and *piquette* by "sour wine," all in one paragraph. This indifference has prevented a wholly faithful rendering of the broken sentences and irregular style of the original; but, as has been said, the main significance is nearly always given, and the English book, though far less pleasant to read than the French one, contains the same matter.

What, then, is this matter which we hasten to say makes the book an interesting and valuable one in any shape? It is the broken and disconnected fragments of the knowledge and thought of a life-time spent in the serious practice of art. Couture was the author of the well-known painting, "The Romans of the Decline," a work which by itself gave him a great name, an admitted position among artists; and, although he was less celebrated in after-life than some of his contemporaries, and than some of his successors, he remained in a position of constant and intimate connection with the highest modern developments of the painter's art. His chapters give sometimes the expression of his theory, followed by anecdotes which illustrate it; sometimes long stories drawn from his own experience, the application of which is remote and not easy to perceive; but all is intimately connected with that view—that notion—of the pictorial art to which the manner is everything, the matter nothing; with that conception of the duty of the artist which, however narrow and limited it may seem, is yet the most purely artistical of all, and more worthy than any other exact and severe definition to stand for the undefinable whole of fine-art. Not a page but contains suggestive thought; not a chapter but will aid the beginner in practice to understand his task, and the lover of pictures to read their meaning better. The book must be read carefully that its meaning may be grasped at all; but that meaning is unusually well worth working to secure. Indeed, it would seem that no other book known to us (except perhaps its fellow, its second volume, 'Paysage,' which we shall see translated some day), will do so much to open the reader's eyes to a side of the art of painting which is little discussed, little comprehended, little known outside of the studio, and, alas! very commonly misunderstood within it: the painter's own view of painting, the sculptor's own view of sculpture, necessarily misconceived by all artists but the chosen few, and never seized at all by outsiders. That the two books are full of hasty conclusions and uncritical judgment is evident; they are not critical at all in a strict sense of that word, but poetical—dogmatic instruction, not critical enquiry. As such they are of more value than criticism can be unless far more adequate, at once more learned and more imaginative, than is usually given to the subject of fine art.

Our Autumn Holiday on French Rivers. By J. L. Molloy. (Boston: Roberts Bros. 1879.)—Mr. Molloy's book is a narrative of a trip made on the Seine and the Loire in a four-oared shell by himself and three congenial companions possessed to the last degree of the English "holiday" spirit and fondness for out-of-door adventure within the pale of civilization. Some discussion of the best way of spending the "long vacation" resulted in the rejection of such projects as a steam-yacht cruise on the Belgian canals and playing at gypsies in the Devonshire lanes in favor of "taking an outrigger up the Seine." The plan was speedily arranged, and from the start to the return we have an account of all its incidents, main and trivial, direct and indirect, given in the lively manner which it is reasonable to expect from one of the contributors to *Punch*. The author is "Stroke," and his friends "Bow," "Two," and "Three" respectively, and they are thus designated throughout. So much is made of him that we should not omit "Gyp," "our dog, and generally alluded to as a little wonder"—alluded to on every possible occasion apparently. The journey was, on the Seine, from Havre to St. Mamès, a distance of 283 miles; on the Loire, from Orléans to Nantes, 266½ miles; and from Nantes to Redon, 60 miles—a long enough trip, one would say, for any "autumn holiday." Mr. Molloy, however, expresses "a hope that it may be found worthy of repetition by those who have health, strength, and experience to appreciate a trip beyond all telling the most enjoyable." It will be seen that he writes with enthusiasm, which ought perhaps to be the main characteristic of such a book; and his narrative is almost boiling over with animal spirits. It must have been written before the ardor of the author had in any degree cooled; everything is rose-colored, and is described with a rollicking relish which does not fail to communicate itself in due season and in a degree to the reader. But though all Mr. Molloy's geese are evidently swans to him, some of them cannot avoid disclosing their true character to the stranger who views them with inevitable dispassionateness; much that undoubtedly passed for fun with the crew of the *Marie* becomes in frigid print a trifle dreary; many jests and witticisms that seemed excellent lose flavor and appear a little labored; and of a good deal of the book it is to be said that it is flippant rather than piquant, and trivial rather than sprightly. This may be attributed, perhaps, not so much to Mr. Molloy's animal spirits and his consequent optimism as to careless workmanship in book-making; but we prefer the former excuse, and to suppose that "Bow" really miscalled a French cabman *cochon*, even though the joke is an old one, and we have met it in *Punch* itself, if we are not mistaken. There is,

moreover, instruction as well as entertainment to be got from the book. Its accounts of the picturesque and historical French towns the *Marie* was pulled by are not very complete nor profound, but they are vivid and serve to impress the reader with much that is worth knowing far better than more pretentious but less graphic descriptions.

BOOKS OF THE WEEK.

LOCKWOOD, BROOKS & CO., 381 Washington Street, Boston.

Midsummer Holiday Scribner

Since the publication of the first "Midsummer Number" in 1876, SCRIBNER for August, prepared with reference to summer reading, has become

THE LITERARY FEATURE OF THE SUMMER SEASON.

The issue for August, 1879, is now ready, and the publishers announce that the sales of the magazine have increased to such an extent during the past eight months as to warrant

A FIRST EDITION OF 100,000 COPIES.

It is thought that this number compares favorably with, if it does not excel, the issue for August, 1878, which was pronounced by the Boston *Transcript* "THE FINEST EXAMPLE OF PERIODICAL LITERATURE EVER PUT FORTH." Some of the specialties:

WHISTLER IN PAINTING AND ETCHING,

With ten engravings of his pictures; a brilliant article, affording in its illustrations an opportunity for some of Mr. Cole's finest work; the opening chapters of

A STORY BY HENRY JAMES, JR.,

Entitled "Confidence," to continue six months. This story belongs to the same "International" school as "Daisy Miller," "The American," and others of Mr. James's recent novels.

A PORTRAIT OF WHITTIER,

Accompanied by an essay on his literary work, by R. H. STODDARD, and illustrated with views of the poet's homes and haunts.

A LONG POEM BY DR. HOLLAND,

With two by Bayard Taylor, and shorter poems by Mary Mapes Dodge, Celia Thaxter, and others.

OTHER ILLUSTRATED ARTICLES

Are, "A Peep into Antwerp and Holland," "Field and Forest Insects," with the wonderful pictures engraved by HENRY MARSH, "The Cook of the Confederate Army," "Over the Narrowest Narrow Gauge," etc.

SHORT STORIES AND SKETCHES

By CHARLES DUDLEY WARNER ("Out of the World"—a Shaker sketch), FRANK R. STOCKTON ("Our Archery Club"), NOAH BROOKS ("Lincoln's Imagination"), MARY HALLOCK FOOTE ("The Cascarone Ball"), HENRY KING ("The Man with a Hobby"), and others.

THE EDITORIAL DEPARTMENTS

Are full and interesting, containing essays, book reviews, scientific items, etc., etc., and Bric-à-Brac is unusually crowded with anecdotes, pictures, short humorous poems, etc., etc.

Price of this number (160 pages), 35 cents.
For sale by all booksellers and newsdealers.
SCRIBNER & CO., New York.

LOCKWOOD, F. B.

THE TRAINING OF CHILDREN. Price 25 cents.

WARD, L. F.

HAECKEL'S GENESIS OF MAN. Price 30 cents.

EDWARD STERN & CO., Publishers, Philadelphia.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

F. W. CHRISTERN,

Foreign Bookseller and Importer,
180 FIFTH AVENUE, NEW YORK.

The principal publications of Charpentier, Didier, Didot, Hachette, Levy, etc., on hand; also, complete sets of Tauchnitz's collection of British Authors and Teubner's Greek and Roman Classics. Catalogues mailed on demand. European Periodicals received weekly.

D. APPLETON & CO.

Have just published:

I.

The Human Species.

By A. De Quatrefages, Professor of Anthropology in the Museum of Natural History, Paris.

CONTENTS: Book I. Unity of the Human Species; Book II. Origin of the Human Species; Book III. Antiquity of the Human Species; Book IV. Original Localization of the Human Species; Book V. Peopling of the Globe; Book VI. Acclimatization of the Human Species; Book VII. Primitive Man—Formation of the Human Races; Book VIII. Fossil Human Races; Book IX. Present Human Races—Physical Character; Book X. Psychological Character of the Human Species.

1 vol. 12mo, cloth, 498 pages, price $2. *Forming Number 27 of "The International Scientific Series."*

II.

Classical Writers.

Edited by John Richard Green.

1. *MILTON.* By Stopford A. Brooke. 16mo, 168 pages, cloth, price 60 cents.

Under the title of "Classical Writers" Messrs. Appleton & Co. have begun the issue of a series of small volumes upon some of the principal classical and English writers, whose works form subjects of study in our colleges, or which are read by the general public. Care is taken to impart information in a thorough and systematic way, while an intelligent interest in the writers and their works is sought to be aroused by a clear and attractive style of treatment. The following volumes are in preparation: Of the ancients—EURIPIDES, HERODOTUS, DEMOSTHENES, SOPHOCLES, VIRGIL, HORACE, CICERO, LIVY; of the moderns—BACON, SPENSER, CHAUCER. Others will follow.

III.

The Development of English Literature.

The Old English Period. By Brother Azarias, Professor of English Literature in Rock Hill College, Maryland. 1 vol. 12mo, 214 pages, cloth, price $1 25.

IV.

The Life of His Royal Highness the Prince Consort.

By Theodore Martin. With Portraits. Vol. IV. 1 vol. 12mo, cloth, price $2.

V.

Freedom in Science and Teaching.

From the German of Ernst Haeckel. With a Prefatory Note by T. H. Huxley, F.R.S. 1 vol. 12mo, cloth, price $1.

VI.

Money.

A Tale. By Jules Tardieu. Forming No. 37 of Appletons' "New Handy-Volume Series." Paper, 25 cents.

For sale by all booksellers; any volume sent by mail, post-paid, to any address in the United States, on receipt of price.

D. APPLETON & CO., Publishers,
549 and 551 Broadway, New York.

Decoration.

HOUSEHOLD ART COMPANY,

NINETY-THIRD ST. AND NINTH AVE.
ONE HUNDRED AND FOURTH ST. AND NINTH AVE.

For up-town trains, take east-side stations; for down-town trains, take west-side stations.

Trains run to Fifty-eighth St. and Sixth Ave., and One Hundred and Fourth St. and Ninth Ave., alternately.

Fare 10 cents, except from 5.30 to 7.30 A.M., and from 5 to 7 P.M., when the fare is 5 cents.

M. VAN BROCKLIN, Supt. WM. R. GARRISON, Pres.

Schools.

Alphabetized, first by States; second, by Towns; third, by Initial Letters.

I.—IN NEW YORK CITY.

NEW YORK CITY, 10 Gramercy Park.
MADEMOISELLE DE JANON (successor and former partner of the late Miss Haines) will reopen her French and English School for Young Ladies and Children on Thursday, Sept. 25. Boys' Class and Kindergarten Oct. 1.

NEW YORK CITY, on Central Park.
CHARLIER INSTITUTE, for Boys and Young Men from seven to twenty. Prepares them for all colleges, scientific schools, West Point, Naval Academy, and business. French, German, Spanish spoken and taught thoroughly. New building erected purposely—a model of its kind. The prospectus contains full details. Twenty-fifth year will begin on September 16 next.
Prof. ELIE CHARLIER, Director.

NEW YORK CITY, 36 East Thirty-fifth Street (formerly 42 Avenue du Roule, Neuilly, Paris).
MESDEMOISELLES CHARBONNIER'S French Protestant Boarding and Day School for Young Ladies will reopen Thursday, Sept. 25. Thorough and complete course of studies in French and in English. Address as above until Sept. 8, when Mlles. Charbonnier will be at home.

NEW YORK CITY, 102 East Thirtieth Street.
MISS DU VERNET'S SCHOOL for Boys. A Collegiate Department will be added in September, where students will be prepared for American and European colleges.
Mr. H. BEAUCHAMP TEMPLE, of Eton and Oxford, and late Principal of Temple Academy, Brooklyn, Head-Master.
Circulars at Lockwood's, No. 812 Broadway, after July 10.
For further information address
H. BEAUCHAMP TEMPLE, Darien, Conn.

NEW YORK CITY. Removed to 348 Madison Avenue, with enlarged accommodations.
MISS JAUDON'S Boarding and Day School for Young Ladies and Little Girls. Circulars and references.

NEW YORK CITY, 7 East Forty-second Street.
MISS S. L. CHAPMAN'S (late Mrs. J. T. Benedict's) English and French Boarding and Day School for Young Ladies and Children will reopen on Thursday, September 25.
Modern languages practically taught. Thorough instruction in all departments.

NEW YORK CITY, corner of 23d Street and 3d Avenue.
NEW YORK HOMŒOPATHIC MEDICAL College.—Session commences October 3 and closes March 1. Hospital and Clinical advantages unsurpassed by any college in the country. Address J. W. DOWLING, M.D., Dean, 313 Madison Ave.

NEW YORK CITY, 518 Madison Avenue.
THE MISSES CHADEAYNE will reopen their Boarding and Day School for Young Ladies and Little Girls on Wednesday, October 1.

II.—ELSEWHERE.

CONNECTICUT, East Haddam, Middlesex Co.
MAPLEWOOD MUSIC SEMINARY for Young Ladies. Established 1863. A thorough graduate course, with lectures and recitals weekly. The finest location on the Connecticut River. For catalogues address
(Pupils can enter at any time.) Prof. D. S. BABCOCK.

CONNECTICUT, New Haven.
SHEFFIELD SCIENTIFIC SCHOOL of Yale College. Address Prof. G. J. BRUSH.

CONNECTICUT, New Haven.
WEST END INSTITUTE.—Mrs. S. L. Cady's School for Young Ladies.

CONNECTICUT, New Haven.
YALE LAW SCHOOL.—Regular course, two years; Graduate course (for degree D.C.L.), two years. Fall term opens Sept. 25. Address Prof. FRANCIS WAYLAND.

CONNECTICUT, Norwich, 56 Washington Street.
MISS MEEKER'S French and English Home and Day School for Young Ladies will reopen on Thursday, September 18, 1879.

CONNECTICUT, Stamford.
MRS. RICHARDSON'S English, French, and German Boarding and Day School for Young Ladies reopens September 23.

DELAWARE, Wilmington.
RUGBY ACADEMY.—A Collegiate School for Boys. Terms, $250 to $300 per annum. Refer to Senator Bayard and others. Address Dr. S. W. MURPHY, A.M.

DISTRICT OF COLUMBIA, Washington.
COLUMBIAN UNIVERSITY. — College, Law School, and Medical School. For catalogues address J. C. WELLING, LL.D., President.

ILLINOIS, Chicago, 275 Huron Street.
HURON STREET SCHOOL reopens Sept. 17. A few boarding-pupils received. German spoken in the family. For circulars address Miss E. S. KIRKLAND or Mrs. ADAMS, 275 Huron Street.

ILLINOIS, Morgan Park, Cook Co., near Chicago.
MORGAN PARK MILITARY ACADEMY. —A first-class Preparatory School for boys. Send for catalogue. TALCOTT & WRIGHT, Principals.

MAINE, Old Orchard Beach.
TWO HARVARD GRADUATES, of 1874 and 1878, desire to take a few pupils during the summer at Old Orchard Beach, to prepare for the September admission or condition examinations of Harvard College. They have permission to refer in classics to Professors Lane and Goodwin; in mathematics to Professors B. and J. M. Peirce. For terms, etc., address W. S. MARSTON, Cambridge, Mass.

MARYLAND, Baltimore, 46 Mount Vernon Place.
MT. VERNON INSTITUTE. English, French, and German Boarding and Day School for Young Ladies and Little Girls.
Mrs. MARY J. JONES and Mrs. B. MAITLAND, Principals, assisted by a large corps of Professors.
The twentieth annual session will commence September 18.
For circulars address the Principals.

MASSACHUSETTS, Auburndale (near Boston).
LASELL SEMINARY for Young Women.— A Home School of high grade. C. C. BRAGDON, Principal.

MASSACHUSETTS, Boston.
BOSTON UNIVERSITY LAW SCHOOL. Opens Oct. 2. E. H. BENNETT, LL.D., Dean, 20 Beacon St.

MASSACHUSETTS, Boston, 34 Worcester Street.
DAY AND BOARDING SCHOOL for both sexes. Elementary, intermediate, and pre-collegiate studies. Natural methods. Tuition: Boarding-pupils, $400 per year; day-pupils, $60 to $100 per year. Circulars sent by MARY W. MITCHELL, 34 Worcester Street, Boston; or by B. PICKMAN MANN, Cambridge, Proprietors.

BOARD OF VISITORS.
Rev. Henry W. Bellows, LL.D.
Rev. C. B. Cheney, D.D., Pres. Bates College.
Mr. Wm. T. Harris, Supt. of Schools, St. Louis.
Mr. A. Bronson Alcott, Concord, Mass.
Dr. Edward W. Emerson, Concord, Mass.
Prof. Walter Smith, State Director of Art.
Prof. Wm. P. Atkinson, Mass. Institute of Technology.
Rev. Geo. L. Chaney, Cambridge.
Prof. John Trowbridge, Harvard University.
Mrs. Horace Mann, Miss Elizabeth P. Peabody, Mrs. E. P. Brown, and Mrs. Jas. P. Farley, Visitors of the Kindergarten.

MASSACHUSETTS, Boston, 83 Boylston Street.
FOR GIRLS AND YOUNG LADIES.— Miss LUCY M. NEWHALL and Mrs. EMILY J. F. NEWHALL will open a new family and day school on October 1, 1879. Further particulars in issues of July 3 and 17. Address the Principals at Wales Street, Dorchester.

MASSACHUSETTS, Boston, 69 Chester Square.
*GANNETT INSTITUTE. For Young La*dies. For Catalogue apply to Rev. GEO. GANNETT, A.M.

MASSACHUSETTS, Boston.
INSTITUTE OF TECHNOLOGY, for Civil, Mechanical, and Mining Engineers, Chemists, Architects, etc. Address Prof. JOHN M. ORDWAY.
WILLIAM B. ROGERS, President.

MASSACHUSETTS, Boston, 68 Marlborough Street.
MISS PUTNAM'S ENGLISH, FRENCH, German, and Classical Family and Day School for Girls will open its fourteenth year September 25, 1879.
The number of boarding pupils is limited to twenty. Terms, for boarding pupils, $500 per annum; for day pupils of fifteen years and upwards, $200; between the ages of ten and fifteen, $100; under ten years of age, $50 per annum. References: Hon. Wm. M. Evarts, Secretary of State, and other eminent scholars. Please send for circular.

MASSACHUSETTS, Boston, 5 Chestnut Street.
ST. MARGARET'S SCHOOL.—A German, French, and English Boarding and Day School for Young Ladies, under the control of the Sisters of St. Margaret (Episcopal) and the immediate direction of Miss EDITH L. CHASE.

MASSACHUSETTS, College Hill (four miles from Boston).
TUFTS COLLEGE.—Entrance Examinations begin June 19 and Sept. 16. For Catalogues address Prof. C. E. FAY, Sec.

MASSACHUSETTS, Easthampton.
WILLISTON SEMINARY fits Boys for our best colleges and scientific schools. Tuition, $60 per year. Free tuition to needy and deserving students. Good board at Seminary Boarding-House, $3 per week. Fall term begins Sept. 11, 1879. For catalogue, containing full information, address J. W. FAIRBANKS, Ph.D., Principal.

MASSACHUSETTS, Greenfield.
PROSPECT HILL SCHOOL for Young Ladies and Children. The eleventh year begins Sept. 11, 1879. Pupils fitted for Smith's and other colleges for women. For circular address Miss SABRA WRIGHT.

MASSACHUSETTS, Groton.
*LAWRENCE ACADEMY.—Fall term com*mences August 27. Abundant apparatus, good instruction and discipline. Board and tuition very reasonable. Young men and ladies thoroughly fitted for college, for teaching, and for business. Catalogue on application. E. S. BALL, A.M., Principal.

MASSACHUSETTS, Hadley, Hampshire Co.
"THE ELMS"—Home School for Young Ladies and Little Girls.
Misses PORTER & CHAMPNEY, Principals.

MASSACHUSETTS, Harvard.
BROMFIELD SCHOOL. Endowed 1877.— College Preparatory, Scientific, and Literary Courses for both sexes. Total expenses, $180 per year. Quiet village, noble scenery, fine buildings, extensive apparatus, skilful instructors. Trustees: A. P. Peabody, D.D., Harvard College, Cambridge; A. A. Miner, D.D., Boston, *et al.* For Catalogues, etc., address
C. W. STICKNEY, Principal.

MASSACHUSETTS, Newburyport.
EAGLENEST.—A Church Family School for Boys. Established 1866.
Boys of any age, or those needing a permanent home, received. Number is limited. LLOYD W. HIXON, M.D., Principal.

MASSACHUSETTS, Pittsfield.
MAPLEWOOD INSTITUTE for Young Ladies. Three courses of study, besides preparatory and optional. Location unrivalled. Terms low. Address Revs. C. V. SPEAR and R. E. AVERY, Principals.

MASSACHUSETTS, Plymouth.
MR. KNAPP'S Home School for Boys. Next (thirteenth) school year begins Sept. 18.

MASSACHUSETTS, Quincy.
ADAMS ACADEMY.—Hon. Charles Francis Adams, Chairman of Managers. Thirteen out of fourteen boys passed the examination this year at Harvard College. Tuition, $100 a year; board and lodging, $350. A new circular just issued. For information apply to WILLIAM EVERETT, Ph.D.

MASSACHUSETTS, South Braintree.
THAYER ACADEMY.—J. B. Sewall, lately Professor of Greek in Bowdoin College, Master.
This institution, established and substantially endowed by will of the late Gen. Thayer, U.S.A., went into operation September, 1877. It is intended to be a school of the highest character of its kind, and is open to both sexes. It fits boys for college and young women for the Harvard Examinations in the most thorough manner. Tuition, $75 per year.
First term, third year, begins Wednesday, September 17.
Entrance examinations Thursday, July 3, and Saturday, Sept. 13.
For catalogues or information address the Master.

MASSACHUSETTS, South Williamstown, Berkshire Co.
GREYLOCK INSTITUTE.—Fall term opens Sept. 4. Expenses, $450 a year. For catalogues address BENJ. F. MILLS, A.M., Principal.

The Nation.

NEW YORK, THURSDAY, JULY 31, 1879.

The Week.

THERE have been ninety-six new cases and thirty-seven deaths from the yellow fever reported at Memphis during the week, the largest number of new cases being the nineteen on the 23d inst., and the smallest the eight reported in yesterday's despatches, a diminution which, moreover, has been gradual and constant. The exodus of the citizens, however, continues, and on Monday of the probable 45,000 inhabitants (the census of 1870 says 40,226) a special census reported but 16,110 persons left in the city, of whom only 4,283 were whites. The Howard Association has announced that for the present it has no need of nurses or physicians from without; and "interviewed" refugees maintain that the city is in the most perfect sanitary condition possible. The refugees have taken the disease and spread alarm in various directions, though in but few cases. Of these, three have occurred in this city—the two in Brooklyn having come from Havana—and several at Shelbyville and Bon Aqua Springs, Tenn., at Louisville and St. Louis. The latest reports from Mississippi City, which come through the National Board of Health, announce five cases and one death. Monday there was the first death of the season from unmistakable yellow fever at New Orleans, but, though it caused a panic, and Natchez and Shreveport instantly quarantined against the city, it has been followed by no others except two doubtful ones.

Senator Sherman has gone up to Maine to speak in the canvass, and delivered a long speech on the 23d at Portland. He opened by a wave of the bloody shirt, showing that to repeal the legislation of the war directed against the South was "State rights" and "nullification," and "revolution and anarchy," and before this, he said, "questions of money, labor, and property sunk into insignificance." After this—which sounds a little wild, but was doubtless called for by the occasion—he spoke at considerable length on the comparatively trifling subject of the resumption of specie payments and the reduction of the national debt, giving a brief résumé of the financial history of the country between 1860 and 1873, and showing that the difficulties which had to be encountered in making any preparation for resumption were mainly due to the action of Congress. He made some amusing quotations from speeches in and out of Congress prophesying the frightful calamities that would result from resumption, but the only Republican he exposed in this way was Mr. W. D. Kelley. He then told the curious story of resumption itself and of the refunding of the five-twenty bonds, and gave some account of the revival of industry. His happiest hit was in showing that he is now doing what the Greenbackers have always clamored for most—redeeming bonds in greenbacks, paying the interest on the national debt in greenbacks, and receiving customs duties in greenbacks—and yet they are not satisfied.

About silver he was both clear and instructive. He said that to make it circulate at par with gold the ratio between the coins must be the market ratio, and not 16 to 1, "which means the single standard of silver"; that $35,801,000 of silver had been coined since 1878, and the Treasury had been only able to put $13,359,942 of it afloat, and of this over $6,500,000 had been returned. He proposed, therefore, to coin it without limit when "the commercial nations had all agreed on a market ratio by which they would stand," but not sooner. He concluded by another short wave of the bloody shirt and a eulogy on the Republican party, which had, he admitted, been guilty of some errors, but on the whole had done great things—which is true. It appeared plainly in his speech that he shared the very common opinion in the Republican ranks, that all legislation passed to carry out the objects or secure the results of the war by the Republican party is, in some sense, part and parcel of the Constitution itself, and only repealable, if repealable at all, with the consent of the Republicans, no matter what the majority in Congress may think. The necessity he felt of waving the bloody shirt, even when his subject was finance, and the speaker Secretary of the Treasury, is also one which nearly all Republican orators seem to feel, and reminds one of the actor at the Surrey Theatre who had the humble rôle of a footman, and who—his sole duty in the play being to say "Sir, your carriage is waiting"—added, "and the man who would lay hands on a woman, except in kindness, is unworthy of the name of a Briton." Secretary Sherman is, however, by far the ablest man the Republicans have to show, and has solid claims on the confidence and gratitude of the country.

General Butler has announced his intention of repeating this fall his chronic attempt upon the Governorship of Massachusetts. For the first time he is to make a confessedly personal canvass, and the call for a purely Butler convention at Worcester in September indicates that the Claimant is convinced of the futility of repeating his former efforts for a "regular" nomination; although Senator Dawes, in an interview, said there was no doubt that Butler would be the Democratic nominee. Still, in that event, he would run with the Democratic "endorsement" only, in effect, and could certainly not get more Democratic votes than he got last year. The announcement of his candidacy has excited no surprise, and but little alarm anywhere except among the Democrats represented by the Boston *Post*, to whom the annual Butler panic has been definitively transferred—perhaps as an ironical punishment for the delight they used to experience in witnessing Republican terror. Senators Dawes and Hoar make light of the General's chances, and the Republicans generally say they will make an active canvass if Butler does, but not otherwise. It is probable, however, that they will be driven to do so, for apparently Butler is able, in some occult way, to extract as much pleasure from an active canvass as he would from a successful one. His recurrent candidacy is one of the inexplicable incidents of contemporary politics. The reputation for political shrewdness that he has acquired can hardly be so false that he can imagine himself in any contingency a possible Presidential candidate with fair prospects of election; and the cost of the Butler kind of canvass must be greater, we should say, than the somewhat idle enjoyment to be derived from making it. Possibly ex-Collector Simmons, who is out for his old patron, would suggest an explanation in the following sentence of the General's letter to the man Usher: "It will be agreed by all that our candidature last year did the State very considerable service in directing the attention of the people of the Commonwealth to the necessity of reformatory changes in the administration of its government." It seems odd, however, to consider Butler posing in the attitude of a self-sacrificing benefactor of his State to the extent which this suggestion implies.

The Republican Conventions of Pennsylvania and Wisconsin were held on the 23d at Harrisburg and Madison respectively. At the former Mr. Samuel Butler, of Chester County, was nominated for State Treasurer; and in Wisconsin, Governor William E. Smith and the present State officers were renominated. The platforms adopted and the various speeches delivered were eloquent rather than precise, which speaks volumes for the heroic enthusiasm of the delegates, who evidently had a cut-and-dried task to perform. Both conventions affirmed that the United States are a nation and not a league; that the Democrats are endeavoring now to obtain by "plotting" what they lost in fight; and that the Republican party is charged with the preservation of the nation it has already saved. The Pennsylvania platform, of course, advocated the continuance of the protective tariff, a subject upon which the other body was silent. Upon the currency question there was very little frankness shown

in either convention. In Pennsylvania the payment of the national debt in "coin" was favored; and in Wisconsin a resolution was passed which should gratify Secretary Sherman, although it did not personally mention him thus early, and which approved of a currency "such as we have at present." It cannot well be that we shall have no more definite party utterances than these before the national conventions of next year instruct the several States.

The fears expressed during the week in the Western news despatches, that General Miles's ambition to become a brigadier would lead him to bring on a general Indian war, must be interpreted like the ingenuous advice to the mob not to duck the poor gentleman in the horse-pond. Certain classes at the West, as we know too well, are always "spoiling for a fight" with the Indians, and they have been anything but alarmed by the collision between General Miles's patrol and a Sioux band in Northern Montana, in the neighborhood of Milk River. There is, fortunately, every reason to believe in the prudence of General Miles, and to suppose him, as well as the authorities at Washington, to be fully impressed with the gravity of the present situation on the border, which Sitting Bull and his people have overstepped in the endeavor to keep from starving by following the buffalo southward. Not only is this formidable body in a quasi-hostile attitude, to say the least, but the Blackfeet and other tribes of the Saskatchewan have had a famishing winter, and are now with difficulty sustained by the issue of rations. The food-region for them, too, lies to the south and in the limits of the United States, and their junction with the warriors of Sitting Bull would greatly enhance the chances and the formidableness of a war. Supposing our forces equal to the emergency, and that Sitting Bull should be driven back into the Dominion, the Canadian Government would have a by no means enviable problem thrust upon it. But we cannot conceive that the oscillation of a savage tribe between two adjacent countries should go on for ever without a mutual understanding and joint provision for removing this menace to the peaceful settlement of the Northwest.

The verdict of the jury in the Buford case, which was that of guilty, and specified the prisoner's punishment as imprisonment for life, is satisfactory to lovers of justice in general of course, but it is particularly encouraging to wise and sincere friends of the South. Taken in connection with the similar verdict in the Cox case recently tried in Atlanta, it is possible that it may indicate a tendency upon the part of Southern juries to deal with Southern outrages as the juries of other civilized lands deal with crime. Buford's case, however, was a peculiarly flagrant one: he had shot a judge for a decision adverse to him, and his defence of insanity was a thoroughly transparent *pis-aller* of his counsel. Even a Kentucky jury could not fail to see the enormity of Buford's crime, and the consequences which his acquittal would have upon the community's respect for law; and even this jury, which is described as an ignorant one in the main, could not be made to believe insane a man who had been a creditable public lecturer, a candidate for the Legislature, and a politician whose opponents had never accused him of mental derangement. So that any inference from their verdict that the character of Southern civilization is changing may be justly considered hasty. Still, it is to be said that Buford's acquittal was almost everywhere confidently predicted, and that in a certain degree his conviction is evidence that there are crimes, aside from robbery and rape, in deliberating upon which the Southern mind does not allow its sense of justice to be obscured by its notions of Middle-Age chivalry.

Judge Hilton's manifesto against the Jews at Saratoga two summers ago has been imitated, with less coarseness and less rigor, by Mr. Corbin, the presiding genius of Manhattan Beach and its approaches. His main grievance appears to be that the class in question sit too long at the tables on his piazzas, smoke cheap cigars, and do not drink enough; so that, apparently, a little more fondness for the promenade, greater extravagance in the consumption of tobacco, and a decided disposition to get drunk, would go far to redeem them in his eyes. He does not complain that they interfere with the good order so remarkable at Coney Island, or add anything to the cares of the police; but for all that, without expressly forbidding them to come on his premises, he wishes to discourage them. The idea of a money discrimination—as, for instance, double fares on the boats and cars, or "two prices" for everything ordered by Jews from his restaurant—does not seem to have occurred to him. In fact, Mr. Corbin's abstaining from any positive measures to carry out his prohibition makes it a *brutum fulmen* for all except the more sensitive and self-respecting of the obnoxious class—*i. e.*, the very ones not aimed at by it. It has consequently been regarded as a mere advertising expedient, and some of Grant's enemies have, we are sorry to say, compared it, as a family measure, with the army order expelling the Jews from the Federal lines—with an evident intent to injure "the boom."

It looks as if there would have to be a new Rapid Transit Commission to secure the object for which the unfortunate gentlemen who now hold that barren title were appointed. This is due to one of the interesting blunders which municipal legislatures occasionally make. The Aldermen were so desirous of putting themselves "squarely on the record" that they reconsidered their veto of the Commission's report, it will be remembered, and definitively settled the matter by the emphasis of a second veto. Now, the property-holders of the new wards are anxious that the routes laid out above the Harlem River should be adopted, to which the Aldermen have no earthly objection, but which they have put it out of their power to bring about, as they might once have done, by the adoption of that part of the Commission's report which did not involve suspicious favors to that well-known *bête-noir* of the legislator, the corrupting Mr. Vanderbilt. All the remedy that we have seen suggested for this charming state of affairs is a new appeal to the mayor by the necessary fifty property-owners for the appointment of a new commission to visa, so to speak, part of the old report. Steps have already been taken to this end.

The progress in harvesting the wheat crop in the Northwestern States, which are the principal producers, was such during the week as to warrant the expectation that the product in quantity and quality will be fully up to the average. This, together with the European advices, which report short crops and foreshadow an unusually large demand on this country, induced free drawing of commercial bills against grain shipments to be made in August and September. The amount of these anticipatory bills was such as to overcome the present demand for remittances to Europe and to break down the rates for all bills on London; prime drawers at the beginning of the week asked 4.85 for sixty-day drafts and 4.87 for demand drafts, but these were subsequently reduced to 4.83 to 4.83½, and 4.84½ to 4.85, respectively. The same reasons that depressed sterling exchange gave an impetus to the upward speculation in the stocks and securities of the railroads of the Northwestern States, and there was a large advance in the prices of all. Aside from this movement the Stock Exchange markets were dull. United States bonds were rather weak for the four per cents, and it really begins to look as if some of the national banks would relinquish their note circulation rather than substitute four per cent. bonds as security for their notes in place of 10-40 bonds, which have been called for redemption and interest on which has ceased. The Treasury bond settlements have all passed without disturbance to the money market, and the rate for loans here rules at 2 to 3 per cent.; in London, discounts are yet obtainable at the rate of ¼ to ⅜ of 1 per cent. per annum.

The last monthly report of the Bureau of Statistics completes the statement of exports and imports for the fiscal year ending June 30. The total value of the former was $710,423,743, of the

latter $445,792,141, or an excess of exports amounting to $264,636,602. This is an increase of some seven millions over the surplus of 1877–78, and involves an increase in the exports of $15,600,000, and of imports of $8,800,000. For the past seven months, however, the upward tendency has been with the imports. The year before the panic marked the culmination of the adverse commercial balances since the war. The average of these balances annually was, as the *Commercial Bulletin* shows, $98,800,000; the total for nine years (deducting the net export of specie) being $363,000,000. During the past six years, on the contrary, the credit balance has averaged $125,000,000 and the total (net export of specie added) has been $924,000,000. Nothing can show more forcibly the debt-paying capacity of the country, and the material rewards of industry and economy; the moral gain cannot be stated in figures.

The so-called "Letellier Case," even more than the question of protection, influenced the last general election in Canada, and has since been the chief topic of discussion in the politics of the Dominion. It has at length been settled. Mr. Letellier, it will be remembered, was the Lieutenant-Governor of Quebec, and had dismissed the Provincial Ministry, in spite of its having a working majority in the House, on the ground that it had treated him with disrespect and had forced certain measures that were not in the public interest. The Dominion Parliament at once took up the issue thus created, and Sir John Macdonald, then the leader of the Opposition, after a parliamentary defeat, made it a leading question after the subsequent dissolution, and upon becoming the Conservative premier at the next session, with a large majority behind him, demanded Letellier's dismissal at the hands of Lord Lorne. The latter referred the matter to the Home Government, which, generally wise in inaction, referred it back to the Governor-General, and Dr. Robitaille has just been announced as Mr. Letellier's successor. There can be no doubt of the wisdom of the Beaconsfield Government's refusal to interfere; anything other would have irritated Canada as, in the opinion of less radical judges than Mr. Goldwin Smith, it would have been foolish to irritate her. As for the pith of the real question at issue, it must be admitted that Sir John Macdonald has had the good fortune to be more nearly right than is often his lot. There was a cloud of dust raised and a great deal of heat engendered, but the dismissal of Mr. Letellier seems, in spite of all the complexities of the matter, to be a vindication of the responsibility of parliamentary ministers to their electors, a protest against arbitrary individual action on the part of individual executives, and an emphasis of the well-understood supremacy of the different Canadian provinces in purely local matters. On the other hand, those who regard provincial cabinets as costly and somewhat ridiculous surplusage in the Dominion system, will find their objections confirmed by the incident just closed.

From England there is little news beyond the Zulu victory, whatever attention can be spared from the obsequies of the Prince Imperial and the performances of the Comédie-Française being bestowed unavailingly on the deplorable condition of agriculture, which is now in a more serious condition than trade. A royal commission is to enquire into it, and some sensation has been excited by the admission of the Marquis of Hartington that the present land system cannot stand. In fact, it appears more and more likely that the Liberals will now make a desperate effort to dislodge the Tories from the counties, of which they have held almost undisputed possession for two centuries, by offering the tenant-farmers better tenures and more freedom, and by making it easier for landlords to lower their rents and to sell what they cannot afford to keep. The only thing the Tories could oppose to this would be protection for agricultural produce, which, however, they dare not talk of, as it would mean dear food and rouse the working classes to fury.

Lord Chelmsford has delivered himself from a very unpleasant position by winning an apparently decisive victory over the Zulus, and destroying the large "kraal" which passes for King Cetewayo's capital, Ulundi, and Sir Garnet Wolseley pronounces the war at an end. The difficulty in bringing the king to terms in spite of his two defeats appears to have lain in the fact that the invaders fought him on both occasions behind intrenchments or a wagon laager, and from his experience at Isandula he has believed he could beat them in the open by an impetuous charge. At Isandula, however, besides the surprise, the Zulus were received in line, and even in the open order which the breech-loader has introduced into the tactics of all European armies. In this last fight their onset was received in a hollow square, as in the old days of cavalry charges, and they were routed in half an hour and pursued by the cavalry with heavy slaughter. It is now said that, having redeemed himself, Lord Chelmsford will resign, and leave to Sir Garnet Wolseley the task of settling the terms on which the Zulu king is hereafter to live with his neighbors.

The English Ministry have furnished one more weapon to the Liberals by Lord Salisbury's denial in a recent speech that they incurred any responsibility about reform in Asia Minor by their Convention with Turkey. He says the very idea is "absurd," and that "the utmost they can do is to urge upon every suitable opportunity and with all the energy they can that the promises the Porte had given should be fulfilled." The facts are that the Convention guaranteed Asiatic Turkey against all aggression, and in return for this the Porte promised reform, and the Ministry presented this promise to the country as an assurance that the Turkey they were to defend was to be a renovated Turkey. The present repudiation of all responsibility about reform shows that the Liberals were right in their assumption that the Convention was a cunning device of Lord Beaconsfield's to cover up the substantial defeat he sustained at Berlin, and the *Economist* compares it now, in language never before applied by respectable writers to ministers of the Crown, to "a check with no effects behind it in order to get respectably out of a tavern."

Germany is passing through the most serious political crisis which has overtaken her since 1866. Prince Bismarck, before the adjournment of the Reichstag on the 13th ult., formally broke with the National-Liberal party in one of his most powerful speeches, and put himself at the head of a combination composed of the Conservatives and Ultramontanes. Not only has Dr. Falk been dismissed, as a sop to the Ultramontanes, but they have been further gratified by an agreement that all money over a certain amount raised by the new protective tariff shall be divided among the separate States, which is a distinct concession to the Particularist interest. Encouraged by his success thus far, the Chancellor now proposes that the duration of the Imperial Parliament shall be extended to four or six years, and intervals of two shall elapse between its sessions, so that the taxes will have to be voted for two years at least, thus greatly diminishing parliamentary control over the revenues. This project, which involves several amendments to the Constitution, is now before a committee, and it has filled the Liberals of all shades with dismay, and the National-Liberal party is said to be utterly disorganized.

The Austrian Liberals have also been unfortunate at the late general elections. They have lost forty-five seats, leaving them with a majority of only eleven, which can hardly be called a working majority. The gains are made mainly by the landed interest, and indicate a revival of the influence of the great proprietors, particularly in the Slav constituencies, and the cause is very much the same as that which put Disraeli in power in England in 1873, and has enabled Bismarck to carry his tariff and other schemes in Germany —viz., a sort of weariness, aggravated by the hard times, of the rule of the commercial and professional classes, which has now lasted since 1866. Having tried the "thinkers" and progressive men without attaining complete happiness, the constituencies turn to the country squires.

SENTIMENTALISM IN POLITICS.

THERE is at present some curiosity in the public mind to know how the Administration feels towards the solid Democratic South after the contest it has had with its representative majority in Congress. Mr. W. E. Chandler essayed to gratify this feeling a few days since by assuring a reporter that the President far out-did himself and his fellow-Stalwarts in the indignation which he felt at the general political course of the South during his Administration. Whether this was merely the random assertion of a mind not remarkable for sobriety of judgment, or the shrewd guess of an astute politician, it is worthy of consideration from its representative character. The notion that such a feeling on the part of the Administration would, under the circumstances, be eminently reasonable, is entertained by a large majority of the Republican party, and, no doubt also in secret, by no small number of Democrats.

The case presents itself to the average mind in a form like this: When President Hayes came into office, there was a contest between the two wings of his party as to whether he should or should not use the military force at his disposal to keep Chamberlain and Packard in power in the States of South Carolina and Louisiana, and whether he should continue to confine the Federal officers in the South to that class of men who held them under the Grant régime. In this contest the white Democrats of the South believed that the interests of their section were deeply involved. If Hayes yielded to the Stalwarts, governments which they considered as among the most odious would be enforced upon them, and the material prosperity of their section would continue exposed to all the dangers and drawbacks arising from bad administration. Instead of pursuing this course, which from the ordinary politician's point of view was that demanded by the interests of his own party, the President did what the South desired, and thus conferred upon the latter a valuable and lasting privilege. Such being the case, it was supposed that the common sentiment of gratitude would prompt them to do something in return. Since the benefit came from a source which, in some sort, represented the Republican party, it seemed nothing more than reasonable that the expression of gratitude should take the form of a favor to that party, and the only favor which could be done it was that of voting its ticket. Hence the President is supposed to have looked with great interest to see the Southern people rise up and overthrow the Democratic party in all the Congressional districts where the beneficent effects of his policy had been felt, or, at least, to stay away from the polls in sufficient numbers to allow the Republicans to elect their candidates. The Stalwarts assured him that no such result would follow, that the South was not to be trusted to do anything but oppose his own party to the utmost under all circumstances, and that it would use the very power he put into its hands for the benefit of his political enemies. To a mind so magnanimous as that of Mr. Hayes this seemed hardly credible, and he went on in full confidence that he would find his good feelings and intentions reciprocated. Time has proved the Stalwarts to have been right, so far as the impossibility of recruiting the Republican party from the white Democrats of the South is concerned, and now the President and his supporters are supposed to be lamenting the failure of his policy and the ingratitude of humanity.

Plausible as this view appears at first sight, it is founded on those radically false ideas of the objects of political management which, diffused among the masses, constitute one of the great difficulties with which the progress of sound principles has to deal. Those who adopt this view do not think it worth while to ask whether the course of the President has or has not promoted the cause of good government in the South, but only whether it has been successful as a political manœuvre. It assumes that the only motive which actuated the President and his supporters was that of securing a Republican Congress, and, of course, the effort is pronounced a failure because this end was not gained. The lesson which the more radical Republicans would have the country learn is, that the South is not to be trusted. But if they will look a little deeper they will find that a much more valuable lesson is taught them.

Wise statesmanship accepts human nature as it is, with all its infirmities, and does not assume that men in general are either angels or devils. Human nature is so constituted that it does not overflow with gratitude for any act, however beneficent, unless that act be prompted by a disinterested spirit. Just so far as support and gratitude are expected in return, just so far is the moral effect of the act diminished. As Morley says in his study of Rousseau, "A service done in expectation of gratitude is from that fact stripped of the quality which makes gratitude due, and is a mere piece of egoism in altruistic disguise." In political life men's innermost motives are as clear as the light, and the more gratitude a public man expects from his constituents for a virtuous act, the less he will get. Now, every one feels and knows that neither political party is at the present time actuated by any higher motive than that of succeeding in the next election; and so long as this is so it is puerile to expect any interest to deal with it in a spirit different from its own. No doubt when President Hayes assured the Southern States the privileges of self-government within the Union he acted from the purest and highest motives. Could the Southern people have given him political support entirely irrespective of party, we can hardly believe that they would have hesitated in doing it. But they knew very well that behind him was a party carefully ciphering out on their slates how many members of Congress it might gain or lose by his course, and looking on the situation in no other light than that of its effect on their own interests. Such being the case, it was only human to resolve that the calculators should be left to take care of their own interests.

If we look upon the Administration as having no higher hope than that of winning Southern whites over to the Republican party, good advice would be thrown away upon it. An individual who is not only selfish but is not willing to wait for the slow grinding of the mills of God, will never receive much sympathy from any quarter, nor much benefit from good advice; and the moral law is much the same for an organized party as for an individual. But if the party, or its leader, sees some higher problem of statesmanship than that of making the majority vote their own ticket, it will not be difficult to point out some of the conditions of success.

The first thing to be recognized is, that the problem of dealing with the South is a purely practical one. Sentiment has nothing at all to do with the matter, and is nearly as much out of place as passion. We may as well at once make up our minds that any profession of love on our side will do little good, unless we make them feel that it is entirely disinterested and has no relation to politics, which it will be difficult to do under present circumstances. We must throw aside all considerations of love and hate, gratitude and ingratitude, and show them that we are actuated by a regard for sound principles and an honest administration in which no amount of unfriendly feelings on their part can make us waver. A dispassionate adherence to a fixed line of policy, dictated by a regard for the general welfare, modelled so far as possible after the laws of nature, unshaken by threats or blandishments, and persevered in to the end, has a wonderful influence on all men, even the most degraded. Nothing quells passion so surely as resistance by an entirely dispassionate agent. In the Constitution and laws we have such a policy marked out with sufficient precision to serve as a guide under nearly all circumstances. Differences of opinion in matters of detail are, of course, inevitable, but in settling them no better rule can be adopted than to reject the advice of all who are moved by feelings of any kind, whether love, hatred, or passion, and take the advice only of the coolest portion of the community. What is most wanted to cement the Union is a few years of an Administration which shall show neither animosity nor favoritism towards the South, expect neither its opposition nor support, insist on nothing but a due regard to the Constitution and laws on both sides, and wait patiently in calm confidence that the reward of virtue, though long delayed, will surely come at last.

The present Administration has kept about as near to this ideal

as we can expect in the present state of political feeling, and whatever disappointments it may have suffered it has every reason to be satisfied with the result not only to the South but to itself and its party. It has started the South on the only possible road to good government by allowing power to be taken from the hands of reckless adventurers and put into the hands of men who, whatever their shortcomings, represented the intelligence of the community. An element of moral strength has thus been gained which would not have been possible under any other course, and which will the more surely tell in the future the more closely it is imitated by Republicans everywhere. So far as purely party interests are concerned, if the President has not saved his party in the South, he has saved it in the North. Those of its members who complain that it does not command its old majorities should compare its position now with its utter demoralization two years ago, and reflect upon the situation in which it would now be placed if the Stalwarts had then had their own way. The doctrine that in time of peace a State government can be kept in power by Federal bayonets is one which can never receive the sanction of the Northern people, unless under the influence of a gust of feeling. Had the President desired a Democratic successor he could have taken no more effective step to gain his object than that of yielding to the friends of military rule over the South; and whatever the final result may be, it will not be so bad for the party as that course would have proved.

THE PROPOSED AMERICAN INTEROCEANIC CANAL.

THE development of steam navigation made it necessary to cut a ship-canal through the Isthmus of Suez, and the time has arrived when it is equally necessary to create a water-way across the American isthmus. The subject has been discussed periodically for three centuries with great earnestness; and but for the natural obstacles to be overcome and the enormous cost of the work, it would long ago have been completed. Steam traffic between the Atlantic and Pacific oceans has reached the point which ensures an adequate return for the investment of the sum required to complete and maintain an American interoceanic canal, and this, coupled with the necessity for diminishing the cost of carrying the products of our Pacific States to European markets, ensures the construction of a canal within a period of ten or fifteen years. These products, it should be stated here, are not such as can ever be profitably transported across the continent by rail, and there would be no injurious competition between the Pacific railways and an interoceanic canal.

The Suez Canal is simply an exceptionally wide and deep ditch, cut for the most part mechanically through loose sand across a low and nearly uniform section of land. The genius of M. de Lesseps was displayed not in overcoming the forces of nature by engineering triumphs, but in persuading governments, bankers, and individuals to furnish him the money needed to complete the canal. It is a tolerably familiar fact that there was water communication between the Mediterranean and Red Seas, *viâ* the Nile and a canal, more than three thousand years ago, and there is evidence of the existence of an artificial water-way across the Isthmus of Suez more than four thousand years ago. The engineering problems presented for solution in the construction of an American interoceanic canal are not comparable with those of any similar works in the Old World, and have but few parallels in the United States; they are novel in many particulars, and can only be solved by deliberate study in the light of past experience. There is, therefore, something ludicrous in the assurance with which M. de Lesseps and his associates in the Suez construction arrogantly assume a superior knowledge on all canal questions. A lack of appreciation of the magnitude of the work now about to be undertaken, and an inordinate conceit in his power to overcome all obstacles, are the two most prominent deductions from the recent utterances and acts of this influential personage.

Prior to 1870 our knowledge of the American Isthmus was derived chiefly from the assertions of interested persons and from incomplete surveys, although parts of several routes had been carefully examined. Beyond demonstrating the need of a systematic examination of the whole Isthmus, and teaching how to provide against climatic and other natural difficulties, very little had been accomplished. The selection for chief of a bureau in the Navy Department of an officer who had given special attention to the canal question, combined with the growing popular interest in the subject, and demand for more rapid sea-transit between our Atlantic and Pacific ports, resulted in the organization, in 1869, of naval exploring parties which spent the six ensuing winters on the Isthmus, and the summers in working up the observations for publication. This labor was persisted in until every probable route had been instrumentally examined and the data prepared for discussion. The service thus rendered by the Navy reflects the greatest credit on the officers engaged in it, and particularly on Commander E. P. Lull, who appears to have been either the chief or the second in command of all but one of the exploring parties. The whole body of data was placed before a commission appointed by the President, by authority of Congress, composed of the Chief of Engineers of the War Department, the Chief of the Coast and Geodetic Survey of the Treasury Department, and the Chief of the Bureau of Navigation of the Navy Department. After careful and deliberate examination of the subject the Commission unanimously reported, in February, 1876:

> "That the route known as the Nicaraguan route . . . possesses, both for the construction and maintenance of a canal, greater advantages, and offers fewer difficulties from engineering, commercial, and economic points of view, than any one of the other routes shown to be practicable by surveys sufficiently in detail to enable a judgment to be formed of their relative merits."

This decision will be regarded by all unprejudiced and disinterested persons capable of appreciating the circumstances as finally settling the question as to the best route for a canal. Subsequently, and in apparent ignorance of this decision, and of the extended surveys on which it was based, M. de Lesseps and a few associates advanced a large sum of money and sent parties to explore the Isthmus. During these explorations a concession was granted by the Colombian Government to their agent, who thereupon made an effort to obtain copies of the unpublished data resulting from the United States surveys of the Panama route. These and all other data which the world owes to the United States surveys were ultimately laid before the Congress recently held at Paris, under the auspices of the Geographical Society, by representatives of the United States Government. The meeting had been called ostensibly to discuss the subject and recommend the best route; an examination of the *procès-verbaux* and accompanying documents shows clearly that the Society permitted M. de Lesseps and his associates in the Panama Canal venture to use its name and influence to secure the approval of their scheme, so that the concession they controlled might be utilized. An analysis of the list of members of the Congress shows that of the one hundred and fifteen members seventy-five were self-appointed Frenchmen; of the sixty foreign members five were connected with the Suez Canal, and twelve were given seats by M. de Lesseps. Certainly none of the French members, none of those connected with the Suez Canal, nor any of the members given seats by M. de Lesseps, would be likely to oppose him; the result was a certain majority of sixty-nine votes on any question avowedly advocated by M. de Lesseps. From his opening remarks to his closing address before the Congress and its committees, at social gatherings, in private and in public, he advocated the construction of a canal *at sea-level viâ* Panama and Aspinwall. The excuse offered for this indecent exercise of his powerful influence was the conviction on his part that a canal with locks was impracticable. So manifest were the advantages of the Nicaragua over all other routes that, in spite of the opposition of M. de Lesseps, the engineers of the Congress had almost reached the point of recommending it, when, on the day before the final sitting, the Panama scheme at sea-level was abandoned by M. de Lesseps and his adherents, and a plan substituted for it in which locks formed the essential feature, and which was founded on an imaginative basis of topography of the Isthmus unwarranted, if not conclusively proved as not existing, by the United States surveys.

Admitting that M. de Lesseps and his associates were sincere in opposing a construction involving locks on account of the time necessary to operate them, is such an objection well founded? The proof that it is not is found in the official reports of the United States Army Engineers in charge of the construction and management of the Des Moines Rapids and Louisville & Portland Canals. It is a satisfaction to us, and might possibly interest our transatlantic friends, to know that there is now near completion at the St. Mary's Falls, between Lakes Superior and Huron, a lock having a length of five hundred and fifteen feet and a lift of eighteen feet, the largest ship canal-lock in the world, through which vessels will be passed in ten minutes.

We do not think it necessary to defend the selection of the Nicaraguan route by the American Commission, composed, as it was, of three men so well fitted to make the selection by their eminent ability, extended experience, and, above all, their freedom from personal prejudice in favor of any one route, against the selection of the Panama route by a packed congress composed chiefly of non-professional members and secretaries of geographical societies practically, if not positively, pledged in advance to advocate and support a certain route because those who had called the congress controlled a favorable concession for using it. A canal at sea-level at Panama is shown to be impracticable by the indisputable facts that such a canal must receive and carry off without injury to itself all the drainage of the Chagres River, and that this river frequently rises over thirty feet in one night. If tunnels are constructed, such a rise would stop traffic by filling them. An open cut would cost five or six times as much as the traffic would warrant, and require an enormous sum to keep it in repair; and if ever completed, the canal would be a financial failure. The official utterances of M. de Lesseps since the Congress adjourned indicate his bewilderment on the economic as well as engineering questions involved. The cost of the canal *viâ* Panama, as estimated by the *Commission Technique*, was one thousand and forty-four millions of francs, and the time necessary to complete it twelve years. M. de Lesseps has within a short time publicly stated that the same canal can be built for less than five hundred millions of francs in less than five years. He proposes to issue four hundred millions of francs of stock, incur an indebtedness of two hundred millions of francs, guarantee an annual interest of five per cent. pending the construction, and an annual dividend of eleven and a half per cent. after completion. He fails to state the sources of his revenue pending construction, and he admits that the gross revenue of the canal will only be ninety millions of francs. He must, therefore, have in view some novel method of providing for the maintenance of this costly work with one-tenth of one per cent. of the gross annual revenue.

The construction of an American interoceanic canal being necessary to the United States, the economic and political questions involved are of greater importance than any discernible by human foresight in the near future. Wherever and whenever it is constructed it will become the most sensitive and vital part of our interstate and international commercial system, and we must be prepared to protect it from the evils of local revolutions and foreign aggression, to seize it when necessary and successfully defend it against the two greatest naval powers in the world. The completion of such a canal involves, therefore, the creation and maintenance of a naval force in the Atlantic and Pacific capable of contending with that of any possible European combination.

THE COMÉDIE-FRANÇAISE IN LONDON.

London, July 12, 1879.

THE Comédie-Française gives to-night the last representation of its extraordinarily successful series, and I am reminded that I am on the point of losing my opportunity for carrying out an intention long deferred, and making a few remarks upon this very interesting episode of the visit to London of the children of Molière. The first remark to be made is that this visit has been a brilliant, a complete, an unclouded success. It is saying little for it to say that it is incomparably the most noteworthy event that has occurred for many a long year in the theatrical annals of London: these annals are not so rich as to impart any great force to such a compliment. But what I may say is that the episode will have been a memorable one in the annals of the house of Molière itself. Its members, individually, have refreshed their laurels and renewed their fame, and the beauty and power of the best French acting have affirmed themselves under circumstances which give an added value to the triumph. The appeal has been made to a foreign audience, an audience whose artistic perceptions are the reverse of lively, whose ear does not respond quickly to the magic French utterance, and whose mind does not easily find its way among the intricacies of French sentiment; and yet the triumph has been perfect, and the Comédie-Française and the London public have been thoroughly pleased with each other. I am far from intimating that the Théâtre Français in its collective or ideal capacity has gained in prestige or in dignity by its visit to London and its successful exploitation of English curiosity. This is another question, and there are various things to be said about it. If London has been charmed by this delightful episode, Paris has by no means been affected in the same manner. Parisian irritation has been almost in direct proportion to English applause. It is hardly too much to say that Parisian opinion has been to a certain point scandalized. The conservative view of the case is easy to understand, and (inconsistent as the declaration may appear) it wholly commands my sympathy. In this view the Comédie-Française has no right to detach itself from French soil; it is beneath its dignity to wander off to foreign lands like a troupe of common strollers, to fill its cash-box and make barbarians stare. If it leaves Paris it should betake itself to some other French city; it should speak only to French-speaking audiences; it should find a temporary home at Lyons, at Marseilles, at Bordeaux. Indeed, in the view of many fastidious spirits, the Comédie-Française should not think too much about the cash-box at all. It should enjoy its copious subvention; it should live in comfort and credit; but it should never propose to itself to make money. It should never, as the French say, *courir les aventures*. Such vulgar ambitions are for other companies—they are not for the house of Molière, which belongs to the Gallic soil, to the climate, to the atmosphere, and has as little right to absent itself as the French Academy or the Chamber of Deputies would have to hold their sittings in neighboring states. The pretext of this brilliant escapade on the part of an austere institution was the undertaking of certain repairs and embellishments in the great theatre of the Rue de Richelieu, where it must be confessed that some such labors had long been urgently needed. The house was to be put in order, the theatre was to be closed for six weeks. It was decided to spend these six weeks in London, and a rich pecuniary harvest was guaranteed beforehand. The Comédie assumed no risks, and no one connected with the enterprise can have been a loser—not even the tattered persons, of both sexes, whose share in it has been to thrust the play-book into the windows of the long train of carriages slowly advancing to the Gaiety Theatre. This is all very well; but if I were a consistent Parisian I should be no better pleased. I have spent as many evenings at the Gaiety Theatre as I have found possible, and I have always enjoyed my privilege; but, distinctly, the institution which I just spoke of as austere has lost to my eyes a part of that sanctity in which it was formerly clad. I have enjoyed it in London, but I am afraid that in case of paying it a visit in Paris I shall not enjoy it so much. I have seen it out of its element—I have seen it in the Strand! I have seen it vulgarized, reduced to the level of ordinary commercial ventures, departing from its traditions and compromising with its ideal. I don't know a more striking example of the spirit of the age, of the march of a civilization before which old scruples and reserves, old sentiments and sanctities are successively toppling over.

But of course if the Comédie-Française was willing, we were only too delighted, and I must restrict myself to talking of our charming impressions. It is true that we have talked of them a great deal already—a certain section of the London world may be said for the last five weeks to have talked of nothing else. It had found a topic, and in a community addicted to dinner-giving a topic has precious uses. Indeed, there came a time when the Comédie-Française threatened to take rank with the weather, or with Mrs. Langtry, as a subject available only for persons who had resigned themselves to the apparent sacrifice of originality. I almost feel tempted to say that the most entertaining part of the episode has been the performances, not of the Comédie, but of the audience. The Théâtre-Français, as exhibited to London society, is one branch of the affair; London society, as exhibiting itself to the Théâtre-Français, is another. The most amusing comedians have not always been before the footlights, and the drama has gone on in the world as well as on the

stage. The whole thing, on the part of the public, has been very characteristic, very English—the Parisian mind would probably say very provincial. I shall not attempt, however, to go into details on this point—it is enough to say that the hospitality of the London world has been extreme and complete. The Comédie-Française has been "taken up," collectively and individually, with a warmth which must have taxed the preconceptions of the French imagination, and which does great honor to English courtesy. How the French imagination may have reconciled all this—especially in some of its phases—with the familiar traditions about English stiffness and coldness, English prudery and false delicacy, it profits not to enquire. It is enough that it must occasionally have been sorely puzzled, and have carried away a considerable store of tough problems, to be solved at leisure. One of these, for instance, will be connected, as we may surmise, with the extraordinary vogue of Mademoiselle Sarah Bernhardt, and will concern itself with enquiring into the sources of the tender interest excited by this lady. I speak of her "vogue" for want of a better word; it would require some ingenuity to give an idea of the intensity, the ecstacy, the insanity as some people would say, of curiosity and enthusiasm provoked by Mlle. Bernhardt. I spoke just now of topics, and what they were worth in the London system. This remarkable actress has filled this function with a completeness that leaves nothing to be desired; her success has been altogether the most striking and curious, although by no means, I think, the most gratifying, incident of the visit of the Comédie. It has not been the most gratifying, because it has been but in a very moderate degree an artistic success. It has been the success of a celebrity, pure and simple, and Mlle. Sarah Bernhardt is not, to my sense, a celebrity because she is an artist. She is a celebrity because, apparently, she desires with an intensity that has rarely been equalled to be one, and because for this end all means are alike to her. She may flatter herself that, as regards the London public, she has compassed her end with a completeness which makes of her a sort of fantastically impertinent *victrix* poised upon a perfect pyramid of ruins—the ruins of a hundred British prejudices and proprieties. Mlle. Sarah Bernhardt has remarkable gifts; her success is something quite apart, as the woman herself is something quite apart; but her triumph has little to do with the proper lines of the Comédie-Française. She is a child of her age—of her moment—and she has known how to profit by the idiosyncrasies of the time. The trade of a celebrity, pure and simple, had been invented, I think, before she came to London; if it had not been, it is certain that she would have discovered it. She has in a supreme degree what the French call the *génie de la réclame*—the advertising genius; she may, indeed, be called the muse of the newspaper. Brilliantly as she had already exercised her genius, her visit to London has apparently been a revelation to her of the great extension it may obtain among the Anglo-Saxon peoples, and the dénoûment of this latest chapter in the history of the Comédie-Française is that Mlle. Sarah Bernhardt has resigned her place as *sociétaire*. You will, of course, have heard long before this reaches you that she has formed projects, more or less definite, for visiting the United States. I strongly suspect that she will find a triumphant career in the Western world. She is too American not to succeed in America. The people who have brought to the highest development the arts and graces of publicity will recognize a kindred spirit in a figure so admirably adapted for conspicuity. Mlle. Bernhardt will be a loss to the Comédie-Française, but she will not be a fatal one. Charming as are some of her gifts, peculiar and picturesque as is her whole artistic personality, it cannot in the least be said that she is a consummate actress, or even what the French call a real *comédienne*. She is far from belonging to the race of Rachel and Desclée, she has something sceptical and cynical which was wholly foreign to the manner of those concentrated and serious artists. There are, indeed, actresses now at the Théâtre-Française who are very much more complete than Mlle. Sarah Bernhardt. Mlle. Favart knows her trade as her more youthful and more captivating successor will probably never pretend to do. But unfortunately Mlle. Favart lacks charms; she pleases no one but the people whose judgment is complicated by an appreciation of technicalities. It is to be added that Mlle. Sarah Bernhardt's repertory is a singularly narrow and disadvantageous one; in a single part, in "Phèdre" alone, has she a chance to give the measure of a great talent. The plaintive and pathetic passages of "Phèdre" she renders with admirable delicacy and grace; but in the violent scenes she forces her note beyond all reason, and becomes painfully shrill and modern. Her only other opportunity is in the last act of "Hernani," which apparently has been her great success in London. In "Ruy Blas" her part is pale and savorless, and in "L'Étrangère" it is an almost grotesquely bad one. In "Zaïre" she has failed in London to make her mark; and in "Andromaque" she has little or nothing to do but to assume the attitude of a weeping willow, rustling and murmuring in melancholy zephyrs. This it must be confessed, however, she does to perfection.

Her rival, Mademoiselle Croizette, has obtained a very much scantier share of the public favor, and this lady's failure to please the English public has been, I believe, for the administration of the Comédie-Française, one of the surprises of the visit to London. This accident will have been less of a surprise to many spectators; yet I nevertheless think that Mlle. Croizette has not received her due. She has the misfortune of lacking a certain indispensable delicacy of interest, and it must be added that the amplitude of her person has reached a point at which, in the parts of young girls, illusion tends to vanish. But Mlle. Croizette is a very handsome woman and a very vigorous and definite actress, and it would have been in the interest of ideal justice that English applause should have been rather more equally divided between the most eminent of the younger ladies of the Comédie-Française. As regards the elder ones, we have had the entertainment—and found it an excellent one—of seeing Madeleine Brohan and Mademoiselle Favart in the parts of mothers and aunts The latter lady, in consenting to undertake the representation of maturity and maternity, has opened for herself a fresh and honorable career; and nothing can be more charming, more brilliant and picturesque, than Madeleine Brohan's creation of the old *Marquise de Villemer*, in George Sand's agreeable drama of that name. The striking thing in London, however, as it has long been in Paris, is the great superiority of the masculine side of the house. The great trio of Got, Delaunay, Coquelin, is unapproached, and from present appearances unapproachable, by any feminine combination. Each of these great actors has won himself large honors with the English public; each of them has done with a rich perfection that which he has had to do. If I were to put forward one of these artists rather than another as the source of my own highest pleasure, I think I should have little hesitation in naming the rich, the rare, the admirable and inimitable Coquelin. There was a time when I thought Got the first of living actors, and Got is certainly still a consummate, a superb comedian. But as Coquelin has advanced in life and in his art, he has attained a command of his powers and developed an intelligence of the whole dramatic mystery which place him, to my sense, almost alone. His variety, his versatility, the extent of his scale, are extraordinary; he is at once the most joyous and exuberant of pure comedians and the most powerful and touching of serious actors. He has a deeper intelligence than is often seen upon the stage; he strikes at once the note of high comicality and the note of passion, of deep seriousness; and he does both of these things with a certain touching, moving, exciting ardor. I said just now that Mlle. Sarah Bernhardt was supposed to be going to America. That is all very well; but what I really wish is that M. Coquelin would go.

XX.

THE KHEDIVE'S DEPOSITION.

CAIRO, July 5, 1879.

THE forced abdication of the Khedive in favor of his eldest son has been effected so quietly that but few persons out of Egypt are aware how near we came to having very serious times here. It is well known that when the question of the abdication first came up the Porte was strongly in favor of the succession of Halim Pasha, the late Khedive's uncle, now living in exile in Paris, who, according to the old system of succession, would have succeeded Saïd Pasha in 1863. The late Khedive had told Shaim Pasha, the Minister of War, that if Halim Pasha, or any person other than one of his own sons, should be designated as his successor, he would fight. He added, moreover, that the present state of affairs was such that the chances were that no European power would care to go to the expense of sending a force to conquer Egypt as soon as it was known that there would be a serious resistance. Military preparations were selessly but effectively pushed forward, and in three weeks about one hundred thousand men could have been put into the field well equipped and passably well disciplined.

On Wednesday, June 25, at three o'clock in the morning, the Consuls-General of England and France called at the palace and demanded the immediate abdication of the Khedive. The Khedive asked them what guarantee would be given as to the succession of one of his sons. Upon the reply that Tewfik Pasha, his eldest son, would succeed, but that they were not prepared to give any guarantees, the Khedive refused to consider the question of abdication any further at that early hour in the

morning, and referred them to the Sultan. Wednesday and Thursday the scene was transferred to Constantinople, where the representatives of the Powers had their hands full in making the Porte realize the folly of persisting in the succession of Halim Pasha. On Thursday noon their efforts were crowned with success. The Porte agreed to accept Tewfik Pasha, and a telegram was sent to that young prince declaring him Khedive of Egypt. The new Khedive, who is only in his twenty-fifth year, went at once to embrace his father, who congratulated him on his succession to the throne, and held his first reception at the Citadel in Cairo on Thursday afternoon, and all was quietly settled. Tewfik has been very carefully educated, and speaks Persian, Turkish, Arabic, French, and English. Although, with the exception of ten days in Vienna, he has never spent any time out of Egypt, nevertheless he is more liberal and more European in his views than any of his brothers. His chief adviser is Sherif Pasha, who has been President of the Council of Ministers since the fall of the Nubar-Wilson-De Blignières Ministry.

Ismaïl Pasha, accompanied by his two sons, Hussein and Hassan, left here for Naples on June 30. At the departure the scene of separation was most impressive. Under a personal government almost every individual of any importance has some special and perhaps confidential relations with the sovereign ; and when the ministers and functionaries and employés came in turn to bid farewell to him who had been their sole master for sixteen years, there was scarcely a countenance in the vast crowd that was not moved to tears. Ismaïl Pasha alone remained apparently unmoved, and received the homage of those about him with the same grace and dignity which characterized his receptions when at the height of his splendor. The shrieks and cries of the harems were simply indescribable. The women tore their hair and put dust on their heads, and the scene was most painful. At five o'clock in the afternoon Ismaïl Pasha embarked on board his beautiful steam-yacht, the *Maroussa*. From the immobility of his expression one could scarcely realize that his highness was about to leave his country for ever. He had for every one an affectionate word, and told those who begged to accompany him that by rendering as good service to Tewfik Pasha as they had rendered him they would please him best.

The result of all this is not deemed so encouraging by European residents here as it seems to be in Europe. One khedive has been changed for another, and two countries, France and England, propose virtually to administer the country. Whether they can do this in face of the obstacles of religion and prejudice of race in Egypt itself, and in face of the jealousy and the rights and privileges which other European Powers have obtained by treaty, remains to be seen, and will form the subject of another letter.

FRANCE AND ENGLAND IN EGYPT.

PARIS, July 8, 1879.

IT would be difficult to explain the singular attraction which the land of the Pharaohs has so long had for France. Bonaparte's expedition to Egypt was perhaps the origin of it, though it was, on the whole, unsuccessful, and ended in a disastrous capitulation. This expedition was conceived, at the time, as an indirect attack on England; but it was a mere incident in the revolutionary wars. The savants who accompanied Bonaparte came back with many notes on Egypt, and the result of their labors is still preserved in a monumental work. The fashion became Egyptian. Heads of sphinxes became a common ornament, and marked the transition from the style of Louis XV. to the hideous style called the "Empire." The discoveries made in the valley of the Nile opened new horizons to history, to philology ; and though these discoveries have been much extended since, it is certain that the expedition to Egypt was, in a scientific sense, almost a revolution.

There was no Egyptian question till France conquered Algiers. This conquest, provoked by the insolence of the Bey of Algeria and by the depredations of the Algerian privateers, was the first blow to the power of Turkey and of the great Sultan in Africa. French influence had always been felt in Syria, in Lebanon, at Jerusalem. There was a Levantine population at Alexandria and at Smyrna. The French element was important in these towns, and enjoyed the benefit of the *capitulations*—that is, of the consular jurisdiction. When Mehemet Ali made himself independent France naturally became his ally and protector. Egypt at that time threatened to become very formidable. The new sovereign of Egypt attempted to tear Syria from the hands of Turkey ; the "Quadruple Alliance" put an end to his dreams ; Lord Palmerston contrived to unite all the great Powers against Mehemet Ali and against France. You can read in the memoirs of M. Guizot and in those of Charles Greville how the intrigue of the Quadruple Alliance was conducted under the eyes of M. Guizot, who had gone to London as ambassador. Guizot was an Anglomaniac. He was *enguirlandé*, to use a favorite Russian expression, by the English aristocracy, and Lord Palmerston was able to unite all Europe against the cabinet of M. Thiers, who was then Prime Minister. Louis Philippe had to choose between peace and war, and war with all Europe—war for a Mussulman pasha. He wisely chose peace, and made a composition with Europe in virtue of which Mehemet Ali lost his ephemeral conquests in Asia, but the possession of Egypt was guaranteed to him and to his family. The rulers of Egypt were still kept dependent on the great Sultan. They had to pay a tribute ; but Egypt became autonomous and practically independent.

France is accustomed to go to war "for an idea." In 1840 she did not actually go to war, but she incurred great dangers, and we were obliged to put our army on a war-footing. France actually gained nothing substantial from her great efforts in favor of Mehemet Ali, except perhaps the "obelisk" of Luxor, which now adorns the Place de la Concorde. Under the rule of Mehemet Ali and his family Egypt might have developed quietly her vast resources. It would be unjust to say she has not partly done so ; unfortunately, much evil has been mixed up with partial good. The two last rulers especially, Saïd Pasha and Ismaïl Pasha, have been only too much civilized ; they seem to have been able to combine and to marry all the vices of an old and effete civilization with those of a barbarous state. The diffusion of knowledge among the people, a just and moderate taxation, a good administration of justice—all the real objects of a high civilization have been utterly neglected by them ; the *fellah* is as ignorant, as submissive, as wretched now as he could have been under the rule of the Pharaohs ; the system of taxation is as barbarous now as then, the tithes are collected in kind, the bastinado seems to be considered as a necessary process for the collection of imposts ; the taxes are often levied before they are due. Altogether, the Egyptian khedives have treated their people as unmercifully as a pasha sent from Constantinople to Asia Minor, to Damascus, or to Bassorah. It was thought, and it seemed natural to think, that an unlimited tenure of power would calm and subdue the lust of plunder in the hearts of the Egyptian rulers. The pashas of Bagdad have a fortune to make in a few years ; the fortune of the Khedive was already made.

The members of the family of Mehemet Ali, coming from a semi-barbarous stock, were only able to see in civilization what is material and visible ; they could build palaces and fill them with treasures ; they could buy costly furniture, chosen without any reference to art ; they could encourage science, if science brought from the earth something visible—inscriptions, monuments, sphinxes, rings, amulets ; they could encourage art, if art spoke to the senses. Verdi was commissioned to write his opera of "Aïda" for the theatre built by Ismaïl Pasha ; the new Pharaoh gave himself the amusement of seeing, so to speak, the ancient Pharaohs revive under his eyes. But he was not contented with the noble music of Verdi, even if the singers were adorned with real diamonds and rubies ; he wanted something more *civilized*—it was his pride to be looked upon as a Parisian. Hortense Schneider was obliged to go and sing the "Grande Duchesse" on the shores of the Nile. The *opérette* was at home in Cairo ; the songs of the "Bouffes-Parisiens" and of the "Palais Royal" became popular in Egypt. Journalists were hired to go to Egypt, were hospitably treated and made to sing the praises of the new rulers of Egypt. Even books were written in their honor. I am not sure that Edmond About, the author of 'Tolla' and of the 'Roi des Montagnes,' is not the author of a volume called 'The Fellah.' Prévost-Paradol made a pleasure trip on the Nile on a Government steamer. The hospitality of the Khedive was boundless ; life at the Windsor Palace, in the Burg of Vienna, even in the Summer Palace or Winter Palace of the Czar, is tame compared to what it was in the oriental palaces of Ismaïl.

The Khedive was not only a most generous host, he was not content to draw to Egypt the celebrities of Europe; he really believed himself to be a man of progress. But he could only understand progress in the material sense. He could interest himself in canals, in railways, in works of irrigation, in machines, in sugar-factories ; he became the largest landlord in the world, by the very simple means of confiscation or of buying at his own price. He possessed, together with his own family, about one-fifth of the cultivable part of Egypt. He was, with all his civilized airs, more absolute than the King of Dahomey. If he had been a good man of business his rule, strange as it was, would probably have benefited Egypt in the end. The opening of the Suez Canal is a benefit which cannot well be forgotten. Unfortun-

ately the Khedive contrived to spoil everything by his bad management; he was never satisfied, he was a schemer as full of projects as a man who has his fortune to make. When the American war of secession broke out he began to grow cotton, and for a few years the speculation was a good one; now the cotton-plantations of Egypt have become almost worthless. It was the same with his sugar-factories. He looked after every detail, and in the number of the details he completely lost sight of the whole. The whole was the budget of Egypt; after a number of years spent in civilizing, Egypt found herself hopelessly ruined. Credit had been the chief instrument of the Khedive; he had soon perceived that he need not be long the prey of the Levantine bankers; he found in London and Paris a host of easy and complacent lenders. There was a halo about Egypt, the Isthmus of Suez, the civilizing Khedive, which was very favorable to speculation. Who would not assist the great man who loved France so much that he even valued the French *opérette?* The savings of France began to find their way to Egypt. A great institution, called the "Crédit Foncier," was instituted under Napoleon III. for the protection of French agriculture. This bank, which has a capital of 40,000,000 francs, makes loans to our farmers and landlords at a moderate rate. The bonds of the Crédit Foncier, having the guarantee of a first mortgage on land, are good securities; but the directors of this establishment thought that they might encourage agriculture in Egypt, and so they did. The Crédit Foncier holds now about 160,000,000 of Egyptian securities (francs). The loans made to the Khedive by this great establishment were made with the capital of French depositors; the directors have since been blamed and changed, but there remains the disagreeable fact that an immense sum is due by Egypt to a French establishment which is under Government control, and the director of which is appointed by the Minister of Finance. There is besides in Paris what is called a "great Syndicate" of bankers and banking-houses which have between them about 80,000,000 of Egyptian securities.

You see that the Egyptian question has become for our financial world a question of the highest importance. A short time before he fell from power the Khedive had contracted a new loan with the greatest financial house in the world, guaranteed by his own domains and by the domains of his family. The English and French Governments have been placed by all these circumstances in a somewhat difficult position. They have always refused to give their formal guarantee to any of the loans contracted by the Khedive; at the same time they have assumed a great share of responsibility in the management of the Egyptian finances, by the continued interference of the consuls and the defence of the claims of the creditors of the Khedive, and by the direct interference in the administration of Egypt through Nubar Pasha, MM. Rivers Wilson and De Blignières. This last cabinet was, in fact, an Anglo-French cabinet imposed on the Khedive; the Khedive dismissed it, but he fell soon afterwards himself, without noise, without difficulty, at the first intimation of Europe.

What will come next? Europe chose to use the hand of the Sultan to give the last blow to the Khedive, but everybody understands that the revolution in Cairo was not the work of the Sultan; it was the work of Europe. Directly, or indirectly, France and England have undertaken to administer Egypt and its finances. They are afraid themselves of this *condominium;* they know the danger of any *condominium.* That is the reason why they screen their action behind the action of the Porte, and why they are not sorry to see the Austrian and the German associate their action with the Anglo-French action. On the whole, the fall of the Khedive has not much simplified matters; the change of one man will not, at least for the present, improve the state of the Egyptian finances, and the circumstances of his fall will allow fresh combinations in European politics which may become dangerous. It seems to me probable that Turkey will soon be thrown into the hands of Russia; that Austria and Germany, who are completely tied now, will favor the Anglo-French *condominium* in Egypt, in the hope that it will bring on the difficulties which are inseparable from a common action of two Powers in a distant country and for separate interests.

Correspondence.

BI-METALLISM IN EUROPE.

To the Editor of The Nation:

Sir: I infer from some recent remarks in the *Nation* upon ex-Secretary McCulloch's Harvard lectures that there is a notion prevailing in America that Europe, and especially England, is coming to take a more favorable view of bi-metallic money. Having been at some pains recently, both in London and Paris, to sound the depths of the so-called "silver movement," I feel justified in saying that there is no such movement—that is, no *new* movement. The resolutions of the Liverpool Chamber of Commerce were promptly negatived at Manchester, and they never produced a ripple in London. After diligent search in the latter city I could find no movement in reference to silver except a languid discussion of the expediency of bi-metallism in India. Even this, which can hardly be called a silver movement, was extremely faint and inconsequential. One gentleman of eminence in the financial world was quoted as having changed his opinions and being prepared to take a favorable view of silver as full legal-tender, but this gentleman was not quoted as in any way active or as constituting a movement. I became convinced that the depreciation of the rupee, so far from inclining England to adopt a bi-metallic currency for her own uses, was having the opposite effect, and that if silver became as cheap as tin she would cling only the tighter to the sovereign.

In Paris there is absolutely no silver movement, except the agitation which M. Cernuschi keeps on foot from his princely residence on the Parc Monceaux. This agitation is not confined to any one country or continent, and it is less effective in France than in England or the United States. M. Cernuschi, by the way, is not favorably impressed by the Warner Bill. Indeed, he esteems the supporters of that measure the worst enemies of bi-metallism in the world, and he thinks that the United States by coining silver dollars are postponing the triumph of the principles which he espouses, by making the burdens of Europe lighter by two millions per month.

As to Germany, I cannot speak with the same confidence as with reference to England and France—not having visited Berlin as yet. I have been informed, however, by persons whose business it is to keep *au courant* with the subject, that not only has the German Government no intention of changing her new gold standard for a bi-metallic one, but such a change is deemed impossible, and therefore not worth wasting words about.

The indifference of the world does not prove anything, in the forum of reason, against the bi-metallists. They believe that there is not gold enough in the world to answer the monetary needs of mankind, and that some more can be added by joint resolution. They may be right, but we shall probably never know till the last day. The only purpose of this note is to disabuse the minds of your readers of the impression, if it exists, that a change has come over the public mind of Europe since the failure of the Paris Conference in August of last year.

Horace White.

Wiesbaden, July 10, 1879.

THEOLOGY IN COLLEGES.

To the Editor of The Nation:

Sir: As a clergyman, I have been much interested in your recent articles upon the teachings of theology in colleges. If, as the *Nation* seems to intimate, it is impossible for theology to be taught under the auspices of a university, I should be glad to know it, that I may advise my young friends to seek some other profession where their education *can* be that of a university. If, of all the liberal arts, theology alone cannot be taught with the single purpose of discovering the truth concerning it, I think the public would be glad to know it, that it may once for all discard theology from its concerns. If of all the departments hitherto covered by a university training, Harvard College, which is called a university, feels itself incompetent to provide for any particular one, whether theology, or natural science, or medicine, I am sure many graduates of Harvard College besides the ministers would be glad to know it, that they may make the University worthier of its name. In a word, if while all other education in these days is becoming broad and catholic, theological education alone must remain provincial, it behooves us all to understand the reasons.

Whatever may be said on this question, the simple fact remains that theology is, and has always been, one of the branches of sound learning; and this being the case, the university is bound to embrace it in its course or else show reason why it does not. That theology has hitherto been taught in a narrow or partisan spirit is no concern of the university whatever. So has Greek, for that matter; and so is political economy taught to-day in half our schools and colleges. The attitude of the university is, that whatever can be taught at all *can* be taught without par-

tisanship, else university training is a myth or a misnomer. If it be charged that where theology is taught in this way only one sect will accept its instruction, the duty of the university still remains the same. When Harvard College begins to decide what it shall teach, or how it shall teach it, by the political or religious prejudices of the community, it is time for it to close its doors. Harvard College is offering agricultural instruction to-day without regard to the prejudices of New England farmers. That New England farmers do not value it, or will not accept it, may starve the Bussey department out, but is no reason why the Bussey experiment should not be tried.

For some strange reason it seems to be held against the Harvard Divinity School that it succeeds in training ministers for a particular denomination. I am not aware that any such charge against a law or medical school would be considered fatal. If any special community preferred university-educated lawyers or doctors to others, or even Cambridge-educated ones to New York or Philadelphia-educated, this would show the taste of the community, but would not affect the duty of the university. If Unitarian churches prefer university-taught theology, no Unitarian has cause to blush, and Harvard University may simply rejoice that there is one sect that appreciates its theological wares. Fortunately there are many indications just now that other denominations are forming the same taste.

I argue on the assumption that theology *can* be taught without partisanship; at least with as little partisanship as any branch of study where different conclusions are possible. It would be difficult to prove, and certainly the present discussion has not shown, that theology differs on this point from the other sciences, in any other way save that theological prejudices and prepossessions are more deeply rooted than any other. But this only argues the greater need of university training. This is what universities are for. To divorce theological education from the great centres of learning, as the *Nation* suggests, and turn it over to the sects in their out-of-the way corners of the student's world, is deliberately to doom theology to narrowness.

I notice that in this discussion, as in others of the kind, the analogy between theology and such branches as political economy and medicine is conveniently ignored as having nothing to do with the question. It has everything to do with the question; and when the *Nation* can show that because political economy means to the world at large free-trade or protection, mono-metallism or bi-metallism, or because no good teacher of political economy can fail to have convictions on these points, therefore political economy may not be taught in a university, it will be time to demand that theology be banished on the same grounds. To most of us this is the best reason why the university should undertake the one and the other; and for Harvard College to refuse to attempt it seems not a noble unsectarianism but an ignoble abdication of the university's true responsibility.

The *Nation* is anxious to have its correspondents define "non-sectarian theology." Excuse me, but this is the very thing which we look to the university to do. My Catholic neighbor would like very much to have me define "non-sectarian history." I decline the attempt myself, but send him to Cambridge to find out. If he still complains that his son is taught anti-Catholic history, I say so much the worse for Cambridge, which ought to know how, or to find out how, to teach history undenominationally, whether its professors are Protestant or Catholic. If there are difficulties in the way it is a poor university that cannot overcome difficulties of teaching.

But really I cannot see the difficulties here which seem to the *Nation* so portentous. It thinks such questions as the Trinity, the Nature of Christ, the Atonement, etc., must be taught in a sectarian way or not at all. But why? No one disputes that a doctrine of the Trinity is held in the Church. The question is where it came from and what are its claims? Is it part of primitive Christianity, or has it grown out of primitive Christianity by processes which can be historically traced; or even if part of early Christianity, was it the teaching of all the founders, or of only one or two of them? These are questions of historic fact to be decided by the study of ancient documents and of the writings of two or three centuries. If the *Nation* discovers any respect in which these differ from other historical facts, or any point at which a scholarly and independent mind cannot view and teach them on their merits, it is bound to make its discovery known. The case is essentially the same with the other doctrines alluded to. Even when the ultimate question arises, whether Christianity itself demands any other acceptance for its facts or teachings than reason accords to all other facts or truths, this does not differ in the least from ordinary questions of logic and philosophy. If any claim that it does, it is for them to prove how it does. If it is urged that theology never has been taught in this way, I can only reply that it is quite time it should be, and that in no place can it be more properly attempted than in our oldest and largest university.

As for Unitarians, so far as I may speak for them, let me assure the *Nation* that whenever such absolutely unsectarian theology as this is offered at scholarly hands, they, as a sect, will be perfectly satisfied, and will not enquire whether the teacher be orthodox or heretic, if they are the only ones to be satisfied. I still insist that this is not a matter for the university to consider. It has offered thorough training to theologians; and there its responsibility ceases. E. H. H.

WORCESTER, MASS., July 18, 1879.

[It would have saved trouble if "E. H. H." had defined his meaning in speaking of "theology." If he means "natural theology"—that is, the proof of the existence of a benevolent creator from the order of the universe—we have said already that we do not see how a university can avoid teaching it. But if he means Christian theology—that is, the religion revealed by the Bible and Church traditions—he ought to have informed us how this theology is to be taught in a non-sectarian form, for this is what the present discussion is about. It is "non-sectarian theology" which the Harvard Divinity School is, we are told, going to teach, and, as well as we can make out, "E. H. H." sees no more difficulty in teaching it than in teaching political economy or agriculture. This is something rather odd, coming from a minister, for he knows that the great majority of the Christian world hold not only that certain theological beliefs are essential to a man's eternal happiness, but that they contain the sources of his morality in this life. Unitarians and Universalists may not hold this, but then it is admitted that Harvard University is not intended for the exclusive use of Unitarians and Universalists, so that their readiness to accept "non-sectarian theology" does not meet the emergency. He knows also that this is not true of economical or agricultural opinions. No father thinks his son will be damned eternally or suffer in character if he does not believe in free trade, or in a high tariff, or entertains singular views about manures or the rotation of crops. "E. H. H." also appears to assume that the theological professor will have no more serious duty regarding the Trinity, for instance, than tracing the history of the dogma. But we can hardly believe that we understand him rightly. A professor of ecclesiastical history might possibly by very careful steering confine himself to this; but think of a professor in a divinity school, in talking to his students about the Trinity and the Atonement, evading the question, "Are these doctrines true, as held by the great body of Christians both Catholic and Protestant?" Think of his telling his class that they might believe them or not, just as they pleased! What Christian father would like to have his son instructed in this way on such matters? What honorable father would like to have his son educated at an institution in which a body of professors was engaged in communicating information on such themes without letting their own views be known? If we were to take "E. H. H.'s" language literally, we should conclude that what he meant by theology was what is called the "science of religion," in which Christianity is put in the same category with fetishism, Buddhism, and Mohammedanism, and all religion is treated as simply a form of human expression, like art or language, and to be studied in a spirit of pure criticism. But, then, this is not what President Eliot proposes, or what the contributors to the new endowment fund have in mind. Moreover, a professor who taught this successfully would have almost necessarily to be a sceptic. The true way out of the difficulty is, it seems to us, if the University must teach theology, to set up, frankly and candidly, as they do in Germany, an orthodox Protestant faculty, and a Unitarian faculty, and a Catholic faculty, and let the student suit himself. But do not let us assume that there is an essence of theology which can be served out in a harmless form, and which each denomination can afterwards flavor and dilute to suit itself.—ED. NATION.]

THE DANGER OF DIVINITY SCHOOLS.

To the Editor of The Nation:

Sir: Was it not rather rash in an experienced editor to print the following sentence?

"We shall be glad to receive from Dr. Clarke a definition of 'non-sectarian theology,' describing in detail the manner in which it is taught and the view it takes of such questions as the Atonement, the Trinity, Original Sin, Future Punishment, the Nature of Sacraments, the Relation between Faith and Works, and telling us whether the chair or chairs from which it is to be taught in the Harvard Divinity School can or will be filled by Congregationalists, or Episcopalians, or anybody but Unitarians. Some explanation of this sort is due both to the subscribers to the endowment, and to parents throughout the country who are asked to consider the college undenominational."

By this cordial invitation you open your columns to a description "in detail" of the mode of teaching six important doctrines. To do this in the way you desire would require some five or six articles in successive numbers of the *Nation*, each occupying, perhaps, a page in your paper. Would you like, on the whole, as much theology as this? But I will not take advantage of the rare moments in which a good editor may nod. Though you ask for details on all these great theological questions; though you tell me that I am bad at a *résumé*, and thus indicate your wish to have an argument rather than a summary, processes rather than results, I shall try to limit myself to the essential points in your paragraph.

1. *What is non-sectarian theology?*

A theology which is not confined to the limits of any sect, nor taught in the interests of any sect, may be called, I suppose, a non-sectarian theology. If the teachers of theology are not bound by any creed, nor subject to the criticism of any sect, but are free to enquire, to change their views, and to say freely what they believe, they are non-sectarian teachers.

2. *Is there any non-sectarian theology?*

It would be safe to say, in reply, that there is no sectarian theology. No sect, as far as I know, has a theology peculiar to itself. Each one shares its views with others, and contains a large range of opinion within itself. I never heard of a theology which belonged exclusively to any sect. Even what is called the Unitarian view of the Trinity is held substantially by four or five different denominations.

3. *Is Harvard Divinity School non-sectarian?*

A recent article in the *Christian Register*, evidently written by one in close connection with the Divinity School, makes the following statements:

(*a*) The foundation of the Divinity School declares that "no assent to the peculiarities of any denomination of Christians shall be required, either of the instructors or students."

(*b*) As a matter of fact, students are encouraged to examine both sides of every theological question. They are free to defend orthodox views of the Trinity, Atonement, etc., in their essays, sermons, and discussions. They often do defend them. The writer refers to instances in which orthodox students have entered the school, have maintained orthodox opinions in their sermons and lectures, and, after graduating, have entered the orthodox ministry. The students are encouraged and taught to read the leading works on both sides of each important question.

(*c*) Prof. Ezra Abbot (who probably stands at the head among the professors of textual criticism in this country) teaches at Cambridge exactly as he would at Princeton. The Professor of Ecclesiastical History at Cambridge has more than once publicly expressed his satisfaction with the definition of the Trinity, not as given in the Athanasian Creed, but as really taught by Athanasius himself. No one suspects the Professor of Hebrew Language and Literature of teaching *that* in a sectarian way. The same may be said of the teaching of theism, of ethics, and of the ethnic religions.

Harvard Divinity School is, therefore, already to a large extent non-sectarian by its statutes and foundation: by the encouragement given to students to examine both sides of important questions; by the largest liberty given them in their essays, discussions, and preaching; by there being no doctrinal tests for students or professors, and by its having in its chairs men of too much insight and breadth to narrow their minds to any sectarian limits. To make it wholly non-sectarian it is only necessary to have other professorships established, to be filled by eminent men of different denominations. And this is exactly what we all wish to have done, and what President Eliot is preparing to do.

4. *How can a non-sectarian theology be taught at Harvard?*

It can be taught by having professorships endowed by different denominations, to be filled by their best men; by having professors who are themselves superior to any sectarian bias, and by having an instruction deep enough to go below the common sectarian controversies. You seem to assume that there are only *two* sides to such doctrines as the Trinity or the Atonement. But, in fact, there are many different views to be taken of them. Serious study disposes of most sectarian definitions by rejecting all of them. It finds truth and error in all creeds. It advances by means of new statements and broader generalization. No theologians of any party in New England would accept either the orthodox or the heterodox views of the Atonement which were generally held two hundred years ago. No Calvinist now accepts Calvinism pure and simple. In proportion as a man is a real scholar he *must* teach an unsectarian theology.

The purpose of endowing new chairs in the Harvard Divinity School is to enable the corporation to secure the ablest men from all quarters, men who, because able, are usually liberal. Such men will be welcome there, no matter from what denomination they come.

5. You say that "a large body of Christian parents" believe Harvard University "to be a hot-bed of Unitarianism."

This may have been true twenty or thirty years ago, but it is too late now to attempt to alarm any one with this phantom. Parents who wish to send their children to Harvard know perfectly well that no sectarianism exists in the University; that its professors and students are of all denominations; that the University provides seats for the students in any church they desire to attend; and that the Divinity School is wholly apart from the academic department. So long as classes of two hundred or more enter college we may be sure that there is no cause for the anxiety you feel on this subject.

Though I have not answered "in detail" all your questions, for which I have not time nor you space, I think I have sufficiently indicated the answer which may be given to them.

James Freeman Clarke.

Jamaica Plain, Mass., July 23.

[We are not so rash or so simple as Dr. Clarke supposes. We are so confident that anybody who undertakes to describe "non-sectarian theology," and tell how he will teach it, needs plenty of elbow-room, that we are fully prepared to meet large demands on our space. This is one of the cases where brevity means obscurity. Taking his answers in their order we will observe:

1. Yes; but what would be the effect on a young man of religious teaching communicated by a professor of this kind? Would it make him religious, or deepen his faith in "God and immortality"? Moreover, what is "a theology which is not confined to the limits of any sect"? Is not this definition the substitution of one uncomprehended for another?

2. Of course every sect holds some view that some others hold; every sect believes in the existence of God; but if you teach "non-sectarian theology" you must teach only the things which no sect rejects, for whatever any considerable sect rejects and some other considerable sect holds is sectarian, and, therefore, non-teachable. Your only escape from this difficulty lies in throwing down the dogmas before the student and bidding him choose for himself. We grant that some subjects may be taught in this way, but surely theology is not one of them. The value of a theological opinion rests on the strength of conviction with which it is held. Loosely held, or merely selected from "a desirable assortment" on the recommendation of an obliging professor, it can hardly be considered a very useful part of a young man's equipment for any calling.

3. The declarations of the founders of the Divinity School are of little moment; the important thing is the practical working of it. That cases have occurred in which orthodox students have graduated in it may be true, but the fact remains that all but an infinitesimally small number of those who graduate from it are Unitarian ministers. The mode of acquiring their theology, as described in the *Christian Register*, is one which must of necessity produce theologians with little or no theology, if we may use the expression; or rather theologians whose attitude towards all doctrines is one of negation or indifference. We know of no reason why a university should not teach Hebrew and New-Testament Greek as well as Anglo-Saxon or Sanskrit, and anything else which prepares a man to study theology. Why, for instance, ecclesiastical history, which deals with

the agency which has most powerfully influenced the course of events in the modern world, is relegated to divinity schools, is something we have never understood. But our "non-sectarian" friends must not, as the *Christian Register* has done, by putting forward these subjects, to which divinity schools have no proper claim, as examples of things which may be taught undenominationally, try to cover up their retreat about great Christian dogmas like the Atonement and the Fall of Man.

4. No one who values positive religious opinions, or thinks belief in the doctrines of Christianity of deep moment, is at all likely to endow orthodox chairs in Harvard Divinity School as described by Dr. Clarke, when he has Yale and Princeton and Andover to go to. Few religious men like to see theological teaching converted into an exercise for sharpening the wits, or would like to see young men exposed to the influence of professors who took half a dozen different views of the Trinity and the Atonement.

5. If "the Divinity School be wholly apart from the academical department," how is it to help to arouse interest "in God and immortality" in the college at large, and why should the president make a special effort on its behalf, *quâ* president? Why not leave it wholly to the care of those who understand and value unsectarian theology? Why should the University charge itself with a piece of work which no two men would describe in the same way? Classes of two hundred are large, but there is no good reason why they should not soon reach five hundred with such an equipment as the college now has, and such a position towards the country at large as President Eliot's administration during the last ten years has created for it.—Ed. Nation.]

Notes.

S. C. GRIGGS & CO., Chicago, have in press 'Summer Savory,' by Benjamin F. Taylor; 'Somebody's Ned,' a novel by a Chicago author; 'A New Method for the Study of English Literature,' by Louise Maertz; and 'Clinical Lectures,' from the French of P. Jousset.——G. P. Putnam's Sons will shortly issue a rejoinder to Mr. Mallock's 'Is Life Worth Living?' "from the pen of a well-known writer."——R. Worthington will reprint for this market Sir George Campbell's 'White and Black' recently brought out by Chatto & Windus, London.——According to George P. Rowell & Co.'s *American Newspaper Directory* for July there has been an increase in the number of newspapers in the United States during the half-year from 8,703 to 9,153. Suspensions have been fewer than for several years during the corresponding period.——We are informed that Miss Emily F. Wheeler, formerly of the Northwestern University, who has just returned from a two years' residence in Europe, has been elected to the chair of French and Belles-Lettres in the Cincinnati Wesleyan College.——'Summer Vacations at Moosehead Lake and Vicinity' is published by A. Williams & Co., of Boston, for the author, Lucius L. Hubbard, who manages, in 145 pages, indexed and prettily illustrated with photographic views, to provide tourists of the usual summer variety, and also more advanced enthusiasts, with a practical and well-edited guide-book.——We learn from the *Athenæum* that a new English version of 'Don Quixote' is about to be brought out by C. Kegan Paul & Co.; also that the following English works are in preparation: Dr. Krause's 'Life of Dr. Erasmus Darwin,' translated with a preliminary notice by his grandson, Mr. Charles Darwin; a 'Memoir of Edward and Catherine Stanley,' by their son, the Dean of Westminster; 'Rheinsberg; or, the Student Life of Frederic the Great,' by Andrew Hamilton; 'Nile Gleanings,' by H. Villiers-Stuart; and 'Japanese Letters,' by Miss Bird, who rode 700 miles on horseback through the remoter regions of Japan.——Sime's 'Lessing,' reprinted in its original English by Brockhaus, at Leipzig, comes to us in two neat volumes from L. W. Schmidt, 24 Barclay Street. The form not less than the contents well fits them for the pocket or the satchel of the vacation tourist. They might be surreptitiously read even at Manhattan Beach.——Authorized German versions of selections from the Morley series of 'English Men of Letters' are announced by Eduard Wartig's establishment, in Leipzig. Goldsmith, Defoe, and Thackeray will be first published. They should prove excellent aids to students in the practice of German composition.——Von Holtzendorff's 'Handbuch des deutschen Strafsprozessrechts' completes with Part 6 its first volume, and enters upon the second with Parts 1 and 2 (Berlin: Carl Habel).——A portrait of Mozart, after one drawn from life in 1787 by Doris Stock, has just been published by Franz Hanfstängl, in Munich. The features are more delicate than in the common pictures and busts of the great composer. The artist was an aunt of the poet Körner.——Mr. E. Maunde Thompson contributes to the *Academy* of July 19 a number of letters which form part of the correspondence between Lady Byron and Mrs. Leigh lately purchased for the British Museum. They form another and convincing chapter of the negative evidence brought forward since the publication of Mrs. Stowe's story, now happily forgotten.——The *Portfolio* for July (Mr. Bouton) contains, besides some not over-brilliant landscape etchings, a valuable fac-simile by the Armand Durand process of a horse by Paulus Potter, well exhibiting the large, candid style of the young etcher, who may be said to have exhausted the essentials of the art in the practice of the eighteen coppers he left. Munkácsy's painting is described, representing Milton and his daughters, a fine work soon to be added to the public collection of the Lenox Library in this city. A running notice of Stanfield is begun, replacing Mr. Hamerton's criticism on Goya, an unfortunate bit of journeywork which its writer should never have undertaken. It was written without sympathy, in confessed ignorance, and might be described as a version of Yriarte's "Life," with the mild English word "shocking!" placed in various faint inflections between the lines; and Goya is not an artist who should be "written up" merely to gratify a sense of outrage.

—Mr. Lalor's translation of the second volume of Von Holst's 'Verfassung und Demokratie,' reviewed by us some weeks ago (see the *Nation*, No. 715), has just been published in a handsome volume by Callaghan & Co. (Chicago). It does not appear as a second volume, but as an independent work—'The Constitutional and Political History of the United States, etc.; 1828-1846, Jackson's Administration—Annexation of Texas'; a chapter, as it were, of our national history published by itself. The translation is in general very accurate. No doubt there are here and there Germanisms and mistranslations; it would be strange if there were not. Whatever such defects may be found come from Mr. Lalor's over-anxiety to adhere to the very words and order of the original, lest by recasting or amplifying an expression he should do injustice to the original. We think he might safely have allowed himself somewhat greater freedom. For example (p. 106), "a politically *viable* people" (*lebensfähig*); some such paraphrase as "a people capable of political life" would have been better and more idiomatic. So "a constitutional source" (p. 273). Of errors of translation we find two on page 202. "*Für denselben*" (of a vote) is rendered "on the question," instead of "for the proposition." And below: "Benton's declaration that the good services of the State banks *should have been* secured," etc. (*man . . . habe gewinnen müssen*, where the translation would, we think, require *hätte*). What Benton said ('Debates,' xiii. 403) was: "The administration *could not* cut loose from the local banks then: they were allies against the Bank of the United States, and as such *had to be* saved." (The italics are ours.) We wish Mr. Lalor had provided the book with what it needs so sadly—an index, or, at least, a practicable table of contents.

—We have received a number of additional communications, from both sides in the late war, on the subject of army breastplates, but it is quite useless to print any more. Our attention has been directed to specimen No. 4,654, in the Army Medical Museum at Washington, classified as XXVII. B. I., and described in the catalogue as "An iron breastplate . . . taken from the body of a rebel officer killed at Gettysburg, 3d July, 1863." Only one correspondent, a Confederate officer, confirms General Taylor's allegation about the strapping of Federal cavalrymen to their saddles, but his testimony is not conclusive, for he only says: "I never saw an instance of it, but I have heard the statement made so circumstantially and by persons of such character that I could not doubt its truth," and adds that this was in the early period of the war. More to the point is the surmise of a Federal officer, who writes us as follows:

"The story of cavalry strapped to their horses is too absurd for belief, and cannot be worthy of serious denial. General Taylor must, however, have had something beyond sheer fiction in his mind when he wrote the paragraph. Is it not possible that some of the troopers had adopted the fashion, not uncommon later, and derived, I believe, from the Mexicans, of strapping the *scabbard* to the saddle, thus occasioning the delay of unbuckling when called to surrender their arms? This is a mere suggestion. But strapped scabbards are not unusual, and they may be the foundation in memory of the myth which has become curiously magnified and distorted in passing through General Taylor's brain."

MALDEN PUBLIC LIBRARY

—The report to Governor Hartranft of Mr. Joseph D. Weeks, Special Commissioner of the State of Pennsylvania, upon the practical operation of arbitration in settling difficulties between employers and employed in England is recently published. Mr. Weeks appears to have made a thorough study of his problem, and a careful examination of what statistics he could get during his English visit. His report gives in brief space the history and practical workings of industrial arbitration in England, describing the different systems, such as those of Nottingham and Wolverhampton, and their success or failure, with impartiality; and its conclusion is strongly in favor of the principle discussed. That it is "infinitely to be preferred" to the method of strikes is scarcely, Mr. Weeks thinks, "a subject of argument." The one method he calls that of reason, the other that of brute force. Still, he acknowledges that arbitration is not a "wonder-worker," that it is "used by men that are extremely selfish," and that "for these reasons it will fail to accomplish all that is expected." Indeed, Mr. Weeks's deductions are more comprehensive than specific and distinct, perhaps, but this does not touch the value of the record of facts from which he makes them. The historical part of his report it would be a good thing for every trades-union inwardly to digest.

—Richard Wagner contributes to the August number of the *North American Review* an article entitled "The Work and Mission of My Life." Whoever reads it with the idea of learning something on this interesting subject will certainly be disappointed. The composer of the "Meistersinger" and of the "Nibelungen" might well have saved himself the trouble of telling the world what he intended by his music, what want he felt himself called upon to supply. Those who wish to know something about his "work and mission" will find all that can be known in a careful study of his operas, beginning with "Rienzi," the work of his immature youth, following him through his transition period, in "Tannhäuser," and finally arriving at the glorious perfection of the "Meistersinger" and the "Ring of the Nibelungen"; and any one who cannot recognize the creative genius in these noble monuments will certainly be more bewildered and confused than before by the string of stilted, pompous, and pedantic phrases that compose the article in the *North American Review*. Wagner has imposed his views of his own work upon the Germans in nine stout octavo volumes. It seemed almost an impertinence towards a highly cultivated public to tell them that they must understand his works in his own way, that otherwise they don't understand them at all, and are not worthy to listen to them. A work of art, whether a poem or an opera, a painting or a marble group, cannot be called perfect if it cannot be understood, on its own merits, by an intelligent and cultivated man, without the author's own explanation of what ideas and principles of art he intends to convey. Shakspere did not feel called upon to explain to his countrymen that there was an actual inward necessity for writing his "Hamlet," his "Lear," his "Coriolanus"; Beethoven confided to nobody what he meant by his Ninth Symphony; and Goethe left it for contemporary and later critics to sound the depths of his "Faust." An advanced state of musical culture and knowledge is necessary to understand and appreciate the "Meistersinger" and the "Nibelungen." This only proves the grandeur of the genius who wrote them, but does not call for the composer's intrusive interference. Wagner cannot resist the opportunity afforded by this article to have a fresh fling at the hated Jew. In speaking of Mendelssohn and Meyerbeer his aversion to the whole race is expressed in a sneer which may be called mild in comparison with the tone of his scandalous pamphlet, "Das Judenthum in der Musik," which appeared about ten years ago. In Robert Schumann, too, Wagner can see nothing but "a tasteful composer of little spirited and pleasant songs and pieces for the piano-forte"; yet Schumann's symphonies and other orchestral works, his chamber-music, and his pianoforte compositions approach nearer than any other composer's to the great creations which Beethoven left to the world. The style of Wagner's prose is heavy, dull, and ambiguous, unless we are here dealing with an incompetent translation, as may be suspected. The incredible self-conceit of the man is transparent in every line.

—A little more than a year ago a professorship of Anglo-Saxon was established at the University of Cambridge. There was already one at Oxford, but, singularly enough, only one man in all England to whom achievements in Anglo-Saxon philology gave a claim to either chair. This was Mr. Henry Sweet, an Oxford man, but not an Oxford professor. The new place at Cambridge, "the Elrington and Bosworth professorship of Anglo-Saxon," was filled by the appointment of the Rev. W. W. Skeat. Mr. Skeat's labors in fourteenth-century English are well known, but his mark is yet to be made in the older language. The nomination was still the best that Cambridge could make from its own body. Mr. Skeat is a man of great activity, and not far advanced in years, and there is hope that he may do something to set forward (were it not for Sweet, the word would have to be *set up*) the scientific study of the primitive form of the mother-tongue within its original domain. The first work undertaken by the new Cambridge professor is an 'Etymological Dictionary of the English Language' (Macmillan). The first quarter was issued within a year of his appointment, and the second is promised for November next, so that the book will be completed within about three years, if driven through with uniform speed. Now, there is no doubt that an etymological dictionary of our language is needed. The etymologies in Worcester, for instance, were compiled by a person or persons who had no qualification for the business. Those in the revised Webster were the work of a competent scholar, but they were abridged very materially at the instance of the publishers, who insisted that either the etymologies should be made shorter or every other one left out! Wedgewood does not stick firmly to historical ground, pursues phantoms of onomatopœia, is loose and arbitrary. A good etymological dictionary of English *in* English was a thing to desire. But it is not desirable that for this the Anglo-Saxon professor should be kept from his proper work even for three years. A translation of the new edition of Eduard Müller's dictionary would have answered nearly the same purposes, and might have been done by somebody else. Though Mr. Skeat may have accumulated interesting and valuable etymological notes (and a mere turning of the leaves shows a great deal of the sort), nevertheless, considering the shortness of life and the extent of the work in Anglo-Saxon which is to be done in England, and which cannot be done out of England, he should not have been drawn into making a dictionary for the sake of publishing them. Even what he describes as an important feature of the work, and perhaps regards as the most important—the attempt to mark approximately the date at which a word first appears in the language—is the very thing which cannot be done to any satisfaction within the time which Mr. Skeat has allowed himself; and this, moreover, is probably to be one of the principal objects, and the characteristic feature, of another work which the Clarendon Press announces, a dictionary of the English language founded on the materials collected by the Philological Society. But when we come to the work itself, all that is done seems to be well done. There is a good method, and the sources of information have been judiciously used. There is also much that is new, and entertaining too, in the notes on the history of words. Why certain words are left out is not clear—for example, barbecue, bosh, to calk (a horse), cricket (a footstool), demijohn. All these are in other etymological dictionaries, and this does not purport to be a selection. It is very much to be regretted that even courtesy to the ex-professor of Anglo-Saxon at Oxford should have allowed Mr. Skeat to speak of Earle's insane derivation of *bédridden* from "*bedrían*, to bewitch," as a "suggestion that can hardly be accepted"—a derivation which throws the root-accent back on the inseparable and necessarily unaccentable particle *be-*! This was a lapse on Mr. Earle's part which generosity should make us forget. If Mr. Skeat could fall into such a pit—but he could not—it would harrow us with fear and wonder.

—The Société de Géographie has just paid a remarkable tribute to the memory of the English navigator, Capt. James Cook. The séance held on February 14 was entirely devoted to celebrating the centennial anniversary of Cook's death. On this occasion there was exhibited a large collection of relics of Cook, and objects illustrating his voyages. The Bulletin of the Society for May gives the addresses made on this occasion by the president, Admiral de-la-Roncière-le-Noury, and MM. Huber, Hamy, and Varigny. Following this is a catalogue of the Exposition "à l'occasion du centenaire de la mort de Cook." The remainder of the Bulletin, some sixty pages, is occupied with a "Cartographie et bibliographie relatives à Cook," by James Jackson. Included in this bibliography are notices of ten charts and four hundred and seventeen separate publications of Cook's, or relating to him. The first on the list is "An Observation of an Eclipse of the Sun at the Island of New found land, August 5, 1766, by Mr. James Cook," published in the Philosophical Transactions of the Royal Society in 1767. The last is "Viajes y descubrimientos en el Polo Norte por E. Contreras de Diego, Madrid, 1879." Many of the titles have notes explanatory of their reference to the great navigator.

—Krones's 'Geschichte Oesterreichs' has just been brought to a completion by the publication of its fourth volume. It was originally an-

nounced to be finished in three volumes; but it would have been contrary to the nature of serial historical publications if this promise had been kept. Even the limits of four volumes are only realized by crowding the events of the eighty years from 1792 to 1870 into about a hundred pages. As an accurate and exhaustive treatise the work deserves all recognition, but it is exasperating even beyond the measure of German books in having absolutely no table of contents except for the individual books—an *Inhaltsübersicht* of half a page, for instance, for a "book" of nearly three hundred pages. When one wishes to look up some special point, and has found his place in this labyrinth, he will always find the subject treated fully and perspicuously, and in the light of the most recent scholarship. If we compare this history of Austria with that of the author's townsman, Dr. Mayer—Krones is professor in the University of Grätz, and Mayer in the *Realschule* of the same place—we should say in general that Krones's is designed for scholars, Mayer's for general readers. Mayer's two volumes are just about equal to one of Krones's; and, without being deficient in scholarship, his work makes no attempt to discuss minute and controverted points of history. It covers the ground much more proportionately, too, coming down fairly to the year 1873, and giving nearly one hundred and fifty pages to that latest period which its more voluminous rival crowds into about one hundred. Both books are well provided with genealogical tables and references to literature; neither of them, however, makes a practice of referring to authorities upon special points.

MacVEY NAPIER'S CORRESPONDENCE.*

IF some highly intellectual cook, some Ude or Vatel, had left behind him all the culinary correspondence that preceded his grand entertainments—had printed his appeals for salmon, his entreaties for *entremets*, his letters on lettuces, and had added the responses from all lands and climes—his work would have had an interest curiously like that of the delightful collection of letters here printed. After all, the process of victualling a castle or a palace is not very unlike that of keeping a review supplied with the needed nutriment. Through all Mr. Napier's most familiar letters the reader finds him always the same persistent literary purveyor, whose one great object is to secure with unfailing regularity the fit rations for the *Edinburgh*.

He was born April 11, 1776, and was educated at the universities of Edinburgh and Glasgow. In 1799 he became a member of the "Society of Writers to the Signet," and in 1805 was made librarian of that fraternity of lawyers. In 1814 he was appointed editor of the "Supplement to the Encyclopædia Britannica"; in 1824 was made first professor of conveyancing in the University of Edinburgh; and in 1829 was selected by Lord Jeffrey as his successor in the editorship of the *Edinburgh Review*. This office—then the most influential position in British literature—he retained until his death, which occurred February 11, 1847. For more than thirty years, in these successive editorships, he was in confidential correspondence with the leading literary men of his nation, and selections from his letters and theirs make up this volume of more than five hundred pages. The persons who appear the most frequently are Jeffrey, Brougham, Macaulay, McCulloch, and Sir James Stephen. There are also letters, though less abundant, from Scott, Hazlitt, Moore, Godwin, Gifford, Carlyle, the two Mills, Bulwer, Campbell, Wilson, Senior, Dickens, Thackeray, Buller, Palmerston, Lord John Russell, Lewes, and Mrs. Austin. Mingled with these letters are many from contributors whose support was most important to the *Review*, in those days, but whose very names are almost forgotten. How many Americans could lay their hands on their hearts and assert that they ever heard of John Allen or William Empson?

In dealing with all these it was the editor's duty to plan, propose, oppose, criticise, encourage, refuse, mediate; to soothe jealousies and reconcile feuds; to deal with a class proverbially irritable, and yet avoid irritation; to win new contributors, and yet keep old ones; to maintain *esprit de corps*, and yet have his own way. In all this he certainly had a great success. When we consider that Lord Brougham had maintained such a right of ownership in the *Edinburgh Review* that Jeffrey had been accustomed to beg new contributors not to mention that they wrote for it lest they should offend this touchy monopolist (p. 3); when we find McCulloch getting into a rage (p. 76) because the editor admits a single paper on political economy from anybody but himself,—we must recognize the rare qualities needed to keep house for so very unreasonable a family.

It is hard to tell whether one is more amused in this book with what the writers say of one another or with what they think of themselves. Tom Moore frankly avows that if he has a strong point it is theology, and he delights to announce that he is habitually termed in Ireland "Defender of the Faith and Father of the Hibernian Church" (pp. 115, 137). Macaulay, usually very good-natured in his tone, describes Wilson as a "grog-drinking, cock-fighting, cudgel-playing Professor of Moral Philosophy"; and Senior thinks the same Christopher North "one of the very worst of the clever bad writers who infest our literature; full of bombast, affectation, conceit—in short, of all the *vitia tristia* as well as *dulcia*"; and closes with saying, "I had almost as soon try to read Carlyle or Coleridge" (p. 424).

It is singular to find in a man of Carlyle's superiority so much less recognition of his own weak points than in Macaulay. Carlyle's strongest conviction is that "at all events one can and should ever *speak quietly;* loud, hysterical vehemence, foaming and hissing, least of all beseems him that is convinced, and not only *supposes*, but *knows*" (p. 97). Yet it never seems to occur to him that he here condemns himself, whereas Macaulay constantly recognizes by his own self-criticism the precise faults that posterity discovers in his essays. He thinks his paper on Burleigh "a strange rambling performance" that ought to be put into the fire (p. 127); says that he has "never written a page of criticism on poetry or the fine arts" which he would not "burn if he had the power" (p. 257); that his "Frederic the Great" does not go deep (p. 381), and that the editor and the public will probably think "Addison" a failure (p. 429); that he "will not found any pretensions to be a classic" on his review articles (p. 394); that he is far from putting himself on a level with Mackintosh or Dugald Stewart (p. 410); that his essay on Moore's 'Byron' is "wretchedly bad" (p. 112), and that some of his articles are "viciously florid" (p. 77) and passages in others "indecorously violent" (p. 66). There are few among his published essays which he reads with satisfaction, but happily those few are the latest (p. 428). Certainly the whole impression of Macaulay in these letters is most agreeable, and he shows the greatest good-nature that is possible for an author when he more than once authorizes Napier to erase from his essays anything that might seem too personal, adding: "I had much rather that in a case of private provocation you should judge for me than that I should judge for myself" (p. 100).

It surprises one to find how frankly Macaulay was discussed by his contemporaries, and how many of the later opinions of critics were anticipated while the essays were yet fresh. Sir James Stephen, to be sure, says: "I can forgive him anything, and am violently tempted to admire even his faults" (p. 391); but see the vehemence of Lord Cockburn's utterance in 1844: "Though I incur your contempt by the sentiment, I think the brilliancy of his style, especially on historical subjects, the worst thing about him. Delighting, as I always do, in his thoughts, views, and knowledge, I feel too often compelled to curse and roar at his words, and the structure of his composition. As a corrupter of style he is more dangerous to the young than Gibbon. His seductive powers greater, his defects worse. But still I rejoice in all his deliveries" (p. 474). On the other hand, Carlyle writes in 1832: "Macaulay is always spirited and emphatic, worth reading even on a worn-out matter" (p. 129); while Macaulay says in the same year: "As to Carlyle, he might as well write in Irving's unknown tongue at once" (p. 122).

Lord Brougham, writhing under personal unpopularity, succeeds in convincing himself that Macaulay is more unpopular still, calls him pityingly "Poor Tom," and says that "he is absolutely renowned in society as the greatest bore that ever yet appeared." "I have seen people," he continues, "come in from Holland House breathless and knocked up, and able to say nothing but 'Oh! dear, oh! mercy.' What's the matter? being asked, 'Oh! Macaulay.' Then every one says: 'That accounts for it; you're lucky to be alive,'" etc. (p. 403). He declares in the same letter that Macaulay "is always upon stilts, never able to say the plainest thing in a plain way, . . . half poetry, half novel, no argument, no narrative—fifty little periods in a paragraph, fifty little sparkling points in a sentence." And, after all, the article thus sharply condemned turned out not to be Macaulay's, but Stephen's, and all the wrath had to be retracted in the very next letter! On the other hand, Macaulay more composedly sets down Brougham as "all but mad," and says that "the stories which wander about town as to his sayings and doings are almost incredible, yet the strangest of them are true" (p. 429).

The correspondence most essential to the value of the book—that indeed which, in spite of fragmentary material, gives to the whole a continuous interest—is the series of letters to and from Jeffrey. To him

* 'Selections from the Correspondence of the late MacVey Napier, Esq. Edited by his Son, MacVey Napier.' London and New York: Macmillan & Co. 1879.

alone, as predecessor and confidential adviser, could Napier write with entire freedom, and the answering letters supply a continuous commentary on all that occurs. Jeffrey is informally that functionary often wished for in literature—a reviewer of reviews—for he furnishes a careful criticism on each issue as it appears; and he is always ready to be called on for counsel, when it is necessary to mediate between Watt and Brewster, to repress Brougham or to curtail Macaulay. His prophecies as to particular contributors may not always have found fulfilment in history, as where he has hopes of Carlyle's one day becoming an "elegant" writer; but he has admirable sense, and his criticisms on the whole hit the mark better than those of anybody else. At any rate his letters constantly supply gaps left by those of others, or give the same facts at a wholly different angle. Indeed, this series of utterances from different persons often seems like the various versions of the same story in Browning's "The Ring and the Book," or like the children's play of "Consequences"—what he said, what she said, and what the world said. In these pages we hear first from some contributor, punctual and unconscious, simply doing what has been asked; then from another contributor, very indignant; then from the sagacious adviser, suggesting the discreet course; then from the editor, bland, conciliatory, final. *Tantæne cœlestibus iræ?* asks the innocent reader, when put behind the scenes of this battle of the gods. Thus, Sir David Brewster is set to review Whewell's 'Philosophy of Inductive Sciences,' having previously reviewed another book by the same author, and having frankly expressed to Napier the opinion that Whewell was "a mere bookmaker" who displayed the most deplorable ignorance (p. 193). Naturally, the criticism when it finally appears (January, 1872) proves anything but flattering, and as it occupies the first place in the number, it attracts much attention. Jeffrey at once complains of it as "a great deal too personal and bitter" (p. 371); Macaulay thinks it prompted by "every sort of animosity, personal animosity, national animosity, academical animosity" (p. 377). These frank criticisms are duly transmitted to the unlucky reviewer, who declares that he wrote "without soreness or irritation," that Lord Brougham and Sir John Barrow endorse his review, and that it was written with the knowledge that Arago and Biot would read it. Then Macaulay writes, partly retracting and admitting that Brewster's view may be the true one after all. But how little did the innocent readers of the *Edinburgh*, accepting all its verdicts as the solemn award of some unseen court of infallibles, know how the dread tribunal was divided against itself, and what hard names the judges were calling one another through the post-office!

Literary history as yet records but few authors who positively enjoyed being cut to pieces in a leading quarterly; and the editor is pretty sure to be like that British drummer who complained of the unreasonableness manifested by the soldiers whom he had to flog, inasmuch as whether he hit high or low there was no such thing as pleasing them. Mr. Napier's tact seldom fails, however, and seems to have fairly deserted him only once, when he wrote to Leigh Hunt that he should like to have "a gentlemanlike article from him." "Between ourselves," remonstrates the kindly Macaulay, "the word *gentlemanlike* was used in rather a harsh way; and considering that poor Hunt has more than once been attacked for really ungentlemanlike conduct, and is naturally sore on that point, I am not much surprised that he was hurt" (p. 366). It took a long letter from Macaulay to make the necessary explanations; then Napier wrote "a most generous and amiable letter," by which the wounded poet was much touched and "more than satisfied." Whether Macaulay was the gainer by his intervention may be doubted, for it appears that just a year after, on the publication of his "Roman Ballads," Leigh Hunt wrote to him to lament that these ballads were no better, and to ask for a small pecuniary loan. Macaulay says that he should have refused the loan had it been accompanied by praises, but that he gladly sent Hunt a few guineas for his frankness (p. 411). If plain-speaking among authors brings in the market a reward thus high, this volume may well have an ample retail-price set upon it, for it is rare to find between two covers so many instances of that particular virtue.

THE MEANING OF LIFE.*

THE question of the value of life, according to Mr. Mallock, conveys to different minds such different meanings that he finds it necessary at the outset to define in precise terms the exact nature of the question as he undertakes to answer it. When he asks, "Is life worth living?" he is not enquiring "whether its balance of pains is necessarily and always in excess of its balance of pleasures," nor "whether any one has been, or whether any one is, happy," but *whether life ought to be found worth living by all?* For this, he says, is what it is pronounced to be when as a general truth it is said to be "worth living"; when it is said to be sacred, or solemn, or earnest, or significant. The meaning of all such language is that those who hold it believe life to have some deep, inherent worth of its own "beyond what it can acquire or lose by the caprice of circumstance," health, or riches, or success—an essential value which it can lose by no act but our own. This superior value, of course, life has derived from religion. It is belief in the existence of God, as a rewarder of good and punisher of evil, and in the continuation of existence after death, which gives life on earth its overwhelming importance and meaning. Whatever substitutes for these beliefs may be suggested or invented for the future, it is not open to dispute that in the past the sacredness of life has rested, as the very word implies, upon a purely religious basis. Now, the progress of science has, in the opinion of persons whom Mr. Mallock somewhat vaguely calls "Positivists" (by this word he declares in the prefatory note that he does not refer to the Comtists, but to "the whole scientific school"), eliminated the supernatural from life, and the question therefore arises, Whether from what is left we can extract any value for life at all? The Positive thinkers (such men as Huxley and Tyndall, for instance) "have taken everything away from life that to wise men hitherto has seemed to redeem it from vanity," and they now have to prove to us that they have not left it vain. For the positivists are entirely unwilling to face the dilemma in which science has placed them, and throw religion overboard altogether. They wish to retain the moral advantages of the supernatural without subjecting themselves to its intellectual fetters, and it is therefore incumbent upon them to explain how, if they remove the intellectual support on which the intrinsic value of life has always been rested, they can still maintain that value to have a real existence. Mr. Mallock quotes "the most popular English exponent of the new school"—probably Mr. Frederic Harrison—as admitting "to the full all that has ever been said about the dignity of man's moral and spiritual life," and points out that this dignity must, if positivism be true, be found "in the very place where hitherto it has been thought to be conspicuous by its absence"—"in this earthly life, this life between the cradle and the grave." Where, therefore, do they find it? We have not space to go through in detail the various answers which Mr. Mallock suggests as possible for positivists to make. They all agree that the dignity of life, whatever else it may be, is essentially moral in character. Life, that is, contains some special prize to which morality is the only road. But the prize must, if it has any existence, be describable, and its value verifiable by positive methods. But such positivists as J. S. Mill, George Eliot, and Professor Huxley have never been able to describe the prize or verify its value. The nearest approach they have made to it is to imagine the advancement of the general happiness of the race to be the goal which makes life worth living. Impassioned benevolence is to be the motive power of all the positivist's ethical machinery, and the spring of this is to be a belief that such benevolence will tend, in the long run, to make this human life of ours something better and higher and purer. But this is to the last degree vague, and can hardly be said to give life a meaning or importance to any but a very few highly educated and refined persons.

The positivists, then, do not succeed in giving to life, after they have taken from it its religious meaning, any new value. It remains nothing more nor less than human life, without any religious basis, and without any other moral basis than will be furnished by the common sense and prudence of mankind. There are, of course, many moral rules which would be enforced by public opinion, religion or no religion; but in the absence of religion they would rest on nothing higher than utility. We are threatened, therefore, with a terrible future, the like of which has never before been thought of—the disappearance of religion from the earth; and not only of religion, but of all the thousand hopes and aspirations inspired by religion, and there remains nothing but dull empty life. We must refer the reader to the book itself for the very striking and disagreeable picture which Mr. Mallock draws of the world as it is to be, after the positivists have had full swing for a certain time.

If Mr. Mallock had closed his book here it would have been a most effective exposure of the pretensions of positivism to furnish any guide for the conduct of life, or any substitute for religion; and this we think would have been a practical benefit to the world at large, and to the positivists in particular, for whatever claims to public respect they have established have been the claims of a school devoted to exact thought and to truth. A positivist (we use the term in the sense in which Mr. Mallock

* 'Is Life worth Living? By William Hurrell Mallock.' New York: G. P. Putnam's Sons. 1879.

uses it) is bound by the laws of his philosophy to admit nothing to have a real existence except the phenomena of the natural world. That there may be realities outside of this he neither affirms nor denies, but his refusal to do either is equivalent for practical purposes to a denial. The position of the positivist is, therefore, of all those which the enemies of religion have taken from the beginning of the world the hardest to attack. He does not dispute the existence of God or of a future life, nor does he even question the possibility of a revelation. He merely says that we have no knowledge of anything as yet except the unalterable course of nature, which tells us nothing of God, or of a future life, or of revelation. It is difficult to see how this purely agnostic position can be attacked in any way. It is admitted on all hands that the degree of proof which can be produced in support of any of the tenets of a natural theism is not greater than a high degree of probability, and all that positivists say on the subject is that a high degree of probability is not proof in the sense in which we apply the term in ordinary life, and that while they have no sort of objection to any one worshipping a probable God, or indulging in hopes of a possible future life, they themselves do not feel called upon to join in the devotion or share the hope. But, as Mr. Mallock shows, unfortunately for their reputation for consistency, they have not been content with leaving the mystery of life unexplained. Feeling, as every one, philosopher or not, feels in his heart, that life contemplated as a riddle, of which the key is fatally lost, is not a spectacle calculated to produce content or happiness; feeling the necessity of something outside of life as a standard by which life may be tested, of a lamp by which it may be lighted, of a consolation by which it may be supported, they have endeavored to find within the limits of their philosophy something corresponding to religion, and they have failed. On their own showing, religion belongs to a world with which they have nothing to do; and for them after all to put on priestly robes and volunteer the invention of a new superstition, is an impertinence which we instinctively resent. We have no space to examine in detail the arguments by which Mr. Mallock shows "the utter hollowness of that vague faith in progress, and the glorious prospects that lie before humanity, on which the Positive school at present so much rely, and about which so much is said." His seventh chapter, on "The Superstition of Positivism," is a masterly criticism of those vague emotional substitutes for the Positive tenets of Christianity with which every one is familiar in the writings of Tyndall, George Eliot, and other positive thinkers. As an exposure of the fallacies of this school the whole volume cannot be too highly commended. But Mr. Mallock has proposed to himself an undertaking vastly greater than an exposure of the fallacies of positivism. His book is not only an attack on positivism; it is an appeal in favor of Holy Church. Although we believe the author still professes an attitude of scepticism, his book is, as distinctly as it is possible for a book to be, a Catholic tract, and the last half of it is devoted to a clever résumé of arguments by which he thinks the Catholic faith is supported. Most of this is such familiar ground that we shall not tax our readers' patience by going over it in detail. First, we have arguments for the existence of a God; and, theism once established, the probabilities of a revelation are raised to a very high point. But a revelation once granted, it is quite clear that it is not to be found in the Bible, but in the Church, an inspired body which has had a continuous existence since the revelation of the true religion. All this part of the book forms one of the best Catholic tracts that we have ever seen, and Leo XIII. is much to be congratulated upon being able to number among English sceptics one whose method of reasoning is so little affected by his scepticism. But it does not to our minds strengthen the book, the merit of which lies in its attack on positivism. As to this, however, in the interest of fair argument we desire to offer one or two observations. We have already said that, considered as an exposure of Positive *superstition*, it is very strong. As an attack on Positive morality, however, it goes too far.

Mr. Mallock's argument is in the nature of a *reductio ad absurdum*. The positivist takes away the religious basis of life, and what does he offer instead? Everything that he proposes is in turn shown by Mr. Mallock to be out of the question; and, therefore, he leaves it to be inferred that there must be some religious basis for life, and thus there can be nothing in positivism. It does not appear, however, to have occurred to Mr. Mallock that the sentiment of *altruism*, and the duty of sacrificing one's self for one's neighbor, is simply one branch of the Christian law of life, the other having been left out from the Positive creed because its affirmation presupposes a confession of theistic faith. What is Professor Clifford's "band-work" but an awkward expression of the idea that it is a duty to love one's neighbor as one's self? But if the consequences of altruism are absurd when altruism is put forward as a guide for life by a positivist, they must be equally absurd when put forward by a Christian. *Ergo*, Christian morality is absurd. And is it not so? Does not the following description by Mr. Mallock of the positivist's ideal world apply with quite as great satirical force to that held in view by Christians?

"They live in a world of their own imagining, in which all the rules of this world are turned upside down. There the defeated candidate in an election would be radiant at his rival's victory. When a will was read the anxiety of each relative would be that he or she should be excluded in favor of the others; or, more probably still, that they should be all excluded in favor of a hospital. Two rivals in love with the same woman would be each anxious that his own suit might be thwarted."

To every man of the world—and it is to men of the world to which these arguments are addressed—it is quite clear that unselfishness as a guide to the conduct of life involves an inversion of most of the ordinary rules of conduct. We cannot see that a divine sanction alters this fact. Whether it is God or Professor Huxley who tells us that it is our duty to seek others' happiness rather than our own, it is equally true that it is impossible to imagine a world in which the command is acted upon to such an extent that a desire for the happiness of others has become a primary motive. But surely a rule that we never expect to see the world conform to is no practical guide for life. We think, therefore, that it may be fairly objected to Mr. Mallock's *reductio ad absurdum* of Positive morality that it is also a *reductio ad absurdum* of Christian morality. Mr. Mallock tries to get over this difficulty by the following argument:

"The positivists ask the Christians how they expect to enjoy themselves in heaven. The Christians may, with far more force, ask the positivists how they expect to enjoy themselves on earth. For the Christians' heaven being *ex hypothesi* an unknown world, they do not stultify their expectations from being unable to describe them. On the contrary, it is a part of their faith that they are indescribable. But the positivists' heaven is altogether in this world, and no mystical faith has any place in their system."

But this does not cover the ground. The Christian heaven may be indescribable, but the Christian rules of morality are not so; they are identical with those of positivism. Now, Mr. Mallock makes very merry over "altruism" in the Positive system, while in that of Christianity he sees nothing absurd. But it is unlikely that a just God would reveal a religion a part of which is a moral system that is, as Mr. Mallock shows, on its face absurd; *ergo*, the Christian religion is an imposture. Such is the conclusion to which Mr. Mallock's argument forces us. But, after all, no *reductio ad absurdum* of its moral system can prove or disprove the truth of the positivist philosophy. The only question as to this is whether it is true or not; and though Mr. Mallock makes a very effective plea against what he supposes to be the fallacy that truth is an end in itself, it is certainly not open to those who take part in the discussions of philosophy to maintain that error is an end in itself. Both the positivists and Mr. Mallock propose to themselves the same end, the investigation of the facts of life. They reach one conclusion, he another. The only possible question as to the different results must be, Which is true? This was the only question at the beginning, and it must be the only question at the end. That remote consequences deduced from the conclusion arrived at in either case seem absurd, does not disprove the truth of the conclusion.

Mr. Mallock cites for another purpose a passage from John Stuart Mill's autobiography, which may be used as an illustration of the commission by a positivist of a fault which generally disfigures arguments as to natural and revealed religion. According to Mill's account, one of the most conclusive arguments to his mind against the existence of the Christian God was the supposed existence of hell. The possibility of an all-wise and all-good creator condemning his creatures to endless torments seemed to him inconsistent with his supposed attributes. But if the existence of God can be proved by arguments which commend themselves to our reason, we cannot get rid of him by proving that he does what we could not understand an enlightened human judge doing under the circumstances. When it is said that God is all-wise, all-good, and all-powerful, we do not understand that the epithets are used in their ordinary sense, but that the attributes of the Divinity in all respects surpass and defy the understanding. Therefore, the fact of the existence of a superhuman being once proved, it is a sheer impossibility by ordinary human arguments to disprove the possibility of his having made a hell. In a somewhat similar way, if an apparently faultless chain of reasoning leads us to the conclusion that we cannot know whether a God exists or not, it is idle to ask us after that to explain what will happen to life if this agnostic condition becomes general. Mr. Mallock's book is full of arguments to show that, if reli-

gion is not true, then is the human race indeed most miserable, and that the system of positivism is an absurd one ; but what he calls the agnostic major premise—*i. e.*, "that we can be certain of nothing that we cannot support by proof"—he does not seem to us to meet. It is no reply to this to show that Tyndall shirks the question too.

History of Medicine in New Jersey, and of its Medical Men, from the Settlement of the Province to A.D. 1800. By Stephen Wickes, A.M., M.D. (Newark : Martin R. Dennis & Co. 1879.)—This work, like the title, divides itself into two parts, the latter, and by far the larger, comprehending some 300 biographical sketches of New Jersey practitioners down to the beginning of the present century. The first part is much less restricted than the title would lead one to suppose, for the author, in his history of medicine, includes all the colonies in his survey. He shows how in the beginning the practice of the healing art was chiefly in the care of the clergy, and that they were the authors of some of the earliest medical papers printed in America. In an appendix he reprints a rare pamphlet by the Rev. Jonathan Dickinson on Throat Distemper (Boston, 1740). In the most sparsely settled regions the physicking was chiefly done by women, and everywhere the midwife ruled over her special department. Dr. Wickes states that obstetrics were first taught in a medical school at the University of Edinburgh in 1726, when instruction was confined solely to midwives ; and not till thirty years afterwards were classes formed for male students. "The profession of an accoucheur was esteemed very unbecoming a gentleman, and it was only in the most extreme cases that his advice or aid was sought." The first man midwife recorded in the colonies was a New York physician who died in 1745. To proclaim one's self such "was deemed a scandal to some delicate ears, and Mrs. Grany Brown, with her fees of two and three dollars, was still deemed the choice of all who thought women should be modest." The early obstetrician was not recognized as the peer of the regular physician.

Under the head of Medical Practice we read that in 1718 the method then prevailing in New England was waggishly yet not untruly described as "very uniform—bleeding, vomiting, blistering, purging, anodynes, etc. If the illness continued, there was repetendi and finally murderandi. Nature was never to be consulted or allowed to have any concern in the affair." As for systems, Sydenham's came first; in 1760 that of Boerhaave (the so-called humoral pathology) "governed the practice of every physician in Philadelphia," and doubtless elsewhere; and from 1783 to the close of the century Cullen's 'Practice of Physic' was the approved text-book. A Swedish traveller, Kalm, in 1747–49 noticed that

"Europeans in North America, whether born in Sweden, England, Germany, or Holland, or in America of European parents, always lost their teeth sooner than common. This was especially true of women. The Indians, as he had observed, always had fine teeth. It did not, therefore, arise from the climate. He ascribed it to the use of tea, and to the custom of eating and drinking everything hot. The same effect was produced upon the Indian women after they had become addicted to the use of tea."

The throat distemper, identical with diphtheria, began in May, 1735, "at Kingston, an inland town in New Hampshire, situated in a low plain." Yellow fever is believed to antedate the arrival of the Pilgrims, and to have almost annihilated the coast natives of New England in 1618. As there was no intercourse then with the West Indies, this is regarded as proof of the origin of yellow fever in this country between the 41st and 44th degrees of latitude. In 1798 "it prevailed to some extent on the shores of the Delaware in New Jersey, where it seemed to find its origin."

The New Jersey Medical Society was organized July 23, 1766, and was the first provincial or State society in America. Dr. Wickes collects the scattered notices of other even earlier associations of medical men in the various colonies. One of the first acts of the New Jersey Society was to make a rule that no student should be taken as an apprentice by any of the members "unless he has a competent knowledge of Latin, and some initiation in the Greek." It strove still further to elevate the profession by procuring the enactment of a law providing for the license of physicians by judges of the Supreme Court, after an examination before a board of medical men, who were usually appointed by the Society. The lead taken by Philadelphia in the founding of medical schools caused students from New Jersey to seek instruction there during the last and for the greater part of the present century ; even now, all from West Jersey and most of those from East Jersey receive their degrees in Philadelphia. The French wars of 1758–66 were of great advantage to the medical profession, both from the opportunities for practice and from association with the more cultivated British army surgeons.

The biographical sketches in this volume are somewhat proportioned in length to the author's ability to supplement notices already published in the county medical histories, in which New Jersey is so rich. Sometimes they are reduced to a simple copy of an epitaph, but the proverbial insincerity of such records is not emulated by Dr. Wickes, who frankly tells the truth about several hard characters, forgers, drunkards, and debauchees. If space permitted we might borrow a number of amusing anecdotes with which these histories are enlivened. What is most remarkable is the heredity of the profession in many instances. Take the case of the Blachlys. Dr. Stephen L. Blachly, still living in Pennsylvania, says :

"An old friend and neighbor of mine informed me that my great-grandfather and my grandfather bled him when he was about sixteen, while they were in New Jersey. When a young man he removed to Pennsylvania and settled near my brother [*qu.* father ? also a M.D.], and he bled him; later in life I bled him ; and in advanced life, being of plethoric habit, my son also bled him ; making five successive generations in the family who bled the same subject, with marked relief, and he lived to be eighty-five years old."

Besides these, Dr. Wickes chronicles the Budds, Elmers, and Piersons, four generations each ; the Burnetts, Campfields, and Hornblowers, three each. We must not forget to mention the ancestor of Dr. Hezekiah Stites, John Stites, one of the original emigrants to New England, settled at Hempstead, Long Island, who is said to have "lived to the extraordinary age of one hundred and twenty-two or one hundred and twenty-three years, and when upwards of one hundred was able to walk forty miles a day." On pp. 130–31, there is a confusion between Dr. Assheton and his father (both dying at the age of thirty-seven, the latter July 9, 1773, the former January 4, 1774), which we cannot reduce to order. On page 19, "*Si*riodendron tulipifera" is printed for "Liriodendron," and these are almost the only errors we have detected in this laboriously compiled and elegantly-printed book, for which the thanks, not only of physicians but of the general reader, must be heartily given to Dr. Wickes.

Gazette des Beaux-Arts. Deuxième Série. Tome xix. (New York : J. W. Bouton. 1879.)—When this volume, just concluded by the June number, began, there were two subjects in hand and not yet done with—viz., the examination by M. Charles Éphrussi of Albert Dürer's drawings, scattered among the various museums and private collections of Europe, and "Diane de Poitiers and her Taste in the Fine Arts," by M. Anatole de Montaiglon. The latter series of papers is completed by a very long one in the February number. Some late explorations among the ruins of Diane's famous château of Anet had brought to light interesting constructions which had been forgotten, and statues and sculptured ornaments long since lost had been identified at the Louvre, at the Church of the Sorbonne, and in the neighborhood of the château ; so that the vast and princely building, one of the wonders of the Renaissance, the central part of whose principal front is set up as a model in the court of the École des Beaux-Arts, comes up for a fresh discussion, which, with its illustrations, forms a useful appendix to the great monograph of M. Rodolphe Pfnor. But it is not only the stately residence of the famous courtesan that is treated of : her library with its superb bindings ; the utensils and fittings of her household ; her personal adornments, and the allegorical and enigmatical designs, in the taste of the time, made to her honor and glory—the examination of all these goes to the elucidation of a curious epoch in the history of art. What Madame de Pompadour was to a later time and a degraded art, was "Madame la Grand-Sénéchale" to the French Renaissance.

M. Éphrussi's study of Dürer is a long one ; the eighth paper is in the January number, and the ninth, in the March number, completes it. It is rather a sketch of Dürer's life than a critical or comparative study ; but an immense number of his drawings are named in their chronological order, and many of them are reproduced. It is a valuable treatise, in the historical sense, and forms one more life of Dürer, and one taken from a new point of view.

One of the most voluminous treatises in this volume is M. Yriarte's "Les Arts à la Cour des Malatesta au XVe Siècle. It is completed in three numbers. It seems more serious and careful than the big parlor-table books which have come from the author of late years; and, although we cannot advise any reader to take M. Yriarte for a critical authority, and although he is far too much inclined to take for granted everything that a famous artist does or a famous epoch produces, yet this examination into the history and character of buildings seldom visited,

bas-reliefs almost unknown, medals dear to a few collectors but unheard of by most students, cannot but have its value. The author's historical researches seem, moreover, to have been extensive and serious. Nor does this essay complete the list of papers devoted to the French Renaissance; M. Ferdinand de Lasteyrie, of the Institute, whose death last May at the age of seventy called attention to his consistent protest against the Second Empire from the *Coup d'état* to the end, had contributed the first part of a paper on the Constable de Montmorency and his patronage of the arts, a valuable essay which we fear never to see completed.

M. François Lenormand contributes to the February and April numbers a very interesting article on the Schliemann discoveries at Mycenæ, in which he refuses to accept the enthusiastic theory or rather assumption of the discoverer of the royal tombs in the Acropolis. Some valuable illustrations, not borrowed from Dr. Schliemann's book but from photographs specially taken, add to the value of this review. Other reviews of books on art are limited to one paper each; thus, the editor-in-chief, M. Louis Gonse, notices Adeline's 'Sculptures Grotesques et Symboliques,' and Vidal's 'Les Instruments à archet'; M. Eugène Müntz, librarian of the École des Beaux-Arts, reviews the magnificent work of M. Paul Mantz on Holbein, the third large book devoted to Holbein's life and work which has been published within a few years, and the best of the three; and M. Paul Mantz writes the notice of the book on the sculptors and metal-engravers, the father and sons Caffiéri, by that M. Guiffrey who is known as biographer of Charles Jacque and author of the catalogue of that great etcher's work. These book reviews are not quite what we hope to see in the new Boston art-monthly. French criticism, even the best of it, is apt to be too polite, and to carry too far the good theory that every man's work should be judged from his own standpoint and not from another; and then these book notices are, perhaps confessedly, not critical at all; they are called *comptes-rendus*, as if to disclaim any great severity in passing judgment. The volume ends, as all the volumes do, with a long list of works on the fine arts published during the semester.

One of the most useful articles is the long study of the Museums of the North of Europe, by the Count Clément-de-Ris. The three papers contained in the volume before us are devoted to the Hermitage at St. Petersburg, and one of the illustrations to this is a full-page drawing by M. Goutzwiller of that wonderful Grecian vase which made the despair of M. Vitet, the vase of Cumæ, "la perle, le lustre de la collection Campana," one of those wonderful vases, with figures in relief and gilded and painted, which Russia obtained before France bought the rest of that famous collection in 1862. These papers are very minute and exact, forming almost a catalogue of the museum, with critical enquiry into the authenticity of the ascriptions, etc., and one apparently very thorough and valuable.

But it is impossible to describe all the papers of this volume, and we wish to call attention to what seems to us one of the best features of the *Gazette des Beaux-Arts*, the frequent appearance in its columns of careful papers written by competent judges, and illustrated by good draughtsmen, on works of art which are at the time exciting general attention. Thus, the Louvre acquires, for the price of forty thousand francs, a bust of Philip Strozzi by Benedetto da Majano, and in the January number M. Gonse gives an account of its origin and former home, and the inscription which is hidden beneath, not to be seen by the visitor to the gallery where it stands; while M. Paul Laurent gives a large drawing of the bust. Another recent addition to the Louvre is the kneeling or crouching Venus, found long ago at Vienne in Dauphiny, and until now a private possession. To this statue M. Félix Ravaisson, of the Institute, devotes a long paper, accompanied by three drawings of the statue, two from as many different points of the statue as found, and the third of the statue as set up in the Louvre, with feet added, all three by M. Montalan. M. Joseph Israels has just finished a set of etchings, it appears, and they were not yet for sale when in the April number M. Duranty gave three pages to their consideration, and one very lovely specimen ("Enfants sur la Plage," a real gem) accompanies the text. It was in this way that Méryon, and afterward Haden, were introduced to the French public. In like manner there is question of two splendid portraits by Rembrandt, which, with other paintings, had been bought a year before by the Rothschilds, in Amsterdam, to the great scandal of all Holland. Mr. Henri Havard, author of a charming book about the dead cities of the Zuyder Zee, and, more lately, of a treatise on Delft ware, a large volume with splendid illustrations, writes upon the subject of these Rembrandts and their companions in exile, and two full-page etchings by Flameng accompany the text. And in connection with these articles on current topics it is right to name the engraving by M. Gaillard of "Monseigneur Pie," the bishop of Poitiers, with a brief mention of this and other works of that wonderful engraver, by M Gonse. Why M. Gaillard's works are so little sought for by collectors, at least in this country, it would be hard to say, but every owner of a set of the *Gazette des Beaux-Arts* has half-a-dozen of them, the work of the only original line-engraver, so far as we know, who is now alive and at work. In nothing does the *Gazette* deserve more praise and thanks than in the care with which these engravings *tirées à part* are printed, for the etchings by Haden, Israels, Jacque, and a score of other masters, and these burin engravings of Gaillard's, are satisfactory and brilliant prints, good enough for any collector's choice. No doubt the coppers are steeled, and the prints therefore, while uniformly good, a little less rich and mellow than a few early proofs before the *aciérage*; but that is of course.

The Pedigree and History of the Washington Family: derived from Odin, the Founder of Scandinavia, B.C. 70, involving a period of eighteen centuries, and including fifty-five generations, down to General George Washington, first President of the United States. By Albert Welles, President of the American College for Genealogical Registry and Heraldry. (New York: Society Library. 1879. Pp. xl. and 370.)—In past years it has been our duty to speak pretty plainly about Mr. Welles and his sham College of American Heraldry. We were also obliged to censure his pretentious and unfounded genealogies; and we truly hoped, for the credit of American literature, that we should never again encounter his name on a title-page. But it seems that we misinterpreted his silence, and that he has really been engaged in an enterprise worse than its predecessors. Few people cared whether or not his stories about the Welles family were true; but it is a national disgrace to have a false pedigree set forth for the greatest representative of our country. George Washington has, indeed, been unfortunate in his successive heralds. Sir Isaac Heard, full of zeal and sympathy, published a wrong pedigree of the ancestors of the emigrant Washington. Then the Rev. Mr. Simpkinson tried to correct that story and substituted a fresh blunder. This one died hard. The Legislature of Massachusetts, inspired by Charles Sumner, sanctioned it, and during the present year *Harper's Magazine* gave a fresh impetus to it. But it is an avowed error, and Mr. Simpkinson has repeatedly expressed his regret at his mistake. Now, after all this, we are brought face to face with a new and infinitely greater bundle of figments, and we can only hope that Mr. Welles has been the dupe of an abler writer, who has deliberately concocted a literary forgery.

In the New York *World* for March 29, 1879, Colonel Joseph L. Chester, a genealogist and antiquary of the first rank, now living in London, sounded the alarm. Colonel Chester knows more about the Washingtons than any other man; he has for years studied the matter, and he exposed the errors of Heard and Simpkinson years ago. He had seen proof-sheets of Welles's book, and he termed it "unmitigated rubbish." For the English pedigree Welles seems to rely upon "James Phillippe," of London. This is said to be one alias of an adventurer who calls himself "Marshal-General Plantagenet Harrison," a getter-up of pedigrees to order, and unpleasantly known to literary men in England. At all events, the character of his work shows that he is without scruples or without judgment. His book abounds in direct statements for which he declines to give any authority. A pedigree thus prepared is useless, and its author must expect the harshest construction to be put on his silence. Mr. Welles, indeed, tried to reply in the New York *Herald* of May 19, 1879, to the crushing criticism of Colonel Chester. It was an utter failure. Without encumbering our pages, it is enough to say that Mr. Welles declared that "in regard to the proofs of the identity of Laurence and John Washington, who emigrated to this country in 1659, the proofs are in my office." Perhaps they are, but they are certainly not in his book.

With the ridiculous fictions relating to Odin we have nothing to do. There are numerous families or branches of Washingtons in England, and this pedigree tries to connect the emigrants with one of these—the Washingtons of Warton, County Lancaster. Mr. Welles writes, pp. 101 and 105, that Laurence Washington was baptized at Warton in 1625, and his brother John was baptized there in 1627, both being sons of Leonard W. of that place. Now, Colonel Chester wrote last spring: "I have carefully examined that register (Warton) personally, and very carefully, and can declare that no such entries are to be found in it." Where, then, are Mr. Welles's proofs of the baptism? Where are his proofs that Leonard had any two sons named Laurence and John? Above all, where are his proofs of identity? The plain truth is, that no one has yet the faintest proof of the identity of the emigrants with any two known members of

any English family. Simpkinson and Heard found a Sir John with a brother Lawrence of the same date as our Americans ; but also a further search proved that both of them lived and died in England. Of course a pedigree is good only so far as proved. Similarity of names may be presumptive evidence, various circumstances may give us moral proof of identity ; but mere assertions are impudent attempts to mislead the ignorant. If Mr. Welles has any proofs, it is his duty to present them. If he does not, he is like any other incredible witness, and he should be told plainly that his mere assertions are good for nothing.

As to the rest of his book, we find numerous small errors in the parts which have a historical basis. In regard to the American portion we hope that he has copied correctly from sound authorities, but the lack of proper arrangement prevents critical study, and the general fatuity and stupidity of the whole book discourage the critic. There are some books which defy analysis or correction ; they sound like the ballads in 'Alice's Adventures,' and with a show of meaning bewilder the firmest brain. It is so with all of Mr. Welles's work ; we cannot correct without re-writing the whole, a task for which we have neither time nor inclination.

Roscher's Political Economy.

2 vols. 8vo, $7 50.

Present Human Races—Physical Character; Book X. Psychological Character of the Human Species.

1 vol. 12mo, cloth, 498 pages, price $2. *Forming No. 27 of "The International Scientific Series."*

II.

CLASSICAL WRITERS. Edited by John Richard Green.

1. MILTON. By Stopford A. Brooke. 16mo, 168 pages, cloth, price 60 cents.

Under the title of "Classical Writers" Messrs. Appleton & Co. have begun the issue of a series of small volumes upon some of the principal classical and English writers, whose works form subjects of study in our colleges, or which are read by the general public. Care is taken to impart information in a thorough and systematic way, while an intelligent interest in the writers and their works is sought to be aroused by a clear and attractive style of treatment. The following volumes are in preparation: Of the ancients—EURIPIDES, HERODOTUS, DEMOSTHENES, SOPHOCLES, VIRGIL, HORACE, CICERO, LIVY; of the moderns—BACON, SPENSER, CHAUCER. Others will follow.

III.

*THE DEVELOPMENT OF ENG-*lish Literature. The Old English Period. By Brother Azarias, Professor of English Literature in Rock Hill College, Maryland. 1 vol. 12mo, 214 pages, cloth, price $1 25.

IV.

*THE LIFE OF HIS ROYAL HIGH-*ness the Prince Consort. By Theodore Martin. With Portraits. Vol. IV. 1 vol. 12mo, cloth, price $2.

V.

FREEDOM IN SCIENCE AND Teaching. From the German of Ernst Haeckel. With a Prefatory Note by T. H. Huxley, F.R.S. 1 vol. 12mo, cloth, price $1.

VI.

ESSAYS FROM THE "NORTH *American Review."* Edited by Allen Thorndike Rice; containing papers by W. H. Prescott, by Caleb Cushing, by Ralph Waldo Emerson, by George Bancroft, by John Lothrop Motley, by Washington Irving, by Charles Francis Adams, by Henry Wadsworth Longfellow, by George William Curtis, by Francis Parkman, by James Russell Lowell, and by Oliver Wendell Holmes.

"The essays collected in this volume may, without pretension, be truly said to represent the growth of native thought and scholarship in the United States from the close of the second war with Great Britain down to the close of the great Civil War. In few libraries, public or private, can complete sets of the *North American Review* be found, and the best thoughts and the freshest activity of two generations of conspicuous American writers have thus remained inaccessible to the great mass of the American reading public.

"It is to afford the present generation of readers an easy access to this most interesting chapter of our literary history that, with the kind permission of such of the authors as are still living, this volume is now given to the public."—*Extract from Preface.*

One vol. 12mo, 482 pages, cloth, price $2.

VII.

EPIPHANIES OF THE RISEN Lord. By George Dana Boardman, D.D., author of 'The Creative Week' and 'Studies in the Model Prayer.'

"In arranging the 'Epiphanies of the Risen Lord' the author is aware that there are difficulties in harmonizing the accounts of them as given by the Evangelists. Nor is it strange that there should be these difficulties. In the first place, Christ's risen body was an absolutely unique body, endowed with supernatural properties, and as such capable of moving with supernatural celerity, and therefore might have seemed to appear in different places at practically the same moment. Secondly, it was a period of intense excitement among the disciples; they had suddenly and most unexpectedly lost their beloved Master; so absolutely were all their hopes crushed that the thought did not occur to them that they would ever see him again; accordingly, his sudden reappearance was to them a total, bewildering surprise; no wonder that under such circumstances absolute harmony of separate accounts would have been almost impossible."—*Extract from Preface.*

One vol. 12mo, cloth, price $1 25.

VIII.

THE EVOLUTION OF MAN. A Popular Exposition of the Principal Points of Human Ontogeny and Phylogeny. From the German of Ernst Haeckel. Professor in the University of Jena, author of 'The History of Creation,' etc. With numerous illustrations. In two vols. 12mo, cloth, price $5.

IX.

MODERN CHROMATICS, with Applications to Art and Industry. With 130 original illustrations, and frontispiece in colors. By Ogden N. Rood, Professor of Physics in Columbia College. Forming No. 26 of "The International Scientific Series." 1 vol. 12mo, cloth, price $2.

X.

THE HISTORICAL POETRY OF the Ancient Hebrews. Translated and critically examined by Michael Heilprin. Vol. I. Crown 8vo, cloth, price $2.

The Nation.

NEW YORK, THURSDAY, AUGUST 7, 1879.

The Week.

THE *Herald*, which may always be relied upon to do something to relieve the monotony of the summer, has hit this year upon the ingenious device of publishing a series of editorials urging upon Mr. Tilden the necessity of withdrawing from public life. Mr. Tilden must see, the *Herald* thinks, that he is a very serious impediment in the way of "harmony" in his party. The next Presidential election cannot be carried without the State of New York, and yet the Democrats in New York are hopelessly divided into a Kelly ring and a Tilden ring, and the Republicans have an excellent chance of carrying the State. To restore harmony, to bring about peace and calm, the only means is the retirement of Mr. Tilden from political life. What is distracting the Democrats is his candidacy; with him out of the way they could easily unite upon a good candidate with a fair hope of electing him. The *Herald* has accordingly drawn up a dignified letter of resignation, which it urges Mr. Tilden to sign. As yet, however, the suggestion has not been acted upon, mainly, we suppose, because Mr. Tilden does not consider himself really in public life. His view of the situation, as we understand it, is that he is simply a private citizen residing at 15 Gramercy Park (one of the most sequestered parks of the city), having no connection with politics in any way, and attending to his private concerns; that the people are justly indignant that his election in 1876 was rendered null and void by the fraudulent decision of an unconstitutional commission, and that the people will never "condone fraud." Under these circumstances what is the old gentleman to retire from? The *Commercial Advertiser*, in its ribald way, says that the only farewell address that will ever be issued in Mr. Tilden's case, will be in the obituary columns of the daily newspapers, accompanied by the usual notice of a funeral from 15 Gramercy Park.

It would be difficult to overestimate the importance of the election this autumn in this State in its bearing upon the Presidential contest of next year. If the Republicans carry the State the Conklingites, who still completely control the local machine, will go into the Republican convention with the whole weight of this State behind them, which Conkling cannot be said to have had in 1876 at Cincinnati. On the other hand, if the Democrats elect a Tilden Democrat, like the present Governor, even by a small majority, the "mortgage" which Tilden is supposed to have upon his party will be in a fair way of being speedily foreclosed. But if the Kelly forces obtain a victory and defeat the Tilden nomination, there is no saying who will secure the Democratic nomination; in all probability it will fall to the hands of some Western inflationist. All this makes the nominations of this year of exceptional importance; and it is a curious proof how little real popular interest is felt in politics as they are now managed in both the parties, and how little popular expectation there is of a change for the better through the victory of one or other of the factions, that the struggle excites little or no attention except among professional politicians and in the party press.

Among the Republicans there are absolutely no signs of movement in the Reform wing, composed of the anti-custom-house Republicans and those who, in general, think better of their party, as reflected in the editorials of *Harper's Weekly*, than as it appears in the life and conversation of Conkling or "Johnny" Davenport; and the result of this apathy is that it is now generally conceded that Mr. A. B. Cornell, whose nomination this wing prevented when it was last pressed, will this year be nominated without any real difficulty. Among the Democrats the situation is very different. Kelly has announced in a newspaper interview that Tammany will not support Mr. Robinson under any circumstances. The reason for this is that Robinson is a mere "tool" of Tilden's, is "haughty," "domineering," "overbearing," and means to rule the party or ruin it. Mr. Robinson has also been interviewed, and says that he is a candidate for renomination. Should Tammany bolt the regular nomination Mr. Robinson could hardly be elected; but it is extremely improbable that anything like the whole Tammany vote could be induced to follow Kelly in such a revolt. A great deal will depend upon the management of the State Democratic Convention, and that again to a great extent upon the temporary organization. This is in the hands of the State Committee, which last year was in Kelly's interest, but of which enough members to give the control are said to have been since converted to the other side.

When the New York *Times* published its census of public sentiment in regard to Grant's renomination, in spite of its disclaimer of any sympathy with the verdict it was generally regarded as having rather wilfully given this acceleration to the Grant "boom." Since that time its course has been remarkable for undisguised antipathy to Secretary Sherman's Presidential aspirations and prospects, as when it allowed its Washington correspondent to accuse him of "fixing," by Treasury patronage, the Southern delegates to the next Republican convention. Accordingly, its giving up seven columns of Monday's issue to a flattering account of Mr. Charles Francis Adams in his library at Quincy, had all the appearance of an attempt to start an Adams boom. There could have been no mistake about it six months later, but the enterprise is probably to be set down to the exigencies of the dull season, and not to any spirit of propagandism. The same explanation doubtless holds good for the protracted rehearsal of Tilden's frauds in the last election; but this had the further advantage of eliciting complimentary notices from the country press, the reprinting of which in the *Times* itself ensured an unlimited supply of padding.

The Kentucky election on Monday resulted in the election of Dr. Blackburn, the Democratic candidate, of course, but by a majority about forty per cent. smaller than that of McCreary four years ago. The Republicans gained several members of the Legislature, among others a successor to the Speaker of the last House of Representatives. There was a call for a Constitutional Convention voted on, but it failed to receive a majority, and at this writing it is doubtful if a majority of the voters of the State took the trouble to go to the polls. Blackburn's reduced majority is perhaps due not so much to unusual Republican activity as to his personal objectionableness. That, according to all accounts, was great; and his election is the reverse of creditable to the State. During the campaign repeated enquiries as to his identity with the Blackburn infamous for his connection with the plot to introduce yellow fever into the Northern States during the war, were left unanswered by himself and his friends. The Cincinnati *Gazette* made a point of repeating this question daily and in every conceivable form, but was only able to elicit from the *Courier-Journal* a counter interrogation as to certain misdeeds of one Richard Smith; other journals made the charge distinctly—except notably the Cincinnati *Commercial*, which would doubtless prefer anything to interference with a sensation of the *Gazette*. If it is true—and, we repeat, though constantly made it was never denied—it is curious that Dr. Blackburn should have owed his nomination to his heroism and self-sacrifice in treating yellow-fever patients last year. In this event yellow fever may be said to be his "specialty," and to possess attractions for him which he cannot withstand, but is forced to pass his life either in fighting his enemies with it or in rescuing his friends from it. At any rate it is to be hoped that the citizens of Kentucky, whose affairs he is now to administer, will manage to keep on the right side of a man of such proclivities.

The political riot at Yazoo City, of which full particulars have been published during the week, is an affair which concerns the people of Mississippi more nearly than it does any one else. A Colonel Dixon, much respected by every one in the county, and three other gentlemen announced themselves candidates for various local offices, subject not to the ratification of the forthcoming Democratic Convention, but "only to the choice of the people at the ballot-box," it being well understood that "the people" included the colored voters. This was looked upon as intolerable impudence by the regular organization, and Dixon and his friends, having made an active canvass, were finally "waited upon" by an armed mob of three hundred which insisted that they should leave the county or "take the consequences," "consequences" being, of course, the local euphemism for "death." Finally a compromise was arranged; Dixon withdrew his candidacy, and his party virtually disbanded. The case recalls the attempt last fall of General Davis, in the same State, to get negro support as a Greenback candidate; what he did get being threatening letters and a burning in effigy. Commenting on this, in opposition to those who thought it an occasion for Federal interference, we held up the duty of the Southern whites to display the courage of their convictions. The moral of the Dixon outrage is precisely the same. If the South is not to be for ever the slave of its lowest elements, the Dixons and the Davises must be ready to pay with their persons for the privilege of independent opinion and political action. The martyr stuff is what is needed, not withdrawing and disbanding under compulsion. What Northern constituency ever submitted to such "bulldozing," or appealed, as did the Independents of Yazoo County, to a judge for his advice in their distress? Judge Morris, it is only fair to say, bids them maintain their organization and proceed resolutely, and invokes the support of the prominent planters who participated in the Vicksburg Convention. He foresees as a consequence of failure to face the mob a revival of the exodus and the embittering of the "solid North." But it is high time Mississippi realized that exhibitions of white pusillanimity produce no effect at the North except disgust.

There has been no important change in the condition of Memphis, and the prospect seems to be that, while the daily average of new cases and deaths hitherto will probably be kept up through the rest of the hot weather, the epidemic is by no means likely to reach the last year's proportions. There have been ninety-seven new cases and twenty-five deaths during the week; the largest number of new cases being 18 on Tuesday, and of deaths 7 on Saturday, when all river traffic and railway travel ceased. Some trouble between the Committee of Safety and the colored people over the unwillingness of the latter to go into camp has not been in any degree serious. The National Board of Health has made a requisition for 500 tents upon the Secretary of War at the instance of Congressman Casey Young; and some of the papers are finding much fault with it for having done nothing else—save collect information. At New Orleans the Board of Health announces there is no danger and no likelihood of any but "sporadic" cases from time to time; of these there have been eight and two deaths. In this city the Commissioners are to appoint a special physician for the Quarantine hospital, where apparently one has been needed for some time.

The War Department has recently published a list of appointments from civil life to vacant second-lieutenancies in the regular Army, the only educational examination required of them being wholly unprofessional, and limited to the ordinary degree of scholarship which can be attained in most of our public schools. Appointments of civilians to the lowest grade of military rank is no innovation, having been common before the war of the rebellion to fill vacancies remaining after the graduates of the Military Academy had been exhausted. This plan added neither to the efficiency nor popularity of the service, and a section in the Army Appropriation Act of June 18, 1878, was intended both to secure the rights of actual soldiers and to improve the personnel of the Army by providing that "hereafter all vacancies in the grade of second lieutenant shall be filled by appointment from the graduates of the Military Academy, so long as any such remain in service unassigned; and any vacancies thereafter remaining shall be filled by promotion of meritorious non-commissioned officers of the Army [recommended under the provisions of the next section of this Act]; *provided*, that all vacancies remaining, after exhausting the two classes named, may be filled by appointment of persons in civil life." The following section made elaborate provision for the selection, recommendation, examination, and report of enlisted men. The forms of this law have been observed with the astonishing result that so few non-commissioned officers have been appointed as to allow the selection of a large number of civilians. It is well known that the first or "orderly" sergeants of the companies of the line perform virtually all the official work of their companies beyond certain signatures and parade posturings. Most of them are certainly competent to instruct professionally any of the civilian youths who are to be appointed over them. Moreover, during several years past the difficulty of entering into business pursuits has induced many young men of perfectly good habits, and who probably can pass the slight educational examination required of the new appointees, to enlist, and learn the duties of soldiers. If neither of these classes are now fit for promotion the Army must be in a deplorable condition.

The present law, not having accomplished its object, might well be amended by striking out the proviso above quoted, and requiring that all vacancies in the lowest grade of the Army, after the graduates of West Point had been assigned, should be filled by meritorious non-commissioned officers of sufficient length of service to prevent another colorable evasion. When the commanding officers of the military subdivisions and the members of boards find that they cannot secure the appointment of their own friends and relations in civil life through the rejection of soldiers, there will be plenty of the latter who will pass the required examination, and a far higher standard will be gained for the companies, to which would be given the incentive of an honorable ambition. The alleged exclusion of the Army from politics, and its supposed freedom from all phases of favoritism, as markedly contrasted with the condition of the civil service, have furnished strong arguments to its supporters. Nothing is more likely to diminish both respect and gratitude than the knowledge that commissions are given on the same political and personal grounds as are clerkships throughout the country, and with no difference in the standard for examination except that the candidates for the temporary and less respected positions are required to possess higher qualifications. The memorandum published by the War Department, attached to the general order of announcement, is not fortunate. A significant proportion of the names announced are qualified as the sons or other relatives of present officers of the Army. If the mode of selection, so far as regards efficiency, is to be the same for officers of the regular Army and for the irregular army of clerks, the rule published, and to some extent observed, in the departments at Washington should be universally enforced, that two members of the same family should not be favored. Military commissions becoming, like all other executive appointments, the mere spoils of office, there should at least be a pretence of impartiality in distributing them.

The Attorney-General has given the Albany County Bank an opinion on the new six-per-cent. interest law which must be considered authoritative, at least until the questions involved are passed upon by the courts. He decides that the new law applies to State banks and repeals their right to charge seven per cent. From the concluding portion of his opinion it would seem that national banks must also lower their rate to six per cent., they having authority only to charge the rate established by law in the State in which they do business. The State banks were by a special act (L. 1870, ch. 163) empowered to charge seven per cent., but the

new act repeals in explicit terms all acts or parts of acts inconsistent with its provisions. The Legislature must in inserting this clause be assumed to have had in mind the State banks, and therefore the repealing clause amounts to a specific withdrawal of the right conferred by the act of 1870. As a matter of fact it is highly improbable that the Legislature had anything of that sort in its mind, for if it had it would probably have noticed that the act must also have the effect of cutting down the interest on the United States deposit fund, the income of which goes to the public schools. The deficiency in that fund arising from the change will, the Attorney-General says, have to be supplied by taxation. He thinks that the act does not affect the statutes against usury, which remain, *mutatis mutandis*, in force. On this point, however, there is clearly room for difference of opinion. It is rather a serious matter to have the law relating to interest on money left in this condition. Whether the Legislature had better leave the point in dispute to be settled by the courts, or try their clumsy hands at it once more, may perhaps be open to question.

Mayor Cooper last week made formal charges against Police Commissioner Wheeler in connection with the Bureau of Clothing and Equipment, and Monday afternoon was fixed for the hearing. The charges include misappropriation of funds, and retaining money due to tradesmen for supplies. Wheeler is a Republican Commissioner, whose term of office has expired, and who is holding over. His behavior in doing so is satisfactory to no one, even Mr. George Bliss being reported as remonstrating with him, and urging him to resign for the good of the party. He is not altogether fit for the place, being a bankrupt, and laboring under the suspicion of being "controlled" by the notorious Captain Williams, who is believed to have "a hold" upon him. Mr. Wheeler, however, evidently profited by the previous proceedings before the Mayor, and immediately retained counsel, who applied to Judge Van Brunt for a writ, which was granted and served upon the Mayor. This interesting document has been published in full by the morning papers, but as our space is limited we are only able to give an abstract of it. It is headed: "The people of the State of New York to Edward Cooper, Mayor of New York, greeting," and states that Wheeler has informed the court that he has been summoned before the Mayor to show cause why he should not be removed; that the Mayor has no jurisdiction in the premises, and that anything he does will be illegal and void; that, nevertheless, the said Cooper, contriving to oppress the said Wheeler, proposes to carry out his nefarious design. It goes on to command the audacious Cooper to desist until the third Monday (18th) of August, and further order of the court. The legal student will perceive that this document resembles the ancient writ of injunction introduced into England by the early chancellors, and brought to a high pitch of perfection in New York during the present century. It is, however, really what is known as a writ of prohibition, designed by the founders of the common law for the purpose of preventing encroachments of jurisdiction, and much in use in England in the time of Henry II. It has never before, we believe, been applied to prevent a mayor of a city from removing a police commissioner "under the charter." Mr. George Bliss, however, has told a reporter that it was once used to prevent Quimbo Appo, a Chinese murderer, from being tried. Its employment for such purposes is, therefore, corroborative of the jurist's favorite maxim, that "there is no wrong without a remedy."

Perhaps the most important event of the week was the decline in the rates for foreign exchange to very near the point at which gold can be imported. Sterling fell to within ¼ of a cent of this point, and bills on Paris were so low that an importation of $200,000 double-eagles to New York was reported. As this decline comes before expected foreign demand for our breadstuffs has much more than begun, the prospect of getting a considerable amount of foreign gold before the year closes seems to be fairly good. Should the movement of specie to this country become large, it is a safe calculation, however, that an effort will be made in the foreign financial markets to return American securities to us. The New York money market has shown symptoms of advancing during the week, but rates are not firmly higher than a week ago. It now appears that the Treasury during July paid out the eight-odd millions of legal-tender notes which made up the fund held for the redemption of fractional notes. This disbursement increased the ease of the money market and neutralized the temporary disturbances incident to the settlements of the bond contracts between the Treasury and the national banks. Money continues very cheap and abundant in London. Silver bullion there has ruled at 51⅛*d.* to 51¼*d.* per ounce. At the close of the week the bullion value of the 412½-grain silver dollar was $0.8623.

The foreign news of the week is unimportant. Parliament has been called upon to vote a new credit of $15,000,000 for the expenses of the South African war, making the total cost of that enterprise so far $22,500,000, to say nothing of the Prince Imperial. Cetewayo is still at large, but his military power seems utterly broken, and his territory will be divided among his brothers and other surrendered chiefs. The proceedings of the court-martial which sentenced Lieut. Carey to death have been quashed, ostensibly on account of informality. The French Chambers have been prorogued till November, and consequently the Ferry laws go over the heated term.

Judge Kelley's interview with Bismarck is described at length in a letter from himself to the Philadelphia *Times*. When the conversation had passed from the Chancellor's habits of work and sleeplessness to the pending Tariff Bill, Bismarck laid down the principle that each government should regard the welfare of its own people, and proceeded to show how much the agricultural interests of Germany stood in need of protection against the pauper labor of Hungary and Russia. He then complimented the United States on having, by means of its tariff, brought machinery and transportation to such a point (or, in other words, so pauperized its industry) that it "can send food even into Germany." The grounds of cordiality between the German and American statesmen being thus established, Judge Kelley made an "opportunity" of the last remark, and reminded his host that Germany's demonetization of silver had arrested the progress of the United States and restricted its trade; but as this could not fail to be gratifying intelligence to the great protectionist, he immediately added that a further consequence was the driving of bankrupt traders and unemployed artisans into agricultural pursuits, and that this, by reducing prices, had increased the competition with which Germany was contending. Bismarck thereupon frankly admitted that they had gone too far in this direction, said he had prohibited further sales of silver, and on being told that our Government was about to call a new bimetallic convention, said his acceptance of the invitation would be immediate. He had, however, some curiosity to know what would happen if the other governments addressed did not respond favorably, and was assured of the Judge's hope that they would all refuse, based on his confident belief that "our people would, in less than two years, imperatively demand the full and unqualified remonetization of silver," and would, as silver mono-metallists, presently monopolize the trade of China, Japan, British India, Mexico, and Central and South America. These unhappy countries "could not sell their raw materials to, nor purchase their manufactured goods from, people who used a much more costly metal as a standard of payment." But Bismarck would not listen to this selfish programme: "In this matter you must not act alone; others must co-operate with you." The only other noticeable feature of the interview was Bismarck's "intense contempt for the arrogant pretenders who regard the doctrines of the British school of free-trade as absolute and indisputable propositions." "He characterized them as doctrinaires and closet-men," and said that "doctors, clergymen, and lawyers, but few of whom know anything of the details of public affairs, are generally on that side."

THE REVELATIONS BEFORE THE RAILROAD COMMITTEE.

THE question of railway power, and the methods and effects of its exercise, continues to force itself upon the public consideration. The Legislature of the State of New York was petitioned last February by the Chamber of Commerce of this city to investigate a number of charges against certain companies, which were set forth in the memorial with more distinctness than such charges usually are. The matters complained of were alleged to be fraught with much general harm, and to be especially detrimental to the interests of both the State and City of New York. Other important bodies also urged similar complaints, and the Legislature finally, by successive resolutions, created a committee of nine, with Mr. A. B. Hepburn as chairman, endowed it with ample powers, and charged it with very comprehensive duties. Its sittings commenced June 12, in this city, at the City Hall.

The New York Board of Trade joined the Chamber of Commerce in securing the services of Mr. Simon Sterne to act in their behalf before the committee. His opening speech did not exaggerate the gravity of the evils which gave birth to the investigation, nor the need both of more knowledge as to their extent and causes and as to the proper remedies. The public nature of the services rendered by railroads was shown, and their claim to exemption from public supervision and reasonable regulation easily disposed of, while the grosser and more palpable tyrannies engendered by their past license were forcibly depicted. Indeed, it is not easy to understand why the community should seriously doubt the question of the right to regulate. Nothing can be vainer than the hope that railways may, through pleas of business privacy, or others, long escape from whatever degree of enquiry may be found essential to throw light on their ways and management, and from the amplest and completest code of regulations which the public weal may seem to require. Indeed, the only real question worthy of consideration is the extent to which the community should and can safely call upon their government to proceed. There is a popular and justifiable distrust about confiding to government officials the supervision of large aggregations of capital, especially when their particular functions are affected by or may greatly affect the complicated and fluctuating movements of commerce. This many-sided question is worthy of our wisest thinking. But every fresh probing into railway practices only makes clearer the fact that some effective regulation is imperatively needed.

Mr. Samuel Goodman was the first witness who testified before the Committee. This gentleman is Assistant General Freight Agent of the New York Central & Hudson River Railroad Company, in special charge of its local freight business. He has been connected with that system of roads for twenty years. His duties, as defined by himself in his testimony, give him a certain and substantially unrestricted power over the commercial prosperity of all merchants, manufacturers, farmers, and other men of business living in the territory which that system serves—a power which in periods of commercial distress is quite sufficient to determine whether success or bankruptcy shall be the issue to men of limited means, no matter how prudent, thrifty, and industrious they may be. Such a power is much too great to be confided to any one, however competent, equitable, and upright he may be; but it has been wielded by Mr. Goodman. How fit he is to wield it, and how much credit he does to those who selected him, he has very fully revealed in the course of his evidence. A few extracts will illustrate his intelligence, and especially his knowledge of the business in which he is engaged, and in which he passes for an expert.

The examiner attempted to discover some rule or basis upon which the violent and sweeping changes in tariffs that had been confessed to were made. The witness protested that they really did rest on reason, and were not the offspring of mere whim, nor, when secret, of simple favoritism; but he nowhere produced any sound reason for them, nor, indeed, much semblance of any rule or guide for his actions; but he finally asserted with some positiveness that the first condition in determining rates was the cost of transportation. In response to persistent questioning, he was obliged to admit, however, that he did not know the difference in cost between transporting potatoes and flour by the barrel, nor how much it cost to haul freight, or to handle freight at termini, nor what effect grades had on such cost, nor the cost per mile per ton or train, nor in which direction the most empty cars ran, nor how much additional cost it would involve to move a car loaded instead of empty, and, in short, that he was not familiar with any of the elements which enter into the expense of freight carriage, though he also testified that he could get the information if he chose to ask for it. He could give no good reason for the present classification of freight, excepting some vague generalities respecting variations of value and bulk; but any attempt to define the relations between such variations and the allotment of goods to classes, simply exposed anew the density of his ignorance. However, he is probably not alone so far as classification is concerned. As it at present exists it is really a sort of untrimmed growth of years of custom, and is loaded down with the excrescences and absurdities which usually characterize such growths.

"Can you tell us," asked the examiner, "how much of the transportation expense is due to the handling of goods?"—"Not to such an extent as to give intelligent answers."

"Have you any guess upon the subject of (the cost of) haul?"—"No, sir; I have not the slightest idea."

"Does the ease with which an article may be handled at the termini determine the question whether it is to go into the first or fourth class?"—"It *does* to a certain extent."

After some explanatory questions and answers:

"Then the terminal charges do *not* enter into consideration *at all* in making this classification?"—"Not particularly at this time."

Certainly a frank acknowledgment of incompetency is better than unfounded pretension to skill; and for this reason Mr. Goodman is worthy of commendation. But there is something appalling in the fact that a great power over the well-being of vast communities should be lodged with one so grossly and wilfully and almost boastfully unfitted for its intelligent exercise.

The facts drawn out of him, in illustration of the practical administration of his department, were as numerous and instructive as the illustrations of his incapacity. The tariffs of charges, by which all his patrons were necessarily compelled to regulate their business, were in some cases two years old; some, two weeks. They had been issued with so little precision that the witness himself could not tell the exact day when even the most recent took effect. Between the various local stations there were absolutely no tariffs in print, nor were there any at non-competitive points. The bulk of such business is done under special rates made from day to day, and for each shipper as he needs to ship. "More than one-half of these special rates, and all the important ones, are made verbally, and in many cases under a pledge of secrecy." If Mr. Goodman thought potatoes worth one dollar per barrel, his tariff would perhaps be twenty cents; if he thought them worth but half a dollar, he would obligingly cut his rate to ten cents; but if one shipper should simply forward his potatoes as he would mail a letter, he would pay the twenty cents; while his neighbor who was astute enough to consult Mr. Goodman would get the same service done at one-half the cost. And here it should be remarked that Mr. Goodman never gives notice of tariff changes to any but those who choose to enquire of him. If a Western road lops off fifty per centum of the through-tariff to New York, Mr. Goodman's road meekly accepts the capricious decree, and he himself proceeds to consider how far it shall disturb his manuscript tariffs and verbal rates from Buffalo or from Utica. Sometimes Mr. Goodman thinks he will reduce, and sometimes he thinks he won't. When he reduces, the Utica man can ship, and possibly at a profit; when he decides the other way, the Utica man has nothing for it but to stop business or lose money. He has, however, the satisfaction of knowing that his Chicago rival is very cheaply served, and is doing a rushing trade; all the larger that Utica is for the time under the ban of Mr. Goodman's indifference or caprice.

The witness confessed that, while his regular tariff of charges from New York to Syracuse was thirty-seven, twenty-nine, twenty-

five, and eighteen cents per hundred pounds, according to class, he gave to special favorites in that city a rate of ten cents per hundred pounds on all classes; while from New York to Schenectady (130 miles less haul) the very lowest rate he would give to his dearest friends was fifteen cents per hundred pounds. It is only fair to say, however, that some Syracusans stood no higher in his good graces than the best of Schenectady. Of course the generality of shippers at each place paid the full tariff rates. Utica ranks about as highly in his favor as Syracuse, while Frankfort—poor little Frankfort—is not accorded so much as one single special rate; not a single man in Frankfort is pledged to secrecy. The happy result which is thereby achieved is that Frankfort ships nothing, and probably never will ship anything. Mr. Goodman will be thus spared much worry and rate-making annoyance. To win his highest regard, however, it is safest to dwell in Milwaukee. Residents there can under his benign auspices ship from Troy, 1,301 miles, at a lower cost than he will accord to shipments from Troy to Syracuse, 151 miles. Why he should shower smiles on Syracusans who ship from New York City, and frown on such as ship from the city of Troy, does not appear; and it is quite unlikely he could himself give any good reason for the difference. It transpired in the course of the evidence that if any recipient of a special rate was caught patronizing any other route, his rate would probably be withdrawn; and, as from most local points only special rates exist, he might easily find himself debarred from shipping at all. One of the few plausible grounds for discriminating rates between shippers which Mr. Goodman advanced was the relative quantities of traffic they offered for carriage; but when pressed he was obliged to admit that he kept no record of these respective amounts, and was, in fact, totally ignorant of the volume of traffic received from each patron, or whether the special rates really resulted in an increase of business. He had no records to show, and apparently no knowledge, whether the special rates he gave so lavishly yielded any profit, or whether they were not below the actual cost of the work.

Mr. James H. Rutter, who fills the responsible post of traffic manager on the same system of roads to which Mr. Goodman is attached, was a less interesting witness than the latter. His readiest and most frequent reason for inability to furnish much of the information asked for was "necessary unfamiliarity with details," his own duties being general in their nature. It was a convenient excuse, and much resorted to. It was quite evident he understood the value of not knowing too much. A competent traffic manager, such as he may probably be, would hardly fail to familiarize himself with all matters related to so important a feature of his jurisdiction as the drawing-room-car question, unless he had good reason to believe his investigations would not commend him to his superiors.

Mr. Royal C. Vilas, the general freight agent of the New York, Lake Erie, & Western Railway, is as well equipped, both by disposition and study, for the duties of his important post as Mr. Goodman for his. If the two companies should exchange these officers, it would be difficult to determine which had the best of it. We should like to speak of some of the extraordinary facts revealed by him, and notably of the "evener" scandal, but our space will not permit.

The Chamber of Commerce could not more effectually forward their purposes than to have a careful digest made of the points elicited in this testimony. In its present shape it is necessarily too diffuse and lacking in arrangement to be generally read or fully comprehended. The examination has been ably, and we think successfully, conducted, and the mass of ill-doing which it has brought and will yet bring to light before the sessions are closed, should be placed in the clearest possible way before the public judgment.

THE ECONOMIC REVOLUTION IN GERMANY.

MR. W. D. KELLEY'S visit to Germany has been most opportune. He was sure of a cordial reception as a representative of the Pennsylvania school of political economists, which is now in high favor with the German Government and the German Diet; and he has actually had the honor of being referred to by a deputy in the Reichstag as a "leading American statesman," and of being quoted in elucidation of some abstruse question of finance. He has had an opportunity to meet Professor Dühring, the translator and expositor of Carey; to hear the doctrines, though of course not the methods, of the Pittsburgh rioters taught in the classes of the first university of the land; to listen to the eloquence of Von Kardorff, his own German counterpart; to receive from Prince Bismarck economical opinions by the side of which his own are conservative and almost orthodox; and, what to a conscientious protectionist must have been the highest gratification of all, to witness the process of making an imperial law which puts a duty of seventy five cents per hundredweight on petroleum, and corresponding burdens upon canned meats, vegetables, and fruits, machines, grain, and nearly everything else which America has hitherto exported free, or practically free, into Germany. The duty on petroleum is, indeed, a duty for revenue, since not even Herr von Varnbüler has yet proposed to sink oil-wells in the Fatherland, but the other articles are taxed distinctly and avowedly in the interest of "home industry"; and, as the measure is sure to ruin several young but flourishing branches of American export trade with Germany, there was an ironical propriety in the presence of a Pennsylvania protectionist to witness the triumph of the great cause.

The completeness of the protectionist victory is not more striking than the ease and rapidity with which it was effected. There had, indeed, been hints and signs for a year or more that Bismarck was dissatisfied with the tariff system, and sooner or later would begin to tamper with it. Herr von Kardorff in the Diet, and one or two of his servants in the press, kept up a busy agitation against free-trade; but apparently on their own responsibility, and without open encouragement from the Chancellor. His own début in the new character was not made until last Christmas. Before that no general canvass of the country had taken place; the issue had not been submitted to the people, who at the last election had hardly a suspicion of what was coming; and even the *personnel* of the present Diet is not essentially different from that of earlier ones, from which free-trade has for years received such a consistent and resolute support. And yet in six short months the revolution—for it is nothing else—has been accomplished. It would be difficult to find a parallel to such recklessness even in the history of American politics. Compared with it the Bland Bill was a piece of prudent legislation. The "silver question" had at least entered, in a vague way, into the previous campaign; in Germany the protectionist scheme was carefully concealed from the electors. In this country the Government exercised a restraining and salutary check upon the wild purposes of the legislature; in Germany the Government has favored and encouraged the extremists even in the amendment of its own measure. And in the United States the silver triumph was at least mitigated by its inability to produce immediate harm; while the complete overthrow of the historical commercial policy of Germany will unsettle all values, disturb all industries, increase all prices, notably of food, and prepare the way for inevitable social convulsions. But these points of difference—in the end chiefly differences of degree—between the two "reforms" are balanced by points of very striking resemblance, which suggest to the observer certain serious and disagreeable reflections. The enumeration of some of these will at the same time characterize the method of Bismarck's performance.

In the first place, the protective tariff, like the Silver Bill, is a measure of class legislation, and was defended by the basest appeals to class interest and prejudice. The peasant and the artisan were arrayed against the trader; the debtors against the creditors; real estate against funded capital; Christians against Jews; and other insidious and incendiary distinctions were freely employed by the reformers. Prince Bismarck himself did not disdain such tactics; and on one occasion in particular—the debate on the corn duties—he harangued the House in the best style of an American Granger. With a full sense of his responsibility he took up and made his own

all the selfish complaints of the great proprietors. Their taxes were unduly high; foreign grain was ruining them; their lands were covered with mortgages; in short, relief must come if the agricultural industry of the country was to be saved! These mischievous sophisms did their work. The heavy duties which the Government first proposed were afterward doubled by the Diet with the assent of Prince Bismarck, and the consumers will now pay their contribution to the rescue of the squires and landlords of Eastern Prussia.

Another instructive point in the comparison is the fanatical impetuosity of the protectionist majority. Becoming early conscious of their power, they became at the same time utterly deaf to the voice either of reason or of caution, cut debate off impatiently on many occasions, treated the subject as belonging exclusively to themselves, and curtly repulsed almost every suggestion made by members of the minority. In the House of Representatives at Washington the majority can also be tyrannical, but only under certain well-defined conditions. There are various inflexible rules which, under English parliamentary law, must be observed, and which are, on the whole, regarded with a perhaps technical but not unchivalrous respect. In Germany there is nothing of the sort. A bare majority can stifle discussion at any time by a so-called *Schluss-Antrag*, or motion to close debate; and even during debate the Speaker can control affairs almost arbitrarily through his power of recognizing such deputies as he chooses out of those who have announced in writing their desire to speak. Herr von Forckenbeck, so long as he was President of the Diet, was scrupulously impartial in the exercise of his discretion. But Herr von Seydewitz, whose personal intentions are doubtless no less honorable, was nevertheless elected exclusively as a partisan speaker, and, having besides a majority which was determined to avenge itself for years of ignoble impotence, has found himself more than once in the disagreeable necessity of enforcing resolutions contrary to every sentiment of justice. To make use of the observation which the late John Stuart Mill once applied to another question, the more the protectionists became convinced of their inability to meet the free-traders' argument the more certain they became that their cause had a natural and sentimental strength above and beyond all argument. Their parliamentary intolerance was only one consequence of this singular delusion.

The third tendency which this unfortunate affair reveals is in many respects the most deplorable of all. We mean the open contempt which has been displayed for the authority not only of specialists, but of educated and thinking men in general. The "practical men" controlled the situation. This interpretation of the case is not our own, and is not ironical as might be supposed, but is a great favorite of the Government press and the Government speakers, and did splendid service during the debates. Now, by a singular coincidence, the "practical men" were all in favor of the protectionist scheme. One of them, perhaps the most "practical" of all, was Herr Stumm, a great iron manufacturer; and the appearance of this deputy as the leader of the iron men, speaking and voting under the applause of the Government, for the highest possible protective duties in favor of his own wares, was one of the most shameless exhibitions that the floor of a legislative body can afford. The rich country squires at the extreme Right are also "practical men," and they carried the grain duties against the "theorists," the "book-men," the "literary fellers" of the Left. That Germany has always had her Camerons, Murphys, and Joneses is, of course, no secret, but this is probably the first time that they ever won so cynical and complete a victory over the culture and intellect of the country.

One of the protectionist speakers paid the Chancellor an indifferent compliment when he said that instead of starting the movement he simply saw it coming and put himself at the head of it. This was an absurd error. The only movement up to the time of Prince Bismarck's pronunciamiento last December had been a somewhat languid and modest one, supported by the Liberals rather than the Conservatives, in favor of the introduction of imperial taxes, and thereby the creation of an imperial revenue, to take the place of the matriculary contributions of the states. It was intended to be almost exclusively a fiscal reform. It was a centralizing plan, since it was to put the Treasury on an independent footing, whereas now it is compelled, to use Prince Bismarck's phrase, to beg for its funds from state to state. These imperial taxes were practically obliged to be indirect; and it was proposed to take import duties on tea, coffee, tobacco, and so forth, and on the latter an excise rate. With the outlines of such a scheme the Liberals were satisfied. But they insisted that after the abolition of the matriculary contributions, which were voted by the Diet from year to year, while the proposed indirect taxes were to be permanent, some other arrangement ought to be made securing Parliament's control of the purse. This seems a modest demand, but it is proved to have a momentous importance, for parliamentary control of the purse was just what Bismarck wished to abolish; and the first step being to make the revenues independent, he applied himself to that task with characteristic energy, and, in so far as his relations to parties were concerned, with characteristic unscrupulousness. The fact that the National Liberals had been his chief allies for a decade counted for nothing as soon as they ceased blindly to register his decrees. He turned from them to the Clericals and extreme Conservatives as easily as he would exchange one coat for another. But the Clericals, coming from manufacturing districts, are mostly protectionists, and the rural Conservatives were readily made such by the tempting offer of the grain duties, which at first had seemed incredible; and in this way the "movement" was called into life. Duties for revenue and duties for protection were tacked together in such a form that the Liberals who favored the former were compelled to accept the latter, and the Clericals who favored the latter were compelled to accept the former. The only question was, which faction should be taken and which rejected; and this depended on the so-called guaranties. The Liberals demanded security for the privileges of parliament; the Clericals, security for the rights of the states—in other words, for the federal principle. But the federal principle being also dear to the reactionists, they hastened to accept the proposition of the Centre; and the constitutional guaranties of the Liberals being hateful to Bismarck, he consecrated the rival league, and then the work was done. Protection was triumphantly carried by a two-thirds vote. For the first time since 1866 the National Liberals found themselves in the minority and isolated from the Government, and from this position they are not likely soon to escape.

THREE DEATHS.

LONDON, July 22.

ENGLISH society has been disturbed just now by some painful and touching incidents. First, I must note the death and solemn burial in Westminster Abbey of Lord Lawrence. As you know, he was the last of Indian statesmen who crowned a purely Indian career by filling the highest post in the government of that great dependency. Practically, he saved India during the Mutiny, and his administration of it as viceroy was directed towards the consolidation of its resources, and the limitation of those projects of territorial extension which found favor with some governors before and after him, whose knowledge of India was picked up during their term of office. Mr. Bright in one of his late speeches describes his coming across a newly-nominated governor-general in a railway carriage, and finding him armed with a series of volumes. "I will wager," said Mr. Bright, "that that is Mill's 'History of British India.'" So it turned out to be. That is the basis of knowledge which most governor-generals endeavor to lay before setting out, and on it the advisers into whose hands they fall endeavor to build a superstructure of aggressive and ambitious plans. The late Lord Lawrence's varied experience of nearly every department of Indian administration qualified him to be his own adviser, and to control the large projects of military men and political residents ambitious of action and distinction. The phrase of "masterly inactivity," which was applied to his system, marks its essential character. During the last year of his life his strenuous opposition to the Indian policy of Lord Lytton, and especially his acceptance of the chairmanship of the Afghan Committee,

made him the centre of heated and angry controversy. How heated and angry that controversy was, and into what regions it penetrated, one fact sufficiently discloses. It is well known to all readers of the newspapers that one of the special functions which the Queen has assumed to herself since her widowhood has been that of consoler-general to all persons of a certain degree of political or personal distinction, men or women, similarly afflicted. Her Majesty never fails to administer a telegram of condolence or sympathy to a bereaved husband or wife in the official or high social classes. Until within a few days no message of this kind had been sent to the widow of the great Indian statesman who for a term ruled India in her name, and to whom more than any one else the fact is due that the Indian Empire was not lost to the Queen in the Mutiny.

The political partisanship which has penetrated into the Court, and the personal likings and dislikings which have been indulged and freely displayed, have passed the limits of that wise restraint observed during the earlier years of her Majesty's reign. Some of the Queen's most illustrious ministers have experienced it; but hitherto the resentment and animosity have not passed the bounds of the grave. The contrast which has distinguished the later years of the Queen's reign—the last half-dozen years of it, in fact—from the seven-and-thirty years which preceded, is often exaggerated in popular talk, but it is real. The explanation of it is easy. The theoretic doctrine of the position of the Queen in the Government which the Prince Consort derived from his German training, and which were embodied in the maxims and counsels of Baron Stockmar, are in close harmony with those views of personal rule which form the political philosophy of Lord Beaconsfield. For the first time in her reign the Queen has a Prime Minister whose disposition is to encourage instead of checking the ideas of monarchical authority which are natural to every crowned head—and this not entirely from servility or as a matter of personal management, but from real sympathy. The practical good sense of the Prince Consort, which restrained his action through the Queen far within the limits of his theory, has not transmitted itself to any adviser equally near the throne. During the greater part of her reign the Queen was surrounded by statesmen older than herself, on whose wisdom and experience she relied. Sir Robert Peel and the Duke of Wellington, Lord Melbourne and Lord Russell, Lord Lansdowne, Lord Aberdeen, and the late Lord Derby had the authority of age and of services to give weight to their counsels and remonstrances. Even they, however, could scarcely say, "*Ego et regina mea.*" They had to reckon with the distinct personal views and wishes of the Queen and to make large concessions to them, as the 'Memoirs of the Prince Consort,' perhaps prematurely, shows. Now, however, the Queen is surrounded by men who are younger in years or in political life than herself, and who by policy or temperament, or through conscious inexperience, rather follow than lead. During the whole of the Queen's reign, as during that of her predecessors, the personal power of the sovereign has been a larger element in constitutional monarchy than the majority of her people have supposed. It is only, however, within the last few years that the working of the machine has been deliberately laid bare to the public view, the wheels within wheels disclosed, and the principle of the mechanism acknowledged. It may be doubted whether this candor is expedient. With the return of the Liberal party to power, whenever that may take place, and certainly with a new reign, the adoption of the constitutional system as it was believed to be is morally inevitable. The fact that English monarchy was less limited than it was fancied will probably lead to further limitation.

The merely formal representation of the Queen and the Prince of Wales at Lord Lawrence's funeral is in striking contrast with the presence of both, and of other members of the royal family, at the funeral of the late Prince Louis Napoleon, at Chiselhurst. Personal feelings no doubt prompted the display. The unhappy circumstances of the poor boy's death, the relations of intimacy which he had sustained with our own princes, the natural compassion of a reigning for an exiled sovereign, and of an actual for a dispossessed heir-apparent, go for a good deal in matters of this kind. It must be remembered, too, that no official civilities have been wanting towards the French Republic. There was proper recognition of M. Grévy during the Queen's passage this year through Paris. The Prince of Wales breakfasted with M. Gambetta during the Exhibition of 1878, and is said to have left upon the present President of the Chamber the impression that he would make a very good sort of a king for England. Still, there can be no doubt that political did mingle with personal feeling in the display at Chiselhurst. In the struggle which followed the 24th of May the sympathy of courtiers and of the Court was notoriously with Marshal MacMahon and the Duc de Broglie. A Bonapartist or Orleanist restoration was held to be the best thing for France. The contrast between constitutional monarchy, as in England, and a Napoleonic empire is one which flatters our sense of superior capacity for parliamentary rule. The spectacle of a peaceful republic, industrious and orderly, at our very doors, excites a certain disquietude in courtly circles which is not of course openly avowed, which is scarcely self-acknowledged, but which is not the less real. It had a good deal to do with the exaggerated manifestations which followed on the news of Prince Louis Napoleon's death, and the reception of his body in England. It prompts the injudicious suggestion which has been made, and to which Dean Stanley has given a hasty assent, to the erection of a memorial to the Prince in Westminster Abbey. This proposal, however, seems to have outrun the public sentiment; numerous protests have been made and are being made against it, and there is some likelihood that it will not be persisted in. The Dean of Westminster is an excellent man, who, if he is somewhat spoiled by being a courtier, yet is a redeeming influence in the Court. If some virtue goes out of him, it goes into it. The suggestion with which he has complied came from the Prince of Wales, and had the sympathy of the Queen, and this was enough to make it welcome to him. But this was not all. The Dean takes a peculiar view of the Abbey of which he is the guardian. He regards it as a sort of historic museum, of which he is the curator, and for the time being the possessor. He is as eager to add to his collection as a coleopterist or a numismatist is to acquire a rare beetle or a scarce coin. The Dean is a great body-snatcher. Scarcely a man of high eminence dies whose remains Dr. Stanley does not strive to acquire for the Abbey; and if they are not to be had, a monument or bust to supply the place. The Dean has all the eagerness of an enthusiastic collector, and, as is the habit of collectors, he is sometimes more impressed with the rarity than the worth of the object. The undesirability of offending the sensibilities of the French Republic, and the inconvenience of opening a sort of Bonapartist chapel in Westminster Abbey, will probably lead to a reconsideration of the project and its abandonment. It is undesirable that we should have annual pilgrimages, headed by M. Paul de Cassagnac, to England.

The death of the lady whose pleasure it was to be known, from the title of the second of her four husbands, as Frances Countess Waldegrave, removes a conspicuous figure from English society. The daughter of John Braham, the vocalist, whose real name was Abraham, her life was a succession of social conquests. It illustrates strikingly the doctrine of the closing essay in George Eliot's last volume. Theophrastus Such might have appealed to her career and position as a proof of the intellectual power of the Jews, and their capacity of becoming masters in the communities in which but lately they were despised and proscribed outlaws. In politics, in finance, in journalism, in society, the Jews are playing the principal parts. A Jew is Prime Minister; a Jewish house controls in a great degree the political finance of the country; a family of Jews are the proprietors and managers of the most largely circulated and, for its own purposes, the most skilfully conducted newspaper in England, or perhaps in the world; a Jewish girl, the daughter of a public ballad-singer, became a sort of mistress of society, rebuffing or admitting to her favor some of the haughtiest and most squeamish members of our old nobility. Lady Waldegrave's receptions in Carlton House gardens and her hospitalities at Strawberry Hill have often been described. The marriage of a niece of Horace Walpole's with the Lord Waldegrave who was "governor" of George III. when Prince of Wales, and afterwards Prime Minister of George II., brought the celebrated Twickenham house into the family of the late Lady Waldegrave's first and second husbands. With all their property left away from their own family, to whom nothing has descended but a poverty-stricken earldom, it became hers in full possession. The report is that by her will it will return to the family after the death of her present husband, Lord Carlingford, who, as Mr. Chichester Fortescue, was a member of Mr. Gladstone's Cabinet, and had a large share in the preparation and carrying out of the great Irish measures of that Government. Bold and adventurous, generous, frank, and kindly, a mistress of the arts of management, Lady Waldegrave's career, if ever it be fully recorded, will be as strange and as piquant a story as the political romance of Lord Beaconsfield's life. Though belonging to opposite sides in politics, their sympathy was strong, and Lord Beaconsfield was a frequent guest at Strawberry Hill. Indeed, the way in which the Jews hold together and play into each other's hands while playing on society is remarkable. Minister, financier, and journalist understand each other and work together.

Correspondence.

COST OF THE MASSACHUSETTS RAILROAD COMMISSION.

To the Editor of The Nation:

Sir: In your comments on the tenth annual report of the Massachusetts Railroad Commission, in the "Notes" of your issue of the 24th inst., you say "the expense of this excellent work for a whole year was less than $2,500." You here fall into the very natural error of mistaking the statement of the purely office expenses of the Board, as printed on page 435 of the report, for its entire cost. If put forth with the authority of the *Nation*, this might convey a wholly erroneous impression to legislators in other States preparing to organize similar commissions.

Massachusetts has always been what would be considered liberal, judged by prevailing standards, in the provision made for its Railroad Commission. Perhaps the fact that the cost of the Board was met by the assessment of a special tax on the railroad corporations has had something to do with this liberality; but, in any event, the liberality has had a good deal to do with the somewhat conspicuous success of the Commission. Indeed, the salary attached to the chairmanship of that Board ($4,000) was almost the only salary in the State within the reach of the last Legislature which underwent no reduction at its hands. During the ten years since its organization the average annual cost of the Commission has been a little over $16,000 a year. Last year its cost was a little less than $20,000, instead of $2,500, as stated by you. G.

Boston, July 29, 1879.

THE LETELLIER CASE.

To the Editor of The Nation:

Sir: In your editorial on "The Letellier Case" you say: "There can be no doubt of the wisdom of the Beaconsfield Government's refusal to interfere; anything other would have irritated Canada as, in the opinion of less radical judges than Mr. Goldwin Smith, it would have been foolish to irritate her."

I cannot understand why my name should be thus introduced. I have expressed no opinion in favor of interference with colonial self-government, in the Letellier case or in any case; quite the reverse.

The main feature of the case, in its recent aspect, and that which determined my opinion and the opinion of many others, Conservatives as well as Liberals, is not noticed in your editorial. The charge against Lieut.-Governor Letellier was stale and had been dealt with in a former Parliament. I have no doubt that he did very wrong in turning out his Conservative Ministry, and at the time I was in favor of his removal. But he was then sustained both by the Dominion House of Commons, which voted down the resolution censuring him, and by the people of his Province; and it seemed an equivocal proceeding, and a sinister use of a party victory, to revive the matter in the new Parliament and put the accused person on his trial a second time. This view can hardly be described as "radical"; at least, it did not commend itself to either of the extreme parties.

The Conservative Premier, Sir John Macdonald, was so far from making the case "a leading question," that he evidently wished to let it alone, and himself refrained from moving the resolution of censure in the new Parliament, though he could not control the impetuosity of some of his French supporters.

You say that "the Letellier case, even more than the question of protection, influenced the last general election in Canada." But at the last general election the question was hardly before the country. It was generally deemed to have been settled in the late Parliament, and few of us expected that it would be revived. I will venture to say that it did not turn a vote in any province but Quebec. Even in Quebec, the people who had sustained Lieutenant-Governor Letellier, a member of the Free-Trade party, at the local election and on the provincial question, gave a large majority in favor of the Protectionist leader at the general election.

The last general election turned on the tariff. If there was anything else that materially contributed to the Conservative victory, it was the personal ascendency of the leader, Sir John Macdonald, whose delinquencies had been forgotten and whose popularity had revived.

Yours faithfully, Goldwin Smith.

Toronto, August 2.

WHAT THE SILVER DOLLAR IS WORTH.

To the Editor of The Nation:

Sir: Almost every American one meets asserts that the silver dollar, which he calls the standard, coined in 1878, is *worth* as much as the greenback. It is not so here, but the American invariably replies that it is so in New York. He says that the United States Treasury will redeem all the silver standard dollars presented to it in gold, and therefore it is bound to be worth as much as the greenback. I see you weekly give the value of the silver dollar, which is generally over 87 cents. Is this what the silver dollar is *worth?* and what is the *worth* of the greenback? Americans contend that as much can be bought for a silver dollar as for a greenback. Does this establish the worth of *the silver dollar?* Americans say that it does; I venture to say that it does not, and I assert that even did the Treasury redeem in gold what of standard dollars might be presented, that would not establish the worth of the dollar. Which is right? A word of explanation will be esteemed a favor, not alone by D. B.

Toronto, Ont., July 19, 1879.

[The above is answered by the following statement: What is called the standard silver dollar contains 412½ grains of silver, 900 fine. The legal-tender value of this dollar is 100 cents; the bullion value is whatever 412½ grains of silver bullion is worth, which as we write is $0.8623; the market value, or the value at which the coins can be sold in quantities, is now about 99¼. As yet there are not enough of these standard silver dollars outside of the Treasury to force their circulation at their bullion value; so soon as there are enough out, then these coins will pass only at their bullion value, and the difference between that and the bullion value of the gold dollar, which is 100 cents, will be répresented either by a premium on gold—as during suspension, when the only other legal tender consisted of United States notes—or a discount on silver. The legal-tender notes are promises to pay coin dollars, either gold or silver; and as they can be discharged by paying silver dollars they will always rule at the market value of the silver dollars; as before said, this market value is now nearly the same as the legal-tender value, for the reason that there are not enough of these dollars in circulation to bring their market value down to their bullion value. Silver dollars are not redeemable with gold dollars. Outside of the domain of the United States all coins of the United States are taken at their bullion value, being bought in quantities by the ounce; accordingly, 412½-grain silver dollars are taken at say 87 cents, and gold dollars at 100 cents. As gold dollars can yet be obtained for legal-tender notes, and as the market value of the silver dollar is about 100 cents, the notes rule at par with gold, less the cost of collecting the coin on them. We publish from time to time the bullion value of the 412½-grain silver dollar to inform our readers what these dollars and all coin obligations not specifically payable in gold would rule at if there were a sufficient supply of these dollars in circulation to force them to circulate as the gold dollars now do, at their bullion value. It is only a question of time, provided existing legislation is unrepealed, when the silver dollars will rule at their bullion value, and when the par of all coin obligations not payable in gold will be the gold value of 412½ grains of silver bullion 900 fine.—Ed. Nation.]

Notes.

J. B. LIPPINCOTT & CO. have in preparation 'Memoirs of Henry Armitt Brown,' together with four historical orations, edited by Prof. J. M. Hoppin, of Yale College. The edition will be limited to the number of subscribers at $2.50 per copy.——Nos. 4–6 (vol. xi.) of the Bulletin of the Essex Institute contains valuable "Notes on the Native and extensively introduced Woody Plants of Essex County, Mass.," by Mr. John Robinson. They form in effect a manual of reference to the specimens in the Botanical Department of the Peabody Academy of Science, of which a heliotype view showing the arrangement adorns the Bulletin.——Mr. Warren Upham begins in the *American Naturalist* for August a series of papers on the "Formation of Cape Cod," which will interest all the coast dwellers from Provincetown to Perth Amboy. In the

same number Mr. Albert S. Gatschet records his investigation concerning adjectives of color in Indian languages on this continent. It has a decided scientific importance.——Judge Elisha R. Potter's "Memoir concerning the French Settlements and French Settlers in the Colony of Rhode Island," No. 5 of Mr. Rider's R. I. Historical Tracts, relates primarily to the Huguenot colony on the site of the present East Greenwich, but has for a scarcely subordinate object the unmasking of the Puritans. The author's manner does not always suggest impartiality, nor indeed is the whole case presented; but the residuum of ugly facts is considerable. The French genealogical notices are a useful contribution to the meagre Rhode Island stock of family histories.——The July Bulletin of the Boston Public Library contains a list of local histories with genealogical matter; Part V. of the History of Mental Philosophy; and a bibliography of the Renaissance in France and Italy. There is also a list of American newspapers of the last century possessed by the Library, with indications of their incompleteness. The number is considerable (35). The Twenty-seventh Annual Report of the Library is chiefly concerned with the growing inadequacy of accommodations, and with the practicability of co-operating with the teachers of the public schools in an attempt to direct the reading of the pupils. No recent Yankee notion is better worth trying.——The August number of the *Magazine of American History* is in a sort a continuation of the February number, being given up almost entirely to Washingtoniana. Mr. Parton has a characteristic paper on "The Traditional and Real Washington"; an account of Washington's headquarters at Preakness, N. J., accompanies a view of the house; and several letters of Washington's are printed, nineteen for the first time.——We have received from the Old Colony Historical Society, Taunton, Mass., its first collective publication, consisting of the papers read at its meetings during the year 1878. The Society is twenty-five years old, and contemplates publishing its earlier collections as soon as it is able. A sketch of its history introduces the present volume.——The Buffalo Historical Society also began its publications with the present year, the third number having appeared in March. In No. 1 the origin of the name of the city is discussed.——Part 21 of Sprüner's 'Historical Atlas' (B. Westermann & Co.) contains maps of Europe in the middle of the fourteenth century; Italy from 1137 to 1302; the Slavic kingdom of Poland, etc., 1386–1480; and Hungary from the beginning of the thirteenth century to the battle of Mohács. There are, as usual, numerous side maps.——In the *Rassegna Settimanale* for July 13 we find a letter from V. Cesati introducing one from the poet Longfellow in reply to the enquiry why the latter had entitled his poem "Excelsior" and not "Excelsius." His explanation is "that the device on the banner is not to be interpreted 'ascende superius,' but 'scopus meus excelsior est.'" This letter bears date of Feb. 5, 1874.

—Capt. George E. Belknap, U.S.N., in a second article on deep-sea soundings, published in the *United Service* for July, has brought out some of the results of the *Tuscarora's* work in the Pacific Ocean which should not be overlooked while the brilliant record of the *Challenger* is engaging attention. The *Tuscarora* was equipped for the work of deep-sea sounding under Captain Belknap, at Mare Island, in the bay of San Francisco, during the summer of 1873, and, after some preliminary reconnoisances, sailed from Cape Flattery September 17, and began sounding on a line which was to extend to Yokohama, by the way of the Aleutian Islands. After a run of eleven hundred miles the ship came back to Puget's Sound, the deepest of the twenty-five casts which were made being in 2,534 fathoms. While returning to San Francisco eighty-three soundings were made "off-and-on," to ascertain the true continental outline. The submerged Pacific coast was found to be very abrupt in its descent, and a run of seventy miles would sometimes disclose a fall of two and a quarter miles (2,000 fathoms). Later in the year a continuance of soundings south to San Diego, Cal., revealed the same outline. Should the waters retreat, says Belknap, the continent would appear "buttressed and bastioned like an immense fortress." The *Tuscarora* sailed again, January 6, 1874, to run a line across the Central North Pacific, *viâ* the Hawaiian and Bonin groups. Between San Diego and Honolulu sixty-two casts were made, ranging from 71 to 3,054 fathoms. From these soundings Belknap estimated the mean depth of this part of the Pacific at 2,562 fathoms, confirming the Coast Survey estimates based upon the rate of tidal movements. Passing westward to the Bonin islands, it was found that the contour of the ocean-bed loses its regular character; and were the waters of the Pacific drained off, six ranges of mountains, from 7,000 to 12,600 feet in height, would appear between the two island groups, "clothed on their sides and top with coral limestone, sand, and lava, and solid rock, with yellowish brown soil in their valleys." The deepest water found was 3,287 fathoms, and near the Bonin group. Fifty-nine casts were made, eighteen of them in over 3,000 fathoms. Proceeding to Yokohama, the *Tuscarora* made twelve casts, the deepest in 2,435 fathoms.

—On the return voyage the northern line of soundings, *viâ* the Aleutian chain, was completed. In the Kuro Siwo, or black stream of Japan, the current was so strong that soundings were abandoned. In latitude 40° N. they were renewed, and with remarkable results. Running towards Tanaga, of the Aleutian group, seven casts were made in over 4,000 fathoms, *the deepest in 4,655 fathoms.* Good specimens were brought up from four of these casts; in one the cylinder struck rock; in the two last and deepest casts the wire broke—one from a momentary carelessness at the reel; and the other, after 400 fathoms had been reeled in, "pulled in two from the strain at that great depth, five and a quarter miles." "So far," says Belknap, "these are the deepest soundings ever made." The conditions were all favorable—light wind, smooth sea, and gentle swell; the wire had run straight down like a sound in a pond or a plummet in a well, and the indications of the dynamometer were perfect and unmistakable. There could be no mistaking the instant of touch." Captain Belknap complains, and it seems to us with justice, that Mr. Wild of the *Challenger's* civil staff has thrown discredit on his deepest sounding, and has asserted that the greatest of all depths of which we have reliable evidence was found by the *Challenger* between the Caroline and Ladrone Islands, 4,575 fathoms. Belknap's soundings were made by the new and beautiful piano-wire method, suggested by Sir William Thomson, with the Brooke rod and sinker, the whole apparatus receiving on the *Tuscarora* its final form of extraordinary perfection. Simple as it was, it needed to be managed with great care; and this care was constantly given by officers and men. Particular credit is given to Lieut. G. A. Norris and Quartermaster Burns. Belknap contends that if Wild had been familiar with the Thomson machine and its workings he would not have discredited the *Tuscarora's* work, in which four tests proved the accuracy of the soundings—the action of the dynamometer, the stopping of the revolutions of the drum, the detachment of the sinker, and the bringing up of the bottom soil. The *Tuscarora* returned to San Francisco September 2, the anniversary of her departure from Cape Flattery. She had traversed 16,600 miles, and made 483 casts; the *Challenger's* casts in four years were 384. Of the soundings made by the *Tuscarora* thirty-two were in more than 3,000 fathoms; nine in depths ranging from 4,000 to 4,655 fathoms. Belknap's article contains some interesting references to the work of the Coast Survey steamer *Blake*, under Commander Sigsbee, and to other recent deep-sea operations.

—In some respects the ablest of recent contributions to the Ritualist controversy in England is a paper in the *British Quarterly Review* for July on "The Evangelical Movement: Its Parentage, Progress, and Issue," by Mr. Gladstone. It is very temperately, almost tentatively, written, but for that reason it is perhaps more persuasive; and it is particularly effective because what we take to be its motive and its real pith is a defence of the Tractarian movement and its succession, the so-called Ritualism of the present day, and because this is conducted indirectly and under the guise of an examination of the Evangelical movement. In this Mr. Gladstone displays the wisdom of the serpent, and to our mind his subtle attack upon the Evangelical position towards Ritualism is much stronger than Dr. Littledale's open field-tactics in his late discussion with the Abbé Martin. To be sure, Dr. Littledale's task was the more difficult, it may be said; he was endeavoring to show good reasons "Why Ritualists do not become Roman Catholics." But the Evangelical accusation against Ritualism consists solely of asking this same question, and it is, after all, the essence of the controversy, whether it is conducted with Romanists or with Low-Churchmen or with the Puritan Nonconformists. Mr. Gladstone argues that the relation of the Evangelical movement to the Tractarian movement was one of parentage, which will shock even Dean Stanley, peradventure, but in refutation of which it is hard to see what the Low-Churchmen can find in the historical argument, if they appeal to the historical argument to show the Tractarian tendency towards Rome. And this they always do, since it is the chief weapon they have. Mr. Gladstone points out that if one was a case of *post hoc ergo propter hoc*, the other was, and he says it will not do to answer this by the just but irrelevant observation, "Tractarianism was a movement obviously in the direction of the Church of Rome; Evangelicalism was a movement not obviously in the direction of Tractarianism." Of all the Tractarian leaders who followed Dr. Newman, "it must be said that, as they proceeded from Oxford (so to speak) to Rome, so they had already marched from Clapham to Oxford." This he supports not only by various

distinguished examples, but by showing the spiritual nexus, and his *tu-quoque* retort seems complete. On the whole, however, he concludes that "the great preparatory agent in co-operation with the Roman Church is the war now so actively waged against belief." His article is likely to provoke discussion, especially as it appears in the *British Quarterly*, which has not entirely outlived the reproach of "existing as an organ for the political Dissenters" long ago brought against it.

—At all events, if it does not the reason may perhaps be found in the want of luminousness and pointedness in Mr. Gladstone's manner, which often affords a curious literary study in itself. He is always copious to extravagance, but here, for the very reason doubtless that he felt himself bound to write dispassionately, he loses the measure of directness and simplicity which, in writing of Bulgaria or in speaking of Lord Beaconsfield, his unchecked personal ardor attains for him. He seems to occupy very much the same position that he held when Macaulay controverted his youthful argument upon the Apostolic Succession, and, as we say, the pith of his article on "The Evangelical Movement," etc., seems to be a subtle defence of Ritualism. At the same time he cannot be accused of lacking the Evangelical spirit. In a dozen places in his paper he refers to the crying faults of the Establishment, past and present, he does full honor to the Evangelical return to the "preaching of Christ," and his passing tributes to Wesley and Whitefield are as evidently genuine as his mention of Hook and Keble. His sketch of the Evangelical movement's rise and progress is elaborate; he nowhere explicitly excuses what are termed "Ritualist vagaries," and, indeed, it may be said that what he urges in their defence is urged indirectly and in palliation. Furthermore, on every other page there is a paragraph of digression upon some strictly extraneous matter which compels him to observe constantly that it is foreign to his "present purpose"; so that what his "present purpose" even is, it is difficult to discover with thorough satisfaction. His essay has the air of beginning anywhere and tending any whither. There is a manifest introduction, but where it terminates there is no ready means of ascertaining. There seems in all the fourteen pages no proposition distinctly advanced—no distinct "statement in words about a thing." It presupposes great technical erudition, and of its style the following sentence is not an unfair illustration: "A far larger and deeper problem is, of course, presented to us when we enquire, in connection with these differences, what front the Christianity of the country, and especially the great Anglican community, is to present to the disintegrating movement, which, however premature in its songs of triumph over Christianity, has undoubtedly made a progress which some years ago would have seemed incredible, in the business of sapping the foundations of belief in individual minds." Demosthenes was fond of long sentences, but his differed from Mr. Gladstone's in having, as a distinguished Greek professor once observed, "a snapper on the end."

—M. Renan has written an explanation of that part of his Academy address which offended Germany, in the form of a "Lettre à un Ami d'Allemagne." This supposititious friend having informed him that what he had said had been regarded in Germany as the utterance of an enemy, he writes in reply that such a judgment is superficial, and proceeds in a pamphlet of a dozen pages to elaborate rather than extenuate his criticism. He explains, however, "J'ai pu aller à l'encontre de certaines opinions des militaires et des hommes d'état de Berlin; je n'ai pas dit un mot contre l'Allemagne et son génie." M. Renan does not, to speak familiarly, carry very heavy guns for use in conflicts other than those which belong to his particular province. Even in that he does not command the respect of wholly unimaginative rivals; one recalls the remark of the late M. Doudan: "I know of no theologian with so intimate a knowledge of Oriental flora." But, aside from the charm which his writings have—his books almost read themselves—what he says is always interesting because he always moves in the sphere of ideas, because he is always concerned with truths rather than with facts, and with truths of a spiritual order. The manifestations of the human spirit occupy him to the exclusion of systems and theories on the one hand and practice on the other. In this essay, with all his accustomed elegance and more than his accustomed precision, he examines what may be called the Berlin ideal—unless Prince Bismarck objects to the word "ideal" as in itself involving sentimentalism—and the flaws he finds in it are worth attention, notably at the present time. It disdains everything that is not force, he says, and its heroes are "hommes de fer"; and he draws a vivid contrast between the Germany of to-day and the Germany of fifty or sixty years ago—the Germany of Goethe. To that Germany, "noble, intelligent, and profound," France, in M. Renan's view, owed much. It learned idealism of Fichte, faith in humanity of Herder, the poetry of the moral sense of Schiller, abstract duty of Kant. It imagined—"voyez notre naïveté"—that the German nation would become united after the principles laid down by Fichte or Kant, and then would appear in the great European confederation a people philosophical, rational, a friend of every kind of liberty, the enemy of the old superstitions, and having for its symbol justice and the ideal. Instead of this, profound discontent reigns in united Germany; whereas ordinarily after victory repression is needless, the Government is constantly occupied with measures restricting liberty; it has made of the people a nation organized for war, and, like the knights of the sixteenth century, hampered by its armor; socialist agitation, at once a malady and a symptom, is rife; in constitutional government no progress has been made; its parliamentary life is no more brilliant, free, or fertile than that of other peoples; statesmen are rigorously preoccupied with restrictions, repressions, and coercive measures; there is no succession to Goethe and Schiller and Heine; the military service is designed to foster *Junkerism* to the destruction of the finest flower of literary genius, and the social condition tends to the same result; the campaign against Ultramontanism has not advanced the question of the separation of church and state a step; finally, the idea of ruling humanity by love of humanity, by lofty, liberal, and sympathetic sentiments, is laughed at and treated as a sentimental and pretentious notion by her new masters, men of a cold and arid school, who tend to destroy rather than to develop Germany. Such, at least, is the substance of M. Renan's indictment.

—On the other hand, his essay is worth reading for its exposition of M. Renan's own ideal, from which Anglo-Saxons may pardonably conclude that there is a *juste milieu* somewhere, not thought of by M. Renan. What is supposed to be the typical French ideal is easy to parody, and a good deal of not too discriminating ridicule has been poured upon that part of M. Renan's reception address which demanded "captains with sonorous battle-cries." Such ridicule is cheap, it may be said, but it would hardly be so common, perhaps, if it had not an element of justice in it. Our notion of what the French mean by "*gloire*" is not utterly removed from the contempt which the cockney felt for a nation that called bread "*pain*." "Well," said his friend, "we call it bread; what's the difference?" "Oh! but you know it *is* bread," was his reply. Still, it is very far from necessary to misunderstand M. Renan in order to recognize the inadequacy of his ideal, its moral weakness and its lack of seriousness. These things go without saying, he would no doubt rejoin, but that is very much the view that men who are religious only on Sundays maintain towards religion. "La grandeur oblige," "L'homme qui a obéi est à jamais perdu pour certaines délicatesses de la vie," "La littérature suppose une société gaie, brillante, facile, disposée à rire d'elle-même," "Nous ne comprenons pas qu'on règne sur le monde sans grandeur, sans éclat"—a dozen such sentences carry an implication which Prince Bismarck is quite right in disregarding, if not in disdaining. They undoubtedly contain a measure of truth which Teutonic races are not likely to overvalue, but one wonders in reading them if M. Renan would thoroughly appreciate a distinction very forcibly made once by Mr. Carlyle: "'These poor, persecuted Scotch Covenanters' said I to my enquiring Frenchman, in such stinted French as stood at command, 'ils s'en appelaient'—'A la postérité,' interrupted he, helping me out. 'Ah! monsieur, non, mille fois non! They appealed to the Eternal God, not to posterity at all. C'était différent!"

—The 'Key to Domesday, showing the Method and Exactitude of its Mensuration,' exemplified from the Dorset survey by the Cheshire historian, the Rev. R. W. Eyton, is a full source of painstaking and erudite information upon a puzzle-ground for scholars from the eleventh century itself. Has anybody satisfactorily defined a Domesday hide, which one of our latest archæologists with good reason maintains is "variable according to the arability or pasturability of the land"? The *Athenæum* is so well satisfied with Mr. Eyton's book as to wish that it were in his mind "to do for Domesday Book, taken as a whole, what he has done so thoroughly and so conscientiously for one only of the counties surveyed." Mr. Eyton is clear that the *pertica* or *virga* contains 16½ feet, and sets the *quarentena* at 40, and the *leuua*, *leuca*, or *leuga* at 7,920 feet. The lineal *acra*, quite distinct from the square acre, is fixed at 4 *perticæ*, while the square or areal acre equals 160 *perticæ* of 30¼ square yards each. Ten areal acres are put to one square *quarentena*, twelve of these latter making the areal league.

—It is a curious fact that Diez's 'Poesie der Troubadours' (Zwickau, 1826) and 'Leben und Werke der Troubadours' (1829) still constitute the best history of Provençal poetry. The *Nation* has called attention from time to time to the shortcomings of Diez's successors. The books, how-

ever, of Rutherford, Miss Preston, and Hueffer laid claim to a popular character only, and were entitled to some indulgence on this account. The latest work on this subject is so pretentious, and at the same time so much worse in many respects than those above mentioned, that it deserves the severest treatment. We allude to the 'Historia Política y Literaria de los Trovadores,' by Don Víctor Balaguer (Madrid, 1878–79). The first two volumes contain seven preliminary discourses, and the biographies of sixty-four troubadours. As Bartsch in his 'Grundriss' names four hundred and sixty, it will be seen that Señor Balaguer's work will probably extend to six or seven volumes. The plan of the work is precisely that of Millot's 'Histoire Littéraire des Troubadours' (Paris, 1802), which, it is within bounds to say, Balaguer has lifted bodily. So barefaced a piece of literary borrowing we have never seen. Page after page of biographical notices are transferred literally, while constant use is made of Millot's prose translations from the Provençal, which are copied down to italics, omissions, and punctuation—and all this without a word of acknowledgment. The character of the author's own studies may be seen from his statement in his *Prólogo* that he had collected materials for his work from the various libraries of France for two years before he knew of the existence of Raynouard's 'Choix des Poésies des Troubadours.' An utter lack of scientific method characterizes the whole work. In the entire six hundred and sixty pages there are *four* citations of works by volume and page. Of all the Provençal texts used not one is referred to its source, although most of them are taken from Raynouard, whose erroneous theory of the origin of the Romance languages Balaguer seems to share. He also accepts too readily Nostradamus's fabulous stories, among them that of William of Cabestaing, now thoroughly exploded. The preliminary discourses are superficial, especially those on the various classes of poetry and on the courts of love, the very existence of which Diez disproved fifty years ago. We trust Provençal scholars will not be led by its attractive appearance and pretentious character to purchase this worthless abstract of Millot.

JOHNSON'S RELIGION OF CHINA.*

THIS work, comprising 1,000 pages less one, is a marvel of labor and research. It is a further instalment in the execution of a great purpose undertaken by its author—viz., the investigation of the character of the Oriental religions and their relation to *that* religion which contains universal elements, or is governed by universal laws, such as historical continuity, reaction, ideal demand and supply. Such a universal religion, though it exists not in a concrete form, may be justly idealized and reasoned upon. It is, in other words, the religion of humanity. The design of the author, then, would be to detect these elements or laws in the religions he surveys, and so bring them within the common *nexus* that, so far, binds together the human race, and, we may add, proves its common origin and eventual destiny. The vast labor required for such enquiry, and the penetration necessary for carrying it out with any hope of success, must be evident to all. The religions of the East, except Christianity, are still, as far as our knowledge of them goes, wrapt in obscurity. As concerns India, its sacred books have yet to oe translated. What we know of the Vedas leaves us almost as ignorant of the genius of the Indian mind as we were before. They are grand in their simplicity, but uninstructive in the solution of the great questions which, if they did not grow out of them, followed after them, and perplexed the minds of thousands of subtle thinkers. We have only a fragmentary knowledge of the Upanishads, and the whole of the Indian theology is founded on these. With respect to the Vedânta, although we have excellent summaries of its doctrine, yet, until the formidable list of Upanishads named by Colebrooke at the beginning of section ix. of his work on the 'Philosophy of the Hindus' be translated, we cannot be said to have a thorough knowledge of its origin and development. Mr. Banerjea, indeed, seems to think that the Vedânta owes very much of its dogma, if not its origin, to the speculations of Buddhist controversialists ; and in this many others agree with him. But if the religions of India are yet only half known to us, what shall we say about China ? What do we know of the religious life of the three hundred and fifty million human beings who inhabit that mountain-girt empire ? Next to nothing. We have their books, some of them well translated ; but what do we know of their lives? And if we do not know the character of a nation's inner life, we cannot pretend to be acquainted with its religion; for book-religion is one thing, and the belief and life of a people, very often, another.

The only way to review such a work as that before us is to say something as to its object and method, and then to select some one point in the field of its research for illustration. We have said something about the object of the book. It is professedly intended to be a search after elements in the Chinese religious character the possession of which proves them, in this particular at least, to belong to the great religious federation of the world. We confess the object appears to us an illusory one. We may think we have found out some touches in the picture that harmonize with our conceptions of what must be universal, but unfortunately the field is so vast, and our actual knowledge of its true character so contracted, that what we take to belong to the whole may indeed be only exceptional, and therefore deceptive in its character in the search after the object named. And as we confess this to be our view of the case, we must add that, notwithstanding all the learning and the wonderful amount of detail contained in the book before us, we have closed it with something like disappointment, because we do not find ourselves satisfied that the object has been attained ; nor do we feel that we have any very distinct apprehension of what it is in the religions of China, so far as they *are Chinese*, which brings the people of that country into the federation we have named. In fact, the very startling question has to be answered first, Has China any religion at all ?—that is, any religion *of its own*. If we take the word religion to mean the act of remembering (the opposite, in fact, of *negligere*), then undoubtedly the Chinese are the most religious people in the world, for their whole life is built up on this basis of remembering the teaching of their ancestors, particularly Yaou and Shun. And, in fact, perhaps this is *the* element which connects them religiously with the rest of the world. But it is evident that "to remember" is only one factor in the definition of the word religion ; *what* we remember, and with *what view* we bring ourselves to remember, these are further elements in the question ; and if it be necessary, in order to entitle a people to be called religious, that they remember something more than their social duties, with a view to something beyond the present life, then we can hardly find out from their books, at least, that the Chinese as a distinct people have any religious life of their own.

But if the object of Mr. Johnson's work appears to us more or less an impossible one to reach, the method of the work both for its originality and wonderful completeness demands the highest commendation. What may be known of the Chinese can certainly be found out from the methodical arrangement of the materials in the work before us. The method is, first of all, to select certain leading divisions under which the enquiry may be exhaustively conducted—(these divisions are five in number, named as follows : (1) Elements, (2) Structures, (3) Sages, (4) Beliefs, (5) Philosophy)—and then in the several divisions to search out fundamental ideas, which in some way or other tend to illustrate the subject of enquiry. It need hardly be remarked that to follow the author through the field he has chosen would be impossible in a mere review of the work. Suffice it to say that no task could have been more conscientiously fulfilled than that which his own method exacted from him. Each division might, indeed, be the substance of a separate treatise. The only fear we have is that the very thoroughness of the author's research may tend rather to embarrass the reader, and burden his memory with facts and conclusions too numerous to be carried forward in the calculation in which he is engaged. In one of the subdivisions of the work, viz., that which treats upon "language" (the third subdivision under the heading "Structure"), we find many remarks of an interesting character. Nothing, we imagine, can throw more light on the genesis and growth of the religious idea in man than the words or symbols used in the earliest ages to represent the Divinity, or the highest object of worship. In this there is an absolute agreement in all the typical races of mankind. If we take the earliest Aryan symbol, it will be found in the figure which undoubtedly stood for the mystical syllable "OM." This symbol is merely the junction of three signs which respectively indicated the sun, the moon, and the stars. It is simply this : ☉. In cases too numerous to mention this symbol is found for the purpose of indicating "the Highest," or the object of divine worship. The curious reader may refer only to the Pâli inscription found in Burnouf's 'Lotus,' p. 438. But what we want to observe is that this idea of something "high" or "exalted" is also contained in the Chinese symbol 上, which by its very structure (and, we may add, its acknowledged significance) indicates that which is high or exalted above the earth ; and, therefore, amongst the Japanese is translated by "Kami"—*i.e.*, God—and in the Chinese itself is the principal factor in the composition of the term Shang-ti, which is regarded by the best-informed Sinologists as the only correct rendering of our word for the Divinity. And now compare with this the Semitic word for "heaven" (*shamaim*),

* 'Oriental Religions and their relation to Universal Religion. China. By Samuel Johnson.' Boston : Houghton, Osgood & Co.

which, as Goldziher remarks, is derived from the idea of "height," and even our own word "heaven"—*i.e.*, something "raised" or "heaved up"—and we shall see how in the earliest times there was an agreement amongst men that in worship there was an object *above* themselves deserving of loving adoration (kissing the hand), and that this object was as a father, a heavenly father, a father in heaven, the high and lofty one. This is a common element in the religious life of the race, but in China it was lost at a very early period, and can hardly be said to exist there as a distinct conception now, or at least only in a material and degraded sense. And yet the language of China bears testimony to truth of an original search after a supreme object of worship in other ways. There is one symbol, for instance, which has come now to mean "the heart," or "the mind," as appertaining to ourselves. In all the old Buddhist books this symbol is used to signify the same as the Sanskrit Âtman (nom. sing. Âtmâ), which, according to our dictionaries, is rendered by "breath," "soul," etc., but which is in fact equal to the "highest self" or the "supreme existence." Now, the character is described in the best Chinese books to be compounded of a curved stroke, which represents the crescent of the moon, and three dots, to denote the stars above the moon; in other words, this primitive symbol was designed to signify the "highest" or "Âtman," so that the worship of the "supreme self" must have been known in China at the time when this character was devised. And now, if we connect these three dots or stars with the three gods (,',) of Semitic origin, used for "Adonai," and with the *Cándra-vindu*, "the dot in the crescent" (☽), in Sanskrit, which dot in the crescent is now the symbol of the Moslem, adopted by them to signify their divine power; and, finally, if we go back to the primitive symbol alluded to above, viz., ☉ as the equivalent of "OM," being the sun, moon, and stars conjoined, we seem to arrive at this conclusion: that the symbols used in the three great families of man, viz., the Chinese or Mongolian, the Aryan, and the Semitic, to signify "the highest," or "the supreme object of worship," are identical, and that, therefore, there was a oneness of thought and an agreement of expression in the great human mind as to the object of worship, shared by East and West alike in their primitive home, and carried by the several branches of the divided race to their respective locations.

Mr. Johnson is particularly happy in his remarks on Buddhism (Division iv. sec. 2). It is indeed a subject of vast dimensions to handle thoroughly, but according to his plan our author exhausts it for all practical purposes. Under the heading, "The Coming of Buddhism," and the causes of its growth in China, he shows that Mr. Fergusson's theory of the origin of Buddhism in "serpent worship" is quite untenable; he accounts rather for its growth because it was a slow-sure movement, with secular aid, to which he might have added that it was introduced into the country under the immediate auspices of the reigning monarch, and at a period of reviving literary enquiry after the destruction of the books and the persecution of the literati. Mr. Johnson then refers to the ethical side of Buddhism, which was preached first, that is very true; but we must also connect with this the translation of "The Life of Buddha" into Chinese, which was made at the very introduction of the religion; and the simple, touching, and, we may say, truth-like biography of the sage had doubtless a wonderful effect in winning disciples to his doctrine. The industry of Buddhist preachers and scholars is another reason given, and a very just one, especially when joined with the wonder caused by their travels and adventures. The sympathies of Buddhism are a fourth reason; force of organization another; reaction against Confucian contempt or what, perhaps, we might call the supposed *finality* of Confucianism, this is another and a weighty reason; and, lastly, Mr. Johnson adds the power of its intrinsic virtues as a cause of success. This is all very true and to the point. It would be well if this section were more generally read and studied by those who are interested in the religious history of the Chinese. Mr. Johnson then goes on to consider the development of Buddhism through its four stages: 1. As a primitive system concerning itself chiefly with the great question of the cause of sorrow and the mode of its destruction. 2. The Hinâyana system, as it embraces the beginning of conventual life, and concerns itself more with philosophical speculations. 3. The Mahâyana system, which, in fact, marks the beginning of a supposed *gnosis* in reference to matters which the former systems had not mentioned, such as the character of Nirvâna, the supreme soul, the nature of Tathâgata, and so on; and, fourthly, Mysticism, which is the natural counterbalance of scholastic refinements. Under these headings Mr. Johnson surveys the development of Buddhism. Lastly, from p. 800 to p. 833, Mr. Johnson sketches out a history of Chinese Buddhism, or of Buddhism in China, as distinct from the Buddhism of India. This part of the subject is ably treated, but cannot be fully handled by any one until we have more of the native literature, faithfully and fully translated, especially the writings of the Tsung, or contemplative school, which has taken deep root in the south of China.

To go on with this book would be to distract rather than engage the attention of our readers. Suffice it to say that if any one wants to take up a study in a line out of the common way, and to master it as a problem is mastered by the mathematician, he has here, in Mr. Johnson's work, materials for a complete investigation of a subject which few have ever thought upon—viz., the relative position of the Chinese as a religious people with other nations in the West, and how far this relationship accounts for the differences in daily life and habits which separate this people so conspicuously from the rest of the world.

TURENNE'S 'NORTH AMERICA.'*

COUNT TURENNE, who spent fourteen months in the United States and in Canada, differs in many respects from the ordinary French traveller, and the difference is greatly to the advantage of his readers. As a rule, a Frenchman, particularly a Parisian, away from his beloved Paris, would not be charmed even with Utopia. He eats no dinners as good as those at the Café Anglais; sees no plays as enjoyable as those at the Français, and meets no people as witty as the Parisian, or as happy as the French peasant. Count Turenne, however, travels and examines in a candid, if not an enthusiastic, spirit. He came to this country in the fall of 1875, and visited the principal cities of the Union, making repeated and prolonged stays in New York, Philadelphia, Boston, Chicago, St. Louis, New Orleans, and San Francisco. His volumes abound in exact statistical and economical accounts, which, though of slight interest to the American reader, to whom they are familiar, cannot fail to diffuse a great deal of useful information among the French, who are not, as a nation, entirely free from a provincial ignorance of the social, political, and commercial life of foreign countries. Thanks to his own name and position, and to the circumstance that his travelling companion was Baron Edmond de Rothschild, of the Paris branch of the great banking-house, the author travelled under particularly favorable circumstances. His impression of New York society as well as that of the other large cities which he visited will best be understood if reproduced in his own language:

"In fine, after having spent more than three months in travelling in the United States, living a little in every kind of society, it is impossible for me to avoid observing that society does not exist there, excepting in very limited proportions. And by society I mean those *rapports*, those sympathetic communications, that one has with others. America is full of men who have succeeded marvellously, and who are themselves a failure; whose residences are splendid, but whose souls are vulgar; who have pictures and cannot appreciate them, books and do not read them, clothes and bad fashions, clients (*clientes* in the Roman sense) but no society, flatterers but no friends. They have acquired fortune by great effort, but they do not know how to enjoy it. To be sure, there are eminent minds, enlightened and cultivated in art, letters and science, but they associate with each other almost exclusively in a by no means numerous group, which in the wealthy or well-to-do class forms a sort of caste by itself, and constitutes what might be called 'the true society.' Its defects are, as palpably as in any country, those which are the result of early education, and access to it for the wealthy of the old world is difficult."

In Washington and Baltimore Count Turenne was struck by the ludicrous anxiety of many sensible and refined people to trace their origin to ancient and illustrious houses. The mania for titles he considers common to all classes of American society, and the prevalence of it in a democratic republic leads him to conclude that human nature has a horror of equality. He assures his French readers that the number of senators, governors, judges, generals, and colonels—particularly colonels—to whom he was introduced is something fabulous. When it had become known that he had served in the French army he was immediately called colonel, in spite of his repeated and earnest protestations that he had never held so high a rank.

The position of women in American society naturally occupies a great deal of Count Turenne's chivalric attention. The personal charms of American ladies he considers superior to those of any European nation, and the elegance of their manners seems to him to exercise a wholesome and refining influence upon the harsh and angular character and behavior of the men. American men, in return, show an amount of almost religious attention and devotion to women which the author

*'Quatorze mois dans l'Amérique du Nord. Par le Comte Louis de Turenne.' 2 vols. 8vo. Paris, 1879. New York: F. W. Christern.

thinks unparalleled in any other country. The general inferiority of the men as compared with the women is due, he suggests, to the very deficient schooling which most of the former get. At the age of fifteen or sixteen, when, among the better classes of European nations, the serious part of a boy's education really begins, the American boy is commonly taken from school and obliged to enter some business, where in the struggle for wealth, which alone secures position in American society, he soon entirely neglects and forgets the very slender rudiments of education which he carried away from the school-room. To this very deficiency, however, and by way of compensation, is due the fact that the character of the young American gains such an amount of self-reliance, independence, energy, and capacity of administration at an age when European boys are under the strictest surveillance of schoolmasters and parents.

In his long journey across the continent from New York to the Pacific, where he also visited the interior parts of Colorado, Nevada, Montana, Idaho, etc., the author gives elaborate statistical accounts of the commercial activity of the West, of which the general French public has probably never heard so much heretofore. Part of the account will doubtless prove discouraging—as, for example, when the average French farmer, burdened in his own eyes, at least, with taxes, compulsory military service, and material difficulties of various sorts, reads that owing to an unequalled system of canals, railways, river, lake, and ocean steam-navigation, the grains of the West and Northwest of the United States can be delivered in England and France at an average price of 16 francs per hectolitre, while he labors at a loss if the price of grain falls below 22 francs for the same quantity.

Count Turenne devotes an entire chapter to an account of his visit to Salt Lake City, and manifests a proper abhorrence of Mormonism. He spent three weeks in New Orleans, where the remains of the old Creole aristocracy naturally charmed him. He made two long visits in Canada, and was, of course, delighted with Lord Dufferin, whom he met and who appeared to him the English gentleman, *par excellence ;* and in an analysis of the Constitution of the Dominion he expresses similar admiration of that. As to the future of the political institutions of the United States, however, Count Turenne exhibits, in several places, gloom and despondence. From his interviews with some of the best-informed and most sober-minded men in this city, he feels inclined to arrive at the conclusion that few of them believe in the stability of the present state of affairs and in the existing form of Government. This, indeed, is perhaps the only shallow and superficial part of his entertaining work.

Count Turenne is a lively and interesting writer, his descriptions of natural scenery are vivid, often graphic, and where his patriotic sentiments come into play, as among the French element in Canada and Louisiana (where he evidently lost his heart to a beautiful girl of half French origin), he even grows pathetic, and occasionally "drops" into poetry. A certain dulness and monotony is excusable in consideration of statistical tables and figures which fill many pages of the two volumes. The book must be of great use to French readers, who wish to learn something of a country and a nation in whose welfare the French people have always expressed a lively sympathy, but of whose political, commercial, and social life the majority is singularly ignorant. Nor can it fail to interest American readers, who would like to see themselves and their institutions judged by an intelligent, high-bred gentleman.

Webster's Unabridged Dictionary. New edition, with Supplement. (Springfield, Mass.: G. & C. Merriam. 1879.)—The time seems to have come when some close observer of words, some student of language who is at the same time a wide reader in many departments, might profitably issue an annual supplementary dictionary of the English language on the same plan as the annual supplements to popular encyclopædias. Such a work would have two functions : in the first place, of course, to register everything new which has made its appearance during the year in the English language—new and yet not wholly ephemeral ; and in the second place to put formally on record phrases and single words which have been in every one's mouth perhaps for years past, but are never seen in print outside of newspapers and light fiction, and least of all to be found in dictionaries. This latter class should be inserted not only for the sake of foreigners and speakers of English a century hence, but for the English and Americans of to-day. It is never safe for a lexicographer to leave anything out because every one knows it already. "What every one knows" resolves itself into "What I know," and this latter varies as the editor is interested in politics, athletics, bric-à-brac, or what not. The omission of such phrases, and of another class—namely, those which every native speaker of English understands, but many mere readers of the language do not—was a conspicuous deficiency in Webster's Dictionary, and is still a fault of the Supplement. The editors had ready at hand in Hoppe's (German) *Supplement-Lexikon* a valuable collection of idioms and allusions from the works of Dickens, Thackeray, Trollope, etc., to which Hoppe had been frank enough to add an appendix of phrases the meaning of which neither he nor his friends had been able to find out—*freshmen salmon*, for instance. Foreigners, and especially foreign lexicographers (like Hoppe among the Germans and Grimaux and Lagros among the French), have sharper eyes than we have for what is new (*i.e.*, unrecorded) and strange in English. Another important desideratum in any dictionary is words and phrases which Englishmen understand and Americans misunderstand, and *vice versâ*. Of this the Supplement takes cognizance in at least one instance, viz., in adding to the noun *record* the definition, "the list of known facts in a person's life, especially in that of a public man ; personal history ; as, a good or a bad *record*."

A general survey of the sources of the new Supplement discloses the insertion of a good many Shaksperian meanings, and pretty frequent reference to Matthew Arnold, Browning, Tennyson, Dickens, Macdonald, George Eliot, F. W. Newman, Marryat, Scott, Darwin, Lubbock, etc., for the later or still living English writers ; and to John Russell Bartlett's 'Dictionary,' Lowell, Emerson, Hawthorne, etc., for Americanisms or classic American usage. A few examples will illustrate the character of the additions, and incidentally afford a glimpse of the world's progress in the interval since 1864, the date of the last edition : After-glow, aggressively, albert-type, alcoholism, Algonkin ; banality, bicycle, Bohemian (literary and other), Brahmo Somaj, butter-fingered ; Calisaya bark, card-catalogue, carpet-bagger, chauvinism, cod-liver oil, Comtism, crédit-mobilier ; Darwinian and Darwinianism (why not the vastly more common Darwinism, and Darwinist ?) ; deacon, *v.t.*, "to line out the psalm" (but we miss the other New England meaning, *e.g.*, in connection with a box of berries which do *not* "grow bigger downwards"), deadbeat, derringer, Draconian, dynamite ; earth-closet, evolution ; Faradization, Fenian, fractional currency, Franklin-stove ; Gatling-gun, gang-plough, gouache, Granger, greaser, greenback ; health-lift, heliotype, herd-book, Hicksite, humanitarian (in the recent sense of a philanthropist, etc.) ; interview, *v.t.*, Irvingite ; kindergärtner, Krupp-gun ; lacrosse ; margin (on the Street), microphone, mitrailleuse, Molly Maguire; nihilist; object-teaching, one-horse; papyrograph, Paris-green, Pelasgic, phenomenal, phonograph, pool (on the Street), Portland cement, primary (political), Pullman-car ; repeater (at the polls), repoussé; shogunate (but not septennate), sorosis, stereogram ; tasimeter, ticket (for voters), totemism, trade-dollar, trapeze, type-writer ; underground-railroad ; walking-gentleman.

Criticism of a dictionary, even of a good one, and this Supplement possesses the merits which every one accords to the parent work—generally consists of good-natured or ill-natured fault-finding with particular articles ; and the first three letters of the alphabet certainly furnish not a few instances in which a person utterly ignorant and trustfully seeking information would not find it here. *Abdominal ring* is not, though the Supplement seems to say that it is, a sort of annular wound in the abdomen ; under *acupressure* we are left in doubt whether the ends of the artery or of the needle are left in sight ; there would be no *raison d'être* for the *alethoscope*, "an instrument for viewing pictures by means of a lens, so as to present them in their natural proportions and relations," for the human eye has this very function ; *acrotism* should be the absence rather than "a defect of pulsation"; *bench-show* is defined broadly enough to include cattle-fairs, and *bog-wood* to include all wood dug from peat-bogs. Under *ærose* (coppery), *alose* (shad), and *anserous* (silly), the seeker is not informed that these words are extremely rare and not to be recommended ; and the last, with *anatomism, armsweep,* and *daintify*, is probably one of those wilful, quite ephemeral, creations of individual writers which hardly deserve even cataloguing in an appendix. One phrase, which has become the *bête-noire* of those who have occasion to consult dictionaries frequently—namely, "a kind of"—still affronts us in the Supplement ; a *bag-wig* is "a kind of wig in use in the eighteenth century," and a *bertha* is "a kind of cape worn by ladies." So much every one could tell from the context of the book he was reading, and is righteously indignant at having asked his dictionary for bread and received a stone. Finally, the indefinite article is used more indefinitely than ever in such chemical definitions as those of *amine* and *carbid*. *Amine* is said to be "a substance derived from ammonia by replacement," etc. The learner will ask: Is *amine* a single specific compound with as definite a composi-

tion as acetic acid? or is any one of a single class of compounds derived from ammonia, etc., entitled to be called an amine? or, finally, is any compound whatever derived from ammonia, etc., an amine?

There is one improvement, affecting the whole scheme of the Dictionary, which we should have been glad to find uniformly carried out in the Supplement, but do not. To recur to the word *deacon*, we are told (and for the foreigner it is an indispensable piece of information) that it is usually associated with the word *off*. But there are thousands of words—verbs, substantives, and adjectives—whose meaning is completed, or relation to other words in the same sentence indicated, by adverbs or prepositions which are idiomatic to the English. Often enough the native has to hesitate which to choose; sometimes the usage is mixed; not seldom the English is opposed to the American. Now, neither in Webster nor in Worcester is help given invariably and systematically. As a rule it is left to the accident of an illustrative quotation; thus, in the Supplement, under *directive*, we find the Shaksperian "Directive by the limbs," certainly not cited by the lexicographer on account of the word *by*, but for the sake of the authority merely. No such chance aid is given under *despotize* (*over*); nor under *irresponsive*, which requires the preposition *to*, although *irrespective*, to the honest foreigner's confusion, requires *of;* nor under *original* (*with, in*). To be sure, in the main work, under *averse* we are assured that this adjective ought to be followed by *to* and not *from*, "as formerly"—rather say, as now, in England, and as in O. T., "men averse from war" (Mic. ii. 8); and under *different*, that it is proper to use *from* and not *to*, as in England. So under *differ*, we have the usage with *from* expressly noted, and the usage with *in* suggested rather than enforced by a quotation; and under *agree*, the various usages with *to*, *in*, and *with* are similarly declared or inferrible. But we repeat that there is nothing systematic about this, so that if, for a final example, under *dependence* we learn, directly or indirectly, that it is followed by *on* or *from*, under *independence* we find no mention of any relative word, whether *of* or *upon*.

We should not do justice to this edition if we failed to mention the new feature of a Biographical Dictionary—the latest step towards making "the Unabridged" a cyclopædia. Of this we will only say that it is compiled on the principle of allowing one line to a name, and that the pronunciation subjoined to each is creditably accurate, and appears to be based on the trustworthy example of the Condensed American Cyclopædia. We conclude with the remark that as the publishers do not sell the Supplement apart from the Dictionary, the former will not fall for a number of years into the hands of those persons most competent to offer corrections and additions.

Progressive Japan. A Study of the Political and Social Needs of the Empire. By General Le Gendre. (San Francisco: A. L. Bancroft & Co. 1878.)—This is an essay in the higher branch of politics, discussing the present condition of Japan and the opportunities and dangers that are showing themselves on the horizon of that empire. Before 1867 the people of Japan were the subjects of their feudal lords, who ruled through *karōs* (ministers). When these officials misgoverned, the popular discontent was pretty surely followed by the suicide of the offender or his removal by the daimio. No one ever thought of blaming either the paternal daimio or the sacred Mikado. At a word from the Mikado the Shogunate was abolished, and the daimios, relinquishing their feudal privileges—the inheritance of ages—became practically pensioned noblemen. The supreme control and the actual government again centred in the Mikado, as in the infancy of the nation. But it became immediately evident that the methods of ruling a simple people during the period when they were wresting the land from the aborigines, was not adapted to a large population and a highly differentiated state of society. Various experiments were tried, resulting in the formation of three great boards developed out of the high council of the Mikado. These boards, consisting of nobles, chiefs of the Fu and Ken, and of men distinguished by their services to the country or for eminence in politics, were really nothing more than advisory committees having no legislative powers, though from the manner of their construction it seems to have been intended to raise them at some time to the position of representative bodies.

The present government of Japan is, therefore, a typical autocracy, in which the paternal benevolence of the Mikado becomes perverted and polluted in passing through the channels of an intricate bureaucracy. There is nominally nothing interposed between the subject and the sovereign. The danger which General Le Gendre sees in this state of things is, that the remedy for evils which is provided in constitutional governments by reconstruction of cabinets, etc., does not now exist in Japan; that the Mikado will gradually lose his sacred character in the eyes of his people, and that then troubles which might otherwise end with a change of ministers will end in the downfall of the most ancient and most beloved of dynasties.

Among the many grave problems presented to the Government was the future of the soldier-class and nobles, who had been from time immemorial paid retainers. Within a few years past these have been pensioned, and later their pensions have been capitalized by issuing to the recipients, once for all, Government bonds of more or less brief duration. Fears were entertained that this least provident portion of the people would waste its small capitals in the speculation which arose under the new order of things, and that, once rendered desperate by impoverishment, it would form a dangerous element of society. The most interesting chapter of the book is that devoted to showing that this class can find a wide and profitable field for self-maintenance and usefulness in agricultural pursuits, and that the actual exploitation of the resources of the empire is far below the possibilities. An instance is given where four hundred and eighty retainers, including two *karōs*, forming themselves into a land company, took a tract of land valued at $240. They divided themselves into six sections of eighty men; each section, from the *karōs* down, working five days at a time. "Now, these gentlemen, unused to manual labor and unaided by any agricultural implements, have given a value, entirely by their labor, of $72,000" to the tract, and this after only five years.

The author's manner of presenting his subject is not very clear, and the essay itself is evidently intended for the Japanese and not the foreign reader. But it will be found a useful document by the student of that extremely instructive episode of modern history which is presented in the sudden fall of feudalism in Japan. A voluminous appendix contains among other things a valuable table of classified statistics of production for the empire, a glossary of names of products, etc. From one of these tables we take the following items: the average value of the cultivated land is about $200 per acre; the average taxation is nearly $2 36 per acre, and the average revenue to the owner is 6 per cent. on the value of the land. There were produced (presumably in 1876 or 1877) 5,265 ounces gold; 287,729 ounces silver; 4,216 tons copper; 34,600 tons iron, and 410,000 tons of coal; the total value of the products of mines and quarries was $4,750,000, and the total value of products from all sources—field, forest, mines, sea, and manufactures—was over $428,000,000.

Obituary Notices of Astronomers, Fellows and Associates of the Royal Astronomical Society; written chiefly for the Annual Reports of the Council by Edwin Dunkin, F.R.S., F.R.A.S., of the Royal Observatory, Greenwich, Honorary Secretary of the Royal Astronomical Society, 1871–1877. (London: Williams & Norgate. 1879. 8vo, pp. 257.)—The title of this work indicates its contents in a tolerably accurate way. It consists of a series of short biographical sketches of twenty-three members of the Royal Astronomical Society of London, who died during the period between 1870 and 1878, and of a sketch of Sir William Herschel. These memoirs were originally inserted in the *Monthly Notices* of the Society or in magazines, and are now collected after having been revised, or in some cases re-written. The most important of these are the notices of Sir John Herschel (7 pages), Sir William Herschel (39 pages), Laugier of the Paris Observatory (30 pages), Le Verrier (8 pages), Littrow of Vienna (34 pages), and Main of Oxford (7 pages). The space devoted to the several notices shows that harmonious treatment is not attempted, as the importance of the work done by the subject of the memoir bears no relation to the extent of the notice.

The convenience of having sketches which were already in print bound up in one volume is the only excuse for the appearance of this book, which appeals to a very small public, in America at least. In a few cases the personal acquaintance of the author with the subjects of some of the memoirs has given a more lifelike tone to the notices; in general they are of but passing importance, and of no lasting value. They are more like the after-dinner talk of a good-natured colleague than serious memoirs of some of the greatest names this generation has had the misfortune to lose. In the one instance in which the author has risen to the pathetic (p. 84) his emotion appears to be caused as much by the fact that he was one of the "favored few" who followed the remains of Sir John Herschel to his tomb in Westminster Abbey as by the fact that that tomb was closing over the most restless and active astronomer of his generation; one who

had a double right to honor by his own work and as the inheritor of one of the greatest names in English science.

If in looking over the pages of this colorless book such strictures should seem severe, either because of the harmless good-nature of the author, or of the general and sluggish accuracy of the material, let it be remembered that some of these names are of those which should and will incite future generations to generous enthusiasms, and to years of toilful and scant-paid work, to labors like those of Delaunay and Le Verrier in analysis, like those of D'Arrest and the two Herschels in observation. Such work should not be, is not to be, spoken of as if it were common, ordinary, and of every day. It is to be comprehended or left untouched. And it seems at least a right, if indeed it is not a duty, to say to those into whose hands this work may fall that all has not been told, and that, in fact, there are now in print notices of some of these great men in which the true insight has been used, and the true meaning and perspective of their lives and labors exhibited. We need only to refer to Arago's memoir of the elder Herschel as an example. Models were not far to seek even in this country, where the memoirs of Gilliss, Walker and others by Gould are alive with quite a different spirit. If the work lacks perspective and insight, let it be said that it is not ambitious, and is, as far as we have examined it, strictly correct, although utterly inadequate.

Milton. By Rev. Stopford A. Brooke. Classical Writers. Edited by John Richard Green. (New York: D. Appleton & Co. 1879.)—This is the first of what we take to be a series of primers in some sort similar to Mr. John Morley's "English Men of Letters" series. It is more comprehensive, in that it is to include Greek and Latin as well as English classics, and Mr. Green is naturally a different kind of editor from Mr. Morley. Mr. Morley's aim—at least his accomplishment indicates such an aim—is to select some writer especially fond of and learned in the author he desires written of, and then to allow him to unburden his mind to the top of his bent, as the phrase is; whereas Mr. Green, in the several analogous series that he has edited, exhibits a distinct conservatism, and endeavors to secure that nothing so uncertain as to be liable to provoke controversy shall find its way into a "primer." At first thought Mr. Green's notion seems manifestly the more commendable, though it should be observed that very likely Mr. Morley does not assume his series to be "educational" in any degree, but only "popular." One cannot, it seems at first thought, be too careful to keep one's own or the ideas of others from appearing under the guise of accepted and undisputed truth. Mr. Carlyle's poetical rhapsody upon the French Revolution should not, for example, be permitted to be used as a primer, one reflects, even supposing such use of it possible. At the same time Mr. Green's system has its disadvantages. His primers run the risk of being colorless, it must be acknowledged. It may be that some of them are likely not to be read at all for this reason. Mere chronicle is apt to suffer in a contest with history vivified by speculation. In the second place, it is possible to doubt if mere chronicle is in the long run as trustworthy as vivid historical portraiture—notably if the latter be painted by a master-hand. It is so nearly impossible for any one possessed of parts to confine himself religiously to mere chronicle; and a writer of any individuality who attempts this very frequently falls either into the error of a disproportionate valuation of certain details, or the error of losing, in his concentration upon details, the general tendency and large truth of his subject.

The remedies for these defects are, however, not difficult to a candid temper and a lucid intelligence, and these qualities are eminent in Mr. Stopford Brooke. Mr. Matthew Arnold took occasion to write an essay in general commendation of his 'Primer of English Literature,' in which he said that it was "clear, short, interesting, observant of proportion, free from exaggeration, and free from arbitrariness"—a good deal for Mr. Arnold to say, but the characterization applies appositely to this little volume on Milton. It tells the reader ignorant of Milton's life and work just what he should desire to know, and it is in the main an impartial guide to the reader measurably and superficially familiar with Milton, but not accustomed to think much of Milton's rank in English poetry. The narrative part could not have been better done, perhaps; it is rapid enough to avoid wearisomeness, and it is thoroughly sympathetic. The critical portion is open to controversy here and there, it may be, but we do not think the reader will get a total impression that is wrong. For example, Mr. Stopford Brooke lays down sixteen propositions upon which he says the theology of 'Paradise Lost' is based, and says it is plain from many of them "that to call Milton Calvinistic is absurd"; and elsewhere, "the prose works as a whole are not readable." Now and then, in references to Johnson's 'Life,' one is disposed to differ with him, and he is so strong an admirer of Milton's stateliness that it seems as if he were occasionally blind to his sweetness. But all these things are quite matters of detail, and the essential lines of the portrait almost all persons will admit to be like. Aside from its verisimilitude, too, it is a vivid portrait—and that is a creation not too frequent in literary portraiture, even when the subject is as well understood of all men as Milton has come to be. Mr. Stopford Brooke is an enthusiastic admirer of Milton, but we notice that he has tempered here the expression of his enthusiasm in his 'Primer of English Literature,' and hence one follows him with the less reservation, not to say with—at the end—implicit confidence.

Stories from Herodotus, and the Seventh Book of the History. With English Notes by Robert P. Keep, Ph.D. (New York: Harper & Bros.)—This little volume, intended for beginners in Herodotus, contains the seventh book entire and about fifty pages of well-chosen stories, such as that of Crœsus, of Polycrates, and of Cypselus. It gives the student, therefore, important specimens of the continuous narrative of the historian, and of those charming digressions which equally characterize his manner. The stories, as the editor suggests, may be used for practice in reading at sight, and we speak from previous experience in commending the suggestion. The introductions and notes skilfully hit that condensed minimum of commentary which the ordinary school-boy is willing to assimilate, and seem to meet his difficulties judiciously. A few of the translations might be improved. In the story of Cleobis and Biton, the rendering "The men of Argos praised the strength of the youths; the women, their filial spirit towards their mother," as a paraphrase is superfluous, as a translation is too free to be serviceable to beginners. A note on the unusual combination of constructions with μακαρίξω would have been more useful. In another passage, the word ἐπιλεήνας is correctly explained (p. 231), and the student is directed to translate "Mardonius having spoken thus much *in endorsement* of the opinion of Xerxes, ceased." The italicized phrase misrepresents somewhat ludicrously the style of Herodotus and the relation of Mardonius to his master. We venture to doubt whether the expression "every one so ever" (p. 325) is possible in an affirmative English sentence, though it might be desirable as a representation of παντί τεῳ.

The value of the book is increased by three maps and an excellent table of Ionic forms; the text is admirably clear, but in these days of degenerating and degenerate eyesight a larger type would be welcome to the student.

Four Lectures on some Epochs of Early Church History, delivered in Ely Cathedral by Charles Merivale, D.D., Dean of Ely. (New York: Anson D. F. Randolph & Co.)—Anything relating to the earlier portions of ecclesiastical history from the pen of the historian of Rome and of Latin Christianity may be expected to be instructive and interesting. The narrow limits of the course and the miscellaneous character of his audience, consisting, as Dean Merivale tells us, of the clergy and laity of the neighborhood, of divinity students, and of the upper classes of grammar-scholars, did not admit of the presentation of anything very novel or profound. Each lecture treats an "Epoch," and gives an outline of the man whom the dean considers the principal character in it. The four epochs are included in the period extending from about the middle of the third to the end of the sixth century. At the beginning of this period the Western Church had just ceased to be an association despised, hated, and persecuted; at the end it had become a great, powerful, and completely organized body, directed by a single head at Rome, claiming and in many ways exercising authority over kings, princes, and people. Necessarily only the most prominent features of the history of the time are presented, but the sketch is clear and interesting.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Arnold (E.), The Light of Asia: Poetry	(Trübner & Co.)	
Bellamy (C. J.), The Breton Mills: a Tale	(G. P. Putnam's Sons)	$1 00
Brooke (Rev. S. A), Milton	(D. Appleton & Co.)	60
Brown (R.), Science for All, Parts 1-6, swd	(Cassell, Petter & Galpin)	50
Campbell (Sir G.), White and Black in the United States	(R. Worthington)	
Dale (R. W.), Impressions of America, swd	(D. Appleton & Co.)	25
De Amicis (E.), Studies of Paris	(G. P. Putnam's Sons)	1 25
Funeral Tributes to Wm. Lloyd Garrison	(Houghton, Osgood & Co.)	75
Granville (J. M.), Common Mind-Troubles	(S. E. Cassino)	50
Hartley (J. M.), Cora Lynn: a Tale	(Robert J. Hayward & Co.)	50
Jameson (H. W.), Rhetorical Method	(G. I. Jones & Co.)	75
Kip (L.), Under the Bells: a Tale	(G. P. Putnam's Sons)	1 25
McCulloch (H.), Bi-Metallism, swd	" " "	25

Heliotype.

Permanent Photographic Book Illustrations.

THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.

For terms and specimens apply to the

HELIOTYPE PRINTING COMPANY,
220 Devonshire Street, Boston, Mass.

Atlantic Mutual

INSURANCE CO.

NEW YORK, January 22, 1879.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1878.

Premiums received on Marine Risks from 1st January, 1878, to 31st December, 1878	$4,009,309 47
Premiums on Policies not marked off 1st January, 1878.	1,848,697 36
Total amount of Marine Premiums	$5,858,006 83
No Policies have been issued upon Life Risks, nor upon Fire disconnected with Marine Risks.	
Premiums marked off from 1st January, 1878, to 31st December, 1878	$4,186,024 72
Losses paid during the same period	$2,012,784 45
Returns of Premiums and Expenses	$859,960 58
The Company has the following Assets, viz.:	
United States and State of New York Stock, City, Bank, and other Stocks	$10,086,758 00
Loans, secured by Stocks and otherwise	704,200 00
Real Estate and Claims due the Company, estimated at	619,034 50
Premium Notes and Bills receivable	1,529,259 74
Cash in Bank	381,210 92
Total Amount of Assets	$13,320,463 16

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fourth of February, next.

The outstanding certificates of the issue of 1875 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fourth of February, next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of thirty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1878, for which certificates will be issued on and after Tuesday, the Sixth of May, next.

By order of the Board, J. H. CHAPMAN, Secretary.

28 State Street, Boston.

WILLIAM T. MEREDITH,

37 WILLIAM STREET, NEW YORK,

DEALER IN INVESTMENT SECURITIES AND COMMERCIAL PAPER.

KOUNTZE BROTHERS,

BANKERS,

12 WALL STREET, NEW YORK,

Issue LETTERS OF CREDIT or CIRCULAR NOTES on the UNION BANK OF LONDON,

Available for Travellers in all parts of the world.

PHELPS, STOKES & CO.,

45 WALL STREET, NEW YORK,

GENERAL DOMESTIC AND FOREIGN BANKERS,

ISSUE TRAVELLERS' CREDITS AND CIRCULAR NOTES ON THE UNION BANK OF LONDON, AVAILABLE THROUGHOUT THE WORLD.

DRAW BILLS ON LONDON.

Pratt's Astral Oil.

PERFECTLY SAFE.

Especially adapted for use in the St. Germain Student Lamp.

CHAS. PRATT & CO.,
Box 3050. NEW YORK

PATENT

Prepared Gasolene

FOR GAS-MACHINES.

Made by a new method; an absolutely pure article. Does not deteriorate in quality as the process of evaporation within the machine progresses. Every barrel guaranteed.

Address the manufacturers,

CHARLES PRATT & CO.
(Established 1770),
12[illegible] Pearl Street, New York.

OLD AND RELIABLE

VANITY FAIR

(Flake Cut).

FRAGRANT VANITY FAIR TOBACCO AND CIGARETTES

(Long Cut).

"MILD"—Rare Old Virginia. "HALVES"—Rare Old Perique and Virginia. New Combinations of these Fragrant Tobaccos. Always up to the standard. Six First Prize Medals. Paris, 1878.

Peerless Tobacco Works. WM. S. KIMBALL & CO., Rochester, N Y.

BINDER for the Nation, *convenient for receiving* the current numbers, also for permanent binder. Holds one volume. Price, in cloth, 50 cents; half-cloth, 25 cents (stamps). If sent by mail, 15 cents additional. Address THE NATION, Box 25, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 14, 1879.

The Week.

THE President's action in frustrating the attempt to form Republican political organizations in the departments, if correctly reported from Washington, cannot be too highly commended. The attempt is said, and with probability, to have grown out of the failure of the plan of getting political contributions out of the clerks in the shape of voluntary contributions, the old-fashioned compulsory assessments being forbidden. The importance of the matter to the party-managers may be conjectured from Mr. Gorham's confession before the Congressional Committee that over $90,000 of the $106,000 raised by him for the Republican canvass two years ago was extracted from office-holders. This apparently cannot be kept up by merely soliciting subscriptions, so it has been resolved to put each clerk into a club, where he could be got at by the officers thereof. The President doubtless sees, as all thinking men must see, that as long as the employés of the Government are systematically used to supply the party with the greater part of its electioneering expenses, it will be impossible to avoid a clean sweep whenever the Democrats get into power. We cannot ask them, and they would very properly laugh at us if we did, to leave in office men whose salaries have furnished their opponents with the sinews of war, and to refrain from using what the Republicans have found so potent a weapon. The Government clerks owe no more to the Republican party than anybody else, and they are paid at a rate which in any other walk of life would prevent men from thinking of contributing to campaign funds. The best way of bringing out the latent liberality of the party would be to ask each voter at the polls, say, for one dollar. This would make a magnificent fund, even if the application were only successful in one case in four; and, instead of being a scandal and abuse, would be a virtuous spectacle. A good many Republicans are waiting for the Democrats to set a good example in this matter; but what chance is there of these reprobates ever setting a good example in anything?

The Congressional Committee which has been investigating the conduct of the United States supervisors at the last election at Cincinnati finished its enquiry on Saturday. The results of its labors are not important, and afford small comfort, we should say, to the Democratic memorialists who are responsible for it and its expense. It was proved that money was spent by the Republican Campaign Committee, and by Messrs. Butterworth and Young, to secure the election of those gentlemen. But it also appeared that whereas the Republican committee had spent but $2,500, the Democratic committee had spent $8,891.68, a difference which, although it does not precisely warrant the Republican assumption that it represents the excess of Democratic corruption over the cost of legitimate effort, must have been harrowing to the Democrats. Moreover, the memorialists were taunted, as it were, with assertions that it cost Butterworth and Young less to get elected than Sayler and Goss to get defeated. Indeed, whatever was proved against the Republicans was quickly offset by counter testimony; if the character of certain supervisors was not good, that of the Cincinnati police was worse, and so on. General Banning, formerly a Congressman from the Second District, proved, perhaps, the most interesting witness. He testified that his three elections had cost him $500, $800, and $1,000, respectively, in assessments, besides the moneys he personally expended "at saloons and for bands, for public meetings, for men to work at the polls and to hold tickets." Among his "workers" were several Republicans whose expenses he had paid, and whose services he had recompensed. Of course there is nothing unusual in General Banning's testimony, and of course there are legitimate election expenses. The difficulty is to determine where "legitimacy" ends; it is enhanced rather than removed by a reference to the conscience of the candidate in most cases, we imagine; but about the morality of Republicans accepting pay to "work" for Democrats, or *vice versâ*, there can be small difference of opinion, whether the necessity for "machine politics" is admitted or not.

The defeat of the proposed compromise in Tennessee by which the State debt was to have been "scaled" fifty per cent., and the interest fixed at four per cent., is interpreted in two ways. One view is that the political leaders of both parties committed one of the blunders to which demagogy is liable, and were unable to lead the people whither they had mistakenly supposed the people anxious to be led. This is comforting both to the creditors of Tennessee and to American citizens generally, but it strikes us as optimistic. Much more reasonable is the view taken by Postmaster-General Key, who thinks the "compromise" was the best thing that could be hoped for, and that its defeat is due to the repudiationists themselves. Opinions contrary to this that we have seen seem to be groundless speculations endeavoring to make the best of a bad business. There can be no doubt of the wide prevalence of a desire to repudiate as much of the debt as possible, and the feeling is by no means confined to Tennessee; Louisiana is to vote in December upon a similar project. As good judges of the real temper of "the people" as any one can be are the creditors of a State, and it should be remembered that the compromise just defeated was proposed, or at any rate accepted, by the creditors of Tennessee. No one is likely to forget, moreover, the advocacy of repudiation by those Tennessee statesmen, Andrew Johnson and Emerson Etheridge, and the famous economic principle laid down by the former to the effect that a debt was to be considered discharged when the interest paid should amount to the principal. The case of Tennessee, indeed, seems to be particularly scandalous; her people cannot accuse a carpet-bag government of saddling them with an unjust indebtedness; they have no excuse, save poverty, for their action, and yet their demoralization in this matter seems greater than that of any of their neighbors. Meantime, the arrearages of interest, which amounted to $4,000,000 in January last, are accumulating at the rate of $1,200,000 a year; which means, of course, that there will be less and less likelihood all the time of the payment of even a part of the debt.

The Legislature of New Hampshire has passed an act for the protection of the rights of holders of the bonds of repudiating States which may have important results. It provides that whenever any citizen of the State "shall be the owner of any claim" against any other State, "arising upon a written obligation to pay money" which is overdue and unpaid, the holder may assign his claim to the State, and deposit the assignment with the attorney-general. Upon this deposit being made, it is to be the duty of the attorney-general to examine the claim and the evidence on which it rests, and if it is in his opinion good, to bring suit upon it in the name of the State in the Supreme Court of the United States. The expenses of the prosecution are to be paid by the owner of the claim. This is substantially the same act that was passed by the legislature of this State a year ago, and vetoed by the governor. The legal theory on which it rests is very simple. The Constitution forbids suits being brought against States by citizens of other States, but not by States themselves, and the courts, while bound to protect a State from a suit of the prohibited kind, have always recognized the binding character of contracts made by States. If there is any way of enforcing these they will always be enforced. The difficulty in the way of suing a State is merely technical, and if the technical difficulty can be removed there is no reason why a suit should not be maintained on a State bond as on any other form of obligation. All courts

recognize the duty of a State to protect its citizens, and, consequently, if a State assumes the prosecution of claims on the defaulted bonds of other States there is every probability that the Supreme Court will favor the suit. On the other hand, it may be said that if a State can assume any claim of its citizens, and sue upon it at Washington, the immunity of States from private suits is practically gone. Of one thing there can be no doubt, that the method is worth trying; if the Supreme Court can sustain such an act as the New Hampshire legislature has passed, its decision will do much to revive the credit of American States all over the world.

The war between Tammany and Anti-Tammany has within the past week reached a terrible pitch of excitement. The writ of prohibition served upon the Mayor in Mr. Wheeler's case was a serious blow to the Tilden-Robinson politicians, because the return-day of the writ was made so late that the hearing might, in the natural course of things, have come after the appointment of the inspectors of election. These inspectors are appointed by the Police Board, and are supposed to represent both political parties. With the Police Board in the condition in which it stood last week the two political parties would have been Tammany Hall and the Custom-house. It was, therefore, essential to get an advancement of the time of hearing argument as to the writ of prohibition, and in this move the Mayor was successful, Judge Van Brunt changing the date to the 12th. Meanwhile, the Governor having suddenly made up his mind in the long-deferred case of General Smith, approved his removal by the Mayor, an act which was followed almost immediately by the nomination of Mr. James E. Morrison, the Mayor's private secretary, in his place. This threw the control of the Police Board into the hands of Messrs. French, McLean, and Morrison, and as the last two gentlemen are well known to be Tilden Democrats that wing of the party seemed to have at last gained a decisive victory. At this stage of the proceedings, however, a new judge appeared upon the scene with a writ of *certiorari* in Mr. S. P. Nichols's case, granted to enable him to review the action of the Mayor in removing him. Judge Westbrook's opinion that such a writ is applicable to the case is based upon the fact that the Mayor cannot remove except "for cause" and after a hearing, which means, he thinks, that the party is entitled to a regular trial. The effect of this decision is that the proceedings of the Mayor must be certified to the Supreme Court, which will enquire into their regularity. Some Tammany lawyers maintain that it authorizes General Smith to resume his seat on the Board by force, but the calmer jurists of that party admit that this would be a strained interpretation of the decision.

We believe Mr. Morrison to be an unobjectionable appointment, for, though he is a comparatively obscure man, he is perfectly respectable, and among the city politicians has the reputation of possessing considerable literary ability, though, as most of them regard any one who can read without spelling his words and write without turning back his coat-sleeves as belonging to the literary class, this report needs confirmation from some other quarter. He was during the mayoralty campaign of last fall an active partisan of Mr. Cooper's, and became his private secretary soon after his election. As we go to press the hearing in the prohibition case has been again postponed to the 14th.

Butler has made overtures to the Conservative, or "Abbott," or Regular Massachusetts Democrats for a combination of forces with them, which have been rejected with scorn. For fear that he should repeat his last year's tactics and try to capture the Democratic convention by storm, they have determined to abandon Worcester, the traditional place for holding the convention, and to have their meeting again in Faneuil Hall. The Republicans, who are at length rid of the Butler bugbear, make very merry over the wretched plight to which the Democrats are reduced by his secession to their ranks, but they are themselves somewhat embarrassed by the reported refusal of Governor Talbot to be renominated. General Butler's canvass will doubtless be aided by the Fall River strike, striking mill operatives being natural supporters of a demagogue of his stripe. The Democrats have managed to place so little to their credit in the way of adherence to principle within the past few years that their refusal to enter into an alliance with Butler, particularly in the desperate straits to which their refusal brings them, may fairly be considered as a feather in their cap, to be put down, together with their hard-money platform in Pennsylvania and their bold stand for reform of all kinds in Maryland, as indications that they are tired of sin and are prepared to bring forth works meet for repentance. But we fear the change of heart comes too late. The Republicans are, as the politicians say, "way ahead" in matters of principle, and, for some reason, never labor under the suspicion which gives the Democrats so much trouble, of being moral solely for the purpose of carrying the election.

The Froudes and Macaulays of the daily papers are behaving in a very singular manner about a row which occurred a few days ago at the house of ex-Senator Sprague at Narragansett Pier. Sprague appears to have attacked somebody at his house with a double-barrelled gun, and to have driven him from the premises. The *World* Macaulay says it was Senator Conkling who was there; but the *Times* Froude says this is a mistake—that it was a German teacher named Linck, the tutor of Mr. Sprague's children, to whom the father had conceived a deadly antipathy, and that Senator Conkling, who was in the library reflecting upon the condition of the South, simply intervened to calm the ladies and put a bedridden man, who apparently thought it would be his turn next, into a carriage. The *Tribune* passes the incident over in silence, and so does the *Herald;* but the *World*, which displays splendid enterprise in the matter, says Linck is merely a man of straw put up to save the Republican State canvass, and that it was really the life of the Favorite Son of New York which the bloody-minded Sprague threatened, and that, far from being in the library reflecting on the condition of the South, he was on the piazza engaged in frivolous conversation. The whole family are said to have promptly left the house, Mr. Conkling preceding them, which is a singular result of an assault on Linck. Linck has "made a statement," and Mr. Conkling is said to be preparing one, and so is Mrs. Sprague, and the Republican managers are naturally a good deal troubled in mind. We would recommend the production of Linck on the stump to tell the story of his wrongs. But what does Mr. Reid say to the manner in which the Froudes and Macaulays discharge their duties?

At the Bankers' Convention held at Saratoga last week, Mr. Knox, the Comptroller of the Currency, made an excellent address, chiefly devoted to the National Bank system, but incidentally treating of resumption and of the Coinage Act of 1873. Mr. Knox confessed himself the virtual author of the act in question, a first draft of which accompanied a report of his to the Forty-first Congress, second session, in 1870. In this report a special paragraph called attention to the discontinuance of the coinage of the silver-dollar piece as provided in the bill, and the paragraph was itself distinguished by a precise descriptive heading, in capitals, as follows: "Silver Dollar. Its Discontinuance as a Standard." Mr. Knox showed that the report was published in full in the *Bankers' Magazine*, together with extracts from a subsequent report in which the section ordering the discontinuance was discussed by various mint experts; that this section was discussed also by the New York Board of Trade and Chamber of Commerce, and recommended in their reports; that the Committee on Coinage duly informed the House of the provision, and that the bill was printed thirteen times by order of Congress, and once by the commissioners revising the statutes, and was considered during five successive sessions. He added that probably no act "passed by any Congress received more care in its preparation, or was ever submitted to the criticism of so great a number of practical and scientific experts, as was this Coinage Act of 1873," and that any statement to the contrary "has no

foundation in fact." This is an old story, but it will not satisfy the supporters of the theory of surreptitious demonetization. Mr. Knox should have shown that Congressmen are in the habit of reading carefully and intelligently the reports submitted by his department, the reports of their own coinage committees, the bills they order printed and vote upon; that the subscribers to the *Bankers' Magazine* read every word of it; that members of boards of trade and chambers of commerce invariably attend the meetings and study the reports of those bodies; that the daily press have always had leading articles on acts of Congress which "simply registered in the form of statues what had been the unwritten law of the land for nearly forty years"; and that these articles are duly read, weighed, and discussed by every voter capable of appreciating the "debtor's option." Nothing else will convince the Hon. W. D. Kelley, or the editors of the Cincinnati *Commercial* and the Chicago *Tribune*.

During the week there was a further fall in the rates for sterling exchange, and somewhat more than two million dollars of gold were started from London and Paris for New York. The foreign markets appear to realize the fact that either gold or securities must be sent here within the next few months to pay for the breadstuffs, provisions, and cotton that will be needed from this country, and it is not strange that efforts are already making to send back securities, beginning, of course, with U. S. 4 per cent. bonds, which pay a lower rate of interest than any other American securities held abroad. In anticipation of an attempt to return these bonds, their price in this market has fallen ⅛ of 1 per cent. during the week. The New York money market was again disturbed by the transfers of large amounts of money from the national-bank depositaries to the Treasury, where it is wanted to pay out for bonds to be redeemed. The rates for loans have advanced 1 to 2 per cent., but this must be considered a slight disturbance for transactions of such magnitude. At the Stock Exchange it was a week of wild excitement in the share market; the Vanderbilt stocks having been the most prominent because of rumors that the Lake Shore Railroad is to be leased, or in some way permanently controlled, by the New York Central and Hudson, which is for ever to guaranty 6 per cent. to the stockholders of the former. As Lake Shore stock has long been a doubtful property—some years paying no dividends, and others from 2 to 4 per cent.—this reported prospect kindled speculation in the stock, and the price was run up from 82 to 83 to 93 with uncommon celerity. Silver bullion has ruled at about 51½*d.* per ounce in London. At the close of the week the bullion value of the 412½-grain silver dollar here was $0.8643.

The debate in the English House of Commons on July 22 on the Turkish question, of which full reports have come out, was in many respects very important. It was opened by a masterly speech from Sir Charles Dilke, who drew attention to the various points on which Turkey had with the connivance, or, at all events, without the hindrance, of the British Government failed to carry out the provisions of the Treaty of Berlin, both in the matter of reform and in the matter of the rectification of the Greek frontier. But what was most remarkable in the discussion was the speeches of Sir Henry Drummond Wolff and Mr. Bourke. Sir Henry was an ardent Jingo who was sent out last year as the English member of the Rumelian Commission, but now confesses himself completely cured of his belief in the Turks. He thought an expression of opinion on the part of the House of Commons would be a good thing in order to bring pressure to bear on the Turks to make them fulfil their engagements; pronounced the corruption at Constantinople shocking, and declared that he saw no hope for Turkey except in decentralization, or, in other words, the virtual independence of the provinces. Mr. Bourke, following him, admitted on the part of the Government that Turkey had not kept her contract about reform in Asia Minor, in spite of the best efforts of England; that the state of things reported by the English consuls in that province was "revolting"; but that the Government was fully alive to the responsibility it had incurred with regard to it. It is difficult to see how the Ministry can go before the constituencies with confessions of this sort.

Dean Stanley has brought down a storm on his head by his ill-considered consent to the erection of a monument to the late Prince Imperial in Westminster Abbey, and has not improved his position by a defence which he has thought proper to publish in the newspapers, in which he says, among other things, that the Prince "gave his life" for England. There was already abundant reason for believing that the young man's only motive in going to Africa was to impress the French imagination, and so strengthen the hands of his followers at home. This has, however, been placed beyond doubt by the imprudent publication by one of his friends of a pamphlet containing letters of the Prince and reports of conversations with him about French politics and his own prospects. Some of the revelations thus made are, if authentic, of an extraordinary character, and calculated to ruin his memory in the estimation of all but the most reckless members of the party. He declares that his design was to found institutions which would last, but to this end he must first have a period of absolute power, the duration of which would be regulated by himself; that his mission was to extinguish the revolutionary spirit; that he would probably have to get possession of power by force, and that he would sustain the Church "always, everywhere, and to the full extent of his ability," without, however, submitting himself to the clergy, and that he would "permit unlimited liberty of education," or, in other words, give up all control of the clerical schools and colleges. He appears, in fact, to have been a mixture of the inflated Bonapartist and fanatical Spanish Catholic, and would probably, had he lived, have proved a constant source of disturbance to the French people.

Mr. W. D. Kelley is probably no more trustworthy as a reporter of his conversation with Bismarck as to the views of the latter on the German tariff and the silver question than as a witness as to the objects of the American Coinage Act of 1873, of which he was himself the principal promoter, but subsequently described on the stump, in the most unblushing manner, as a fraud perpetrated at the instigation of the European "money kings." But that he is correct in saying that Bismarck is disposed to consider the expediency of negotiating for universal bi-metallism there appears to be no doubt, as his story is confirmed from other quarters and has found credence on the London market. It appears to be equally certain, however, that Bismarck knows no more about this than about other financial questions, which he has always left hitherto to the colleagues whom he has lately dismissed, and the new ones have not as yet made up their minds what they will do. Consequently the German press contains very contradictory statements about the matter; but the chances still are that nothing will be done. Our correspondent, Mr. Horace White, we believe to have been substantially correct in his account of the state of public opinion on the subject, both in Germany and England.

There is equal uncertainty in Germany as to the future course of the Government with regard to the Ecclesiastical Laws. That a promise or agreement that they will be suspended or modified was given to the Ultramontanes to secure their support in the Chamber, there seems to be little question, but the difficulties of carrying it out are probably greater than were anticipated. These difficulties are not likely to be lessened by the election, at Breslau, of Herr Hasenclever, one of the leading Socialists in Germany, a writer of the Lassalle School, and for years the President of the Society of German Workingmen. On the first ballot he got 5,404 votes; Leonhard, the National Liberal, 5,674; and Hager, the Ultramontane, 2,933. On the second—a clear majority being necessary to election—the Socialist got 7,589 votes, and the National Liberal 6,390, the Ultramontane disappearing from the scene. There thus appears to be no doubt that the Socialist owed his election to Ultramontanes, and people are naturally asking if this is the way that the alliance of the Government with the latter is going to save the country from Communism?

STATE RIGHTS AND FEDERAL STRENGTH.

"HARPER'S WEEKLY," replying some weeks ago to some observations of ours on its position with regard to "State rights," argued that whatever be the definition of "State rights," as now maintained or defended by the Democratic party, all talk of State rights coming from a party so bad in composition and antecedents is to be distrusted. This may be true. It may be that the Democrats advocate State rights with sinister designs; that is, that they urge disputable views of State sovereignty with the view of robbing the national Government of rights about which there can be no dispute. But this renders it none the less necessary for Republicans who are opposing them to make clear their meaning when they talk of State rights. Most of the speakers on the Republican side in the late debates in Congress talked as if all exercise of power by the national Government was lawful, and that opposition to the exercise of any such power in Congress, by persons lately in rebellion, was little short of treason, and really indicated an intention to overthrow the Union. All this, and much that one hears in the various Republican conventions on the other hand, furnishes the Democrats with abundant materials for the charge which they are every day making, that the Republicans really aim, by their assertion of the national authority, to wipe out State lines altogether and convert the Union into a centralized republic, with one huge "helm" or crank at Washington ready for a "strong man" to take hold of whenever there is any sign of trouble. It is not over a year since the Iowa Republican Convention laid down in express terms the doctrine that the national sovereignty covered everything, and that each citizen might look to it alone for the protection of *all* his rights—which meant, if it meant anything, that the State courts and legislatures were now only sitting on sufferance. Other Republican platforms in their zeal against the "pestilent heresy" have uttered similar sentiments, though in more ambiguous language. Taken in connection with the Republican talk about the need of General Grant as President, and about the things he can and will do if he is elected, it makes it very easy for the Democrats to accuse the Stalwart Republicans at least of intending a change in the form of the Government under cover of anxiety about freedom of elections at the South. There ought to be an end to this, and the way to put an end to it is for every man who writes or talks about "State rights" to begin by explaining what he means by this term. A man who maintains that Congress has the right to regulate Federal elections is not necessarily hostile to the rights of the States, and a man who maintains that the practice hitherto pursued for one hundred years, of leaving the States to elect members of Congress in their own way, is not necessarily hostile to the proper powers of the Federal Government. While there is nothing in the character and antecedents of the Democrats to upset the presumption that they entertain unconstitutional designs in the direction of centralization, let us add, on the other hand, that there is nothing in the character and antecedents of many of the Republican leaders to upset the presumption that they would not care how much centralization there was, provided they had possession of the machine and had their "old man" in the Presidential chair.

In fact, many of the latter have of late been affecting, if they do not feel, a contempt for the division of powers created by the Constitution, and talk as if what the world has for a whole century been admiring as one of the happiest and most fortunate of political inventions was in reality a huge blunder, to be rectified as soon as possible. They apparently would have us believe that the slaveholders' attempt at secession, begun and carried out in the interest of slavery and for the defence of slavery wholly and solely, had demonstrated the futility of the division of sovereignty which the founders of the Government deliberately settled on and the people solemnly adopted a hundred years ago, and that our duty now is to provide against "a new rebellion" by putting as much power as possible into the hands of the pure and disinterested persons who every four years provide us with candidates for the Presidency. But the truth is—and the more the people reflect on it the more clearly they perceive it—that if it was State rights which facilitated and stimulated the slaveholders' rebellion, it was also State rights which supplied the means by which it was put down. The working of the Constitution since 1789 has to be judged by the condition and resources of the North, as well as by the fanaticism of the South. It was the habit of local self-government, the pride of the individual States, the efficiency, capacity, and self-reliance of the State governments, which placed at the command of the Federal Government the vast material resources, and the undaunted and patient courage, by which the secessionists were foiled. It was a common and sometimes amusing boast at the North during the war that the rebellion "was the greatest rebellion the world ever saw"; and so it was, and people who keep one eye shut have been disposed to conclude ever since that whatever produced so big a rebellion must be wholly bad. They forget the probability, which may be fairly deduced from the experience of mankind, that with such a rebellion the kind of government some of them would fain see in Washington, with "a strong man at the helm" and United States marshals protecting United States citizens everywhere in *all* their rights, could never have dealt. A community which has taken refuge in the breeches pocket of a dictator, or an omnipotent parliament, has never yet had much success in putting down great rebellions. In fact, the rebellion, so far from demonstrating the danger of State rights, was a triumphant vindication of the wisdom of the constitutional division of authority, and of the value of local sovereignty. All the world so regards it. The ravings of a dozen or a thousand "ex-rebels" at Washington or elsewhere, no matter how extravagant, or the unpunished perpetration of a dozen or a thousand electioneering frauds and outrages in the Southern States, cannot create the shadow of a doubt that the United States Constitution as it now stands was a wonderful contrivance for the government of an immense community, without lodging anywhere power enough to put liberty in peril or abate public spirit. It is not a step behind the highly-centralized governments of the Old World; it is a step beyond them. It does not need mending by "A No. 1 soldiers"; it enables the people to dismiss its soldiers when the war is over, and employ civilians. It would be ridiculous to change or modify seriously an arrangement intended for the government of 200,000,000 or may be 500,000,000 of people, and which in all human probability is the only arrangement by which 500,000,000 of people could be governed without the surrender of their freedom, because we are to-day troubled by election disorders in two or three Congressional districts at the South.

We do not say that anything the Republicans have as yet asked for or attempted is unreasonable; but the discussion which has arisen out of the proceedings in Congress is mischievous as well as unprofitable. It turns popular attention away from the really serious questions of the day, and leads even a man of Mr. Sherman's standing to talk of labor and property as of comparatively little moment. They are, on the contrary, of the highest moment. It is on popular morality with regard to them, and on the legislation of the States and of Congress about them, that it depends whether we shall have any elections fifty or a hundred years hence; and the sooner we address ourselves to them, the better will it be both for the friends of "the reserved rights" and of "the implied powers."

THE LAND CRISIS IN ENGLAND.

ALL the accounts from England represent the gloom there as to the financial future as growing deeper day by day. Its intensity is largely due to the fact that confidence in the land as an investment is shaken for the first time in English history, and the effect on the nerves of a very large class of loss of confidence in the land as an investment is very like that of an earthquake. With trade crises of all kinds the public has always been familiar. Manufacturers and merchants have been exposed to tremendous and frequent risks since manufactures and commerce first began; one of the great sources, indeed, of the contempt of the landed

gentry for "business" has been its liability to sudden ups and downs. Agriculture, it is true, had its drawbacks in the shape of bad seasons and short crops, but then there were hardly ever more than two bad seasons in succession; they did not entail ruin, and when the good seasons came the land remained.

As a consequence of this the land in England has been made to bear vast and complicated burdens in the shape of trusts for widows and children and unmarried women, who were supposed to be secured in this way, as they could be secured in no other, against the risks to which money is ordinarily exposed. In truth, one of the great difficulties of the land system in England lies in the fact that the nominal owner of an estate is generally far from being the real owner, owing to the number of charges on it created for the benefit of relatives by the will or marriage settlement under which he holds it. Consequently, whatever threatens the rent of land not only fills the squire who lives in the manor house with dismay, but threatens with want a very large and very helpless body of persons who have until now considered themselves, as far as security was concerned, better provided for than any similar class in the world. The squire, even if his rents were cut off altogether, could support his family as a farmer; but he could not out of a farm continue his mother's jointure, and the allowances of his sisters and brothers, and cousins and aunts, or of his sons, who are often only able to stay in the army or the church or the civil service by the aid they receive from home. Moreover, it is the rent of the land which enables the landlord to learn the art of politics, and follow it as a calling without making a living out of it. As a farmer, making at best but a moderate support by close and daily attention to farm-work, he could not afford either to serve in Parliament or even attend to such of the minor duties of local government as now fall upon him, and he would rapidly lose the prestige which now gives him so many advantages over other candidates for elective offices among rural constituencies, besides making him a great social force.

It will thus be easily seen that should the land of England prove unable, under American competition, to pay rent to the owner of the fee, the result would be a social and political revolution the like of which has not been witnessed in modern times. The nearest approach to such a catastrophe in the magnitude of its consequences is the overthrow of the French aristocracy in the Revolution, and that of the slaveholders at the South in the late war; but then neither the French nobles nor the Southern slaveholders had played such a part in history, or filled such an important place in the political fabric of their country, as the English landed gentry. We are so much impressed in these philanthropic and progressive days by the undoubted evils which the English social system has wrought in regard to the condition of the English poor, that we are apt to forget the immense, and we may indeed say priceless, contribution which the English landholders have made to modern politics. If they did not originate the representative system of government by free parliaments, it is safe to say that they saved it from extinction at the hands of military monarchs, fostered it into strength and maturity, and adapted it to the uses of modern society so that it is now found working, substantially as they shaped it, all over the continent of Europe, and over the continent of America, and among the remote islands of the Southern Pacific. The peculiar collection, too, of legal ideas and legal rules which is known as English liberty, of which the common law of England, of the United States, and of the British colonies is the embodiment, and which is probably the most precious political inheritance any people has ever received, has been substantially the work of the English landowners, from the day on which the barons won the Great Charter from John at Runnymede down to that on which Wilberforce carried the emancipation of the negroes. Every great instrument in the English Constitution is their composition. It is true that the great rebellion of 1640 found the bulk of them in arms on the side of the king; but the best leaders of the Parliamentary army were taken from their ranks, and it is worthy of note that the permanent changes in, or additions to, the British Constitution left behind by the war were really fashioned in Parliament before the war began. The preservation of England in 1688 from the curse of arbitrary government and established Catholicism was also their work, and they drew the famous Bill of Rights, which has since been incorporated in the constitution of every Anglo-Saxon state.

That they have appeared within the last fifty years in the somewhat odious light of enemies of social and political progress is not surprising. They never were a reading class. Their ideas of the fitness of things in church and state came to them, as they are apt to come to men who live on and by the land, by tradition and habit rather than by reflection. Theirs came down from a period when nobody but freeholders was allowed to have anything to say in politics in any country in Europe; when, indeed, the offering of a political opinion by anybody else was regarded as an impertinence. Manufacturers and traders, therefore, they long looked on as intruders on their domain. The huge crop of social questions which made its appearance in the political arena as the result of the growth of population, and of the awakening of the public conscience in the great cities on the return of peace in 1815, was long a puzzle and offence to them. Nine-tenths of them were as much bewildered by the Reform Bill as the Duke of Wellington, and "did not see how the king's government could be carried on under it." When he, who was not a bad illustration of the intellectual condition of the class, was half way through the Peninsular War, and had seen the campaign of Italy and the battles of Jena and Austerlitz, he sent home urgent requests that only young men of "good family"—or, in other words, the sons of squires—should be sent out to him as officers. Luckily in England, however, the class, although it has furnished the bulk of the army officers down to our own day, has never taken to soldiering as a profession. The English squire's son was never willing to sink the gentleman in the officer, and always plumed himself more on being a gentleman than on being an officer, while in France and Germany, and in all other parts of Europe except Hungary, the landholding class, as a general rule, felt itself elevated by wearing the uniform, and cultivated a barbaric disdain for civil affairs and for the machinery of civil government.

But the English landholders, though so much in advance of their Continental brethren, were with great difficulty reconciled to the idea that the machinery of civil government could be managed by people who "had no stake in the country," as their phrase was —or, in other words, did not own land. Even the Whigs, who were for a century and a half the best defenders of constitutional freedom, found it very hard to admit traders to a share in the administration. It is not over twenty-five years since Lord Palmerston administered, in the House of Commons, a severe rebuke to Richard Cobden for meddling in foreign affairs, using the "ne sutor" quotation against him with a naïveté of which no minister in our day, not even the bumptious Salisbury, would be guilty. The sympathy of nearly the whole landed gentry with the South in the late war was due to the same profound confidence in the exclusive ability of "the landed interest" to carry on good government. In all the country-houses the South was pictured as a region covered with the estates of gentlemen of the English type, who when they led their dependents to the field were contending for English political ideas against unmannerly and free-thinking mechanics and pedlars. In large numbers of them to this day a society in which there are no gentlemen to carry on the county government, and generally to keep the social fabric from being broken up by rowdies and levellers, is something which they cannot conceive and do not like to think about. Their employment of such a personage as Lord Beaconsfield, whose antecedents are all of a kind most likely to be odious to them, to defend and carry out their political and social ideas seems at first sight an illustration of their freedom from caste prejudice. But the truth is they have always shown themselves disposed to use and reward liberally the services of ready and devoted speakers or writers, without abating any of their contempt for them. The stories current in London society of the freedom with which the Prime Minister is spoken of

in private by some landed aristocrats who follow his lead, are interesting proofs of the inability of his titles and orders to make real atonement for his birth and his glibness and dexterity. But taking them for all in all, it is safe to say that our civilization is not likely to produce any other class to which it will owe so much. Should they now disappear, they will have left in English law and government a monument to which there is nothing but the Roman law which can for a moment be compared, and under the shadow of which hundreds of millions are likely to sit for a thousand years.

A PLEASANT MOUNTAIN RETREAT.

FOR that growing class of summer travellers who seek in a mountain journey something besides mountain air, and the opportunity to idle away a few days or weeks in one of those vast and uncomfortable caravansaries which the tide of mountain-travel has brought into existence, the conventional mountain resort has, it must be acknowledged, lost much of its early charm. The railroads, it is true, bring every year to the New England mountains thousands of persons who could afford neither the time nor the money to visit them in any other way, and who, were it not for such facilities of travel, would, for the most part, go to their graves without having formed a very accurate idea even of what a mountain really looks like. But for the trained lover of nature there is little satisfaction, after all, in being shoved up a mountain before a panting and groaning locomotive ; nor does such a traveller, inveterate smoker though he be, care to be informed at every turn of his journey that it is essential to his happiness to "Smoke Vanity Fair"; while he whose mind is, or ought to be, intent on the sunrise will not look with much enthusiasm on the persistent claims of even so estimable a compound as the ubiquitous "Rising-Sun Stove Polish."

The visitor to the Yosemite may now enter that valley by one of three excellent carriage-roads, and cross and recross the Merced on patent iron bridges of the latest and most approved model ; but the romance which only a few years ago invested this journey with a peculiar charm has departed for ever. The loss is a serious one ; but then the lover of nature may, if he times his visit so, find some amends by joining a monster national Sunday-school festival at the base of El Capitan ; or even (but this, we fear, is too much to hope for every year) hear from the lips of such an eminent biologist as the Rev. Joseph Cook himself the why and the wherefore of the "weaving organisms of structureless bioplasm." Even the grandeur of the Colorado mountains must seem belittled by the furious struggles for wealth already carried far up their sides. Where, then, can the lover of unhackneyed mountain scenery now find that unalloyed nature which he misses in the New England mountains, and which is too fast disappearing from California and Colorado ?

Fortunately for him, the most beautiful, although by no means the grandest, mountain region of the continent is still but little known, and rarely visited. We refer to that group of mountain ranges in which the Appalachian system culminates, near its extreme southern upheaval. These mountains, which occupy in short, parallel ranges a territory some two hundred miles long by nearly one hundred wide, lie principally within the State of North Carolina, but with their highest peaks on or just across the Tennessee line. This region boasts of 21 peaks higher than Mount Washington ; 39 which exceed 6,000 feet ; and no less than 48 which overtop Mount Adams, the second of the New England mountains. Its southern districts, especially near Cæsar's Head, in Transylvania County, was long before the war, even, a favorite resort of the low-country planters, who often established pleasant and healthy summer homes here, and found abundant enjoyment in the unrivalled scenery and excellent hunting and fishing of this whole region. Asheville, too, and the valley of the French Broad, the great highway between this part of Carolina and Tennessee, are not unknown to tourists. That portion, however, of this mountainous region north of the French Broad—which comprises the counties of McDowell, Yancey, Mitchell, and Wautauga, and contains within its limits the highest land east of the Mississippi, Mount Mitchell, a peak of Black Mountain—has, until lately, remained so inaccessible and so little known that few travellers from the outside world, except here and there some enthusiastic botanist or physical geographer, have ever penetrated far into its wilds. The Carolina mountains are of two sorts : "Balsam Mountains," wooded to their very summits with a thick growth of fir ; and "Bald Mountains," with open, grassy summits, from some not very apparent cause nearly destitute of trees. Of the latter class the largest and finest is Roan Mountain, in Mitchell County ; and here, midway in the great saddle which sweeps down between Roan High Bluff and Roan High Cliff, and at an elevation not far from that of the summit of Mount Washington, an excellent little hotel was opened two years ago. Here, in perfect peace and comfort, and in an almost perfect summer climate, the lover of nature can enjoy a view extending over the mountain peaks of five States, and of its kind probably without a rival. Here he may wander for miles on foot or in the saddle over the rolling, lawn-like summits ; and, if his visit is made in the month of June, may feast his eyes on the gorgeous bloom of the Southern rhododendron, parent of that race which graces our Northern gardens, and here extending almost uninterruptedly over hundreds of acres just above the forest line.

As the present writer can gratefully testify from personal experience, there is in all this mountain region complete immunity from hay-fever ; and the mosquito and the black fly, pests of the Northern woodsman, are everywhere conspicuous by their absence. The forests of the North Carolina mountains deserve more than a passing notice. No one should boast of having seen the full beauty of the forests of the north temperate zone until he has ridden through those which clothe the mighty flanks of these mountains. Here, nourished by a soil of unsurpassed fertility, copiously watered, unravished by fire, and still exempt from the inroads of the axe, are the richest and most beautiful forests of the continent. In order that their wealth in species may be better appreciated they should be contrasted with the forests of some less favored regions. On the whole continent of Europe there are, according to the best authorities, 33 genera and 85 species of indigenous trees ; in this little North Carolina district there are 39 genera and 86 species. In all New England there are 32 genera and 71 species ; in the White Mountain region proper but 22 genera and 40 species. As compared with the mountain regions of the West the difference is still more striking. In the Rocky Mountains of Colorado and Utah there are but 17 genera with 25 species of trees; and in all the central portion of the California sierras the number is only increased to 20 genera with 35 species. The forests of the Western mountains, and to a less degree also of the New England mountains, are for the most part composed of gloomy pines and spruces, while that of the Carolina mountains consists almost exclusively of broad-leaved deciduous trees, which give it the charm of unsurpassed summer verdure and unequalled autumn coloring. In this forest are found the noblest oaks, hickories, chestnuts, walnuts, and tulip-trees North America can boast. Here the magnolias of the South in great variety mingle with the birches, maples, and hemlocks of the North. Here the different gum-trees, the buckeye, the lovely silver-leaved linden, the sorrel-tree, the flowering dog-wood, and the silver-bell-tree reach their greatest development ; and here one may ride, in the valleys, for miles through continuous thickets of rhododendrons and laurels of such arborescent dimensions and luxurious growth as this forest alone can boast.

This region north of the French Broad may be entered from Marion in North Carolina, or from Johnson City in Tennessee, a station on the East Tennessee, Virginia, and Georgia Railroad, Roan Mountain lying about thirty miles from either point. The Tennessee route will perhaps be found the most convenient for travellers from the North, and the stage-road which leads from Johnson City to Bakersville, a town at the foot of the mountain, crosses the summit of the Unaka range, and affords the best view of the Roan easily attainable. A journey through the North Carolina mountains will best be made on horseback, for the roads in all this region are execrable; and the traveller, if he is wise, will restrict his baggage to the capacity of a pack-mule. Thus equipped, he may travel with great independence and perfect safety and comfort.

Among the many pleasant recollections one brings back from such a journey, by no means the least pleasant is that of the invariable kindness and hospitality of the western North-Carolinians ; and the traveller's preconceived notions of the cost of a mountain journey, if acquired in New England or California, will receive a rude though not unwelcome shock when the universally moderate demands made on his purse in these Carolina mountains are summed up.

ENGLISH POLITICIANS AND IRISH PRIESTS.

LONDON, July 29, 1879.

THE attitude of the two great parties on the Irish University question cannot be considered as politically creditable. Each is desirous to make the other its cat's-paw, and to avoid being turned to that base use itself. On both sides the necessity of settling the question is proclaimed ; on both sides the consciousness is strong that it cannot be settled without making concessions to Roman Catholics which will offend the narrowly Protestant feeling of England and Scotland. Each party

wishes the thing to be done, and each party wishes to make the other do it, and to be able to use the only means of doing it as a weapon against its rival. Powerful as is the Jingoism of foreign politics, the Jingoism of Protestantism is still more potent. The religious Jingo is, to use a phrase of the streets, "the living Jingo." Mr. Gladstone's success in the general election of 1868 was due in large part to the scheme of concurrent endowment, involving, of course, the endowment of Roman Catholicism in Ireland proposed by Lord Mayo on behalf of Mr. Disraeli's Government. The disestablishment of the Irish Church recommended itself to an awakened sense of justice in the English people ; but its cordial acceptance was owing, in a very large degree, to the fact that it was thought to make impossible for ever any such scheme as Lord Mayo's. To make assurance doubly sure, and expressly to exclude the endowment of Roman Catholic teaching in schools and universities, a clause in the Irish Church Act expressly reserved the surplus fund mainly for the relief of unavoidable calamity and suffering. Of course, the legislation of one Parliament does not bind its successor ; but one would have thought, except for the speeches of Mr. W. E. Forster, Mr. Lowe, Lord Kimberley, and Lord O'Hagan, that an understanding, to which Mr. Gladstone's Government was a party, binds for at least a few years the action of its surviving members. Yet these gentlemen gave their support in fact or in principle to the O'Conor Don's measure, which practically made over a large part of the Church surplus to Roman Catholic colleges and a virtually Roman Catholic university.

The O'Conor Don's scheme has, however, as I said it would do, disappeared from the order-book. Its place has been taken by a measure introduced by Lord Cairns into the House of Lords, and now awaiting consideration and amendment by the Commons in Committee. The bill will probably pass. It dissolves the Queen's University, to establish on its ruins a sort of London University in Ireland, with which the existing Queen's Colleges will be affiliated, together with such other colleges, chiefly in practice Roman Catholic, as may associate themselves with it. Members of these colleges and students unattached may present themselves for matriculation and degrees. By an amendment, to be moved in committee on behalf of the Government, money prizes of various sorts, exhibitions, scholarships and fellowships, will be instituted ; but they will be the reward of individual merit, and there will be no payment by results to the colleges from which the students may come. Thus the endowment of Roman Catholic teaching will be avoided. The bill, which in its present form is based mainly on suggestions made by Lord Edmond Fitzmaurice, may undergo changes of detail in committee. It may be possible to save the Queen's University, which has done a good work, and to make it the centre of the new arrangements. The measure in something like its present form will, however, be allowed to pass. But the Roman Catholic priesthood will never accept it as a settlement. They will take it as an acknowledgment of debt, and as payment in part, and will fairly enough sue for the rest of what is owing to them. If the Roman Catholics of Ireland have a grievance in the matter of education, if it is a wrong that they should be treated as members of every other church and sect are, the grievance is a great one, and demands a large and generous remedy. They are practically the Irish people, and exceptional legislation of a petty sort, such as might suit the scruples of a small and capricious clique, is out of the question. If, on the other hand, they have no grievance, other than not being the objects of favoritism, it was unnecessary to disturb the system of religious neutrality on the part of the state which was consummated in the disestablishment of the Irish Church, and the simultaneous disendowment of Maynooth and abolition of the Presbyterian Regium Donum.

The grievance is, I believe, entirely factitious. It has a history ; it is in a great degree the result of the rivalries of English statesmen and the exigencies of English parties. The failure of Mr. Gladstone's attempt to lead the House of Commons in 1866, and especially to carry the Reform Bill of that year to a successful issue, was keenly felt. Lord Russell's ministers resigned office, but by no means acquiesced in their exclusion from power. As one of them said, when they were kicked out they held many conferences to consider how they could get back again. The Irish vote was deemed indispensable, and the Irish vote was thought to depend upon the Irish bishops. The office of Chief Secretary for Ireland in Lord Russell's, and afterwards in Mr. Gladstone's, Government was filled by Mr. Chichester Fortescue, now Lord Carlingford, an able and upright man, but too prone to the belief that the secret of governing Ireland lay in "Castle understandings" and in secret bargains with the clergy. During the last days of Lord Russell's ministry a supplementary charter for the Queen's University was devised and issued on the sole authority of the Crown, and without the cognizance of Parliament. It affiliated Roman Catholic colleges to the University, and gave the Ultramontane party a large representation in the senate, or governing body. Fortunately, the trick did not succeed. There was a legal as well as a moral flaw in the proceedings of the Government, and, appeal being made to the courts of law, the supplementary charter was declared to be null and void. Lord Russell's Government fell upon another issue ; but through it the Liberal party had offered itself to the Irish bishops. The Conservative party, looking forward to a precarious majority, if to any majority at all, at the next dissolution, could not afford to be behind its rivals, and Lord Mayo's scheme of concurrent endowment was submitted to the House of Commons. There was hurried deliberation on the part of the Liberal chiefs, and, after some delays, due mainly, it is believed, to the reluctance and resistance of the eminent statesman who was afterwards most conspicuously associated with the measure, it was resolved to play the card of disendowment and disestablishment. The old Whig traditions of hostility to Protestant ascendency brought the moderate and aristocratic section of the Liberal party into union on this point with the Nonconformist hostility to state churches, and with the Roman Catholic eagerness to remove what was rhetorically called "the last badge of supremacy." The result was what all the world knows. Mr. Gladstone came into office at the head of a Liberal majority strong in numbers, and still stronger in union and devotion to its chief, and the Anglican Church in Ireland was disestablished and disendowed. Unfortunately, it was impossible to stop here. Mr. Chichester Fortescue's subterranean tactics conspired unhappily with Mr. Gladstone's ecclesiastical leanings. Mr. Gladstone has never been a liberal in academic politics. While he was formally leader of the Liberal party he opposed Mr. (now Lord) Coleridge's bills for the abolition of religious tests in the colleges and universities of Oxford and Cambridge ; and although he finally assented to these measures, it was under the irresistible pressure of his party, and as the logical consequence of his position. He has always been unpopular with the academic Liberals of his own university, but for whose distrust he might possibly before this have regained the seat the loss of which was probably the keenest mortification of his political life. The supporter at Oxford of Keble College, in which the system of religious tests has been renewed, all Mr. Gladstone's sympathies are with the demands of the Roman Catholic hierarchy. The absence of state provision for the maintenance of ecclesiastical ascendency in Irish university education was, therefore, in his view, a grievance and a scandal, and as such he denounced it. Mr. Gladstone's pamphlets on Vaticanism, and his assaults on the policy of Pius IX., have misled many people. His anger is not that of a Liberal or a Protestant, but of a schismatic Catholic. His sacerdotalism, combined with the Castle manœuvres and party exigencies, led to the introduction of the Irish University Bill, which really overthrew his Ministry, and, after an interval of six years, has dictated his support of the amendment in which Mr. Shaw, as the leader of the Irish Home-Rule party, covertly reaffirmed the propositions of the O'Conor Don's bill.

That the Irish Roman Catholic laity feel a grievance in the matter of university education does not appear from their conduct, though it does appear in the declarations in which the influence of the priests on the women of their households compels them to join. Though the population of Ireland has decreased since the establishment of the Queen's Colleges the attendance at those colleges has greatly increased. The Roman Catholics are a large majority of the whole population, but they are a small minority of the upper and middle ranks ; and what may be considered the naturally university-going class among them furnishes its full proportion to Trinity and the Queen's Colleges. It does this in spite of episcopal threats and censures, and the conspiracy of successive governments, Liberal and Conservative, with the priesthood. The aim of the Roman Catholic hierarchy is to make Ireland into two nations, Catholic and Protestant. A novel not long since published by a Roman Catholic lady, 'Hogan, M.P.,' shows clearly how every form and method of social intercourse between Roman Catholics and Protestants is discountenanced by the hierarchy, as likely to lead to religious laxity and indifference. Educational separation is only a part and means of a larger and more complete social separation. The Roman Catholic laity, influenced by family ambition or natural friendships and feelings of good neighborhood, resist this dictation with more spirit and success than might be expected. But they may be overpowered, and a state of things will be brought about which will give over Ireland anew to social and religious strife, verging on social and religious warfare, and which may compel either the forcible

interposition of England, or the severance of the connection between the two countries. These are tendencies which may be counteracted, but they exist and are powerfully abetted by Mr. Gladstone's hatred of unecclesiastical education, and by the bids of rival partisans for the electioneering influence of the priests. † † †

QUEEN ELIZABETH AND THE HUGUENOTS.

PARIS, July 24, 1879.

AT various epochs the French Government has sent persons to London in order to find in the State Paper Office documents concerning the history of France. The first mission of this kind was given in 1764 to a M. de Bréquigny, who remained nearly three years in London with six copyists whom he had brought with him. The collection of documents which he gathered still bears his name. These documents come down as far as the year 1515. In 1833 M. de Salvandy, Minister of Public Instruction, sent M. Francisque Michel to England, who chiefly occupied himself with old chronicles. I have now before me a volume just published by Count H. de la Ferrière, under the title of 'Le XVIe Siècle et les Valois,' from unpublished documents in the British Museum and the Record Office.

The collection of the "State Papers" was created by order of Queen Elizabeth, and its nucleus was first the collection of all the papers of the reign of Henry VIII.; it does not contain any paper of an older date than 1500. It is subdivided into Domestic, or what concerns the administration of England, and Foreign, or the papers which concern all other countries. In the foreign department France alone, for the period from 1500 to 1600, comes in for 134 volumes folio, of from 500 to 1,000 pages each. It is very interesting to study Elizabeth in this collection, and especially in her relations with France. It is a pity that M. de la Ferrière gives us only a dry compilation of documents, for with the elements which he had in hand he could have drawn a very interesting history. He follows the chronological order, passing from one subject to another: his book is therefore wanting in dramatic unity, but it is, of course, of the highest value to the historical student. M. de la Ferrière very rarely indulges in any generalization; he cannot, however, conceal his admiration for Elizabeth, and he judges her in these words:

"Elizabeth is in advance of all the contemporary statesmen of England; those who come after her will have nothing to do but to walk in her footsteps. Like Peter the Great, like Frederic the Second, she left her ideas as a legacy to her people. The policy which she instituted, and which England has only too well adopted, can be summed up in these two characteristic traits: (1) she appeals for the first time to the opinion of her people, to the opinion of Europe, by a manifesto directed against the policy of France [this was the Reformation's spirit of examination applied to the acts of government]; (2) the right of intervention is loudly invoked, first in Scotland, then in France, and takes the form of a political dogma. These two lines of conduct once admitted, we shall see Elizabeth maintain herself on them inflexibly. Her whole reign will only be the logical and invariable consequence of these principles."

Peace had been made between France and England in 1559; but the young husband of Mary Stuart signed thus a treaty which was made separately with Spain: "Francis, by the grace of God king of Scotland, of England and Ireland, Dauphin of France." Soon afterwards the death of Henry II. made Francis king of France. On the 5th of March, 1560, the Privy Council sends Queen Elizabeth a memorial touching the pretensions of France. Francis II., Mary Stuart, and the Guises are represented in this memorial as the mortal enemies of England. The Privy Council invites the Queen to intervene in Scotland, to assist the Scots and to turn the French out of that kingdom. The Privy Council was only following the dictates of Elizabeth, who had already made a treaty (the treaty of Berwick, of February 15, 1560) with the Lords of the Congregation. M. Teulat has written a book on the 'Relations of France with Scotland,' and we find in it long extracts from a declaration of the Lords of the Congregation, which was printed and spread all over England by order of Elizabeth. It was read in all public places, translated into French and sent to France. The ambassador of France, M. de Seurre, complained bitterly, saying that "the Queen of England had collected a powerful army on land and on sea, as if she dreaded an invasion. The King of France had proposed to her to be arbiter between herself and the Scotch rebels. She had made conditions which were not acceptable—the return of all the French from Scotland; she had sent an army to the frontier; she had violated the Scotch territory . . . . there was nothing left for the ambassador but to protest." The Queen answered the same day (April 20) "that the Dauphin and the Queen of Scotland had assumed in various writings the title of King and Queen of England, that in the house of the Queen of Scotland the arms of England were everywhere added to the arms of Scotland. . . ." To this were added complaints against the French administration in Scotland; but clearly Elizabeth had shown her inmost heart in the first complaint.

The French made an heroic defence at Leith, but the garrison was reduced by famine, and Elizabeth sent Cecil to Scotland and opened negotiations of peace. At her request Francis II. sent two plenipotentiaries. The instructions of Elizabeth to Cecil can be thus summed up: evacuation of Scotland by the English and the French; a very limited number of French authorized to remain in a few places in Scotland; Calais claimed, but without insistance; the renunciation by Mary Stuart of the English arms, and her formal renunciation of the crown of England; the recognition of the treaty passed between Elizabeth and the Lords of the Congregation. Mary of Lorraine died during the negotiations, the history of which will be found in full in the volume of M. de la Ferrière; they ended in the treaty of Lislebourg. Francis II. died, and on this occasion Elizabeth sent to France as ambassador extraordinary the Earl of Bedford, whose secret mission consisted in opening intimate relations with the Protestants, with the King of Navarre, the Prince of Condé, and with Coligny, to hinder in every possible way the reunion of a general council of the Church, which was asked for by those who flattered themselves with the hope of reconciling the Reformation and the Catholic Church, and not to allow the marriage of Mary Stuart with a foreign prince. Bedford bore an autograph letter from Elizabeth to Mary. He had also an official mission, which consisted in asking for the immediate ratification of the treaty of Lislebourg.

Throckmorton, who was ambassador at the Court of France, was working with Bedford; they both did their best to hinder Catherine de Médicis from sending French bishops to the Council of Trent, and they deputed an Italian Jew called Tremelius, who had made himself a Catholic and afterwards a Protestant, to the German princes. The instructions of Tremelius were against the meeting at Trent. Catherine de Médicis, who was of the Machiavellian school, showed at that time some inclination towards the Protestants, from fear of the house of Guise. Throckmorton encouraged her, as well as Elizabeth. The Queen of England, while she sent letters in her own hand to Catherine, negotiated secretly with the Protestant chiefs. She gave an open mission to Sidney; Sidney was instructed to "explain to the King of France and to the Queen, his mother, how the quarrels and controversies might be settled without any effusion of blood. Her first intention is the glory of God; the second the happiness of her good brother, the King of France, in his young age; thirdly, the good of the Prince of Condé and of his house" (Westminster, May 10, 1562). Sidney was sent as a sort of mediator, but he failed in all his attempts. Civil war was imminent in France, and on the 15th of April the *Vidame* of Chartres took possession of Havre; in the month of July he embarked at Dieppe, and left with a secret mission for England. Havre was to be the price paid by the French Huguenots for the alliance of Elizabeth. All the details of this painful negotiation are now known. Havre was to be occupied by English troops, while France and England were still at peace. Elizabeth wrote a declaration, the original of which is preserved in the Record Office; in this declaration she represents herself as the defender of the King of France and of his province of Normandy against the usurpations of the house of Guise: "We, with good intentions towards the King our good brother (whom we know to be, on account of his age, unable to hinder his subjects from ruining each other), have ordained and commanded to aid and defend said towns (Rouen, Dieppe, Havre de Grâce)." This proclamation is dated September 27, 1562, and soon afterwards Havre was delivered to the English troops. Elizabeth occupied a French city and had still two ambassadors in France, Throckmorton, who contrived rather willingly to become a prisoner of the Huguenot army, and Smith, his successor.

Rouen was taken by the royal troops and preserved from an English occupation. At that time the death of the King of Navarre gave to the Prince of Condé the highest rank in the Protestant party. Elizabeth wrote him a pressing letter; she was afraid that he would become reconciled with Catherine. Condé answered her two days before the bloody battle of Dreux. The Record Office is in possession of the very detailed account of this battle sent by Coligny to the Queen of England. It has also letters of the Princess of Condé to the Queen; she claimed money which Elizabeth had promised to Condé, and which was not forthcoming. Condé had been made a prisoner at Dreux, and Coligny wrote letter after letter to the Queen (these letters show that Elizabeth alleged that she had not treated with Condé but with the inhabitants of Normandy). Coligny

sent his son-in-law, Téligny, to England. The German *Reiter* could not be paid, the Huguenot army had no powder, no guns. The Protestant cause seemed almost lost; still Elizabeth, content with the possession of Havre, did not help it materially. The assassination of the Duke of Guise before Orléans changed suddenly the course of events. Coligny wrote from Caen to Elizabeth to inform her of this great event.

Condé found himself the arbiter of the kingdom; he concluded peace with great haste with Catherine; he informed Elizabeth *pro forma* of his negotiation, but it was well understood that Elizabeth could not keep Havre. In the short note in which Condé makes his conditions is the line: "L'on deschassera tous estrangers hors du royaume de France." Coligny announced the peace to Elizabeth; the Queen was dissatisfied with it, she wrote to Coligny and to Condé expressing fears for the future, and insisting upon the execution of the conventions made between the Huguenots and herself. "We do not doubt your respect for the conventions made between you and us, though we hope with the help of God to maintain ourselves against all events; we also wish to advise you, out of a true and sincere friendship, to fear that you may have to repent of a too great haste in the cause which you pretend to forward, and of thus forgetting yourselves as well as the friends and confederates who have helped you in your great necessities, and incurred great expenses and pains for your good." Condé was not much moved by these expostulations; he quite understood the game of Elizabeth; she had insisted upon the occupation of Havre, wishing to exchange Havre for Calais. Catherine de Médicis wished, naturally, to keep Calais and to retake Havre. When Condé put in the terms of the peace of Amboise the clause promising "the expulsion of all foreigners from France," it applied in his mind, though Coligny had doubts on the subject, to the English at Havre, as much as to the German auxiliary forces. Catherine showed herself at that moment a true queen of France; in the duel between her and Elizabeth Havre was the prize to be won, and the "Florentine" won it, with the help of the Huguenots as well as of the Catholics.

The siege of Havre became a national enterprise, and it was hoped for a moment that the religious differences would be lost in one common object. M. de la Ferrière says that the responsibility of the loss of Havre to England fell almost entirely on Elizabeth. "She acted in this war as she did in Ireland, and in all other wars. Her parsimony never allowed her to seize the favorable opportunities; she could never resign herself to a great sacrifice, to a vigorous and decisive effort. She had had time enough; she had been occupying Havre eight months. The correspondence shows that reinforcements, arms, everything was wanting in time. The despatches between Warwick, Elizabeth, and her councillors would fill a whole volume; but nothing was done in season, and when the fleet of Admiral Clinton left Portsmouth and came in view of Havre the town was already in possession of the French. Catherine de Médicis entered the city, though the plague had decimated the English garrison; she gave herself the satisfaction of looking on the great English fleet which was carrying six thousand useless soldiers, with guns and ammunition. The young king made his entry a few days afterwards into Rouen; Catherine proclaimed his majority, and by her order the Chancellor de l'Hôpital proclaimed the annulment of the pretended rights of the English crown in the city of Calais. Elizabeth was obliged, after a vain struggle, to accept terms of peace from France: the rights of the two countries were reserved; the French hostages detained by Elizabeth were set free for a ransom of 120,000 crowns; free-trade was established between the French and English subjects.

Correspondence.

THE HARVARD DIVINITY SCHOOL.

To the Editor of The Nation:

Sir: In the discussion that has been going on in your columns in regard to the teaching of "non-sectarian" theology, and to the propriety of an increased endowment for the Divinity School of Harvard College, your correspondents, although of the clerical profession, seem to me to misunderstand the points at issue.

No one doubts that a so-called science of religions, or that the history of the development of theological doctrines and religious sects, may be taught according to a purely historic method—that is, in a non-sectarian manner. Instruction in these subjects may, as you have pointed out, very properly form part of a scheme of university teaching. But the function of a divinity school is to teach other things in addition to these, in order to prepare its students for the ministry. It must, if it fulfil its function, teach certain specific religious doctrines. Its teachers cannot help teaching sectarian theology. The most lax Unitarian minister is, and ought to be, sectarian, no less than the most rigid Orthodox. Both alike believe in God, but one has an essentially different conception of the nature of God from the other. Religious dogma is not, cannot be, ought not to be excluded from the most liberal pulpit. Men in all ages have been ready to die for sectarian doctrines of the most opposite descriptions. There has been sectarian persecution within the memory of man in the Unitarian sect itself. It is a curious symptom of the present condition of religious thought (and, I must add, of the mental training of the clergy) that there should be clerical advocates of a school *for the education of clergymen* on the basis of a non-sectarian theology. The blood of the martyrs, Protestant and Catholic alike, protests against the notion; and so does simple common sense. And, in fact, the Divinity School at Cambridge, though it may not insist on any doctrine as essential to salvation, has been a sectarian school, and can no more help being sectarian than the school at Yale or Princeton.

This being the case, that part of the community which regards Harvard College as a national institution, and as one of the most important of national institutions, cannot but feel a deep regret at what they esteem the grave error of its eminent president in his endeavor to strengthen a sectarian school which is connected with the College by no necessary bond. So far as Harvard College has, or is supposed to have, a sectarian character, or even a sectarian bias, so far is its growth impeded, its proper work hindered, and its national influence diminished. No one would object to the existence of a Unitarian Divinity School in the vicinity of the College, any more than they object to the existence of the excellent Episcopal Divinity School at Cambridge. And if President Eliot should succeed in his effort to increase the endowment of the Unitarian School it is to be hoped that he will see that his first duty to the College, for which he has heretofore done so much, is to take measures by which the Divinity School, because in the nature of things it is, and must be, a sectarian institution, is completely separated from it.

A Harvard Alumnus.

August 2, 1879.

Notes.

THE Miscellaneous Writings of the late Dr. Francis Lieber are in the press of J. B. Lippincott & Co.——G. P. Putnam's Sons' fall publications include 'Studies in German Literature,' edited from the MS. of the late Bayard Taylor by Mrs. Taylor and Mr. Geo. H. Boker; 'The Science of Ethics,' by President John Bascom, of the University of Wisconsin; 'A Lady's Life in the Rocky Mountains,' by Isabella Bird; and two volumes of 'The New Plutarch,' viz., Abraham Lincoln, by Charles G. Leland, and Coligny, by Walter Besant.——D. Appleton & Co. have published in English Haeckel's 'Freedom in Science and Teaching,' of which we took notice at some length in No. 723 of the *Nation*. What adds to the interest at least of the volume is a preface contributed by Prof. Huxley. He appears on the scene neither as a partisan, he says, nor as a peacemaker; but while expressing agreement with Virchow's main propositions, he condemns him for proposing to exclude the doctrine of evolution from the schools, while consenting to the teaching of theological fables, and severely reproaches him with introducing politics into scientific discussion by connecting evolution and socialism as cause and effect.——Mr. F. W. Christern sends us a specimen, "The Tempest," of a Hamburg edition of Shakspere's plays issued separately, edited with critical notes and introductory notices by Prof. W. Wagner. Both notes and notices are brief and to the point; and the form is convenient for the hand.——From Cassell, Petter & Galpin we have received the first six parts of a serial publication called *Science for All*, to the frequency and duration of which no clew is given in the prospectus. Its aim, to deal in a proper manner with the elementary facts of science as observed in every-day phenomena and the commonest objects, is strictly carried out by the several contributors, among whom many well-known and authoritative names occur. Illustrations, as is always to be expected in the publications of this house, abound and are of good quality; not a few are derived from the scenery and natural productions of the United States.——Some recent issues from the Government Printing-Office, though dated 1878, are the reports of Prof. Eugene W. Hilgard and Dr. F. V. Hopkins on the specimens obtained from borings between the Mississippi and Lake Borgne in 1874, which prove the practicability of a ship

canal; Lieut. Ruffner's report on explorations and surveys in the Department of the Missouri, consisting of a five months' reconnoissance in southwestern Colorado, the great silver region of the State, and, perhaps, of the continent, by Lieut. C. A. H. McCauley; a paper on the use of the barometer on surveys and reconnoissances, by Lieut.-Col. R. S. Williamson; and vol. vi., Botany, of the Wheeler Survey. The last-named is a quarto volume, mainly a catalogue, and beautifully illustrated with figures of twenty-seven new species and ten rare ones. In the chapter on economic botany Dr. J. T. Rothrock states that the medicinal anti-periodic effects of the Eucalyptus globulus have always disappointed him.——A double number, July–August, of the *Library Journal*, contains the proceedings at the late convention of librarians in Boston, with some of the principal papers in full.——The general meeting of the American Social Science Association will be held at Saratoga, Sept. 9–12. Some of the more remarkable papers are on the voting of women in school elections (Prof. A. P. Peabody), Chinese immigration (Prof. S. Wells Williams), the causation of yellow fever (Dr. C. A. White), the place of the practical man in American public affairs (Hamilton A. Hill), the colored exodus (Frederick Douglass and others), co-operative stores in England and America (Wm. A. Hovey), etc.——The *Athenæum* states that Major Serba Pinto's account of his journey across Africa will be brought out simultaneously in several languages before Christmas; in English, by Sampson Low & Co., who will also publish more immediately 'Kaffirland: a Ten Months' Campaign,' by Frank N. Streatfield, commandant of native levies during the Kaffir War of 1878.——On July 17 the court gave judgment in the Seinguerlet case, described in the *Nation* of July 3. The decision was in favor of the defendant, and the plaintiff was condemned to pay all the costs. It was found that no original descriptions and remarks of Busch were reproduced in Seinguerlet's volume, and that as Busch could have no copyright in Bismarck's utterances, especially as he was not the only hearer of them, the defendant had not infringed the copyright treaty in copying these remarks.——It would seem that writers for periodicals fare better in Germany than elsewhere, for Mr. Paul Lindau, editor of *Die Gegenwart* and *Nord und Süd*, is trying to bring about a convention of editors of magazines and weekly journals in order to establish a tariff for the payment of contributors. *Mehr Licht* says of the scheme that it is highly desirable to carry it into effect, for "bounds must be put to the impudence with which certain German authors take advantage of their at best doubtful reputation."

—To "guide rather than to manufacture a migratory movement" from the crowded cities and populous centres of the country to parts of the United States where land and air are abundant and cheap, is the object of the Co-operative Colony Aid Association of this city, which some of our readers may now hear of for the first time. "Through the liberality of the publisher," Mrs. Elizabeth Thompson, it has just begun the publication of a monthly paper called the *Worker*, of which we have received the first number. This devotes its space to a history of the association and a prospectus of its aims, an address "To the Capitalists" by Felix Adler, articles on "Co-operative Farming" and subjects germane to the object of the society, various items of news, and even a number of what might be called colonization jokes. The advocacy of co-operative colonization appears to be sensibly conducted, and the circulation of the paper among the more reflective of our artisan class should certainly do much towards the transformation of some of them into members of the "peasantry," for which this country is so much better adapted, and every extraneous addition to which helps to remedy the evil of overcrowding that so afflicts the tenement districts of our large cities. It can, however, do no good to the cause to copy from the Chicago *Socialist* misleading and unfair extracts (denuded of their contexts) from the utterances of the press and of individuals upon socialism. The editor is the Rev. R. Heber Newton and the business manager E. E. Barnum. Upon the Association's Executive Committee are Rev. Dr. Rylance, Rev. Dr. Deems, Joseph Seligman, F. B. Thurber, John Wheeler, and other well-known gentlemen.

—In the notice of Captain George E. Belknap's article on the soundings made by the *Tuscarora* in 1874, we (*Nation*, No. 736, p. 95) did not mention that Sir William Thomson's wire sounding-machine had been condemned by the English Admiralty, and that to Captain Belknap belongs the credit of proving the utility of the Thomson machine. It has found its way gradually on the telegraph-cable steamers, and bids fair to become an important adjunct in determining the position of ocean steamers when approaching the land. To those who are familiar with the use of the wire sounding-machines of Thomson as modified by Lieut.-Commander C. D. Sigsbee, of the Coast Survey steamer *Blake*, it seems the height of presumption to question, as has been done by Mr. Wild in 'Thalassa,' soundings made by wire, and to think for a moment of controlling their accuracy by comparison with the soundings of the *Challenger*, which were all made by the old method with hemp rope, and which from the nature of the case are subject to a very considerable error in soundings over 1,500 fathoms in depth.

—From the time of the publication of 'The Descent of Man,' if we remember aright, to the present day Dr. McCosh has been instant in season combating with ceaseless activity the more advanced doctrines of the Evolutionists. His point of view is not perhaps so nearly that of exact science as the scientific infidelity of the day could wish; but until Dr. Tyndall confines himself to his natural philosophy and Professor Huxley to his biology, we do not see that the criticism of Dr. McCosh can be blamed for following them into the domain of abstract speculation. They are, indeed, looked upon in professional circles as more or less poachers in these preserves and justly open to the discharges of the Princeton philosopher's spring-guns. Mr. Huxley certainly felt the edge of Dr. McCosh's weapons, and when he lectured here was not allowed to depart with his dangerous doctrines uncontroverted. And now that he has written an exposition of Hume's philosophy, nothing is less surprising than that Dr. McCosh should have come forward in the current *Popular Science Monthly* with an appropriate antidote. The latter says: "I venture not to urge objections to his [Huxley's] biology, of which he is a master, and to be reviewed only by a master in his department. But he is not so formidable as a metaphysician, and one with but a sling and stone may cast him down." It is not to be doubted that Dr. McCosh has erudition and ability sufficient to swing his sling to good purpose, and even, if it be not presumptuous to say so, to the discomfiture of Professor Huxley. His article is entitled "Agnosticism in Huxley's 'Hume,'" and what he has to say of the way in which the negative positions of both Hume and Huxley are to be met is discriminating, in the main large-tempered, and on the whole so satisfactory that in Princeton, at least, it will be taken as almost axiomatic. He is not, however, content with this, and proceeds to "estimate the influence upon young men likely to be drawn into its vortex"—the vortex of agnosticism. And it is for this element of his argument, always inseparable from his arguments of this kind, that we have alluded to his paper. He always leaves a discussion which has to do with truth to dwell on the moral consequences of certain views of truth; his moral tag is as inevitable as Æsop's *hæc fabula docet*. He does, indeed, say: "I am not to be charged with the fallacy of arguing that because a system is charged with bad results it must therefore be false." But a disclaimer is seldom very effective, and never answers a charge of unconscious self-deception. At best, Dr. McCosh, dwelling upon the "tendencies" of agnosticism, is aside from the point. Most people get their idea of a man from the general impression he makes rather than from any specific utterance, and, after reading this "sermon to young men," they will be apt to infer that Dr. McCosh fears possible resultant evil more than actual fundamental error; that he does not differ essentially from Mr. W. R. Greg, who dreads truth that affords him "no help" and brings him "no comfort." This is a "tendency" of Dr. McCosh which "orthodoxy"—generally pretty confident of its rationality—will lament far more than agnosticism.

—Mr. Leslie Stephen, in his 'Hours in a Library,' recently said some very severe things of the old *Edinburgh Review*. "It is generally dull," he says, "and when not dull flimsy," and "few of the articles would have a chance of acceptance by the editor of a first-rate periodical to-day." And in spite of Mr. Stephen's proverbial iconoclasm, and in spite, too, of the recent revival of respect for the original staff of the *Review*, due to Mr. Trevelyan's biography of his uncle and to the correspondence of Mr. Napier, most of us, probably, have a secret but sincere sympathy with his view; especially if we recall the difficulty of certain persistent attempts to find in the essays of Brougham, of Jeffrey on Scott, or of Sydney Smith on Methodism, say, the "brilliancy" which dazzled the last generation. But some of the reviewers have always seemed in certain respects safe, and though the present generation by no means think of Macaulay as his own did, most people, we venture to say, will be unprepared to find a wayside criticism upon him in the current *Macmillan* quite as severe as Mr. Leslie Stephen's upon his associates. Certain of Macaulay's faults are obvious enough—"What critic can't point them out?" as Thackeray enquired in his "Roundabout" notice of Macaulay's death—and even his enthusiastic admirers must see by this time that, if

the charge of unscrupulousness so frequently brought against him is unjust, the charge of inability to "penetrate beyond the apparent rhetorical truth of things" is just, and that it is quite as grave. But what he did for history, to make it "familiar rather than heroic," to popularize its erudition, to rid it of its old pompous stateliness and endue it with vivid picturesqueness, cannot be forgotten and must remain Macaulay's monument for all time, one would say. His own history may be, as it has been called, a Whig brief in five volumes; all the same it has illustrated the value of his method as perfectly as his own inability to apply it faultlessly; if it were not for Hume, indeed—and we suppose many people would not except Hume—it might be said of him that he did for English history what the invention of printing did for literature. Instead of mentioning this, or at any rate more than hinting at it, Professor Seeley in his article on "History and Politics" deliberately depreciates it. He says, speaking of "the old, primitive, half-poetic sort of history," and very likely meaning Herodotus, whom Macaulay called "infantine," that "it had given place to another kind, dissimilar both in object and style, when Macaulay, taking a step backward rather than forward, reintroduced it among us." Of this other kind of history, he adds that it is "not poetic but scientific," that "its aim is not to give pleasure or confer fame, but to throw light on the course of human affairs"; and he seems to associate Macaulay's history with such works as 'Ivanhoe.' For what he calls romantic history, poetic history, he exercises the contempt not unnatural, perhaps, to a scientific mind contemplating romance. "To make history interesting and exciting you have only to follow a few simple rules. All that is necessary is systematic exaggeration and occasional falsification," he observes. To this one is irresistibly inclined to answer as the theological professor did to the bumptious student who thought making such proverbs as Solomon's was a simple matter—"Make a few." Whatever he may have done to deserve it, Macaulay himself would certainly be confounded at such misappreciation of what he sought to do. What he sought to do is sufficiently suggested in his wish that Clarendon had "condescended to be the Boswell of the Long Parliament"; "Would not his work, in that case, have been more interesting? Would it not have been more accurate?" he asks; and justly adds: "A history in which every particular incident may be true, may on the whole be false."

—This undervaluation of the method Macaulay introduced—or, if Prof. Seeley prefers, "reintroduced"—does not, however, prevent Prof. Seeley's essay from being in the main an admirable one. "Let writers deal with what they understand," he wisely advises, and when he leaves the consideration of "romantic history" and comes to discuss the importance of "scientific history," he speaks not only with understanding but with authority. He is no longer annoyed with what is "interesting," he is not warped by "the magic pen of Macaulay," or inflamed by "gorgeous illusions"; for these are replaced in the domain of scientific history by what he aptly styles "the prosaic truth in all its tiresome dryness and intricacy where poetry had reigned before." At Cambridge, where Prof. Seeley has been teaching it for ten years, history is studied "as a department of science rather than as a branch of poetry," and it is quite true that "only in this shape can history be included among the studies of a university." Scientific history, however, is divided into two branches by Prof. Seeley, which he insists shall be kept distinct—political history or the history of states, namely, and anthropology, sociology, etc. "Manners and customs," instead of occupying more space in our histories, "should have histories to themselves"; it is impossible for the political historian, "with the political history on his hands," to treat them seriously, and they deserve to be treated seriously. Political history is defined as "the biography of states," and it is the biography of states that Prof. Seeley would have studied in universities, so that one may thus be forced to study history and politics at the same time. This he thinks very important for a nation like England, where, as he finely says, "the study of politics answers to liberty as the duty to the right." Certain obstacles in the way of such historical study and how to remove them will be considered in future papers, to which this is but an introduction explanatory. Nothing can be better than this; Prof. Seeley's readers only need to preserve carefully the distinction which he pointedly neglects to make for them, the distinction between "text-books for advanced students," in the construction of which he is an acknowledged authority, and literature, which is "the thought of thinking souls" or "a criticism of life," or whatever one chooses, but certainly not a text-book.

—The news of Charles Fechter's death cannot have been heard by any theatre-goer without a pang of regret, though the stage can hardly be said to have suffered in the loss of an actor whose withdrawal from professional life had become complete some years since. No foreign actor ever had a more immediate and telling success in this country (the paradise of foreign actors) than Fechter, and to a great extent the success was deserved. He was probably the best melodramatic actor that ever appeared on our boards, and he elevated melodrama by his acting to a level as high as it is possible to imagine it elevated. In such a part as *Monte Cristo* Fechter revealed all that capacity for sudden changes and surprises, and for complete mastery of "situations," which are the chief secrets of melodramatic success; while the studied "points" introduced in the inflection of his voice, in posture and gesticulation, all of which were out of place in his Shaksperian parts, were here perfectly appropriate. The same thing might be said of such a play as "The Duke's Motto," though of all his melodramas "Monte Cristo" was, to our mind, by far the best. In Shakspere's plays it cannot be denied that Fechter was almost equally successful with the public; but it should be remembered that "Hamlet" was the play in which this success was earned, and though it is customary to think of "Hamlet" only as the most poetical of English dramas, it is also true that it is of all Shakspere's plays the one in which the effects and situations are most striking. The mad scene, the ghost scene, the players' scene, the fencing scene, and the graveyard scene, though of course not in any proper sense melodramatic, are scenes out of which a good melodramatic actor can in his own way make almost as much as a good tragedian; and it was as a great melodramatic actor that Fechter played *Hamlet*. It is not the way to play the part for any one who discriminates in such matters; but, in his time, each one of us sees many *Hamlets*, and, on looking back at them all, we generally have to confess at the end that none represents the character as it is admitted it should be represented. That Fechter, with his imperfect command of English, and his manner of elocution, which violated all the traditions of our stage, should have created the furore he did on his first arrival was, of course, partly due to the introduction given him to the public here by Dickens, whose extravagant eulogy had momentarily its desired effect. But Fechter was not a great tragedian; he was less a man of genius than a man highly trained in a particular branch of art for which he had a natural aptitude, and his success could hardly be expected to maintain the high level at which it started. His failure as a manager was complete from the outset, and after the attempt to set up the Lyceum Theatre under his direction broke down he gradually withdrew from active life; and when at length he died last week, at a retired village in Pennsylvania, his connection with the American stage was already a thing of the past, although ten years ago he was the most important figure on it.

THE CHINESE IN CENTRAL ASIA.*

MR. BOULGER'S book is in form the biography of one of the most successful—the most successful, the author says, since Nadir Shah—of the many military adventurers who year after year rise and fall in the confused and confusing political arena of Central Asia. Its main importance, however remarkable Yakub Beg's career may have been, lies in the light it throws on the capacity of the Chinese as conquerors and administrators in the same field, and in this respect the volume has proved a veritable revelation to the public of Western Europe. To be sure, nobody who writes about Central Asiatic politics can pretend to produce a narrative of much authenticity or accuracy. Mr. Boulger's materials are nearly all what may be called second-hand—that is, the reports of one or two British diplomatic agents and travellers, the official Russian and Chinese Gazettes, and detached newspaper articles by writers of greater or less familiarity with Central Asiatic affairs. He is, consequently, obliged to leave a great deal to conjecture, and to fill many gaps with explanations for which he claims nothing more than probability. But this is as well as any writer on Central Asiatic politics can do. The immense area which passes under that name is occupied by small states, separated frequently by deserts. The population is barbarous and fanatical, and largely nomad, speaks a great variety of little-known dialects, and has only been accessible to travellers within twenty years. In addition to these difficulties in the way of getting information there is the fact that the whole region, vast as it is, has become within the last forty years a kind of debatable land between Russia and England, in which the former has sought to veil her unmistakable progress by a cloud of misrepresentation of one sort or another, which British agents only penetrate partially. It has to be taken into account, too, that

* 'The Life of Yakoob Beg, Ameer of Kashgar. By Demetrius Charles Boulger, Member of the Royal Asiatic Society.' London: Wm. H. Allen & Co. 1878.

Central Asia has been for eight centuries a kind of wonder-land, which more than any other region has impressed the imagination of the modern world, owing to the prodigious conquering hosts which began to issue from it in the eleventh century, and which, after setting up the immense empires of Jenghis Khan and Tamerlane, and conquering India, continued to vex Europe, even at the very gates of Vienna, down to the end of the seventeenth century.

Those who visit it now and witness its desolation are at first puzzled to know where the men for those vast armies were found, but the traces of abounding fertility and of very dense population in former days are easily discoverable. The whole region has now been suffering for centuries the usual fate which follows the overthrow of a great Asiatic monarchy. Its rulers have been military adventurers, each seizing as much territory as his following would enable him, and holding it until some competitor had mustered force enough to oust him. Yakub Beg was one of these adventurers, who displayed more than usual ability, but his career would have excited little attention in the Western world if he had not succeeded in wresting Kashgar from the Chinese and keeping them out of it for over a dozen years, and had not excited hopes in British India that he was about to prove a power strong enough, even without foreign assistance, to resist the advance of Russia.

It will be a surprise to most readers of Mr. Boulger's book to learn that from 1760 to 1862 China occupied towards the states of Central Asia very much the position which Russia has occupied during the last twenty years ; that is, China was the advancing, absorbing, and overbearing neighbor whom they all feared, and whose slow but invincible progress they sought, now by force and now by submission, to retard. As early as 1760 her onward movement had spread a panic through the whole of Western Asia, and Afghanistan seemed the only Mussulman power left in that region capable of resisting her. She was then in full possession of the whole region known as Eastern Turkestan, including Yarkand and Kashgar, which she governed by viceroys sent from Pekin, and played with the adjacent potentates very much in the style with which the history of Russian aggression of late years has made us familiar, governing on the whole with much wisdom and moderation, and through machinery not unlike that with which the East India Company governed India, but repressing insurrections with horrible severity—in fact, by the massacre of the whole male population of the districts in which they occurred. But for some time previous to 1859 there had been a gradual decline in the force of the Empire, which culminated in the Taeping rebellion and other convulsions, and was taken by most external observers to be a sign of fatal disease. The officers in Central Asia were no longer able to resist the attacks of the military adventurers who pressed them on their borders, or to repress even the desultory risings of their own subjects, and between 1863 and 1865 Yakub Beg was able to gather force enough to drive them out of Kashgar and set himself up in their stead. The Chinese overthrow was signalized by one incident which puts the Chinese character in a light that will be new to most people. The amban or governor of Yarkand, finding the defence of the fort hopeless, summoned all his officers to his chamber, and there sat in state surrounded by his wives and children and servants, until he heard that the enemy was entering, when he dropped his lighted pipe into a charged mine beneath the floor, and the whole company disappeared in dust and smoke.

Since that date a change has come over the Chinese Empire which has received but little attention from foreign observers, so deeply rooted is the Western world in the belief that immobility is the law of Chinese civilization. Not only have its internal troubles disappeared, but its military and naval forces have been reorganized on the European plan. The infantry have received the latest arms of precision, the artillery has been supplied with rifled cannon, and strategists have appeared in high command who are no mean rivals for anything Russia or England has to show; and they have an unlimited population, possessing almost matchless powers of endurance and adaptability to all climates and modes of life, to draw on for recruits. The experience of the last twenty years in war and peace, in fact, seems, without touching their manners or institutions, to have launched the Chinese on a career of extraordinary military progress, and they have suddenly appeared as perhaps the most formidable of the three great competitors for dominating influence in Central Asia.

In 1876 Yakub Beg was astonished to hear that they were nearing his frontier with a large force for the purpose of reconquering their old dominions. The expedition, it now appears, was one of the most remarkable military enterprises on record. Preparations for it first began about 1873. The advance of the force first organized began its march in 1874, through a desolate country devoid of supplies, and had 1,200 miles to cover before it reached its objective point. It established stores and encampments for the main body along the whole line with a deadly pertinacity which reminds one rather of Rome than of any modern state—inasmuch as it actually planted the corn on which the army which was to follow was to live. Early in 1875 50,000 men, armed with the latest weapons, had arrived on the frontier of Turkestan, and began to carry everything before them. Towns were captured, and the garrisons massacred, and in some cases the adult males of the surrounding districts—not with ferocity, but with a cold, business-like calm. In the spring of the following year Yakub Khan had collected his forces and prepared to meet the storm which had already burst over the Tungani Confederation and entered Kashgar. He was caught at Turfan in April, 1877, between two converging corps, and badly beaten. A second defeat at Toksun, forty miles west of Turfan, utterly crushed him, with the loss in all of 20,000 men. He then appealed to the Russians for aid or intercession, which they refused. While making vain efforts to reorganize his forces he died suddenly, or was assassinated, in May. The Chinese continued their advance with the same ponderous caution and solidity which had characterized their movement from the beginning, making roads and bridges and forts, and establishing depots of supplies, crushing all resistance, and occasionally massacring the inhabitants. In December of the same year they carried the capital by a *coup de main*, and are now in full possession.

All that is known of their strategy shows it to be fully equal to that which any European power could under like circumstances have displayed, and they have shown a capacity for moving great bodies of men which no European government has certainly yet equalled. The story is a very strange one, and seems to introduce an entirely new factor into the politics of the East. But it has aspects the interest of which is by no means confined to the East. Should China appear on the scene as an aggressive, militant power, with all the appliances of modern military art, and with a population of 300,000,000 endued with a vitality and persistence which puzzles both ethnologists and physiologists, there is no doubt that many of the problems by which modern politicians are vexed would undergo some very startling modifications. An aggressive, propagandist China in the Southern Seas, for instance, would be a phenomenon for which the wildest political speculator is still unprepared.

RECENT NOVELS.*

WHILE, in a neighboring city, librarians meet chiefly to deplore the attractions and the facile supply of "fiction," novels pour from the press—novels like 'A Star and a Heart,' by Florence Marryat, in which no reference is had to the facts of life ; novels like 'The Ghost at Redbrook,' in which two gentlemen at once appear under feigned names at an English gentleman's house, enjoy his hospitality for months, and, although suspected by their host, are treated one as the heir to the estate, and the other as an honored guest ; novels of all shades and degrees of folly. 'A Mere Adventurer' is an American novel, and has such degree of value as inheres in descriptions of things actually seen and known, and the story seems quite harmless, though not particularly interesting. 'The Puritan and the Quaker' is a story with a purpose—*i.e.*, to rehabilitate the Quakers of colonial times, or, if it does not vaunt the discretion of the Quakers, to make clear the ferocious tyranny of the Puritans. If there is any one left who still believes that the Puritans came to New England solely or chiefly to find "freedom to worship God," this book may give them a truer vision of the stern men who proposed to have all things and people ordered as they saw fit, and undoubtingly called on the sword of the Lord and of Gideon to enforce their convictions.

We heartily wish certain subjects were prohibited to novel-writers. Can it be thought an appropriate or pleasing topic to make the strife between technical Christianity and fixed disbelief in God or a future existence the woof and warp of a novel ? The form of composition takes off the necessity for precise statement or definite argument, while such weighty and abstract topics cumber the movement of the story, and are in perpetual discord with its lighter parts. We believe we have given our opinion of 'The Felmeres' in the preceding sentence. The book has some picturesque descriptions, but it is difficult to say whether the atheist or the Christian characters are most un-

* 'A Star and a Heart. By Florence Marryat.' Boston : Loring. 1879.
'The Ghost at Redbrook : A Novel. By the author of 'The Odd Trump,' 'The Lacy Diamonds,' etc.' Philadelphia : J. B. Lippincott & Co. 1879.
'A Mere Adventurer : A Novel. By Elzey Hay, author of 'A Family Secret.'' Philadelphia : J. B. Lippincott & Co. 1879.
'The Felmeres : A Novel. By S. B. Elliott.' New York : D. Appleton & Co. 1879.
'Elsa : A Romance. By Rev. Alfred C. Hogbin.' Philadelphia : J. B. Lippincott & Co. 1879.

pleasant. 'Elsa' has a profusion of personages, German and American; an unknown *débutante* at the opera received as an inmate of a rich and well-situated family, with no questions asked. A wicked American army officer, an estimable American farmer's son, serve for heroes, and are both lovers of Elsa, who finally proves to be an American also. The scene is laid and the action chiefly takes place in Munich. The language is careless—*e. g.*, "Is he dangerous?" meaning, Is he dangerously ill? and when a young lady is warned of her admirer's doubtful character, "she told her brother she should go with him all she pleased." A German surgeon remarks of a bullet in his patient's shoulder that "it is a pesky thing to get at"; and so on, and so on. The plot is not wholly uninteresting, and, if one must at all risks read a novel and does not mind slip-slop, one might hit worse than on 'Elsa.' 'Under the Willows' is such a pathetic book from the depth of its *naïveté*, only equalled by its profound ignorance of life and human nature illustrated from a Southern point of view, that one is inclined to say no more about it—to hush it up among one's friends, and give its fixed delusions, its fantastic romance, the benefit of silence. 'Tangled Paths' and 'Lorenzo, the Conscript' are two Roman Catholic stories. Mariolatry seems the end and aim of both stories, but this is mixed up with much point-lace, gorgeous furniture, and magnificent jewelry in one book, and in the other with Genoese nobles, terraced gardens, caves, and a system of deception, including direct falsehood and forged letters, practised by one of the saintly characters and highly approved by the author.

'In the Toils' is a story of the tyranny and cruelty of Mormonism. The writer knows whereof she affirms, and writes with directness and that unmistakable note of truth which overbalances the carelessness or crudity of style that might be fastidiously noted. Her preface speaks of "a band of workers as determined to root out the unclean thing" as ever were Abolitionists of the early type, and her story renews one's amazement that such conditions have existed, have been tolerated, and thereby countenanced, by the Government of this country. The book opens with the visit of a Mormon apostle, Harwood, to the happy home of Charles and Esther Wallace. Mr. Wallace is represented as imperfectly recovered from illness and in an overwrought condition of nerves, and he gradually yields to the secret persuasions of Harwood until he tells his wife that he has become a Mormon and that they must leave all for Utah. She decides to go with him, taking their only child, and she gives him through all that follows an unfailing wifely affection. The dreary journey with a great company, the recklessness and brutality of the Mormon managers, are recounted in a straightforward fashion; but while the various motives of the other converts work up to the surface in undisguised lust and oppression, Mr. Wallace remains devoted to his wife, and, as they have a comfortable property, they suffer less than most of the caravan. The arrival at Salt Lake City, and the gradual unfolding of the reckless, lawless system of government, come next. We do not see Brigham Young or any of the more notable leaders, but step by step, year by year, Mr. Wallace's freewill is absolutely overridden, and the facts which come to his wife's knowledge confirm all her worst forebodings. Still, she lives on, near her husband, until outrage does its worst, in her daughter, now seventeen years old, being carried off for the harem of a Mormon elder. The girl is saved, and with her mother takes refuge in a neighboring camp of United States soldiers. They come to the East, and establish themselves in a town on the Hudson River, whither at last Mr. Wallace, broken in hope and health, comes home to his wife to die. Shocking as are the facts of this story, it is told in unexaggerated fashion, and we commend it, not to boys and girls, but to their fathers and mothers.

'The O'Mahony, Chief of the Comeraghs,' and the 'Yellow Mask,' by Wilkie Collins, are so well "ticketed" by their titles that it is unnecessary to say anything more about them; whoever likes that vintage will order it. 'Poor Papa,' on the other hand, hardly announces itself fairly; one supposes it to belong to the order of 'His Dear Little Wife' and other unutterable trash, whereas it is a history of two rampant and insufferable children, very amusingly told by a lady. One shudders at the idea of living with such indefatigably mischievous and selfish little creatures, but the book is undeniably diverting, and Miss Porter is an excellent *raconteuse*. 'Hetty's Boarder' is one of the books that make one wish that Fust and Gutenberg had died when they were babies, or else that Caliph Omar were alive. It is factitious from beginning to end, and of that moral and rural factitiousness which is worst; there never were such people, and if there were they would not behave as they do in this book.

'Delicia' is charming, low in tone, careful in construction; it describes a little corner of the world and a few people with uncommon freshness and originality. The dull London square where the action passes is a piece of reality, and the lives led there, with their blunders, retrievable and irretrievable, their weakness and strength, their hopes and failures, are genuine. Miss Butt is a keen but gentle observer of human nature, and the pauses and levels in her plot are true to life. Betty Stevens is a very attractive and very original creature, whose future rather weighs on the reader, and Delicia, with her gentle weakness, rectitude, and ingrain refinement, is delightful.

'Moondyne' is a story founded apparently on Mr. John Boyle O'Reilly's Australian experience. The word itself has, we are told, a mysterious significance, and apparently belongs to a gentleman who, being an escaped convict, is chosen by an Australian tribe as depositary of their secrets, including the locality of a hidden gold-mine, and who subsequently appears in London hand-in-glove with cabinet ministers and "fashionable noblemen." He returns to Australia armed with absolute power over the whole penal system of the country, and apparently dies in a forest fire. We suppose that any one familiar with Australia could pick out in this book such portions as give correct accounts of scenery or customs, but the untravelled critic is unequal to such discrimination, being lost in a general haze of improbability.

A Manual of English Literature. By Henry Morley and Moses Coit Tyler. (New York: Sheldon & Co. 1879.)—Professor Tyler has used Professor Morley's 'First Sketch of English Literature,' published in 1873, as the material for what is essentially a text-book of his own. His 'Manual' will, therefore, enjoy the prestige of Professor Morley's name, and probably it contains few statements of opinion or of disputed facts for which Professor Morley is not responsible; but for its arrangement, proportion, and general style the American scholar should have the credit. It is a large volume of six hundred and sixty-five octavo pages, and its qualities are various. The publishers specify twelve "chief peculiarities," among which are its "ring of noble Christian sentiment," its "robust and thorough English scholarship, abounding in plain speech, racy, idiomatic, sympathetic and attractive," and its freedom from "mere literary tattle and scandal-mongering." Its distinguishing characteristic, however, seems to be the unusually large space it devotes to the origin of the English language and the literature prior to the Elizabethan period. In this it is far more full and satisfactory than Shaw's 'Manual,' commonly used in this country, and approaches the dimensions of an encyclopædia. The space devoted to the nineteenth century, on the other hand, shrinks to the proportions of a catalogue; between these two limits the ordinary text-book form is pretty nearly followed. The arrangement is broadly according to half-centuries rather than literary epochs, and then there are, of course, subdivisions relating to poetry, the drama, history, theology, and so on. The criticism of the various authors mentioned respects text-book requirements and is studiously unoriginal. We have been unable to discover any "raciness" in its style, unless the whimsicality of the first sentence be termed "racy": "Once Europe was peopled here and there by men who beat at the doors of nature, and upon the heads of one another, with sharp flints"; but in the main the sentences are short and straightforward, which excuses the absence of "raciness." There is a copious index, and the usual distinguishing devices of different types and paragraphing are of course employed.

From this it will readily appear that with its excuse for existence Professor Tyler is better acquainted than any one can be who has only examined the book; he is professor of the subject in the University of Michigan, and his experience has been great; he has felt the need of such a book and has accordingly produced it. So far as one can judge from examination and without the necessary class-room experience, however, it seems to repeat the merits and defects of Shaw's 'Manual' except

'Moondyne: A Story from the Under-World. By John Boyle O'Reilly.' Boston: The Pilot Publishing Co. 1879.

in the points above noted, and these, estimated from the text-book standpoint, do not appear to warrant the infinite and patient labor Professor Tyler must have expended upon them. No task within the sphere of literary journeyman-work is so difficult, we imagine, as the writing of text-books. There is commonly a prodigious initial difficulty, indeed—that of having a distinct notion of what is required. It is not apparent that Prof. Tyler in this instance had any such notion. His book is designed, he says, for advanced students ; but evidently this only means that it is too elaborate for primary instruction. Beyond elaborateness it seems to have no distinct, certainly no consistent, scheme. Its essays on early English literature are worth reading, and its catalogue of nineteenth century authors and books is convenient. But we fail to find anything between these which is a substantial improvement upon Shaw's book. In 'Shaw' there is, to be sure, a vast amount of pure twaddle that waggish students sometimes repeat by rote to raise a class-room laugh. And yet the English language is so arbitrary and its literature so unacademic that beyond a certain commonplace characterization of its writers it is not safe to go. Most professors, it is probable, use a text-book of English literature simply for dates and titles and biographical outlines, and supplement it by lectures. Professor Tyler teaches in this way, he says, and it is hardly likely that he will wholly abandon it even now that he has his own book to use. As a book of reference it certainly has a value, and a great deal of pains has been taken to secure accuracy, as in giving the full titles of such books as 'Pilgrim's Progress,' say. But a book that is part encyclopædia, part compendium, part catalogue, part criticism, can hardly be an efficient text-book. Perhaps we shall have no better, however, until the somewhat impracticable ideal of having eminent scholars write each a chapter, with the authority which special study gives, is attained.

Even then one could ask for an editor of a nicer literary sense than Professor Tyler possesses. When he swings completely clear of Professor Morley and launches into the nineteenth century he inspires distrust. He catalogues almost all of Landor's works, but omits 'Pericles and Aspasia,' Carlyle's and omits 'Cromwell,' Thackeray's "most notable novels" and omits 'Esmond,' mentions Keats's "Ode to a Nightingale" and omits the "Ode on a Grecian Urn," and calls Lord Stanhope's work a 'History of England' simply. Of his characterizations the following may serve as examples : "Mrs. Browning, the best English poetess" ; Sydney Smith "was distinguished for wit, good sense, good feeling, logic, and eloquence" ; De Quincey's essays were "remarkable for erudition and for wealth of thought, fancy, humor, and style." His conclusion is a sort of peroration as sound as it is trite. The 'Idyls of the King,' he says, "is one great allegory of a divine voice in each man's soul that should be king over his passions and desires" ; "Charles Dickens sought to undo wrong and quicken good-will among men" ; Thackeray did some good work too ; George Eliot is a true evangelist ; and finally, "If Thomas Carlyle involves more in his condemnation of the times than may deserve his censure, his war is the true war of his century, with the host of false conventionalities that yet remain, with all that stands in the way of the work now chiefly left for us to do." On the whole, we and our century should think no small beer of ourselves. It is difficult to imagine a college student "reciting" this part of Professor Tyler's text-book.

Souvenirs of Madame Vigée Le Brun. With a steel portrait from an original painting by the author. (New York: R. Worthington. 1879.)—The original of this artist's autobiography forms two volumes of the Bibliothèque Charpentier, and begins with a dozen long letters to the Princess Kourakin. There are then thirty-two chapters of "Souvenirs," bringing the record down to the year 1808 and the age of 53 ; then nine letters to the Countess Potocka, describing a two years' residence in Switzerland ; then three chapters more of the author's "Souvenirs," which relate her experiences under the Restoration, and terminate with a brief note of the publisher, having reference to her last days and her death. There follow a number of "pen-portraits" of such persons as Madame de Genlis, the Abbé Delille, the Prince de Ligne, and Madame de Verdun, with a few pages of hints on oil-painting; and the volumes close with a long list of the portraits and other works of this most successful and famous of female artists. We have described the contents of the French work in order to protest once more against the too common fashion of translating half or two-thirds of a book and sending it out as the work itself. This American edition contains the first twelve letters, and all the thirty-five chapters of "Souvenirs," apparently; but not the Swiss letters, interesting as they are, with their accounts of famous people met with, of the great land-slide of Goldau, then a recent event, and of Madame Le Brun's landscape-impressions ; nor the "Portraits à la Plume" ; nor, finally, the list of paintings. Who is responsible for the selection is not stated. There is no preface or advertisements. No name of translator appears. As for the version itself, it runs along smoothly enough, now and then dropping a whole sentence, and not always retaining the notes of the original, until a difficult phrase or passage stops the way, and then its course is stopped with a jerk ! For instance, in letter vii. the authoress is denying and disproving, calmly enough, the calumnious assertion that Calonne, the famous minister of finance of the early days of the Revolution, had been her lover; she mentions her simplicity of life and costume, and says of herself : "Certes, ce n'était pas une telle femme que pouvait séduire le titre de receveur-général des finances, et, sous tout autre rapport, M. de Calonne m'a toujours semblé peu séduisant." This has been too much for the translator, who gets over the first clause in this fashion (p. 67) : "Certes, it was not a woman of this kind who could gain the title of receiver-general of finances." It would be easy to give many such instances, but it is useless to do so ; it seems to be an admitted truth that it will not pay to have a proper translation made. Almost always in examining the English version of a newly published French or other foreign work we have the same remark to make. The necessary outfit for a translator includes a good knowledge of two languages and a familiarity with the subject in hand ; but this is not possessed by the writers who, generally for a pittance, turn a new book into such an English shape as comes easy, *currente calamo.*

In spite of all this the book is readable, and the very *naïf* statements of the experiences of a lady who seems always to have been sure that she understood everything at first glance, join with her account of her meetings with and knowledge of famous people, her sitters, to make her memoirs as amusing as is the rule for even "summer reading." Moreover, Madame Le Brun really was of some importance as a painter; and in this respect her life is interesting, because of the great rarity of artistic eminence and celebrity in a woman, and because of the singularly simple and quiet life lived by her, in spite of the queens and princesses, emperors, and notables who employed her talent and sought her company. We commend the book to everybody who does not read French with ease. A far better idea of the beauty of Madame Le Brun is conveyed by her own charming portrait of herself and daughter in the Louvre than by the steel plate made to do duty in this edition.

Catalogue of the Spanish Library and of the Portuguese Books bequeathed by George Ticknor to the Boston Public Library; together with the Collection of Spanish and Portuguese Literature in the General Library. By James Lyman Whitney. (Boston : Printed by order of the Trustees. 1879. 4to, pp. xv. 476.)—The usefulness of the Ticknor library has been greatly enhanced by this ample catalogue, which is much more than an alphabetical list of books. Not only are the names of the works entered under the author, subject, and title (in one alphabet), with cross-references, but an immense amount of bibliographical information is given in the shape of notes and references. Some of this is derived from Mr. Ticknor's MS. notes and history, and a great deal is due to the compiler, to Don Pascual de Gayangos, to Professor William I. Knapp, and to Mr. Justin Winsor. By these notes a great deal of light has been thrown on that most intricate subject, Spanish bibliography. The catalogue, as the title shows, contains all the Spanish and Portuguese works in the library; those belonging to the Ticknor collection are distinguishable by the shelf-mark, and originally numbered 3,907 volumes; to these have been added from the income of the Ticknor fund 1,452 volumes. The general library contains 2,619 volumes and 597 bound pamphlets. These figures, while giving some measure of the size of the catalogue and the labor involved in its preparation, convey but little idea of the value of the collection itself. The rarity of Spanish books of the early and classical periods has become proverbial. Too much emphasis has been laid, we think, upon the Inquisition, and not enough on the wars in the Low Countries and the French invasion at the beginning of this century. However, the fact remains, and may be illustrated by one example from the catalogue before us. All readers of 'Don Quijote' know the immense popularity and great number of the romances of chivalry. These have disappeared so completely that the Ticknor library contains but one of the original editions of 'Amadis de Gaula,' and that the most easily procured (Venice, 1533), yet wanting two leaves. A copy of this edition, so a MS. note by Mr. Ticknor tells us, was sold for £30, another for £50. Other rare classes, as the *Cancioneros Romanceros*, and drama, are better represented. The great value of the library, however, consists in its completeness in the department of general literature, in which respect it is undoubtedly one of the best in existence. Here again we must call

numbers to our aid : Calderon, Cervantes, Lope de Vega, and miscellaneous embrace 767 works, drama and miscellaneous 816, and miscellaneous prose and poetry 2,297. The number of historical works is also very large. It is an eminently practical library; it was collected for use, and those who have seen the collection must have been struck by the enormous number of notes in Mr. Ticknor's hand scattered through most of the books.

Admirable in its plan and arrangement, and so full in its notes as really to leave nothing to be desired ; revised throughout by one of the most accomplished scholars of Spain, himself an old friend of Mr. Ticknor and the elegant translator into Spanish of his 'History of Spanish Literature,' this catalogue must be regarded as a monument of unwearied patience and industry, highly creditable to the liberality of the trustees of the institution which sends it forth, an honor to Boston, and in some measure a tribute to Mr. Ticknor, to whom American scholarship is so deeply indebted.

Leisure-Hour Series.

16mo, $1 per volume.

DELICIA.

COUSINS.

MAID, WIFE, OR WIDOW?

HENRY HOLT & CO., NEW YORK.

MASSACHUSETTS, Stockbridge.

HILLSIDE HOME for Young Ladies. $300 a year. Address Miss ADELE BREWER.

MASSACHUSETTS, West Newton, near Boston.

ENGLISH AND CLASSICAL SCHOOL.— Twenty-sixth year. A Family and Day School for both sexes. Boys and girls fitted for Harvard, Smith, and other colleges, and for scientific schools; also for business, teaching, and home life. Pupils distributed in four families. Board and tuition, from $350 to $450. For circular address NATHL. T. ALLEN.

MASSACHUSETTS, Williamstown, Berkshire Co.

ENGLISH AND CLASSICAL SCHOOL.— Thorough instruction for a limited number of boys under careful supervision in the home of the Principals.
Rev. N. H. EGLESTON. M. EGLESTON.

MASSACHUSETTS, Williamstown, Berkshire Co.

WILLIAMS COLLEGE.—Wholly devoted to College work. All departments under control of experienced professors.
Tuition, $90 a year. Board at $3 per week.
$6,000 distributed annually in scholarships and prizes.
Fall term begins September 3.
For catalogues or additional information apply to
P. A. CHADBOURNE, President.

MASSACHUSETTS, Worcester.

HIGHLAND MILITARY ACADEMY. Established in 1856 by the present Superintendent, C. B. METCALF, A.M.

MASSACHUSETTS, Worcester.

MISS WILLIAMS'S SCHOOL for Young Ladies. Circular on application. AVA WILLIAMS, Principal.

MICHIGAN, Ann Arbor.

ANN ARBOR HIGH SCHOOL.—Prepares students for Yale, Harvard, and University of Michigan. Has four complete courses of study, besides a business course. Graduates 50 to 60 annually. Tuition, $18 to $30 per annum. For particulars address W. S. PERRY, Supt.

MICHIGAN, Orchard Lake.

MICHIGAN MILITARY ACADEMY.— Prepares for Ann Arbor ; graduates admitted upon diploma. Location, accommodations, and other advantages unsurpassed. Fall term begins September 18. Expenses, $350 per year. For catalogue address COLONEL ROGERS, Supt.

MISSOURI, St. Louis.

ST. LOUIS LAW SCHOOL opens Oct. 15. Course, two annual terms, seven months each. Address HENRY HITCHCOCK, LL.D., Dean, 1417 Lucas Place.

NEW HAMPSHIRE, Hanover.

THE CHANDLER Scientific Department of Dartmouth College offers a liberal education on a scientific basis. Course in Civil Engineering.
Necessary expenses very low. Address
Prof. E. R. RUGGLES.

NEW HAMPSHIRE, Portsmouth.

"A better, healthier, and pleasanter location for a school could scarcely be found in New England than the quaint, picturesque, ancient city of Portsmouth, with so much that is attractive in itself, and with its beautiful surroundings of scenery, its river, harbor, and out-lying islands, and the fine beaches close at hand."—*Extract from a letter from J. G. Whittier.*

MISS A. C. MORGAN'S English, French, and German Boarding-School for Young Ladies will reopen September 24.
Thorough instruction given in all branches, and especial advantages for the study of French and German with resident native teachers.
One can hardly overestimate the value, to young ladies, of an institution like this, where the home and the school are inseparable, and where, in the selection and arrangement of studies, the health and taste of the individual are considered to a degree impossible in a large school governed by one inexorable rule. Its aim is the development of the highest type of womanhood, through intellectual, physical, and social culture.
Miss Morgan refers by permission to
Rev. A. P. Peabody, D.D., Harvard University.
James T. Fields, LL.D., Boston.
Hon. James G. Blaine, Augusta, Me.
Ex-Gov. Ichabod Goodwin, Portsmouth.
Circulars on application.

W. L. DEAN, Registrar.

NEW YORK, Randolph, Cattaraugus Co. (on the A. & G. W. R. R., in the Chautauqua Lake region).

CHAMBERLAIN INSTITUTE. (Established 1849.) A well-endowed and successful seminary for both sexes. The usual literary departments and a very flourishing Commercial School and Music Department. Three hundred and fifty-two different students last year. Pure air, mountain-spring water, good food, and careful supervision. No deaths in thirty years. Endowments such that we will receive a student (total expense) for one term for $50; for one year, $150. Catalogue sent free on application to the Principal, Prof. J. T. EDWARDS, D.D. Fall term opens August 26.

NEW YORK, Rhinebeck.

DE GARMO INSTITUTE fits for College or for business. A thorough school at reasonable rates. Address the Principal, JAMES M. DE GARMO, Ph.D.

NEW YORK, Rye, Westchester Co.

*PARK INSTITUTE.—Wholly devoted to pre-*paring boys for college. HENRY TATLOCK, A.M., Principal.

NEW YORK, Rye, Westchester Co.

RYE SEMINARY.—A School for Young Ladies. For particulars address Mrs. S. J. LIFE.

NEW YORK, Sandy Hill, Washington Co.

REV. DR. BOSTWICK will receive six boys into his family to educate. He resides in a very pleasant and healthy village on the upper Hudson, midway between Saratoga and Lake George. Circulars sent.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—Prepares for the Universities, etc. Terms $350 per annum. 20 Foundation scholarships. Rev. GEO. HERBERT PATTERSON, President.

NEW YORK, Syracuse, 70 James Street.

KEBLE SCHOOL, for Young Ladies.—Rt. Rev. F. D. Huntington, S.T.D., Pres. Board of Trustees. For circulars apply to MARY J. JACKSON.

NEW YORK, Tarrytown.

HOME INSTITUTE for Young Ladies.— Miss M. W. METCALF, Principal.

NEW YORK, Troy.

*RENSSELAER POLYTECHNIC INSTI-*tute. A School of Civil Engineering.

NEW YORK, Utica.

MRS. PIATT'S SCHOOL for Young Ladies. —Fall term begins Wednesday, Sept. 17, 1879. Applications must be made before July 15.

OHIO, Cincinnati, 166 W. Seventh Street and Walnut Hills.

MISS NOURSE'S FAMILY AND DAY School reopens Sept. 24. Communication by private omnibus between home on Walnut Hills and City School.
Pupils are fitted for the Harvard Examinations and for college. Foreign teachers are resident, and best musical advantages of the city made available. Circulars sent on application.

OHIO, Cincinnati.

WESLEYAN FEMALE COLLEGE.— Best advantages in Literature, Science, Languages, Painting, Wood-Carving, and Music.
Rev. DAVID H. MOORE, D.D., President.

OHIO, Cleveland.

BROOKS ACADEMY.—Autumn half opens Wednesday, Sept. 10, 1879. A Preparatory School for the best colleges. Four years' course, two departments—Classical and English—the latter offering special preparation for the leading scientific schools. The new catalogue (August, '79), containing a "Table of Requisitions" for admission to fifteen leading colleges, will be sent upon receipt of stamp. JOHN S. WHITE, LL.D., Head-Master.

OHIO, Cleveland.

CLEVELAND FEMALE SEMINARY. S. N. SANFORD, A.M., President. Next term begins Sept. 4, 1879. A healthy and pleasant location ; ample and attractive accommodations ; affords the best facilities for obtaining a thorough and finished education. Music in all its branches, Drawing and Painting, French and German, taught by Masters. Board and tuition, from $300 per annum. Address
S. N. SANFORD or L. BUTTLES.

OHIO, Yellow Springs, Greene Co.

ANTIOCH COLLEGE, in a beautiful and healthful location, gives to both sexes thorough preparatory and collegiate education, and fits boys for Eastern colleges. Total expenses, $150 to $200 a year. Write for catalogue to S. C. DERBY, President.

PENNSYLVANIA, Chester.

PENNSYLVANIA MILITARY ACADEMY. Opens September 10.
Thorough instruction in Civil Engineering, Chemistry, the Classics, and English.
Degrees conferred.
For circulars apply to
COL. THEO. HYATT, President.

PENNSYLVANIA, Germantown.

DR. HENRY HARTSHORNE will receive a few young ladies into his family for advanced instruction. Competent teachers are engaged. Health is considered in all the arrangements. Term commences Sept. 17. Address 11 East Penn Street, Germantown, Philadelphia, Pa.

PENNSYLVANIA, Germantown.

MADAME CLEMENT'S SCHOOL for Young Ladies and Children (established 1857). The school will reopen Wednesday, September 16, 1879. For circulars apply to
Miss E. CLEMENT.

PENNSYLVANIA, Germantown, West Chelten Avenue, below Wayne Street.

MISS MARY E. STEVENS'S SCHOOL for Young Ladies will reopen Thursday, Sept. 19, 1879. Scholars prepared for the Harvard Examinations for Women.

PENNSYLVANIA, Haverford College P. O.

HAVERFORD COLLEGE, under the care of the Society of Friends (Orthodox). THOS. CHASE, LL.D., President. For catalogues apply to Prof. ALLEN C. THOMAS, Prefect.

PENNSYLVANIA, Philadelphia, 1715 Spruce Street.

BORDOLLO'S LINGUISTIC ACADEMY. —French, German, Italian, Spanish, Portuguese, Latin, Greek, and all other modern and ancient languages. CONVERSATIONAL METHOD. French and German Readings, Conversations, Soirées, every week. Terms for Conversation, $5 per term (twenty lessons). Please send for catalogues.
One hundred and ninety-two ladies and gentlemen attended this school last season.

PENNSYLVANIA, Philadelphia, 1527 and 1529 Spruce Street.

CHEGARAY INSTITUTE.—Boarding and Day School for Young Ladies and Children. French is the language of the family. Please send for Circulars.

PENNSYLVANIA, Philadelphia, 1615 Chestnut Street.

CHESTNUT STREET SEMINARY.— Miss BONNEY and Miss DILLAYE, Principals. The thirtieth year will open September 17.

PENNSYLVANIA, Philadelphia.

MEDICAL DEPARTMENT OF THE University of Pennsylvania. One hundred and fourteenth Annual Session. The attention of students looking to the profession of Medicine is particularly called to this the oldest Medical School in the United States. Recent changes in the curriculum include a prolongation of the course, and the introduction of much laboratory teaching and practical instruction in all the branches of medical science. For an announcement containing full particulars address JAMES TYSON, M.D., Secretary Faculty of Medicine.

PENNSYLVANIA, Philadelphia, 1350 Pine Street.

MISS ANABLE'S BOARDING and DAY School will reopen September 24.

PENNSYLVANIA, Philadelphia, Summit St., Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's French and English Boarding and Day School for Young Ladies and Little Girls. Apply until Sept. 1, 1116 Walnut St.; after that date, Summit Street, Chestnut Hill, Philadelphia.

PENNSYLVANIA, Philadelphia, 4035 Chestnut Street.

WEST CHESTNUT ST. INSTITUTE. A Home-School for Young Ladies and Children. Term begins September 17. Mrs. BOGARDUS, Principal.

PENNSYLVANIA, Pottstown, Montgomery Co.

COTTAGE SEMINARY for Young Ladies. The thirtieth annual session begins on Thursday, Sept. 11, 1879. Limited in number. For catalogues apply to
GEO. G. BUTLER, A.M., Principal.

PENNSYLVANIA, Pottstown.

THE HILL SCHOOL (preparatory to College). Distinctive work, preparation for best colleges. Graduates of the school invariably enter college without conditions. English and Scientific Courses fit for business. Experienced and permanent teachers. Thorough instruction. Home life and culture.
JOHN MEIGS, Ph.D., Principal.

RHODE ISLAND, East Greenwich.

GREENWICH ACADEMY, with Musical Institute and Com. Coll. Founded 1802. A seaside school. Both sexes. On direct route from New York to Boston. Board reduced to $2 75. For catalogue (free) address Rev. F. D. BLAKESLEE, A.M.

RHODE ISLAND, Newport.

MRS. J. H. GILLIAT'S Family and Day School for Girls.

This is in every respect a *home* where girls will receive all the personal care and culture that parents can desire for their children. The mild and healthful climate of Newport makes it a most desirable location for a school.
Number of boarding pupils limited.

VERMONT, Northfield.

NORWICH UNIVERSITY.—A Military and Scientific College.

VIRGINIA, near Alexandria.

EPISCOPAL HIGH SCHOOL, near Alexan- dria, Virginia.—A Boys' School, fitting for college or business. The forty-first year opens Wednesday, Sept. 24, 1879. Terms moderate. Five resident teachers, and liberal provision in all respects for the improvement and comfort of pupils. Elevated and beautiful location. Extensive grounds, including an ample Skating Pond and thoroughly-equipped Gymnasium. Students from twelve States. For catalogue address the Principal,
L. M. BLACKFORD, M.A., Alexandria, Va.

VIRGINIA, Charlottesville.

COLLEGIATE BOARDING-SCHOOL, near the University of Virginia. Climate mild and genial; instruction thorough; $100 per half-session. Send for circular.
Rev. EDGAR WOODS.

WISCONSIN, Milwaukee.

MARKHAM ACADEMY.—A thoroughly re- liable College-preparatory School for boys. Established in 1864. Address A. MARKHAM, Principal.

Wants.

ADIRONDACKS.—Two Graduates (Harvard and Yale), in camp with three pupils on fine lake in Hamilton County, desire to take charge of one more lad. Address G., care *Nation*.

A GENTLEMAN of scientific culture desires to put himself in communication with a classical scholar, with a view of considering the feasibility of buying out and conducting jointly an Academy. Address CLASSICAL-SCIENTIFIC ACADEMY, *Nation* office.

A LADY of experience and ability desires a po- sition as teacher of art in a seminary, high-school, or several schools in the same city. Best of references. Address A. B. C., 100 Taylor Avenue, Allegheny City, Pa.

A LADY of experience and ability would like a position as bookkeeper or cashier, or both. References A No. 1. Address D. K., Box 25.

A LADY of good education earnestly desires a position in a family where she can make herself useful. Would like the charge of an invalid. For further particulars address Miss KATHERINE, Box 889, Altoona, Pa.

A LADY of several years' library experience, acquainted with several languages and with general literature, desires a position as assistant in a large library, to take charge of a smaller one, or in a publishing-house. Excellent references. Address E., P. O. Box 1984, Boston, Mass.

AN EXPERIENCED AND SKILFUL teacher desires a position in a High School, Academy, or as a private governess. Is especially successful in teaching History and English Literature. Good references. Address B., care of the *Nation*, New York.

AN EXPERIENCED TEACHER desires a position to teach. Address S. A. STEELE, Terryville, Conn.

AN unmarried man, twenty-eight years old, five years a successful teacher in the United States, three years a student in Europe, promoted March 15 by the Philosophical Faculty of Georg-Augusta University, Göttingen, with the highest honors, to the degree of Doctor of Philosophy, seeks a chair of Mathematics or Physics. Address WILLIAM B. SMITH, Ph.D., care of Prof. John Henry Neville, Lexington, Kentucky.

A TUTORSHIP (College preferred) in English and German Literature or the Classics, or literary work of any kind, desired by a clergyman. Best testimonials. Position rather than salary sought. Address GRADUATE, *Nation* office.

GERMAN.—An educated North-German family receives a few responsible persons wishing constant practice in German, with board. Instruction given in German, French, Italian, Piano, Singing, Harmony, if desired. Address Mrs. ANTONIE SCHRADER PLACE, Concord, Mass.

WANTED—A Gentleman of experience, who is an Episcopalian, unmarried, and a graduate of college, as Resident Head-Master in a well-established Boys' School. Address SCHOOL, *Nation* office.

WANTED—By a Harvard Graduate, now a student at law, a situation as stenographer in a lawyer's office in Boston. Address E. W. S., John C. Cobb's Law Office, Portland, Me.

Heliotype.

Permanent Photographic Book Illustrations.

THE HELIOTYPE PRINTING COMPANY are producers of Book Illustrations by the Heliotype, Photo-lithographic, and Photo-engraving processes. Employed by the United States Government in illustrating Scientific and Medical Reports, by Scientific, Historical, and other learned Societies, by the leading publishers, and for illustrating Town and Family Histories, etc., etc.
Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings and Sketches, Views and Portraits from Nature, Medical and Scientific objects, Antiquities, etc., etc.
For terms and specimens apply to the

HELIOTYPE PRINTING COMPANY,
220 Devonshire Street, Boston, Mass.

NORTH GERMAN LLOYD STEAMSHIP COMPANY

FOR SOUTHAMPTON AND BREMEN.

The Steamers of this Company will sail every Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

First Cabin, $100; Second Cabin, $60. Steerage, $30
For Freight or passage apply to

The Nation.

NEW YORK, THURSDAY, AUGUST 21, 1879.

The Week.

THE proceedings of the Democratic State Committee at Niagara Falls, last week, resulted in a call for a Democratic State Convention at Syracuse on the 10th of September. This call is addressed not only to Democrats but to all "friends of administrative reform and economical government as practised and enforced by Democratic State administrations," a formula which, harmless as it may sound to the innocent and simple-minded, is as battle-shout in the ears of the Tildenite, and as anathema in those of the followers of Kelly. When the committee came together at Niagara it was found that the Tildenites outnumbered their opponents by three votes, and that they therefore would be able to control the "preliminary organization" of the convention. The Kellyites desired to have the convention called at Syracuse or Rochester, the Tildenites at Saratoga or Albany; and the choice of Syracuse has therefore been pointed to by the former party as evidence of a readiness on the part of their opponents to compromise. According to an apparently well-informed correspondent of the *Tribune*, however, Syracuse, heretofore, during the mayoralty of Mr. James J. Belden, supposed to be a "canal-thief" headquarters, is now somewhat reformed. A new mayor is in office, who has promised to see that the convention is protected by the police, and therefore the Tilden party were not unwilling, in the interest of harmony, to yield to the suggestion that Syracuse might be chosen as a place for the convention. The whole proceeding, taken together, looks as if the Tilden-Robinson politicians did not yet feel quite sure of their ground; and this may account for the rumor that at the last moment Robinson is to be dropped and a new candidate put forward in his place. According to the *Tribune*, it is not impossible that this new candidate may be Mr. Tilden himself.

The Wallace and Butler Committees, appointed one to investigate "Northern bull-dozing" and the other to enquire into alleged abuses in the Rhode Island civil service, have taken a good deal of testimony during the week at Providence, Newport, and Boston. Naturally much of it is contradictory. Similar testimony in Louisiana, it will be remembered, was contradictory. The Wallace Committee found witnesses both in Rhode Island and Massachusetts who asserted in some instances that they were compelled to vote the Republican ticket under pain of discharge from employment, and in others that they had been discharged for disregarding hints given them in advance of the election. A sample circular of employers "most earnestly advising" their employees to vote against Tilden was produced in Providence, and one witness, a Republican ex-alderman, gave it as his opinion that "the present system of buying votes" was bad. In Boston the Committee have examined Messrs. Thayer and Crocker, of the Republican State Committee, who knew nothing of any intimidation; ex-Congressman Eli Thayer, who had a good deal of information on the subject; and, among various other witnesses, a discharged employée of the Manchaug Manufacturing Corporation, who was confident he and his family had lost their positions because he voted for Butler.

Altogether there seems to have been a good deal of moral suasion used by the Republicans of both States; and doubtless in Massachusetts they were frightened by Butler into extreme measures. They would, it is probable, make much more objection than they do to Congressional investigation of their local elections under the guise of a "supervisor's enquiry" if they had not in past years made light of such objections when the Democratic ox was gored. There is, however, nothing very consistent in a Democratic committee's enquiry into the suffrage laws of Rhode Island, in which, at all events, there is small likelihood of an immediate change, the voting class being apparently abundantly satisfied with things as they are. An ignorant man's vote there, it is said, brings him from $5 to $20, while a "cultured person" gets as much as $100 for his. The Butler Committee finds plenty of evidence that "favoritism" and other abuses are not uncommon in the Rhode Island branch of the civil service; it also finds quite as much which goes to show the utter absence of such blemishes, and to establish the punctilious political character of the civil servants.

We are sorry to have to correct what we said two weeks ago about Colonel Dixon, the Independent candidate in Yazoo County, Miss. It now appears that he was in 1875 himself a very notorious bull-dozer, and won much popularity by his brutality in that capacity among the ruffianly Bourbons who have recently been intimidating him. He turned "independent" and became the champion of the blacks probably for the sake of a new excitement and in the hope of getting office. The Attorney-General, Morris, deplored his fate in being driven out of his candidacy, and reprobated in strong terms the means employed for the purpose, but held out no hope of legal protection; in spite of which Dixon picked up courage and meant to run, when he was killed in a "difficulty" by a private enemy. He would have had plenty of white support. That the white disapproval of bull-dozing gains strength is shown by what has happened in Rankin County, where a similar attempt was made to compel Major Sutton, a highly respectable man, to withdraw from the canvass as candidate for sheriff, but the better men of the county came to the rescue and put down the mob, and Major Sutton does not retire. It is worthy of note, too, that the Yazoo regulators think it necessary to defend themselves before the public. They deny that they went to Dixon armed, and that they asked him to withdraw for any other reason than that he was "a man of violent and desperate character, whose career has been marked by strife and turbulence, and who has been reckless of human life and of law," and who, having "raised a race issue" and put himself at the head of the negroes, would have been a dangerous character. This is a flimsy defence enough, but it is better than none. It indicates growing sensitiveness, and shows that there are white men, even in Mississippi, who are increasing in numbers and influence, who condemn this sort of thing and are gaining courage to resist it.

Casanave, the mulatto member of the New Orleans Returning Board, has been in Washington for some time on an errand of which he has given a *World* correspondent a curious account. After the decision of the Board in favor of the Republican electors in 1876 criminal proceedings were begun in Louisiana against its members, and counsel were employed to defend these at a stipulated fee of $5,000. This money, according to Casanave, Anderson assured him would be paid "out of funds sent from Washington." However this may have been, the counsel-fee was not paid, and the lawyers obtained a judgment for it against the members of the Board. In some way, however, a partial payment had been made of $1,875, but to satisfy the judgment for the balance the sheriff could find no property belonging to Anderson, Wells, or Kenner. A sale of Casanave's property was therefore threatened, and he came to Washington to see what could be done. On the 7th of this month he wrote a long letter to the President stating the facts, suggesting that "it would be more becoming the beneficiaries of our acts (*i. e.*, the Administration) to discharge this debt" than to let his property be sold; adding that he had been assured by Assistant-Secretary of the Treasury Hawley that as soon as Mr. Sherman returned the money would be raised, and that he had subsequently been offered $100 by Mr. Sherman, which he was "compelled to decline out of respect for the great Finance Minister of our Government." This letter, a copy of which is given in full, was, according

to Casanave's story, written to the President after a consultation with Mr. Shellabarger (counsel for Mr. Sherman before the Potter Committee), and was followed by negotiations which resulted in a remittance to New Orleans of $1,750 in cash, and a stoppage of the sheriff's proceedings till January. Of course no reliance is to be placed on Casanave's unsupported word, but his "statement" is fortified by what purport to be copies of all the correspondence.

In the course of Casanave's story there are several amusing incidents. He appears to be a clever rascal—"active and intelligent," the Visiting Statesmen called him—with a Southern fondness for proverbs. He based his application to the Administration, he says, on the "ancient Spanish saying" that "it is not much to give a leg to him who gave you the fowl." Judge Shellabarger, however, it appears, is good at proverbs too, and on learning from Casanave that if he did not get his money he was prepared to "expose the whole matter," kindly advised him "not to throw the handle after the pot," but to write a letter and "await results." Among other things Casanave gives an account of the Returning-Board Custom-house appointments in New Orleans, with a list of the more important names and salaries, from which it appears that Anderson, Wells, and Kenner have "placed" about fifty men there; the Returning-Board connection must draw about $100,000 annually in salaries. There is nothing remarkable in this; but it is important to remember what sort of a stake the faithful men who refused to be debauched by Democratic corruptionists were playing for in 1876. The most disgusting thing about the whole business is the uniform consideration and courtesy with which those Returning-Board adventurers, probably the most depraved politicians this country has ever produced, are invariably treated in Washington. The Louisiana Returning Board is "a damned spot," that will not "out."

Nothing could better illustrate the reputation of Boston as the philanthropic centre of the country than the resort to it of Mr. Tibbles, an editor of the Omaha *Herald*, on behalf of the Ponca Indians now settled in the Indian Territory. It will be remembered that Standing Bear and some thirty others deserted the reservation and sought refuge in the Omaha Agency, were arrested, and subsequently released on a writ of habeas corpus sued out before Judge Dundy in May, the first of its kind. Mr. Tibbles is now endeavoring to raise money to effect the return North of the whole tribe, by a suit in the Supreme Court for the recovery of the lands of which they were wrongfully, indeed atrociously, dispossessed. He has, under the auspices of the mayor and the clergy, held large and sympathetic meetings in Boston, and received entire credence and great attention from the press. There is no doubt that the removal of the Poncas from Dakota, in consequence of a most unfortunate error in the Sioux treaty of 1868, was a grievance of the first magnitude. Except that the Poncas were the weaker and an entirely peaceful tribe, well advanced in agriculture, no reason has been produced for not repairing the error—if that is the proper name to give it—as soon as discovered. In fact, Congress in 1876 made the removal conditional on the consent of the Poncas. Mr. Tibbles alleges that this consent was fraudulently obtained before the return of chiefs sent to the Indian Territory to report, and who, by the way, having incautiously expressed their unfavorable impressions, were allowed to walk back the entire distance, some twelve hundred miles. On their arrival they found the tribe already persuaded or coerced into going. The first locality assigned them proved unhealthy, and one-fifth of their number perished. At present they are variously represented as very comfortable and happy, and as wretchedly housed and homesick.

The *Herald* has laid down the rule, and the *Tribune* has adopted it, apropos of the Sprague row, that "it is not freedom of the press, in its true sense, . . . to invade the domestic circle, and drag into publicity dissensions which concern nobody but the immediate parties"; and that "even if the public had any title to be informed of the facts of the recent distressing case, it would be the clear duty of the press to verify the rumors before giving them currency." This is very sound doctrine, but unfortunately it is one on which the press does not generally act. The principle on which the reporting of most of our esteemed contemporaries is conducted is, that the public is entitled to know all that it desires to know; and the reporter usually, and with the editor's sanction, provides against the mere possibility of the public not hearing all it might like to hear by gathering up and publishing every rumor bearing not only on the actor or actors in every "distressing case," but on his or her relations or connections and their affairs. There was no reason in the world that will bear examination for departing from this system in the Sprague case. There is no doubt that an "outrage" of the Southern type was committed on Mr. Conkling by Mr. Sprague with a double-barrelled gun. Under the newspaper practice now in vogue there ought to have been in all the papers a biography of Mr. and Mrs. Sprague, a biography of Mr. Conkling, and one of Mr. Linck, and a full history containing all the flying rumors and "society gossip" that could be collected of Mr. Conkling's relations with Mrs. Sprague, with a plan of the piazza at Canonchet, a drawing of the gun, and an appendix containing reminiscences of other scrimmages of like character between prominent politicians. The consideration with which Conkling has been treated in the affair at the hands of a portion of the press is due to his being a Favorite Son; he never could have secured it as an Immediate Party.

Anything more depraved in the way of "journalism" than the behavior of the press during the past few days on the subject of the Stewart grave-robbery it would be difficult to conceive. The facts which have been published do not concern the public in any way. The thieves, having made away with the body, appear to have opened negotiations, as everybody knew they would do, with the Stewart family, through "counsel," and, the family having refused their terms, the matter was dropped. Is this any reason why we should now have column after column of the body-snatchers' letters, the replies of their "counsel" through the *Herald* "Personal" column, accompanied by details as to the condition of the corpse, followed by an acrimonious controversy as to whether Judge Hilton did or did not deceive Mrs. Stewart about the return of her husband's body, and persuade her that it had been returned while it had not? Some of the newspapers, while publishing all the details of the negotiations, dwell feelingly on the agony that the whole affair must have caused Mrs. Stewart, and the consequent heartless brutality of the thieves. What sort of work is this for Froudes and Macaulays?

The illness of the Democratic Mayor of Brooklyn has seemed to the Republican Aldermen of that city an opportunity which it would be the height of folly not to improve. Accordingly, at the meeting of the Common Council, last Thursday, acting-Mayor Ray, who is a Republican, ordered the clerk to read a communication from him making some forty or fifty nominations to local offices. These nominations of course differed totally from those which Mayor Howell would have made, and the Republicans of the Board, confident in their majority, are said to have chuckled over the unhappy position in which Democratic place-hunters were thus providentially placed. It seems, however, that they reckoned without their host in two particulars—viz.: Mayor Howell's sudden and temporary recovery, during which he had just time enough to make a nomination of his own, and the defection of several of their own number, the "claims" of sundry relatives of whom had been recognized in the nick of time by a bribe-dispensing administration. The communication from Ray was not read, though Ray appears to have made every effort to secure its reading—even to deciding that a tie vote on appeal sustained the chair. On the other hand, Alderman Kenna succeeded in reading a counter communication fresh from the Mayor's sick-room, and was proceeding to read an affidavit to the effect that notice had been served on Ray that he was relieved from his temporary services, when a small riot occurred. During the disturbance, which was marked by cheers, profanity, calls

for the sergeant-at-arms, etc., and which, as was justly observed by one of the most active of the belligerents, "looked like old times," Ray made his escape, and his allies followed him, leaving no quorum. Mayor Howell is said to have had a relapse, and curiously enough his original illness is attributed by the *Eagle* to "his prolonged battle against the combined political thieves who had plundered and were bent on plundering still more the municipality." If this diagnosis is correct, all lovers of good government will desire Mr. Howell's speedy recovery; though it must be admitted that he is a formidable adversary even while sick, and keeps his head much better than the *Eagle*, which advises the Democratic Aldermen that they would have been "amply justified, as representatives of the city," had they "thrown every one of the conspirators headlong from the windows."

The Wall Street markets were very much disturbed during the week. Money lent as high as $\frac{1}{16}$ of 1 per cent. per day. Government bonds declined $\frac{1}{4}$ to $\frac{5}{8}$ and recovered $\frac{1}{4}$ to $\frac{5}{8}$, and railroad stocks fell $\frac{1}{2}$ to 10$\frac{1}{8}$ per cent. and recovered $\frac{1}{4}$ to 2 per cent. There were several causes for this commotion, among which were (1) the transfers of money from the banks to the Treasury, but these resulted in a loss to the banks of less than $2,000,000; (2) the shipment of currency to the West to facilitate the early movement of the crops and to Canada to put the banks there in a strong position; and (3) the breakdown of the "bull speculation" in Lake Shore stock, on the discovery that the report that the road was to be leased to the New York Central on a guaranty of 6 per cent. to Lake Shore shareholders was a speculative invention, although for a time apparently countenanced by the president of both companies. The weekly statement of the banks published on Saturday showed that the reserve had been reduced to within $1,400,000 of the amount required by law; and this was followed on Monday by Washington despatches saying that the banks still owed the Treasury $45,000,000 on account of 4 per cent. bonds, and that they had successfully appealed to the Secretary of the Treasury to have payment deferred until October 1. Later, the fact came out that while the Treasury books showed debts by the banks to the Treasury of over $45,000,000, the Treasury had possession in the form of collateral of enough of the called 5 per cent. bonds belonging to the banks to reduce this sum to less than $20,000,000, and that if the books were fully posted they also would show this; moreover, that this $20,000,000 was in steady process of settlement. During the whole week foreign exchange ruled so that gold could be imported profitably; the actual importations being about $1,300,000. It is estimated that fully $3,000,000 more—either in the form of double-eagles or bar gold—is on the way here now. Most of these importations are to pay for breadstuffs, cotton exports not yet having begun. Silver ruled in London at 51$\frac{3}{4}$*d.* to 51$\frac{7}{8}$*d.* per ounce. Here the bullion value of the 412$\frac{1}{2}$-grain silver dollar was $0.8681.

Parliament in England has been prorogued, and there is a general cessation of political discussion. The last contribution to it is Mr. Gladstone's attack on the Ministry in the *Nineteenth Century*, which is a most formidable indictment, and would be more so if Mr. Gladstone had with his pen the art of being terse and incisive. When he writes he comes too near the style of an address to the party voters by a Congressional Committee to be thoroughly effective. There appears to be a general recovery on the part of the public from the very discreditable attack of gushing flunkyism which marked the death of the Prince Imperial, and which was so well calculated to be offensive to the French people, but which they bore with good taste and good sense. The clamor against Lieutenant Carey has died out. The best military judges begin to acknowledge that he was in no way to blame. The proceedings of the court-martial against him have been quashed, and he returns to his regiment. If Dean Stanley could now drop his hasty and ill-advised monument project—but we presume he cannot—it would be well, too, for the monument will simply commemorate a very unpleasant episode in English history, of which the excitement about Sarah Bernhardt may fairly be called a part, and which has set people all over the world wondering whether a very unfortunate change has not taken place in British manners as well as in British morals.

The Jewish difficulty in Rumania is being pushed to a crisis. The Berlin Treaty refused recognition to Rumania as an independent Power until the disabilities of the Jews were removed and proper legal protection afforded them. The Rumanian Chambers refused to legislate in execution of the Treaty, and the Ministry thereupon resigned, and Prince Charles, it is said, even threatened to abdicate. His Government, however, by way of palliating the conduct of the Chambers, sent a circular note to the Powers, the full text of which has just reached us, in which the difficulties of the case are explained. After pleading all that Rumania has had to do in the way of internal reform within the last twenty years, and the heavy sacrifices demanded of her by the late war, the note goes on to say that only very few Rumanian Jews are natives of the country, and these mainly Wallachian and of Spanish origin, regarding whose rights there never has been any difficulty; that the existing trouble has mainly arisen from the fact that when Wallachia and Moldavia were united in 1866 it was found that one-quarter of the population of the latter province was composed of Jews of Polish and Russian origin, who had been furnished with passports to leave Russia but not to return, and who lived in Moldavia in the condition of aliens, and yet with no nationality behind them, and were almost wholly engaged in usurious lending and had mortgages on a large part of the farming lands. If they had been allowed by law in 1864, in common with other foreigners, to purchase land, a large part of the soil of the country would have passed into their hands, and as they pay no allegiance to the Government in fact or feeling, and evade military service, and are governed in their collective action by the foreign organization called the Universal Israelite Alliance, they would have constituted a dangerous *imperium in imperio*. The note maintains, therefore, that the question is not simply one of religious toleration but has important social and political bearings, and begs that the Government may be allowed time and elbow-room in dealing with it.

A very important change, and one likely to damage the Turks badly with the European Powers, has occurred at Constantinople. Khaireddin Pasha, who has for the last year been vizir, and has tried to be a genuine reformer, has been dismissed, and the vizirate for the second time abolished. The dismissal would be of little moment by itself, but the cause of it is grave. Khaireddin's chief reform, and one absolutely necessary to convert Turkey into a European state, was the establishment of a constitutional ministry. The Sultan submitted it to the Sheikh-ul-Islam and the Ulemas at Constantinople for their opinion as to whether it was permissible under the Koran, and these doctors of divinity have answered unanimously no. They hold that the Padishah's authority cannot, under the law, be in any way abridged or delegated to one minister.

Khaireddin was not a good man to reform any how, being an Arab, and therefore distrusted by the Turks; the Arabs, who are the only Mussulmans who have shown real political genius, are to the Turks "dam literary fellers." He is even credited with a bold scheme for withdrawing the Sultan from Europe altogether and seeking to revive the glories of the old Caliphate at Bagdad. He has been succeeded by Aarifi Pasha, who is noted for his slothfulness in business. Caratheodori Pasha, the Christian Minister of Foreign Affairs who represented Turkey at the Berlin Conference, has also been dismissed. Much persistence has, however, at last procured the appointment of commissioners with full power to treat with Greece, and the insertion in the firman putting Tewfik Pasha in place of his father in Egypt of the full power and privileges of his father, and notably that of making treaties with foreign Powers, which were at first denied. France and England found this essential.

THE INDEPENDENTS AND THE PRESIDENCY.

THE preparations which are going on on all sides for the fall elections are generally acknowledged to be, and are in reality, preparations for the Presidential election, or, more properly, for the Presidential nominations of next year. The contest in New York, for instance, owes all its heat not to difference of opinion over questions of State policy, or even over questions of national policy, but to the fact that the party that carries New York will probably win the Presidency, and, secondarily, to the fact that if Tilden can show that he controls New York he will probably get the Democratic nomination. The only question on which there is any pretence on either side of going to the country is the question whether Congress has a right to regulate Federal elections, which has come up and become important not simply through the frauds and abuses by which the late elections at the South were marked—though these have been most effective in fixing public attention on it—but also through its bearing on the Presidential conflict of next year. If the machinery which the Democrats have been trying to get rid of could be made effective in securing for the Republicans even one Southern State, the party horror of "State rights" would be more than justified. But if, on the other hand, the Democrats should by any chance secure the Presidency next year, besides having a majority in both houses, we fear the power of Congress to regulate elections would very rapidly cease to be an object of interest in Republican eyes, if, indeed, it did not become an object of positive hostility. It is a weapon the value of which, of course, depends altogether on who wields it. With a Democratic President in power it might be made as potent a means of disfranchising the blacks as bulldozing ever was. Even in Republican hands it has been shown to be of but little practical value. The intimidation and fraud have been carried on in spite of it, and in spite of every other direct legal preventive. Such signs of improvement as show themselves at the South—for example, the local opposition to the Yazoo County, Miss., outrage, expressed in ex-Governor Brown's manly letter—all come from the growth of the public conscience among Southerners themselves, and the growing sensitiveness to public opinion which is the result of increasing commercial dependence on other communities. The notion that there is any effective substitute for this as a guaranty of fair elections in the United States must be set down as one of the traditions of the war.

That this tradition is still strong among the Republican masses, however, there is no denying; and it was probably not bad rhetoric, whatever it may have been in other ways, for Secretary Sherman to pretend before his audiences in Maine that "questions of money, labor, and property sank into insignificance" before the question whether the Federal Government could keep supervisors at the polls on election day. Some such idea, wild as it really is, was probably running through the heads of nine-tenths of his audience. The districts in which Federal supervision of elections is needed now are very few, and, even in these, agencies are at work, such as the growth of local party divisions, which must in a very few years make it unnecessary. To assume that it is now or would ever become generally necessary throughout the Union, is to expect such a spread of corruption and disorder in the several States as would soon put an end to free government. The notion that there would remain in Washington an Administration pure enough to see that fair elections were held in the several States, after the State governments had generally become too debauched and enfeebled to perform the duty themselves, is a chimera, of course. As the several States are, so will the Government at Washington be. The power for which the Republicans have been fighting at Washington, and are putting in the forefront of their canvass, is a power which is to be thought of only for rare and temporary use by those who have any faith in the future of American institutions, and therefore cannot have the vast and overwhelming importance which Secretary Sherman ascribed to it. The great questions of the day are questions of "money, labor, and property." The thing the voter most needs to know about the two great parties which are soon to be pitted against each other in the Presidential arena once more is, where each stands on these questions.

Unquestionably on these points the Republicans are by far the best entitled to the confidence of the country. Even if their course be not wholly satisfactory on financial questions, it is apparently to them only that the friends of sound finance can look for any improvement. They have among them a great many men who are completely at sea about the currency, but the party momentum is unquestionably in the direction of sound currency and an honest fulfilment of the party obligations. One may say this and yet believe, as we do believe, that there was not in the party enough consensus on any financial theory or plan to have brought us back to specie payments on the day named. A Secretary of less skill and determination than Mr. Sherman need not have resumed on the 1st of January if he had been so disposed, and the party would probably never have blamed him or called him to account for it, and, in fact, would have acquiesced in his neglect or refusal. Had the Democrats been in power, however, or could they have had their way, they would undoubtedly have prevented his resuming, and this difference probably illustrates fairly enough the relation of each party to public finance. It must not be overlooked, too, that, although he has been able to "resume," he has not been able to "redeem." This undoubtedly the party would not permit him to do. He has only been able to resume by making resumption take the form of inflation of the currency, and by refraining from taking any steps to provide against the consequences of an unexpected drain of gold. In fact, in so far as there is any strong interest in financial questions to be found in the Republican party, it shows itself in the form of a passionate desire for an abundant coinage of silver, without regard to consequences; and in so far as there is any strong interest in financial questions to be found in the Democratic party, it shows itself in a passionate desire for the issue of large quantities of paper money in addition to silver, and in the destruction of bank paper in order to have more room for Government paper. Of any interest in civil-service reform—meaning thereby not simply the proper performance of the administrative work of the Government, but the destruction of the idea that places in the public service can properly and honestly be used by the President or any one else as the reward of party services—there is very little sign to be found in either party; just as little among the Republicans as the Democrats.

That there has been a great improvement in the condition of the service under Mr. Hayes there is no denying, but this improvement is due to him and his Cabinet solely. It has received no support or countenance from the Republican party through its recognized leaders and managers; on the contrary, it has been one of the agencies which have made him unpopular with the party, and caused so many Republican conventions to give him the cold shoulder. There is as yet no sign that his course has made any of the politicians of his own party a whit better affected to him than they were before, although a growing consciousness that he has gained in the popular mind makes them more careful about denouncing him. There is, therefore, no good reason for believing that his ideas about the civil service or anything else will receive any special recognition in the Convention, unless there is between now and the time of its meeting some formal indication that his methods have supporters among the voters. One hears every day that there are persons known as "Hayes men," and that there are friends of civil-service reform, and all other kinds of reform, but they manage to seclude themselves completely from public notice. It was popularly believed in 1876 that Mr. Hayes owed his nomination to the strength in the Convention of the "independent" or "reform" element in the party, and he acknowledged this himself in a formal manner both by his emphatic adoption of civil-service reform in his letter of acceptance, and by his putting Mr. Schurz in the Cabinet. Having accomplished these results, however, the "Independents" disappeared from the scene as completely as if they thought the millennium had come and the wicked had ceased from troubling. They witnessed without murmur the most shocking violation of their principles by the use of the

Federal offices to reward the Southern adventurers who took part in the electoral count. They gave Mr. Hayes no open support in his efforts to remove the machine from the New York Custom-house, and they have never raised their voices in any way to encourage him in the execution of his civil-service order. What has become of them we do not pretend to know. But, wherever they are, it is proper to ask them whether they are so satisfied with the situation that they mean to give no sign of their existence at the next Presidential election, and to allow all that Mr. Hayes has done to carry out their ideas, even if it be not all he might have done, to be treated by the Convention as a mistake and quietly ignored?

THE NATIONAL BOARD OF HEALTH.

THERE seems to be a general misunderstanding of the origin, character, and purposes of the National Board of Health. Judging from the occasional observations of Washington reporters, it might be inferred that the Board had entirely failed of its original intention in not coming immediately to the front to take charge of the whole question of the treatment of the yellow-fever epidemic. The organization is one of such importance, and the real purpose in view is of such consequence, that it should receive the cordial sympathy and support of all who are interested in the public welfare. Its field is, in one sense, a limited one, and the powers given it were necessarily restricted far more than they would have been had the independence of State governments not stood in the way of a complete extension of its functions. It was organized by Act of Congress approved March 3, 1879. Its members are seven civilians, all physicians, one medical officer of the Army, one of the Navy, and one of the Marine Hospital service, and one officer from the Department of Justice. This act prescribes for the Board two separate duties: one, to obtain information on all matters affecting the public health, and to advise the Government and the executives of States on questions submitted by them, "or whenever in the opinion of the Board such advice may tend to the preservation or improvement of the public health"; the other, to confer with a special committee of the National Academy of Sciences, and the principal sanitary organizations and sanitarians of the country, concerning a plan for a permanent national health organization, to be reported to Congress at its next session, and to give special attention to the subject of maritime and inland quarantine.

Fifty thousand dollars were appropriated to carry out the purposes of the Act. The Board was duly organized, and has since done much work. There was stricken out from this Act a section which should have remained, appropriating $500,000 to pay one-half of the expenses of State boards of health organized in accordance with such plan as should be established by the National Board. This would have secured the very great advantage of uniformity of procedure in all sanitary matters, and in the reporting of all information relating to health and to vital statistics. It would, too, have prevented the enormous waste of effort which necessarily results from the present tentative methods for managing these organizations by inexperienced men, according to somewhat vaguely comprehended opinions, and by newly-invented and inadequate processes. If the result sought is worth achieving, there would have been great economy in carrying out the proposed plan.

Rightly or wrongly, the idea prevails that the best means of meeting yellow fever is to be sought by preventing the importation and spread of the disease through an efficient system of quarantine; and on the 2d of June there was approved a second act, authorizing the expenditure of $500,000 to carry out its various provisions for preventing the importation of the disease from abroad and its spread from one State into another. This act is somewhat vague and cumbersome, and it imposes upon the executive departments and upon the National Board of Health some duties which seem more onerous than effective. The only *authority* that it gives the National Board is an authority to report to the President facts indicating any inefficiency of the present maritime or internal systems of quarantine. It rests with the President in his judgment to order the Board to make such additional rules and regulations as are necessary, and to submit them for his approval. When approved, the Board is to promulgate them, and they are to be enforced by the sanitary authorities of the States if they will undertake the job. If they fail or refuse to enforce the rules, the President "may detail an officer or appoint a proper person for that purpose." Under certain circumstances the Board can pay from its appropriation for work done by State authorities to prevent the transmission of the infection *from State to State*. It can pay nothing for the protection of one part of a State against another part of the same State, nor for the suppression of a localized epidemic.

In criticising the action and efficiency of the National Board of Health the foregoing limitations must be borne in mind. Practically, the case may be narrowed down to this: The Board is to obtain and disseminate information which may exert a great influence upon the organization of a permanent national organization; and it may in certain cases expend money to prevent the spread of the disease from State to State. Beyond that its powers are too vague for it to be materially more effective than would be a voluntary organization of doctors and medical officers. Its limitations are not its own fault. Fortunately, the leading men of the Board are competent, intelligent, thorough, and active. They show a proper determination to make the very best use of the limited power vested in them, and to exert the influence of their official position to secure the best immediate and permanent results. So far as the present outbreak of the yellow fever is concerned, they will undoubtedly accomplish a great deal; more, however, through moral support than by active measures.

There is every reason to believe that the members of the Board appreciate to the fullest extent their power to accomplish good results in two very important directions: 1. They have sent a commission of scientific experts to Havana, with a view to studying in the most thorough manner the character and means of causation of yellow fever. This is entirely virgin soil. It is fair to say that there now exists absolutely no knowledge on the subject. We have a little theory and a little formulated experience which may point in certain directions with some degree of probability, but we are as far as possible from scientific certainty concerning any single element of the question. It is by no means certain that the Havana commission will effect any very material advance, but it is work in the right field, in the right direction, and undertaken in the proper spirit. However small its results, it will probably become the starting point of investigations which will, sooner or later, forewarn and forearm us against repetitions of such disaster as befell us last year. 2. The question of a plan for the permanent organization of a National Board of Health is a vastly more important matter to the whole country than is any question connected with yellow fever—which is after all, even in the worst years, by no means our greatest scourge. Phthisis, scarlet fever, diphtheria, and other diseases which are always at work among us, and which attract very little general attention, are, any one of them, of much more consequence than is any sudden epidemic of yellow fever or cholera. They are all of them probably, and nearly all of them certainly, absolutely preventable diseases—diseases which, under the influence of improved sanitary conditions, are destined to become extinct. They can be overcome only under the influence of sanitary knowledge, which can best be collected and formulated by public health organizations, and which these alone are competent adequately to promulgate. However great the field of utility of the National Board of Health, or of any State Board, in combating disease and in putting down occasional epidemics, their best work will be the instruction of the public in matters which are of most vital interest to it, but concerning which it is now as indifferent as it is ignorant.

Much has been said about the "rules and regulations" of the National Board of Health. The Board has made and can make no rules and regulations whatever. It can only recommend such, and when these shall have been adopted by State authorities, they can be enforced only by State officials. The power of the Board is con-

fined to the work of *inspection*. If it learns that its recommendations have not been enforced, it can apply to the President, and he can delegate executive power in the matter; but so far as any temporary epidemic is concerned, the machinery leading to this result could not be set in operation until the occasion for it would have passed. Thus far, however, no obstructive disposition has been shown. On the contrary, State authorities have been eager to avail themselves of whatever aid the National Board has been able to offer. The trouble in the case is that the State authorities rely too much upon the Board, and wait for it to take the initiative. This it cannot do. It can only suggest, and, as above stated, it can pay for work done by the State only when this has for its object the prevention of transmission from State to State. The Board appropriated $10,000 after the outbreak of the yellow fever at Memphis this year, but it was not all used, and what was used was not used efficiently.

The danger is that the public—which always looks too much for brilliant immediate results—will not sufficiently appreciate the scientific work now in hand. The Havana commission, and its colleagues at home, can be depended on only to determine the probabilities as to the value of future experimental investigation, undertaken with a view to deciding what it is worth while to do in the way of permanent study. Such work as this can be done only at the cost of the general Government, and surely it can make no appropriation of public money so directly leading to great public benefit. Even now the weekly Bulletin, which the law requires the Board to issue, is taking a leading position as a source of sanitary information.

Correspondence.

A VIA MEDIA IN THE HARVARD QUESTION.

To the Editor of The Nation:

Sir: In so far as I understand the issue between the *Nation* and Dr. Clarke it is wholly concerned with the question of practicability. Both parties admit the *desirability* of teaching a non-sectarian theology, if there be any such. Dr. Clarke urges that, as a matter of fact, such a theology is already largely taught at Cambridge, and that to make it uniformly so it is only necessary "to establish professorships endowed by different denominations," to be filled by "able," and "therefore liberal," men (probably Unitarians, since they are not to be "bound by creed nor subject to the criticism of any sect," etc.) In reply, the *Nation* denies that Cambridge theology, either as it is now or as it is proposed to make it, can properly be termed "non-sectarian," since its peculiar "eclectic" method of teaching Christian dogma will not commend itself at all to those who consider dogma a really vital concern of religion.

The *Nation* admits, however, that there are certain subjects (such as ecclesiastical history, New Testament Greek, and so on) now usually relegated to divinity schools, which are legitimate matters for university instruction. Why not, then, establish at Cambridge a course designed "to prepare men to study theology"? It could embrace not only Hebrew and New Testament Greek, but also the historical and textual criticism of the Scriptures, the history of Judaism and of Christianity, including the development of Christian dogma—Catholic and Protestant—theories of Church polity, methods of administration, etc., etc. It should aim to throw out, not astute theologians with wits sharpened by "essays" and "discussions" to combat the heresies of dissenting sects, but simply well-trained students of the history of Christianity. It would surely accomplish the best objects of President Eliot's new movement by giving to the coming generation of American clergymen a scientific equipment and a breadth of view which they cannot obtain from the denominational schools. Undoubtedly there are practical difficulties in the way of any such plan, but they are not, I think, very formidable. For the professorships, the very best specialists in America should be selected, with no more regard for their religious beliefs than as if they were to teach law or medicine. The establishment of different denominational faculties, on the German plan, which at present would be extravagant and unnecessary, might become eventually perhaps a desirable step.

But the whole matter rests upon the accomplishment of a reform which the *Nation* has already so admirably shown to be necessary for the best interests of the University itself. If Harvard is ever to become to America what Oxford and Cambridge are to England, or what the University of Berlin is to Germany, it will be only after the disestablishment of Unitarianism. A national university cannot afford to propagate the doctrines of a religious sect which the great majority of religious people have learned to regard with distrust.

A. K. W.

Cincinnati, Ohio, August 10, 1879.

Notes.

LEE & SHEPARD will shortly publish 'Some Practical Hints on Wood Engraving, for the Instruction of Reviewers and the Public,' from the pen, of course, of Mr. W. J. Linton.——'Up and Down the Merrimac,' by the Rev. Pliny Steele Boyd; 'More Ways than One,' a story by Alice Perry; 'Once upon a Time,' a collection of story plays, by E. E. Brown; and 'Breakfast for Two,' by Joanna H. Matthews, are among the announcements of D. Lothrop & Co.——We have received from Mr. John Springer, of Iowa City, sundry prospectuses and prefaces of the forthcoming 'List of the Reproductions, both Imitation and in Facsimile, of the Productions of the Press of William Caxton,' compiled by Mr. B. H. Beedham, of Kimbolton, England, put in type and printed by Mr. Springer, and to be published September 10, in a limited edition, by Jonathan S. Green, 5 Murray Street, New York. Mr. Springer also announces for the winter a second and revised edition of his 'Expanded Catalogue of a Few Books, etc., on the History and Mystery of Printing.' Of this, too, Mr. Green will be the publisher.——Cassell, Petter & Galpin issue a new and cheap edition of Professor Morley's 'First Sketch of English Literature,' upon which Professor Tyler's 'Manual,' which we noticed last week, is based. A comparison of the two shows that Professor Tyler's work was principally arrangement according to text-book requirements, and excision of various portions more useful to the scholar than the student, and less well adapted for the recitation-room even than we conceived the 'Manual' to be. However, the "advanced student" who devotes himself thoroughly to English literature will, perhaps, prefer for his personal use the original work.——Van Antwerp, Bragg & Co. (Cincinnati and New York) publish a revised edition of 'McGuffey's Eclectic Readers,' five in number, the most marked distinguishing feature of which is the successful attempt to provide illustrations that in design and execution equal much of the wood-engraving now furnished by the best illustrated magazines.——Dr. B. Joy Jeffries, whose work on 'Color-blindness' we lately reviewed, has made an official examination of ninety-four engineers, firemen, and switchmen of the Boston and Lowell Railroad, with the result of proving two of these employés to be color-blind (red-blind) and seventeen to be "below the visual standard," whether as regards acuteness of vision or perception of color.——Portraits of the artists L. Alma-Tadema and Seymour Haden—the latter a remarkably saintlike profile—are given in the last number of Cassell's *Magazine of Art* (vol. ii., No. 7), together with a sketch of the life of the one and a résumé of the other's second lecture on etching.——Part II. of Horn's 'History of Northern Scandinavian Literature' (New York: B. Westermann & Co.) takes up in due course Denmark and Norway.——The *Times* announces for the Messrs. Lippincott that they have in press, for publication during the present year, a much-needed new edition of their 'Gazetteer,' last revised in 1866.——Fords, Howard & Hulbert announce as in preparation 'Figs and Thistles,' a Western story, by Albion W. Tourgee; 'A Fool's Errand,' or a Northern settler's experience at the South "since the 'Late Unpleasantness'"; 'The Gospel History,' by James R. Gilmore and Lyman Abbott; and one or two juvenile books.——The August number of the *Portfolio* (J. W. Bouton) leads off with an article on Watts, asserting that he has mastered the qualities of Titian, Tintoretto, and Giorgione, and altogether so perspectiveless and blind to what is going on in the world as to give the review a provincial fatuity we have not before observed. The article on Oxford by Mr. Lang is becoming readable, but its French illustrations continue to lack the peculiar color of Oxford, and completely clean away from her towers the "lingering enchantments of the Middle Ages"—enchantments hopefully attributed to them by Mr. Matthew Arnold at a moment when enthusiasm caused him to forget the date of their construction. Mr. Hamerton in his running notes on Æsthetics shows, as many a time before, a peculiar air of taking up Mr. Ruskin and dealing with him without hurting him, which is in its way the perfection of breeding and coolness. The etchings, some before letters and others after, are by Richeton (from Watts), and by Thomas and Ferrier.

—A summer lightness and unsubstantiality characterizes the post-dated September *Harper's*. The merit of the illustrations is generally well in advance of that of the accompanying text, and sometimes leaves it clean out of sight, as in the case of the second paper on "Fifty Years of American Art." Rather slight, too, are "Newport Society in the Last Century" and "The Navesink Highlands"; but Mr. Ernest Ingersoll's "Gold-mining in Georgia" is good narrative, and really has something to tell of the scenery of mountainous northern Georgia, the inhabitants, and the mining operations which have made so little noise in the world. This paper would have gained considerably in interest by the addition of a few statistics in regard to the value of the gold product. Mr. Howard Pyle, who still lingers in the neighborhood of the Peninsular Canaan, makes out of rather ancient properties a humorous ghost story, which he illustrates cleverly with his own pencil. Some of the gems of the King Collection are admirably figured in an article on gems in general as well as in particular. The Mülhausen remedy for the inequalities of human condition, with a view to preventing the advent of socialism in that great manufacturing centre, is instructively described in "An Industrial Society and its Work," which we commend to political students, philanthropists, and public-spirited capitalists everywhere. All these Alsatian forms of co-operative charity, education, and culture preceded the Franco-Prussian war, save only the museums of painting and industrial design, history, and natural history, and the Society of Arts.

—The new chapters of Mr. Henry James, Jr.'s, "Confidence," in the September *Scribner's*, show a decided gain in movement, and afford some clew to the novelist's choice of title. Mrs. Vivian emerges from the shadowy indications of the previous chapters as a carefully studied personage new to fiction—"a Puritan grown worldly, a Bostonian relaxed," or, in a still better combined phrase, "a Bostonian perverted." In this rôle she promises great enjoyment to the reader. The most important of the serious articles is Professor Lounsbury's "English Spelling and Spelling Reform," a first paper, in which the magnitude of the job is fully admitted, the causes of the divorce between orthography and orthoëpy clearly traced, the resulting atrophy of the English phonetic sense forcibly pointed out, and some instructive illustrations given of the way in which the tyranny of the printing-office has favored the eye at the expense of the ear. Among the illustrated articles that on the "Art Schools of Philadelphia" attracts attention, as raising the question why the Quaker City has maintained its lead in art-training, and as giving evidence in its illustrations—all from the hands of pupils—of the solid quality of the instruction, especially in dealing with the human figure. The view of the women's life-class is as cleverly engraved as it is designed by Miss Alice Barber. Professor Boyesen, apropos of the University of Rome, marks some of the recent changes in Italian educational methods and ideas, but conveys a rather discouraging impression of the progress made. Portraits of Father Secchi, Count Mamiani, and Professor Bonghi are appropriately introduced. Mr. George Houghton agreeably tells the history of Sandy Hook, its light, fort, and other belongings, and his paper will be profitably read in conjunction with that in *Harper's* on the adjacent Highlands. The fourth instalment of "Brazil" treats of an American home on the Amazons, but rather too picturesquely for the practical thesis that this estate is a shining example of what American skill and capital rightly directed might achieve on the great river. The Fairfaxes of Virginia furnish the subject of an article not so well ordered as the interest of the subject calls for.

—The September *Atlantic* contains an article upon "Cæsar's Art of War and of Writing," and a review of Mr. Froude's recently-published "Sketch," apparently by the same anonymous hand, both of which are interesting and authoritative. The essay notes a number of points in Cæsar's career that will be new to many, and in great measure fresh to most, people. The writer's judgments are not less instructive than his exposition is entertaining; two circumstances that he points out are worth special mention, namely: Cæsar's want of a characteristic method in war, and his invariable success in set battles. "Cæsar had no fixed system; he had the unforeseen," he says, and compares him to Fabius Maximus and Pyrrhus in one person. For the uniformity of his success in set battles he offers various reasons, but candidly admits that it may have been partly chance. The review of Mr. Froude is excellent; it is obviously fair in temper, and Mr. Froude himself would find it difficult to deny its conclusiveness, we should think. The chief fault found with Mr. Froude is his misconception of Cæsar's military transactions. This is vital, for, as the critic says, "As a writer, Cæsar was admirable; as a statesman, he was very eminent; as a general, he was amazing." And it is blameworthy because it was avoidable. "Thiers, Carlyle, and Kinglake are distinguished proofs that a civilian can throw light on warfare, instead of darkness, if he will only bring to the task conscientious study." It seems, however, as if Mr. Froude often found an inherent difficulty in doing just this; as if his test of a theory or a notion in which he delights were not whether it is true but whether it is tenable. The number of details in which he is here tripped up would gladden the heart of Mr. Freeman, to whom, by the way, the urbanity with which they are enumerated may be warmly commended. All the reviews in the *Atlantic* this month are good and indicate a marked advance in the character of its department of "Recent Literature." For the running commentary on "Recent Novels" the same can by no means be said. "The Use of Numbers in Society" is a suggestive article by Prof. Shaler, the scope of which is sufficiently indicated by its title if one understands that "numbers" refers to population. A paper on birds, by Wilson Flagg, is interesting, and would be far more so if to its nicety of observation it added a literary flavor; and we may mention also "A Tennysonian Retrospect," by Julius H. Ward, which is pleasant reading, and contains nothing to dissent from sharply except a statement that Swinburne's "fame is at a standstill" because he has divided his force between poetry and prose.

—If the viceroy of Tientsin, who took occasion recently to compliment General Grant on his youth and retiring disposition, had been a portraitist by trade, he might have produced a likeness different from that just engraved by Mr. W. E. Marshall, and one decked with all the engaging graces of a preconceived perfection. Grant viewed with the sober eyes of candor looks neither young nor bashful now, and his face does not lend itself to heroic portraiture, while it is his most realistic and prosaic presentment, as revealed in the late photograph of M. Théodore Humblot of Paris, which the present engraver undertakes to give. Mr. Marshall's plate is in fact a rather curious contemporary document. We have all occasion to observe sometimes the changes made in the characteristics of our travelling friends by certain awakenings of curiosity and dormant faculties of observation; alert, ambitious, and often a little *poseurs*, they look like translated intelligences exercised in novel spheres, in the smart miniatures they send us from Paris and Vienna. Grant, still non-committal and mastiff-like, shows nevertheless a curious growth of the traits of a man of the world over his old traits. He appears like a man who has learned how to live, to manage a capacious digestion, and to maintain a comfortable self-respect amid the shock of many new impressions. The engraver has used the felicities of deportment as external signs to clothe a grave and tranquil ideal. His previous studies of his subject in oil-color have assisted him to express the individualities of complexion, texture, and flesh quality more happily than would have been possible without such aid. Mr. Marshall remains as one of the few well-educated engravers left of an older school, who can paint and model and design as well as cut, and who deploy originalities of method in the effort to collect into their plates the power at once of design, modelling, and color. It is understood that he is the inventor of a method for shortening the preliminary labor on a plate by photographic aids which, while leaving the work still as copperplate engraving in the strictest sense, greatly diminish the time required for production; this method, it seems, depends so completely on his own manual skill and trained expertness that it does not fear competition and will never need the protection of a patent.

—At the late Librarians' Convention some rather uncomplimentary remarks were made on the architects who have built our present library buildings, and it was intimated that the best method hereafter would be to forget what had been done and start afresh. The *American Architect* protests against this, "as if ideas of beauty and style, which seemed to be considered the whole stock in trade of architecture, could only be expressed at the cost of some practical requirement of convenience or necessity." No librarian probably would maintain this, but many can point to instances where convenience has been sacrificed to appearance, or where convenience evidently was not taken into consideration at all. And this is the librarians' complaint—that architects and building-committees do not inform themselves of the needs of a library. We have seen a design for a galleried book-room sixty feet long where the only means of getting into the gallery was a staircase in one corner, an arrangement which might compel a reader in search of two books—one in the gallery and one below—to walk four times the length of the room. We have seen a tower of working rooms left without any ventilating flues or chimneys, or any other means of getting fresh air except by a draught through the windows, near which the writers had to sit for light. In the

very number of the *Library Journal* that reports the convention is a library plan—a very symmetrical plan—by an architect, in which the "catalogue-room" (meaning, no doubt, the room in which the card-catalogue is to be kept) is put in front, the waiting and delivery-room in the centre, and in the rear the "administration and bibliography." In this last the catalogue would be prepared by persons who must make a constant reference to the catalogue-drawers, separated from them by a crowded delivery-room twenty-eight feet wide—much as if one should put his parlor between his dining-room and his kitchen. No doubt, when architects understand all the wants of such a building they will be able to provide for them and yet satisfy æsthetic requirements, but they will not find the problem an easy one. The necessities are few, but hard to get in combination: heat, but not too much heat; great book-capacity in small space, and yet plenty of light and air; the juxtaposition of certain working parts of the book-room; opportunity for the inevitable enlargement; and, finally, adaptation to the character and the size of the library.

—The last point has not been sufficiently insisted upon. In libraries, as in other things, evolution proceeds by differentiation. A room with shelves on the wall suits a gentleman's library; a room with alcoves (first rudimentary division) suits a small society library, where the public have access to the shelves. In a public library of over five thousand volumes the separation becomes complete, and we find a delivery-room and a stack-room. The larger society library will also need its stack-room, but will run it along by the side of its reading-room, the alleys opening directly into that; whereas in the larger public libraries the stack-house will project longitudinally from the delivery-room as a train-house projects from the head-house of a railway station. For college libraries especially, in which it is desirable that the students should be admitted to the shelves, and that they should not do much harm there, the radiating plan has advantages in the facility which it offers for supervision. Again, a library of small circulation can afford to despise space; so can one whose means will allow and whose circulation will justify the use of mechanical means of overcoming space—telephones, electric annunciators, hydraulic elevators or book-railways. But most of our town and city libraries need to economize room to the last degree, for every unnecessary foot means more pay of attendants. No one plan, then, can suit all; but certain elementary truths may be regarded as settled for all—that some form of the book-stack is to be generally used, that no book-shelf is to be above the reach of the hand, that no book-room should be over two tiers (fourteen feet) high, that every library should have the chance of easy enlargement.

—A correspondent writes us from Texas:

"Perhaps General Dick Taylor saw some Federal soldiers mounted on bucking Southern horses, and adopting a not uncommon Southern way of staying on them. Any one who has seen a real buck-jumper will understand that tying the feet of the rider under him is an excellent way of counteracting his heaven-propelling powers. It seems rather funny at first, but it is often done in the South and in Mexico. The impulse given is directly upwards, and experienced rough-riders are sometimes killed or severely injured by long-continued shocks."

—It is certainly time that there should be made some such 'Plea for the more Thorough Study of the Semitic Languages in America' as is presented by the Rev. Samuel Ives Curtiss, Jr., Ph.D., in his inaugural address as Professor of Biblical Literature in the Chicago Theological Seminary. While it is true that the time is past when a Hebrew teacher in a Pennsylvania German institution could speak of that language as one which he had *siebenmal gelernt und siebenmal vergessen*, it is also true that the standard of Hebrew scholarship in America has been deplorably low. No other country provides so many professorships of Hebrew as does our own. Every religious denomination of respectable size supports as many as half a dozen; but since the incumbents are selected not for their special scholarship, and by men who could not judge of their scholarship, it is not to be wondered at that the general standard of attainment is so low. Within a comparatively few years there have appeared signs of improvement. Several younger men trained in German universities—of whom Professor Toy, lately removed from the Louisville Baptist Theological Seminary for thinking otherwise on Inspiration than the trustees thought, and the late Mr. Murray, of Johns Hopkins University, are examples—give promise of taking the first step in advance in Semitic scholarship which we have seen since Moses Stuart. In the two or three institutions in which there are professors capable of undertaking the task there are flourishing classes in Arabic or Syriac; but, as Professor Curtiss shows in his address, it is almost impossible to give any thorough or extensive instruction in this important family of languages so long as the students come to the Theological Seminary utterly ignorant of Hebrew, and are obliged in the allotted three years also to go through a full course in theology, exegesis, and homiletics. The spirit of this address, taken together with the scholarship of the author's essays in Latin and English on the Pentateuch, augurs well for his helpfulness to the cause which he has at heart, although there are occasional oblique references to unbelievers which an older and wiser man might have omitted. Thus, in speaking of Kuenen's critical doctrine of the Old Testament, he says:

"It is easy to see that such a theory as this, presented with clearness and force, has a certain fascination, not only for the Teutonic but also for the Anglo-Saxon mind, so far as men have not felt the power of Christ in their hearts."

And he mentions Professor W. Robertson Smith as one "who contends for the substantial accuracy of the new school of criticism, but still professes to maintain the inspiration of the Scriptures." Why the insinuation that one scholar is insincere in his profession and that others have not felt the power of Christ in their hearts, should be made when dealing with mere matters of scholarship, is not clear.

—It will greatly interest all Americanists to hear of the publication of a new and comprehensive Spanish dictionary of the Maya language of Yucatan, which is the ripe fruit of original and diligent research. Students of this harmonious idiom have heretofore been restricted to the use of a few short and unsatisfactory grammars and lexical compilations, the most important of the vocabularies being that of Abbé Brasseur de Bourbourg, who had given about 9,000 Maya words in his facsimile edition of the Codex Tró or Troano, one of the few *analté* or sacred books which have come down to our time. To this vocabulary the learned abbé had added so many impossible Celtic, Greek, and Sanskrit etymologies of Maya words, and, what is far worse, given false meanings to some of the terms to rest upon them his "cosmogonic and geological" explanation of the Codex above mentioned, that students are easily led into error by the use of this book. But before Brasseur had even thought of composing his work, Judge Don Juan Pio Perez, an instructed Yucatecan, had formed the plan of giving to the world of science a full dictionary of the language, led by the desire to assist archæologists in clearing up the obscure points of ancient Maya civilization. Perez was born, 1798, at Merida, a short distance only from Uxmal and other ruined cities, the grandeur and magnificence of which must have profoundly exercised his imagination from his early youth. A long sojourn in the interior of the peninsula enabled him to study the inland dialects. The words taken from these form an important portion of his dictionary and are quite new to us; the coast dialects, mostly of the northern part of Yucatan, form the groundwork of the compilation, and additions were made to it from several ancient manuscript lexicons. The illustrious author had just terminated the letter U while preparing the dictionary for the press, when in 1859 death put an end to his painstaking and patriotic labors. The merits of Judge Perez as a man of letters were duly remembered by his friends Norman and Stephens in their respective works, 'Rambles in Yucatan' and 'Incidents of Travel in Yucatan.' Subsequently, in 1870, D. Carlos Peon by his entreaties prevailed upon the Maya scholar, Dr. C. H. Berendt, to digest from the materials on hand the remaining four letters of the alphabet.

—The work, as it lies before us, is a good-sized quarto of 437 pages, with two prefaces, and bears the title, 'Diccionario de la lengua Maya, por D. Juan Pio Perez' (Merida de Yucatan, 1866–1877). Its publication was superintended by Eligio Ancona, a friend of the deceased author, and Dr. Fabian Carrillo Suaste has added a biographical notice of Perez in twenty pages. The number of vocables explained amounts to about 22,000; their meanings are given in short, concise items, worded with great precision, and precision in linguistics is attainable only through a perfect knowledge of the objects described. Syntactic examples are not often added as illustrations of words, though terms of archæologic import are provided with longer explanations than other terms. Maya possesses considerable facilities for word composition, and we often find words counting from five to seven syllables; this is partly due to the circumstance that this idiom is simultaneously a prefix and a suffix language, partly also to the frequent use of syllabic reduplication. The accented syllable is not marked as such in Perez's book, because the emphasis skips from syllable to syllable in Indian languages, but special care is given to describing the pronunciation of the sounds of the alphabet. We do not find any indication whether a second or Spanish-Maya volume is contemplated or not, though this would be as important

for archæologists as the volume just issued. A fruitful and complete study of the Maya tongue might now be instituted by the publication of readable historical and ethnological Maya texts, with the necessary comments added in notes, and for the thorough understanding of such texts Perez's 'Diccionario' would no doubt prove to be the best help at present accessible.

TROLLOPE'S THACKERAY.*

THIS volume forms one of the series of "English Men of Letters," now issuing from the English press under the supervision of Mr. John Morley. It is designed chiefly to popularize the lives of the men with whom it deals, through the use of existing materials. In the case of Thackeray no life, properly speaking, has ever been written, and the materials for the biographical part of Mr. Trollope's were, as he tells us, lamentably slender. Not long before his death Thackeray had his taste offended by some fulsome "biography." The eulogy of this seemed to him to be "the produce (*sic*) rather of personal love than of enquiry or judgment," and so disgusted him that he asked his daughters that nothing of the sort should be done with his name. This explanation, we fancy, is, like many others which occur in this volume, somewhat inadequate. The reason why Thackeray shrank from putting it in the power of the world to become familiar with the details of his life, is probably to be found in a far deeper cause than an accidental burst of indignation at some fulsome eulogy of a contemporary. One of the deepest traits of Thackeray's character, underlying his humor, his sentiment, his cynicism, and his love of moralizing, was a profound reserve and modesty which always caused him to shrink not only from notoriety but from undue public praise. Indeed, this quality was connected in him with his abounding sense of humor. No one can very well be a humorist of the sort that Thackeray was without being continually impressed with the grotesque contrasts between the public judgments of distinguished men and their merits. A large part of his essays on the Georges and on the English Humorists was a protest against such judgments. Was it to be expected that the author of the Book of Snobs, the discoverer of the great truth that there is in each one of us the germ of a snob, should have looked forward to his own death without a dreadful anticipation of falling into the hands of the Biographical Snob? If Thackeray had, as many another distinguished man has done, left behind carefully compiled memoirs, memoranda docketed and filed with year and date, for the hands of his literary executors, the act would need all the explanation that Mr. Trollope could give. That he should have wished to be spared a biographer seems to us a natural and necessary consequence of the fact that he was himself and no one else.

To any one who reads Mr. Trollope's volume it cannot but be amusing to remember that it was "fulsome eulogy" which Thackeray dreaded. The want of a biography Mr. Trollope undertakes to supply in the first sixty pages of his volume, and in so far as giving an outline of the main facts of his subject's life goes he has done all that was necessary. But we cannot, on the whole, regard the Life as a successful one. It may be difficult to lay down abstract rules for the guidance of biographers, but one thing is absolutely essential: that they should sympathize with and appreciate their subject. If a biographer does not do this, he may produce a very effective criticism or exposure; he may analyze the accidental causes of a factitious reputation and influence, and may lay bare their hollowness; but he cannot write a life, properly so-called. Now, Mr. Trollope, whether from a lack of intellectual power of sympathy, or from some other cause, wholly fails to appreciate Thackeray, though he does undoubtedly make a floundering attempt to do so; and the result is that throughout his book he appears to be in a constant state of puzzled surprise over Thackeray's success. He did succeed, of course; he wrote some wonderfully successful books, and the publishers paid him large sums of money for them; but how it should have been so Mr. Trollope never seems to be quite able to make out. There was certainly nothing in his youth to justify great expectations. He attempted to become an artist; but "he never learned to draw—perhaps never could have learned"; besides this "he was always idle." When he inherited a fortune it passed through his hands in a year or two, principal and interest—some of it in a newspaper, some at cards, and some in an Indian bank; so it is pretty clear that he was improvident. Then he began over again as a newspaper and magazine contributor, and Mr. Trollope has some very wise and just observations on the folly, in most cases, of such an attempt. Even Thackeray was not very fortunate at it at first, and when he was writing the "Great Hoggarty Diamond" for *Fraser's* was called upon to shorten it. This was a more serious blow to him than it would have been to most men, for "he was not a man capable of feeling at any time quite assured in his position." This want of assurance Mr. Trollope dwells upon at some length in a passage which, had it been written by an enemy, might be said to show a considerable amount of malicious ingenuity:

"He doubted the appreciation of the world; he doubted his fitness for turning his intellect to valuable account; he doubted his physical capacity—dreading his own lack of industry; he doubted his luck; he doubted the continual absence of some of those misfortunes on which the works of literary men are shipwrecked. Though he was aware of his own power, he always, to the last, was afraid that his own deficiencies should be too strong against him. It was his nature to be idle—to put off his work, and then to be angry with himself for putting it off. Ginger was hot in the mouth with him, and all the allurements of the world were strong upon him. To find on Monday morning an excuse why he should not on Monday do Monday's work was, at the time, an inexpressible relief to him, but had become a deep regret—almost a remorse—before the Monday was over. To such an one it was not given to believe in himself with that sturdy, rock-bound foundation which we see to have belonged to some men from the earliest struggle of their career."

At this period of his life it is, of course, impossible to avoid a comparison of his literary position with that of Dickens, who attained the summit of his popularity while Thackeray was comparatively unknown. Most people would trace this to the different character of their work, and the relative size of the public appealed to by the two novelists. Mr. Trollope finds the explanation in the inferiority of Thackeray to Dickens in firmness of purpose and self-confidence. In 1837 Thackeray married, and here, too, he was unfortunate, for his wife's mind failed. At length, in 1846, *Vanity Fair* appeared. Thackeray's life after this period would, by most persons, be called fairly successful. He was always in the possession of a sufficient income, and as a man of letters occupied a position which forbade rivalry. But Mr. Trollope is too discriminating a critic to be satisfied with such a success as this. In 1848 he was offered a position as assistant-secretary at the General Post-Office by Lord Clanricarde; but he did not receive it. As he never became assistant-secretary the incident would, probably, be passed over by an ordinary biographer as of little importance; but Mr. Trollope, bent on a thorough-going analysis of his friend's character, cannot leave such an opportunity unnoticed. "Had Thackeray succeeded in that attempt," he quietly declares, "he would surely have ruined himself. No man can be fit for the management and performance of special work who has learned nothing of it before his thirty-seventh year; and no man would have been less so than Thackeray." In 1857 he stood for Parliament and was defeated by Mr. Cardwell. This gives Mr. Trollope another chance to show how fully he shares his friend's dislike of "fulsome eulogy." Thackeray, he says, would have failed in Parliament just as he would have failed in the post-office. "From such an one as Thackeray something would have been expected which would not have been forthcoming. He was too desultory for regular work—full of thought, but too vague for practical questions."

Feeling that the materials at hand for a life of Thackeray were meagre, Mr. Trollope has thoughtfully filled in the outline here and there with some interesting details from his own career, which further serve to bring out in a strong light the vices of Thackeray's nature. For instance, about two months before the first number of the *Cornhill* appeared, Mr. Trollope received a letter from Thackeray suggesting that the former should let him have the first instalment of a novel for the first number. It was required that the first portion of the book should be in the printer's hands within a month. Mr. Trollope's theory about writing novels, it seems, has always been to have a complete scheme of a story in his mind before publishing any of it. He hesitated on account of the shortness of the time, but finally allowed himself to be persuaded; and while he is unwilling to say that the story he sent to the magazine was good, it was certainly received with greater favor than any he had written before or has written since. It would be strange indeed if a biographer with Mr. Trollope's analytical turn of mind had not determined to ascertain the reason why this application had been made to him, and why Thackeray had not published a novel of his own.

"I was astonished," he says, "that work should be required in such haste, knowing that much preparation had been made, and that the service of almost any English novelist might have been obtained if asked for in due time. It was my readiness that was needed rather than any other gift. The riddle was read to me after a time. Thackeray had himself intended to begin with one of his own great novels, but had put it off till it was too late. 'Lovel the Widower' was commenced at the same time with my own story, but 'Lovel the Widower' was not substantial enough to appear as the principal joint at the banquet."

* 'Thackeray. By Anthony Trollope.' New York: Harper & Brothers. 1879.

It is perhaps hardly necessary to say that Thackeray, in Mr. Trollope's opinion, made no better an editor than he would have made a civil servant or a member of Parliament, had he ever been either. He thinks it doubtful whether he read the manuscripts which were sent him, and with great *naïveté* tells a story at his own expense to illustrate Thackeray's incompetency. We give this in his own words :

"Nor, in truth, do I think that he did much of the editorial work. I had once made an arrangement, not with Thackeray, but with the proprietors, as to some little story. The story was sent back to me by Thackeray rejected. *Virginibus puerisque !* That was the gist of his objection. There was a project in a gentleman's mind—as told in my story—to run away with a married woman ! Thackeray's letter was very kind, very regretful—full of apology for such treatment to such a contributor ; but—*Virginibus puerisque !* I was quite sure that Thackeray had not taken the trouble to read the story himself. Some moral deputy had read it, and disapproving, no doubt properly, of the little project to which I have alluded, had incited the editor to use his authority. That Thackeray had suffered when he wrote it was easy to see, fearing that he was giving pain to one he would fain have pleased. I wrote him a long letter in return, as full of drollery as I knew how to make it. In four or five days there came a reply in the same spirit—boiling over with fun. He had kept my letter by him, not daring to open it—as he says that he did with that eligible invitation. At last he had given it to one of his girls to examine—to see whether the thorn would be too sharp, whether I had turned upon him with reproaches."

So much for the story. The moral is, as might have been expected, "A man so susceptible, so prone to work by fits and starts, so unmethodical, could not have been a good editor." It cannot be disputed, however, even by those who deplore with Mr. Trollope Thackeray's total lack of that "sturdy, rock-bound foundation" of assurance which helps some literary men so well through life, that the author of 'Vanity Fair' wrote some very remarkable novels, to say nothing of other literary productions. The greater part of the book is devoted to a criticism of these, which is not remarkable either for originality or discrimination. The extracts from Thackeray which occur in them are generally well selected, and afford pleasant occasional relief from the dulness of the commentator. He undertakes, by the way, to offer a novel suggestion or two, and some of these are novel with a vengeance. They relate to matters small enough in themselves, but important as tests of his critical powers. No life of Thackeray would be complete without some mention of that most delightful of his early characters, *Jeames de la Pluche*. Mr. Trollope appears to be aware that the character is amusing, but what he says about it is this : "Of all our author's heroes Jeames is perhaps the most amusing. There is not much in that joke of bad spelling, and we should have been inclined to say beforehand that *Mrs. Malaprop* had done it so well and so sufficiently that no repetition of it would be received with great favor." It is difficult to offer any reply to this singular suggestion, for it is impossible to know what it means. Mr. Trollope can hardly be so unfamiliar with one of Sheridan's best-known plays as to suppose that *Mrs. Malaprop's* "nice derangement of epitaphs" arose from an inability to *spell*. If Thackeray had created a character whose claims upon our sense of the ridiculous had consisted of that confusion of words and the ideas they represent which is the *fonds* of the humor of *Mrs. Malaprop*, it might fairly have been objected that the joke, mechanical at best, had become threadbare by long use. But the immortal *Jeames* is a *character ;* a living, breathing, speaking, and thinking flunky, with a flunky's thoughts, language, grammar, spelling, and style. His rich and ornate vocabulary is language which he has picked up from hearing gentlemen talk ; his spelling arises from the fact that having no written language, and never having *seen* the elegant phrases he likes to imitate, he is obliged to trust to his natural resources, which are slender. But what in the name of common sense has all this to do with *Mrs. Malaprop ?* Again, Mr. Trollope is at pains to point out that Thackeray did not understand the Irish brogue, or manage it correctly. The blemishes which he detects in Thackeray's Irish are chiefly an incorrect substitution of one vowel for another, as of *e* for *a* in the word *major*, which he thinks was due to his mistaking an Irish imitation of the English accent for the genuine Irish pronunciation. Here again the important part of the matter, which is that Thackeray's Irishmen are Irish from the top of their head to the soles of their feet in character, seems to make no impression on Mr. Trollope whatever. We must say, too, that Mr. Trollope's own attempt in one or two of his novels to make use of the brogue is such a lamentable failure that he can hardly be considered a competent witness on this point. The critical parts of the volume are, however, unimportant in comparison with the biographical. It is as a picture of the man rather than as a study of the writer that his book must stand or fall ; and we feel it a duty to enter a protest, in the interest of the great novelist's memory, against its being received as authentic.

ALBERT GALLATIN. *

I.

ABOUT the year 1802 Albert Gallatin's tailor spoiled a coat for him in the making, whereat the then Secretary of the Treasury expressed the energetic opinion to his wife that "Every man, from John Adams to John Hewitt, who undertakes to do what he does not understand, deserves a whipping." Upon first handling the ponderous volume in which Mr. Henry Adams undertakes to tell the story of a very remarkable life, one is irresistibly tempted to substitute for the name of John Adams in the foregoing sentiment that of his great-grandson. In its superficial make-up this volume falls little short of being an outrage both on Albert Gallatin and on every one who wishes to know anything about him. It at once recalls Macaulay's remark on Nares's 'Burleigh'—that it "might, before the Deluge, have been considered as light reading by Hilpa and Shallum." In the present case, also, Mr. Adams has sinned knowingly, and is accordingly entitled to no mercy. He seems, very wrongly, to have made up his mind when he took his task in hand that Gallatin's was not a picturesque character or an interesting life, and could not be made the one or the other ; and, accordingly, he set to work in a spirit of defiance, and made every detail of publication as repelling to the general reader as he knew how. The book resembles in appearance a volume of a cyclopædia,—it measures ten inches by six, and weighs nearly four pounds. It is printed—narrative, extracts, and correspondence—all in one monotonous type, contrary to the agreeable modern usage, and it bristles with letters in French which seem to say, as clearly as if in words, that the book is not for general readers.

Why Mr. Adams should have thus disregarded the harmless prejudices of the reading public is not very apparent. Certainly, if there is one branch of literature in which of recent years there has been a great advance in literary skill, it is in that branch to which this work belongs. Indeed, the best biographical work—that in which the parties tell their own stories in their own words, and we see the times in which they lived portrayed to the life, or revealed in sudden glimpses through skilfully chosen extracts from the literature of the period—this thoroughly artistic work is the creation of recent days. The biography of any considerable public man prepared on this plan almost necessarily takes a wider range and becomes a sketch of his life and times ; and this is just what it should be. A man of society lives in society, and his memoirs amount to nothing unless they convey to us a picture of his social surroundings. It is the fact that he does this which makes Pepys delightful ; it is the fact that he fails to do this which makes Crabb Robinson unreadable. So of great public characters. They were not isolated figures, but they lived in times other than our own, among men who have passed away, and it is the task of the artistic biographer to bring them before us as the central figures in the events they helped to shape.

In the case of Gallatin Mr. Adams has resolutely set his face against all this. He certainly did not lack material, and that he has the faculty of using his material artistically is from time to time apparent in this volume, in spite of himself. It would almost seem as if he had argued himself into the German professorial belief that vivacity is trickery, and that there is some positive merit in dulness. Accordingly, what is in fact one of the most valuable contributions of the day to an almost unknown period of American history is likely to find its way unread to the shelves of the library.

Having said thus much of the unfortunate get-up and detail of this work, it is proper to add that, in spite of its appearance, it is in fact neither long nor dull, except in parts. It would scarcely be believed that the clumsy volume contains only two-thirds the reading-matter of Trevelyan's 'Macaulay' or Parton's 'Burr,' neither of them accounted unduly long ; and it is but a quarter part larger than Edmund Quincy's compact life of his father. But in putting his material together Mr. Adams has not only succeeded in imparting to it an appearance of ponderosity, but he has also kept himself altogether too far in the background—sunk the author too much in the editor. Gallatin was undoubtedly a brilliant talker, but he was far from being a lively letter-writer. Now, it is very proper that a biographer should allow his subject to tell his own story, provided he tells it tolerably well. If, however, he tells very little and writes a great deal, letters, familiar

* 'The Life of Albert Gallatin. By Henry Adams.' Philadelphia : J. B. Lippincott & Co. 1879.

or otherwise, become as dry a form of light literature as can find its way into print. This was the case with Mr. Gallatin. Putting him forward to tell his own story wherever he can, Mr. Adams, to Gallatin's great loss, does not tell it himself; and Mr. Adams's work is a great deal better than Gallatin's. It is, in fact, extremely good, and those portions of the volume in which Mr. Adams cuts loose from his hero and comes to the front in a fresh, clear, connected narrative of events which he thoroughly understands, are not only good but very interesting.

The active participation of Albert Gallatin in the political affairs of this country covered a period of twenty years, beginning with the Whiskey Insurrection under Washington's Administration in 1794, and closing with the Treaty of Ghent in 1814. During that score of years he was certainly one of the very foremost and most influential of the public men of the country, and the part he played was most creditable to himself. The period was, too, a most interesting one, as formative periods always are. It constituted a distinct epoch by itself, succeeding the great Revolutionary effort which wore itself out in the organization of the government and passed away in the troublous administration of John Adams, and preceding the slow and ominous uprising of the slave power of the South through the chaotic democracy of Jackson. Between the two great tragedies—the one beginning with the War of Independence and the other ending with that of the Rebellion—there was a pastoral interlude. The curtain fell as the last mutterings of the Revolution died slowly away; then suddenly rose upon a group of very able men occupying the stage, who had freely imbibed the doctrines of the new French philosophy, and who, filled with a sublime faith in human nature, proposed at once to naturalize Rousseau, as it were, and to offer to the world in America "the first example of man in his best condition, free from all the evils which infected Europe, and intent only on his own improvement." It was all *couleur de rose*, and if only men would always do what they ought to do, and be good—as unquestionably they would be—and not bad, then Jeffersonian democracy would prove a new revelation on earth; the wicked would cease from troubling and the weary be at rest. The difficulty was a practical one. Somehow the wicked never would cease from troubling, and consequently the weary have not up to the present time got their rest. Napoleon and George Canning were the Lucifers in the paradise at first, and the embargo and consequent war of 1812 sadly marred the divine harmony of the Jeffersonian pastoral. It got going again, however, in 1815; but men would be men and not angels, and in 1820 the struggle over the Missouri Compromise disclosed the presence in the garden of yet another Lucifer, in comparison with which Napoleon and Canning were angels of light. Gallatin's connection, however, was with the first or real Jeffersonian interlude, and his connection was so close that a study of his life is essential to any correct understanding of what will undoubtedly always be regarded as one of the most interesting periods in American history. In another notice we shall, therefore, attempt a more detailed sketch of that life, and of the scope and purpose, as we understand it, of Mr. Adams's book.

MOLIÈRE.*

IT is a curious instance of the closer interest taken by English-speaking people in the literature of France than in that of any other country that five of the first nine volumes of the useful series of Foreign Classics for English Readers are devoted to Frenchmen, while Germany and Italy have each but two representatives, and Spain, as yet, none. Of the five French writers, Molière, Pascal, Voltaire, Rabelais, and Montaigne, the first is, if not the greatest, certainly the most popular in France. In the difficult task of setting the life and the works of this wise and long-suffering humorous poet before those unacquainted with the language he wrote in, Mrs. Oliphant and Mr. Tarver have been fairly successful. The biographical details are in general accurate—no slight praise when one considers what a cloud of doubt and legend envelops all the early life of the dramatist, and even covers his later career with a dim haze, and that most of the more recent researches are not utilized. The account of Molière's plays is ample and intelligible; a few translations of salient passages from the more important comedies are inserted; and on the whole it may be said that as a mere piece of bookmaking the volume is satisfactory. Its defect is that it is nothing more than a mere piece of bookmaking. It is not written from the heart by one who knows Molière and loves him—as Goethe did, for example. It is evident that Mr. Tarver had to get up his facts, and that Mrs. Oliphant had to pump up her enthusiasm. It is not evident that either of them had studied long or felt deeply on the subject. Mrs. Oliphant, by whom the greater part of the book seems to have been written, is apparently trying hard all the time to convince herself that Molière really was a great man, in spite of his lapses from the rigid nineteenth-century standard of morality, and in spite of his inferiority to Shakspere—a comparison which recurs again and again in these pages. But notwithstanding this factitious enthusiasm, Molière is so great and the circumstances of his career are so characteristic that the book is interesting.

The facts of Molière's life so far as they are known are here, as has been already said, stated with accuracy for the most part. The errors, though far more numerous than need be, are not in matters of vital importance. A few out of many may be here corrected. The company of actors (p. 37) which Molière found established in Paris when he returned from his provincial wanderings was the *Troupe Royale;* Molière's company was at first the *Troupe de Monsieur* and afterwards the *Troupe du Roi*, and it was never the *Troupe Royale*, or court company. The legend of the *en-cas de nuit*, the supper at which Louis XIV. had the poet-player sit at his table and fed him with his own hand, reappears (p. 89) in spite of M. Despois, who showed conclusively that the story had no foundation in fact. The very valuable volume of M. Despois, 'Le Théâtre Français sous Louis XIV.,' has not been sufficiently consulted by Mr. Tarver. In the analysis of the "Femmes Savantes" (p. 191) it is said that *Vadius* "claims attention for a ballad of his own composition." It was a *ballade* the learned wit had written, not a ballad; two wholly different things, as all readers of Villon know. The *ballade* is a fixed metrical form with rigid rules, just as the sonnet is, and anything resembling the English ballad was unknown to the pedants of the age of Boileau. In the account of Molière's burial, taken from Grimarest and Bazin, are to be found the errors exposed by M. Loiseleur in his recent book on the obscure points of Molière's life. The contemporary letter of an eye-witness, there quoted in full, would have shown Mrs. Oliphant and Mr. Tarver that Molière's burial was not as mean as has been thought. But that because he was a player the great poet was denied aught of the honors which were allowed to others uncontaminated by contact with comedy and tragedy, is beyond dispute, and the fact needs no comment. Mrs. Kemble, in her 'Records of a Girlhood,' quotes from a letter of Talma's to Charles Young, in which he desires to be numbered among the subscribers to the monument about to be erected to John Philip Kemble in Westminster Abbey, the touching remark: "Pour moi, je serai heureux si les prêtres me laissent enterrer dans un coin de mon jardin." In the century and a half which had elapsed from Molière's death to the date of Talma's letter there had been but little change.

Of all French dramatists, great and small, Molière has undoubtedly been the most popular among English-speaking peoples from the days of Dryden to our own; within the past four years two complete translations into English of his works have appeared in England, and one of these has been twice published in the United States. Mr. Henri Van Laun, the translator of Taine's 'History of English Literature,' and the author of a 'History of French Literature,' began to publish in 1875, in Edinburgh, the earlier volumes of a translation of Molière, to be completed in six. About the same time Mr. Charles Heron Wall, the author of the 'Student's French Grammar,' and assistant master at Brighton College, put forth the first of three volumes of a complete translation prepared for Bohn's series. Mr. Van Laun's version has had two separate publications in this country—to which reference will be made later; Mr. Wall's translation, like all Bohn's volumes, is easily to be obtained here.

No French author is wittier or more idiomatic in his wit than Molière, and wit is the most difficult of all things to translate. To do justice to him the translator must be at home in two languages; he must be ready to render the idioms of the one into the idioms of the other. Now, Mr. Van Laun is not at home in either language; neither English nor French is his birthright, and he has no real grip on the idioms of either. He translates "un sixain," a six-line stanza, as "a couplet of six lines" (p. 153), *couplet* here being obviously taken in its Gallic sense. He is so afraid of his English that he leaves many a word in the original French; in the 'Précieuses Ridicules,' for example, we find *petit coucher* (p. 150), *pic*, *repic*, and *capot* (p. 151), and *connaisseuse* (p. 153). Mr. Van Laun nowhere seizes fully the spirit of the 'Précieuses Ridicules,' which he calls the 'Pretentious Young Ladies'; Mr. Wall more nearly hits it in his 'Affected Ladies.' The exaggerated expressions of *Cathos* and *Madelon*,

* 'Molière. By Mrs. Oliphant and F. Tarver, M.A.' (Foreign Classics for English Readers.) Philadelphia: J. B. Lippincott & Co. 1879. Pp. 192.
'The Dramatic Works of Molière, rendered into English by Henri Van Laun. A new edition with a prefatory memoir, introductory notes, and notices. Illustrated with nineteen engravings on steel, from paintings and designs by Horace Vernet, Desenne, Johannot, and Hersent.' Three volumes. New York: R. Worthington. 1879.

intended by Molière to satirize the affectations of the time, are translated by Mr. Van Laun without any regard to their satirical aim and into very cheap English. Thus :

Cathos: "Pour moi, j'aime terriblement les énigmes,"

Mr. Van Laun renders :

Cathos: "As for me, I am awfully fond of riddles" (p. 154).

But even the use of the modern "awfully" for the affected French "terriblement" is not as bad as the turning, a few lines below, of "Ah, certes, cela sera du dernier beau" into "Goodness gracious ! that will certainly be superlatively fine." These are fair specimens of Mr. Van Laun's work. The "Précieuses Ridicules" is a very difficult play to translate, and Mr. Wall does not succeed much better than Mr. Van Laun, but he is wholly free from the constant desire to vulgarize which seems to beset the latter. Before leaving this play a typical instance of Mr. Van Laun's complete misunderstanding of the duties of a translator may be pointed out. As the "Carte du Tendre" is referred to, Mr. Van Laun kindly gives us a "Map of the Country of Tenderness" (p. 169), without, however, translating anything on it but the title ; all the names of places are left in the original, so that it is practically useless to those for whom the translation is made. It would surely have been no hard task to give in English the names of the "Sea of Hostilities," of "Inclination River," of the "Lake of Indifference," and of the town of "New Friendship." Little mistakes of omission and of commission, like those cited above, are of no great importance in themselves, but they fairly represent the whole translation, and if they do, it is at once evident that Mr. Van Laun has not succeeded in giving us in English either the letter or the spirit of the original French.

His abundant industry, however, he employed to good purpose when he read through the most of the Restoration and post-Restoration drama to see how often Molière had been imitated by English playwrights ; and he made a goodly list of discoveries. Dryden, Vanbrugh, Wycherley, Fielding, Murphy, Shadwell, Colman, Garrick, Otway, Sheridan, Foote, Cibber, Mrs. Centlivre, and Mrs. Aphra Behn, are all shown to have been more or less borrowers from the great French comic poet. In his preface to each play Mr. Van Laun mentions the English authors who may have imitated Molière, and in the appendix to the play he reprints the passages from the English plays which are most characteristic. The prefaces are to be found in the American edition before us, but the appendixes have been unfortunately omitted. By this omission and by the use of smaller type and thinner paper the matter of six volumes in the Scotch edition has been included in three. The proof-reading is grossly defective ; the preface in the first volume fairly bristles with misprints ; and this in spite of the fact that Mr. Worthington's book is really a second edition—the first from the same plates illustrated with the same designs, but issued in a different binding, having been brought out last year by Messrs. Gebbie & Barrie, of Philadelphia. The original six-volume edition of Mr. Van Laun's translation was adorned by a series of exquisite etchings prepared expressly for it by M. Adolph Lalauze. These do not appear in the American reprint, but their place is taken by nineteen steel plates (including the portrait of Molière). In spite of the substitution on the plates of Mr. Van Laun's translation for the original titles of the plays which they illustrate, this series of designs is at once seen to be identical with that which adorned the fine edition of Molière's works published in Paris in 1863 by Furne et Cie, into whose hands they came about 1835. The designs of Horace Vernet—surely the last man one would select to illustrate Molière—were first used in an edition which appeared in 1819–25, as we discover on consulting M. Lacroix's invaluable "Iconographie Moliéresque," while those of Desenne first served in 1824–6. The Johannot to whom one plate is credited is Alfred, not the more famous Tony Johannot of the romantic revival.

RECENT WORKS ON EDUCATION.*

"ONE thing thou lackest," says Mr. Matthew Arnold, in substance, in his recent essay, "Porro Unum est Necessarium," to the middle-class Englishman, the still untransformed Englishman of his biting but philanthropic criticism—"one thing thou lackest, and that is good secondary schools under intelligent state supervision." And Mr. Arnold points out once more, with charming lucidity and persuasiveness, the advantages which the great French middle class enjoys in its secondary schools—those which are intermediate between the "primary" and the "superior," the *lycées* and *collèges* in which the classes between the hand-workers and the nobility receive their education. In France there are "eighty-one great secondary schools of the first class [*lycées*], two hundred and fifty-two of the second [*collèges*], all of them with a public character, all of them under inspection, all of them offering guarantees of the capacity of their teaching staff." In these public schools 79,231 boys are educated, while 78,000 more attend private schools, lay and ecclesiastical, of corresponding grades, and which, though private, give public guarantees for their efficiency ; while, on the other hand, says Mr. Arnold, "we have not more than 20,000 boys in Great Britain and Ireland receiving a secondary instruction which can in any possible sense be said to offer guarantees for its efficiency. The point to be set in clear light is this : that whereas in England the middle class is brought up on the second plane, in France the middle class is brought up on the first plane"; and he attributes the greater comfort, self-respect, and happiness of the French middle classes to their getting more and better education than that which the British middle classes get. He points out the fatal interest of the British middle classes in "religious politics," to the exclusion of an interest in the question of education, to the consideration of which, Mr. Arnold tells us, the British middle classes must come at last, if they are ever to be "transformed" into any semblance to the children of light.

But with these broader aspects of the question, with the politics of education, as distinguished from its philosophy or from its methods in working practice, how seldom do we find any thorough comparative study among English writers ! The reason is not far to seek. Mr. Arnold's way of treating this subject, which is substantially that of the French administrative criticism, is scarcely profitable, or indeed interesting to the public, unless it has some chance of realization in practice ; unless it may be seconded by such an authority, for instance, as that of M. Grévy's Minister of Education, who actually directs the educational system of France. This more systematic method we mention for the sake of contrasting it with the individual and unsystematic methods—to characterize them from the Continental point of view—of the treatises before us. The first two books on our list have nothing to do with the administration of teaching. If Mr. Arnold has not occupied himself with its philosophy, neither has Mr. Blakiston nor Professor Bain, himself an old student and critic, like Mr. Arnold, of the subject, paid any attention to the politics of education. They have, however, given us useful books, covering a branch of the subject which Mr. Arnold has never taken up—that of primary education. Professor Bain approaches the subject both from the fastnesses of metaphysical science and from the solid ground of physiology. He pays no attention to the comparative criticism of lycées, communal colleges, gymnasia, or free schools. He discusses mainly the principle, not the actual practice or presumable value, of education. If Mr. Arnold's is an inductive criticism of the subject, rather than a deductive, Professor Bain's is both. It is inductive in so far as it is scientific, and deductive in so far as it is Scotch. We may gather this two-fold character of his treatment from the mention of his leading themes. These are the definition of the idea of education; the relations of its processes to physiology and psychology, with a general account of "the intellect" and "the emotions," in which one finds the Scotch professor upon familiar ground; the material or subjects of knowledge ; the proper sequence, "logical" and "psychological," of subjects in teaching, with an account of "the momentous transition from concrete to abstract"; object lessons ; and a criticism on the methods of teaching the leading primary branches. The tenth chapter is given to a clear *résumé* of the argument for and against the course of classical studies, Mr. Arnold's conclusion of the matter being quoted from his report to "The Schools Enquiry Commission" in these words :

"This one's special aptitudes are for knowing men—the study of the humanities ; that one's special aptitudes are for knowing the world—the study of nature. The rejection of the humanities by the realists, the rejection of the study of nature by the humanists, are alike ignorant. He whose aptitudes carry him to the study of nature should have some notion of the humanities ; he whose aptitudes carry him to the humanities should have some notion of the phenomena of nature. Evidently, therefore, the beginnings of a liberal culture should be the same for both."

The Scotch professor's discussion of the proper sequence of subjects in primary education is one of the most interesting chapters in his book. At what ages should book-training in different branches commence ? Pro-

fessor Bain reminds us that at seven years a boy's brain already averages 40 ounces in weight; for the greater distinctness of his argument he should have added that the average weight of the male adult brain is but 49½ ounces. Keeping these numbers in mind we may see why, as he tells us:

"Intellectual exercises that would be impossible at five or six are easy at eight, through the fact of brain growth alone. . . . You try a pupil with a peculiar subject at a certain age and you entirely fail; wait a year or two and you succeed, and that without having done anything expressly to lead up to the point. In regard to abstract subjects, as arithmetic, algebra, geometry, and grammar, a difference of two or three years will do everything. If we follow the analogy of the muscular system, we shall conclude that the times of rapid growth are times of more special susceptibility to the bents imparted during those times. It would be a great contribution to our subject if we could fix with any degree of definiteness the variation of the plastic adhesiveness of the brain through life. But we cannot disentangle what depends on brain growth, with hereditary transmissions, from what is due to contact with the actual world" (p. 174).

Many of our readers will have seen the recent essays of Mr. Darwin, of Mr. Taine (1876), and of Mr. Pollock upon the psychology of infants; we may refer, too, to a new book by M. Bernard Perez upon the same subject, and to its contents in the *Revue Scientifique* for November, 1878 (translated in a recent number of the *Popular Science Monthly*). Professor Bain adds:

"We commence too early if we interfere with the powers needed for growth; and too early if the desired impressions demand much greater expenditure than would be necessary at a later time. On the other hand, we commence too late if we allow time to pass by when good and useful impressions could be made with perfect safety to the health. . . . We know that many have begun to read at three years old, and have grown up perfectly healthy and strong. What we do not know so well is whether, by beginning at four or five, they would not have been as far advanced at fifteen as they are in the earlier commencement. But the necessity and expediency of protracting the age of commencing till six or seven cannot be made out."

Professor Bain would begin teaching English grammar at ten or eleven; arithmetic, as decidedly easier, may be sooner begun; geography two or three years later. "The full notion of a river takes a great deal of thinking power; implicating, as it does, hill and valley, as well as the notion of an expanse of country made up of these, and constructed so as to converge to one main channel." History, merely as narrative, may be early taught. "With an empirical sociology, involved or implied," it would suit the child of from thirteen to sixteen years. "For historical conceptions it must wait a much longer period"; but how often it waits quite in vain we see daily, as, to take the instance nearest at hand upon our table, in the historical primers of Mr. Eugene Lawrence, who is one of the many persons who have not yet waited long enough to attain "historical conceptions."

Professor Bain's remarks on the study of the mother tongue may conclude our notice of his work. "From six to nine years of age," he says, "there is abundant occupation in knowing words and in getting sentence forms impressed on the memory. . . . There is no need ever to take a sentence to pieces. Sentences may be varied to show the same thing differently worded; and the pupils will gradually feel the superiority of one form over others, while, as regards the correct and conventional idioms, they must take the merits upon trust." "How to order sentences," Professor Bain remarks in another place, and with something, apparently, of the *experto crede* feeling—"how to order sentences in a paragraph is a high and arduous undertaking." Equally high and arduous, perhaps, is it to order words in a sentence. But the phrase is misleading; a better statement would be that a good writer must be both a thinker and an artist—a rare combination. We may remark in passing, what few of Professor Bain's readers will have failed to notice, that his own style is deficient in accuracy—a serious complaint, of course, to bring against a metaphysician. The defect is especially evident in the present book, which seems to have been written in haste in order to fill a place in the "Scientific Series." It is, however, a serviceable contribution to the theory of teaching. But the English and American public still need more than the theory—a sound knowledge of the politics of education.

Inspector Blakiston's little book is well named 'Hints.' It is devoted wholly to primary instruction, and touches many points of detail; often wisely, sometimes with a quaint martinetry, as in the directions for giving a lesson on the middle ear: "Show by the sketch that the passage from the outer ear is like a pipe. . . . Draw from the girls that it contains a little wax. . . . Draw from the class that a blow on the ear causes a singing noise." We do not find much breadth of treatment in this book; it well illustrates the English love of detail to the neglect of principles.

George Combe is best known as a phrenologist, and as such he is mainly presented in the biography noticed in the *Nation* for Nov. 14, 1878 (No. 698). But he was also an educational reformer, and it is the object of the present volume to set forth the nature and extent of his labors in that direction. The editor prefixes a somewhat extended summary of the rest of the volume under the following headings: "The History of the Secular School"; "What Education is"; "The Nature and Importance of Training"; "The Nature and Aims of Instruction"; "The Subjects Recommended for Schools"; "Religious Education in Schools"; "The Education of Women"; "National Free Education"; "The Training of Teachers," etc. The body of the volume consists of reprints of Combe's educational writings, either entire or by extracts, so arranged as to bring together all bearing on a special topic. Reference to the whole work is facilitated by a table of contents and an analytical index.

Combe's educational mottoes were: "Res, non verba, quæso," and "We must teach the child what it is, where it is, what it ought to do, and how it should do it, in order best to fulfil the objects of its existence." In his time the public schools were mainly under sectarian influence, and the salvation of souls was deemed of prime importance, while the laws of health were nearly disregarded. That the case is otherwise at the present day is certainly due in great measure to Combe's persistent advocacy of the separation of secular or "this-world" education from religious teaching, and of the introduction of practical physiology into common schools. It is worth noting, in respect to the latter subject, that Combe expressly excluded not only pathology and physic, but also technical anatomical descriptions; yet some more modern writers and teachers of physiology seem to regard osteological details as the essential basis of the science as presented to the young. Combe was doubtless right in omitting the reproductive function from common-school physiology, but his reasons, as stated on page 97, are certainly insufficient, and he nowhere alludes to the necessity that young people should be properly taught by their parents upon this important subject. As to secular education, the volume contains a suggestion which we do not remember to have seen elsewhere presented, viz., that the vexed question of reading the Bible in the public schools should be solved by the preparation of a volume of "Selections" by a commission of nine clergymen of different denominations, no passage to be admitted without unanimous consent. The education of women is pretty fully discussed, and certain subjects specified as most suitable for them, viz., music and the arts.

There is much in this book which every parent and teacher would do well to read and ponder, but—in view especially of the limited time and compensation of teachers—the volume is undesirably large and costly, and could, we believe, have been materially shortened without seriously impairing its usefulness. Nevertheless, whoever holds, with Paley, that "to send an uneducated child into the world is little better than to turn out a mad dog or a wild beast into the streets," will certainly be glad that George Combe's efforts in behalf of enlightened and general education have been at last recorded in a permanent form.

TREITSCHKE'S GERMANY IN THE NINETEENTH CENTURY.*

THE twenty-fourth volume of the German series of histories of contemporary nations commences a history of Germany in the nineteenth century, by the distinguished Berlin professor, Von Treitschke. The present volume extends to the second peace of Paris (November 20, 1815), which followed the victory of Waterloo, and consists of two books: the first, "The Downfall of the Empire" (containing also a general introduction); the second, "The Beginnings of the German Confederacy, 1814–1819" (probably a misprint for 1815). The title of the first book is inadequate, inasmuch as three out of its five chapters treat, not of the downfall of the old Empire, but of the events which followed it—the new life which Prussia entered upon and which she inspired after the disaster of Jena. The real subject of the book, the central topic of the entire volume, is the War of Liberation and its two organizers, Stein and Scharnhorst.

The author has a noble theme—the unification of Germany under the lead of Prussia, an event in which the uprising of 1813 was the first stage. To treat this subject suitably it was necessary to begin, not with the work of organization after Jena, which made the uprising possible, but to go

* 'Staatengeschichte der neuesten Zeit. Vierundzwanzigster Band. Deutsche Geschichte im Neunzehnten Jahrhundert. Von Heinrich von Treitschke. Erster Theil. Bis zum zweiten Pariser Frieden.' (Leipzig: Verlag von S. Hirzel. 1879. 8vo, pp. 792. New York: B. Westermann & Co., L. W. Schmidt.)

back to the origin of the situation; to show how it was that Germany was at this time so hopelessly disunited, and how it was that Prussia was enabled to serve as the nucleus of the new union. To these two topics—the dissolution of the old Empire and the development of the Prussian state, including here a sketch of the intellectual life of Germany at the close of the eighteenth century—an introduction of about a hundred pages is devoted. This chapter shows how the disintegration of Germany, which began with the great crisis of the thirteenth century, became fixed and permanent in the sixteenth. It was not, the author maintains, a natural and necessary result of the Reformation; rather the Reformation contained in itself the promise of unity, of a new national life, and a reorganization of the constitution. It was the House of Hapsburg, at this time in possession of the imperial dignity, and led by its selfish ambition to associate itself with the Papal See, that brought the hope of union to naught. From the reign of Charles V. dates the *Dualism* which has characterized the whole modern life of Germany; since that time Germany has been divided into two hostile camps, the one led by Austria, and supporting its arrogant despotism and blind adhesion to Rome, the other gradually finding its natural leader in Prussia, and embodying all the elements of liberalism and progress. The most striking, and, if we are not mistaken, original part of this introduction points out that the peace of Westphalia was an indispensable step towards the new unity. This treaty recognized the disintegration which existed as a fact, and established it as a right; by this act the theoretical supremacy of the Empire —that is, the actual headship of Austria—was destroyed. The several states were now *de jure* as well as *de facto* sovereign and independent, and were able to group themselves afresh according to their affinities and interests. "Only a revolutionary decision, only the conversion of the Holy Empire into a confederacy of secular states, could rescue the nation from such falsity of political life" (p. 8).

The section which treats of the growth of the Prussian monarchy, and its preparation for its work, brings out with great distinctness the several epochs in its development. Special emphasis is placed upon the administration of the Elector of Brandenburg, John Sigismund (1608–1619), which was distinguished by three important events: the union of Brandenburg with Prussia, the acquisition of Cleve, and the adoption of the "Reformed" Protestant religion in place of the Lutheran. The change of communion brought Brandenburg into relation with the states which now represented the earnest and aggressive force of Protestantism, and enabled the House of Hohenzollern to become the leader of Protestantism in Germany. The acquisitions of territory gave the state the three-fold character which has always characterized it; while the peculiarly mixed character of its confessions results from the union of large Catholic communities in Prussia and Cleve with the Lutherans of Brandenburg, all ruled over by a Calvinist sovereign. Of the other distinctive epochs, those of Frederic William the Great Elector, Frederic William I. and Frederic II., we need only say that upon their work was based that of Stein and Scharnhorst.

The character and labors of Baron vom Stein are treated at considerable length. "The image of the imperial baron [*Reichsfreiherr*] was ineffaceably impressed upon the hearts of the best men of Germany—the solid, broad-backed form; the strong shoulders made, as it were, for a coat of mail; deep, sparkling brown eyes under the mighty brow; an owl's nose over the narrow, expressive lips; every motion of the large hands abrupt, angular, imperious; a character as if belonging to the high-spirited sixteenth century, and reminding one involuntarily of Dürer's portrait of the Knight Franz von Sickingen" (p. 275). Stein's idea of the state, familiar enough at the present day but new then, was equally removed from the theories of the Revolution and the stiff absolutism of the eighteenth century; "to form a constitution, he often said, was to develop the present out of the past. He strove to go back from those artificial conditions of tutelage and constraint, which had been developed out of the misery of the Thirty Years' War, to the simple and free notions [*Anschauungen*] of the German ancestors, to whom service in arms was the prerogative of every free man, the care for the public economy of the community the natural task of the burgher and the peasant" (p. 273). While, therefore, he broke boldly with the immediate past, in his measures to emancipate the peasantry and convert their estates into full property, and to release all classes from the artificial barriers which divided them from one another, he aimed above all to bridge over the later days of despotism, and to bring the present into organic connection with the distant past. This he did by a system of local self-government, suggested in great part by that of England, but for which "the municipal constitutions of England, long gone to seed [*verwahrlost*], could no more serve him as a model than the patrician rule of his beloved Westphalian cities. Now for the first time there existed in Germany modern communities—independent corporations, which yet at the same time executed the will of the state as trustworthy organs, and remained subject to the oversight of the administration" (p. 284). By the side of this municipal system was a system of provincial and district administration which was designed to serve as the basis of a parliamentary government; but this part of the scheme came to naught. Stein's reforms, popular in their nature, were yet not popular in their origin, but were bestowed by royal authority—in many cases forced upon an unwilling people. It is true, in a degree in which it is true of no other people of western Europe, that the greatness of Prussia, and its share in the progress of the time, have been the work of its princes. The local self-government instituted by Stein has made possible the national self-government of the present day.

What we have said will show sufficiently the leading motive of Von Treitschke's history: it is to depict the new life of Germany, but above all to extol the kingdom of Prussia and the house of Hohenzollern as the chief agents in this new life. And, whatever may be our judgment as to some of Prussia's kings and statesmen—however much we may be repelled by a certain arrogance and hardness which characterize both prince and nation—it cannot be denied, as a matter of historical fact, that there has been here a genuine and potent sequence of cause and effect. The state was built up slowly and solidly by a line of rulers who carried to the electoral, and later to the royal, throne the same qualities of thrift and integrity that had made them merchant princes of Nuremberg. It was a *solid* work, the work of discipline: the harsh and unintelligent discipline of Frederic William I.; the genial discipline of Frederic II.; the liberal and organized discipline of Stein—these have created the power which now stands first in Europe. Apart from the theories which it represents, and the store of new information which is treasured up in it, this work must stand in the front rank of historical literature; distinguished by a style at once dignified and graphic, and by a rare skill in the selection and arrangement of materials.

Biographical Register of the Officers and Graduates of the U. S. Military Academy, 1802–1867. By Gen. G. W. Cullum. Vol. iii., Supplement. (New York: James Miller. 1879.)—The military history of the Republic, with the exception, perhaps, of the last war, is comprised in the lives of the graduates of West Point. Passed in a service usually arduous and sometimes dangerous, they have been for the most part obscure, and information about them has not been easy to obtain. Eleven years ago Gen. Cullum, one of the senior officers of the Corps of Engineers, published his 'Biographical Register of the Officers and Graduates of the Military Academy.' This was a work of great labor, and admirable alike in its plan, arrangement, and execution. It gave concisely the military record of each graduate, and the occupation in civil life of those who had left the service. These records, whenever possible, were obtained from the subject of them or his friends, and in all cases were verified by official records. In this way the memoirs themselves shed some light on the character of their writers. Some consist of a brief mention of the subjects' having shared in several great engagements any one of which might be the experience of a lifetime, others are swollen to more pretentious dimensions by stating useful but less hazardous duty in time of war—enlisting recruits in New England country towns, or issuing clothing or subsistence stores in large cities.

An analysis of the book yields some curious information. It gives strong illustration of the power of sectional feeling at the outbreak of the Rebellion. It furnishes gratifying proof of the greater loyalty in resisting this influence among officers from West Point than among any other class of Government officers, except perhaps the graduates of the Naval Academy at Annapolis. It states that one-half the living Southern graduates remained loyal; that four-fifths of all stood by their colors; that one-fifth of those engaged lost their lives, and that nearly one-half were wounded. It shows that few if any graduates attained high independent command in the last war who had not had at least eight years after leaving the Academy to mature in character and gain experience of men and affairs, and that few younger graduates even reached very high rank except in the cavalry service. Where graduates proved disloyal in the Rebellion a curtain is drawn across their career with the simple statement, "Joined in the Rebellion of 1861–65 against the U. S.," with the date and place of death when called for.

Gen. Cullum has now added to his former work a third volume on the same plan, giving the record of eleven classes more, and bringing the history of all to January 1, 1879. A feature of special interest in this Supplement is the resumption of the career of living Confederate gradu-

ates, giving their history since the close of the war. Now that the temper of the conflict has become calm this information imparts a pleasure like the meeting of long-parted friends. It excites a keen thirst for more. The tug of war usually was due to graduate meeting graduate. We cannot but wish that we had a page or two filled out by Gen. Lee, once superintendent of the Academy, and others by Johnston, Beauregard, Hood, Hardee, once commandant of cadets, Longstreet, and a long list of pestilent rebels. We furtively confess to ourselves that we should read their records with almost as much pride, and quite as much interest, as those of the more fortunate soldiers on our side, who, borne on and supported by the overwhelming and accumulating strength and resources and wealth of the North, finally beat them down in their exhaustion. We could not desire Gen. Cullum to lower the tone of his dignified Register by incorporating in it the exploits of his foemen, who cast such a stigma on his cherished Academy. We can only wish that some enthusiastic adherent of the Lost Cause may adopt his plan, and with similar zeal and labor give us another Supplement, with the history of mistaken graduates in the brilliant annals of the Confederacy.

Studies of Paris. By Edmondo De Amicis. Translated from the Italian by W. W. C. (New York: G. P. Putnam's Sons. 1879.)—Unlike the author's 'Constantinople,' these 'Studies' do not aim at completeness, and beyond being essays on some of the most striking men and things that belong to Paris there is little thread of connection between them. They are five in number, and are as follows: "The First Day in Paris," "A Glance at the Exposition," "Victor Hugo," "Émile Zola," and "Paris." The last, to be sure, is in a sort comprehensive, and sums up certain Parisian characteristics, chiefly of a picturesque nature, but it is not designed to be a complete statement about Paris, such as M. Taine's "Notes," for example, were. They are not, however, the less entertaining, perhaps, for the fact of this unpretentiousness; they are saved criticism, which is apt to be searching in proportion to the seriousness of its subject; and they have very charming qualities of their own. Not that Signor De Amicis could not have done Paris as he did Constantinople. He is something more than a brilliant special correspondent and a captivating essayist; he has peculiarly acute critical powers and is a scholar of experience as well as of erudition. Still, even in his 'Constantinople' it was his artistic rather than his critical qualities that were conspicuously admirable, his pictures rather than his reflections, and one can quite easily forgive him for not making a more ambitious book about Paris than he has done here. He has a very light touch, and his style, which generally flows smoothly in a limpid stream, not infrequently breaks into eloquence that is fairly impassioned. He is graphic of set purpose at times, it may be, but he never betrays a fondness for hyperbole, and it is the frank confession that he thinks a subject something to be enthusiastic over, rather than any oriental exaggeration, that one now and then notices in his essays. It need hardly be said that such a writer is never dull; but Signor De Amicis contrives to be as incisive at times as he is graceful; his range of thought is wide and his observations are subtle, and can even be trenchant on occasion. Indeed, perhaps the best essay in this volume is that on Zola, which for a certain delicate dissection and refined analysis one may safely admire as much as the most picturesque of Signor De Amicis's descriptions. For instance:

"Yet despite this, he is a moral writer; one can affirm this resolutely—Émile Zola is one of the most moral novelists of France, and it is really astonishing that any one can doubt this. He makes us perceive the smell of vice, not the perfume; his nude figures are those of the anatomical table, which do not inspire the slightest immoral thought. . . . He makes us perceive everything by opening our nostrils with the holder of his pen."

One can hardly avoid noting in this a felicity of characterization, a just appreciation, and a subtly insinuated satire that are not frequently to be found in conjunction. And there is much of such in the book, aside from the other qualities mentioned.

DELICIA.

COUSINS.

MAID, WIFE, OR WIDOW?

HENRY HOLT & CO., NEW YORK.

Continued from page iii.

MASSACHUSETTS, Groton.

LAWRENCE ACADEMY.—Fall term commences August 27. Abundant apparatus, good instruction and discipline. Board and tuition very reasonable. Young men and ladies thoroughly fitted for college, for teaching, and for business. Catalogue on application. E. S. BALL, A.M., Principal.

MASSACHUSETTS, Hadley, Hampshire Co.

"THE ELMS"—Home School for Young Ladies and Little Girls.
Misses PORTER & CHAMPNEY, Principals.

MASSACHUSETTS, Harvard.

BROMFIELD SCHOOL. Endowed 1877.—College Preparatory, Scientific, and Literary Courses for both sexes. Total expenses, $180 per year. Quiet village, noble scenery, fine buildings, extensive apparatus, skilful instructors. Trustees: A. P. Peabody, D.D., Harvard College, Cambridge; A. A. Miner, D.D., Boston, *et al.* For Catalogues, etc., address
C. W. STICKNEY, Principal.

MASSACHUSETTS, Newburyport.

EAGLENEST.—A Church Family School for Boys. Established 1866.
Boys of any age, or those needing a permanent home, received. Number is limited. LLOYD W. HIXON, M.D., Principal.

MASSACHUSETTS, Pittsfield.

MAPLEWOOD INSTITUTE for Young Ladies. Three courses of study, besides preparatory and optional. Location unrivalled. Terms low. Address Revs. C. V. SPEAR and R. E. AVERY, Principals.

MASSACHUSETTS, Plymouth.

MR. KNAPP'S Home School for Boys. Next (thirteenth) school year begins Sept. 18.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY.—Hon. Charles Francis Adams, Chairman of Managers. Thirteen out of fourteen boys passed the examination this year at Harvard College. Tuition, $100 a year; board and lodging, $350. A new circular just issued. For information apply to WILLIAM EVERETT, Ph.D.

MASSACHUSETTS, South Braintree.

THAYER ACADEMY.—J. B. Sewall, lately Professor of Greek in Bowdoin College, Master.
This institution, established and substantially endowed by will of the late Gen. Thayer, U.S.A., went into operation September, 1877. It is intended to be a school of the highest character of its kind, and is open to both sexes. It fits boys for college and young women for the Harvard Examinations in the most thorough manner. Tuition, $75 per year.
First term, third year, begins Wednesday, September 17.
Entrance examinations Thursday, July 3, and Saturday, Sept. 13.
For catalogues or information address the Master.

MASSACHUSETTS, South Williamstown, Berkshire Co.

GREYLOCK INSTITUTE.—Fall term opens Sept. 4. Expenses, $450 a year. For catalogues address BENJ. F. MILLS, A.M., Principal.

MASSACHUSETTS, Stockbridge, Berkshire Co.

BOYS AND YOUNG MEN privately fitted for College. Conditioned or rejected candidates coached, summer and winter. Stockbridge, Mass. F. HOFFMANN.

MASSACHUSETTS, Stockbridge.

HILLSIDE HOME for Young Ladies. $300 a year. Address Miss ADELE BREWER.

MASSACHUSETTS, West Newton, near Boston.

ENGLISH AND CLASSICAL SCHOOL.—Twenty-sixth year. A Family and Day School for both sexes. Boys and girls fitted for Harvard, Smith, and other colleges, and for scientific schools; also for business, teaching, and home life. Pupils distributed in four families. Board and tuition, from $350 to $450. For circular address NATHL. T. ALLEN.

MASSACHUSETTS, Williamstown, Berkshire Co.

ENGLISH AND CLASSICAL SCHOOL.—Thorough instruction for a limited number of boys under careful supervision in the home of the Principals.
Rev. N. H. EGLESTON. M. EGLESTON.

MASSACHUSETTS, Williamstown, Berkshire Co.

WILLIAMS COLLEGE.—Wholly devoted to College work. All departments under control of experienced professors.
Tuition, $90 a year. Board at $3 per week.
$6,000 distributed annually in scholarships and prizes.
Fall term begins September 3.
For catalogues or additional information apply to
P. A. CHADBOURNE, President.

MASSACHUSETTS, Worcester.

HIGHLAND MILITARY ACADEMY. Established in 1856 by the present Superintendent, C. B. METCALF, A.M.

MASSACHUSETTS, Worcester.

MISS WILLIAMS'S SCHOOL for Young Ladies. Circular on application. AVA WILLIAMS, Principal.

MICHIGAN, Orchard Lake.

MICHIGAN MILITARY ACADEMY.—Prepares for Ann Arbor; graduates admitted upon diploma. Location, accommodations, and other advantages unsurpassed. Fall term begins September 18. Expenses, $350 per year. For catalogue address COLONEL ROGERS, Supt.

MISSOURI, St. Louis.

ST. LOUIS LAW SCHOOL opens Oct. 15. Course, two annual terms, seven months each. Address HENRY HITCHCOCK, LL.D., Dean, 1417 Lucas Place.

NEW HAMPSHIRE, Hanover.

THE CHANDLER Scientific Department of Dartmouth College offers a liberal education on a scientific basis. Course in Civil Engineering.
Necessary expenses very low. Address
Prof. E. R. RUGGLES.

NEW HAMPSHIRE, Portsmouth.

MISS A. C. MORGAN'S English, French, and German Boarding-School for Young Ladies will reopen September 24.
Thorough instruction given in all branches, and especial advantages for the study of French and German with resident native teachers.
Terms $375 per annum. Circulars on application.

NEW HAMPSHIRE, West Lebanon.

TILDEN LADIES' SEMINARY.—Have you daughters to educate? Send for a new triennial catalogue to HIRAM ORCUTT, A.M., Principal.

NEW JERSEY, Burlington.

ST. MARY'S HALL.—For Girls.—Rev. J. Leighton McKim, M.A., Rector. Forty-third year begins Sept. 24, 1879. Terms, $300. Music and Painting, $50 each.

NEW JERSEY, Elizabeth.

MISS RANNEY'S Boarding and Day School for Young Ladies will be reopened on Wednesday, Sept. 17.

NEW JERSEY, Freehold.

FREEHOLD INSTITUTE.—Boys thoroughly prepared for college or business.
Send for catalogues to the Principal,

MACMILLAN & CO., 22 Bond Street, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 28, 1879.

The Week.

MR. SCHURZ and Mr. Sherman have both made speeches in Ohio during the week. Mr. Schurz devoted himself almost exclusively to finance, and made another display of that extraordinary ability in dealing with questions of this character which has given him a unique position among the political orators of the country. After exposing the folly of General Ewing's predictions about the financial situation, he showed that the proposal of the Democrats to substitute greenbacks for national-bank notes would render necessary a doubling of the Government coin reserve; made some good fun of the Democratic plan of regulating the volume of the currency by "principles established by legislation or organic law so as to secure the greatest possible stability of value"; showed how opposed to all Democratic theories and traditions this plan of lodging enormous power in the hands of the Government was; demonstrated the fallacy, not to say folly, of the Democratic objections to the national banks, and the excellence of the national banking system; pointed out the certainty that a trial of bi-metallism by ourselves alone under the present law will end in bringing us to a single standard of silver only; and finally talked some sound sense on the State-rights question. He acknowledged that the Democrats, either North or South, do not contemplate "a new rebellion"; that what they seek is the possession of power, and that if they get it, so far from seeking to weaken the general Government, they would probably indulge in exercises of its authority "such as we have not seen in times of peace, especially in the use of the national treasure for all sorts of local purposes."

Mr. Sherman began by showing, in answer to the Democrats, that there had been no contraction of the currency by the Republicans since 1868; that the amount outstanding in 1873, when the panic came, was greater than it had ever been before; maintained by figures that resumption had brought about and been accompanied by a revival of business; and explained the value of the national banks both as money-lenders and tax-payers. He made a very powerful explanation of the silver problem, arguing that if we cannot negotiate for general bi-metallism with the other great commercial Powers of the world, our plan is either to keep silver and gold at par by restricting the coinage of the former, or by putting enough silver into the dollar to make it worth as much as a gold dollar in the bullion market. He concluded with the usual wave of the bloody shirt, beginning: "But there is a question *infinitely* more important than money or bonds, or property in silver or gold"; and then went on to describe the condition of the South in language which few intelligent persons will read without a smile. It seems, at first sight, difficult to account for the appearance of this stuff closely following an able discussion of Mr. Sherman's own theme, when one does not find a trace of it in Mr. Schurz's speech; but the explanation is, in reality, simple enough. Mr. Schurz cannot be a Presidential candidate, and therefore discourses in public as a rational man does in private, saying just what he thinks, simply and sincerely, and treating the facts of the day as men treat them in their business. Mr. Sherman, on the other hand, being a Presidential candidate, has to try and catch all classes of voters, and knowing that there is a section of Republicans who believe that the Southern negroes pass their time, as he says, "in the swamps terrorized and bull-dozed," he has to affect to believe it himself, and to be much wrought up about it. Mr. Sherman is an able man whose natural tendencies are sound. In fact, when he thinks nobody is looking he usually creeps stealthily in the right direction, but when he thinks "the people" is watching him, he often jumps up and pretends that he is just as foolish as anybody, and can swallow as many lies as anybody.

There are four parties in the political arena in California—the Republicans and Democrats proper, the Workingmen, and the Honorable Bilks. Nobody knows exactly what the Workingmen, led by Kearney, seek, beyond the possession of the government and an opportunity of working the new Constitution in their own way, for the confusion of capitalists and rich men generally. The Honorable Bilks—a nickname given by Kearney—are politicians from all parties, many of them ex-officeholders, who wish to take charge of the new Constitution also, and shape it for themselves; in fact, treat it as their offspring and endeavor to make money under it. They call themselves Conservatives, and their principal organ is the San Francisco *Chronicle*, a paper of large circulation, which has risen into wealth from very low and scurrilous beginnings, its foundations, it is said, having been laid in blackmail. The Workingmen, under Kearney, nominated for the mayoralty one Kalloch, some time a Baptist minister in Boston, and since a little of everything in various parts of the West, and now a minister again, of a very smutty reputation, but with a glib tongue, much "magnetism," and a red beard. For him the brothers De Young, proprietors of the *Chronicle*, in the language of the place, "went" vigorously, giving a sad account of his deceased father, and promising a still fuller one of the divine himself. As nothing could be more disagreeable to Kalloch than the publication of his biography, he anticipated it by sketching the career of the brothers De Young in an evening discourse to his flock, which was full of odious details, and closed with a reflection of the most serious kind on the character of their mother. One of them then repaired to the "Temple," in which he preaches, called him out from the vestry, or other retreat, on false pretences, and shot him twice, it was believed mortally. The Kearneyites rose in fury, on hearing the news, to avenge their adored candidate, and were on the point of proceeding to extremities which would have brought on a conflict with the police and militia, when Kearney appeared, poured oil on the waters, and advised peace and reliance on the law. Everything is now waiting the issue of Kalloch's wound.

Mr. Sherman has been interviewed about the troubles of Casanave, the member of the Louisiana Returning Board, for whose case he appears to have deep sympathy. His story does not quite tally with Casanave's, though this may be due to some difference in dates, as Casanave declares that he offered him $100, while the Secretary expresses his regret that he had had no opportunity of contributing to the fund, "that he would consider it an honor to do so, and most excellent missionary work to help to pay the amount required." He suggested, too, that "each officeholder should be called upon to contribute a small sum, even if it were a single cent," and the sum collected should be presented to Mr. Casanave "as the payment of a debt belonging to the Republican party." It is rather odd that whenever the Republican party gets into debt the poor officeholders, who constitute only one-seventieth part of the party, should be called on to pay it. What do they owe Casanave any more than the voters?

Mr. Cyrus W. Field has been beguiled by a reporter into an interview of passionate description concerning certain rumors that personal relations between him and Mr. Tilden had suddenly ceased. He not only readily admitted this, but vehemently protested that there was not money enough in the world to tempt him to have anything more to do with Mr. Tilden. For this, however, he would give no reason, though he appeared to take a grim satisfaction in repeated asseverations of it. He hesitated to go into particulars, since it was "quite possible that the whole facts may be brought out in a lawsuit" in which he hoped to be the principal

witness, and so was naturally indisposed to anticipate the cream of his testimony. As it was nevertheless "understood" that Mr. Tilden's sales of elevated-railroad stock during Mr. Field's recent absence in Europe were the cause of the trouble, Mr. Field was induced to refer vaguely to that matter, and to explain that he took Mr. Tilden "into the elevated-railroad business," as a strong legislative ally would be convenient in case the decision of the Court of Appeals then pending should prove adverse. "That is the way he came to get into it, and now he has got his $1,000,000 in his pocket," concluded Mr. Field bitterly. He added that Mr. Tilden, who used to visit him "sometimes two or three times a day," had, since his return from Europe, kept out of his way through shame and terror, but that he should meet him "one of these days" and give him a piece of his mind. He is also now prepared to believe that Mr. Tilden "knew everything about those cipher despatches." Upon this Mr. Tilden's version of the affair was of course eagerly sought. As might perhaps have been expected, it failed to throw any very clear light upon Mr. Field's animadversion. Mr. Tilden explains that he took his stock at Mr. Field's request, after Mr. Vanderbilt had "pooh-poohed it," and that he was free to do what he liked with it, which Mr. Field admits, though sardonically; that he acted with great considerateness in not selling it in large blocks, so as to depress the market, partly for the excellent reason that he intended to keep some of it, partly because it was his "disposition not to hurt anybody more than was absolutely necessary"; but that he wanted to reduce his investment so that he could have "rest and recreation, undisturbed by any cause, business or political, during the present summer"; and he contrived to get in some very neat remarks about the absence of a conservative element in the Manhattan Company's directory, and about the precarious nature of elevated-railroad investments in general.

All this, of course, is regarded as of extreme importance by the newspapers, to which nothing that Mr. Tilden can do seems insignificant. The *Tribune* says the appetites of Democratic politicians have been inordinately whetted at the thought of the $1,000,000 which Mr. Field says Mr. Tilden has got "in his pocket," and which they hope to see transferred to "the barrel." The *World* intimates that Mr. Tilden's temporary indisposition to be interviewed may have done untold harm to his Presidential chances. The *Times* is moved to call him "a cruel old spider." It is noticeable that the *Times* has recently acquired respect for the mental and physical abilities of the "old plotter," whom it was a short time ago describing as a "wreck" bereft of every faculty save the feeble remnant of a memory. It does indeed still call him a "bankrupt in reputation and health," but this in a purely perfunctory way, as it proceeds to show by calling him "a wonderful old man," "serene in his absolute power over his party," and protesting it will not do to regard him "as an extinguished force, a shadow of a shade." It even permits its reporter to allude to "this feeble sexagenarian" as having "paced briskly up and down the room," which indicates the activity of health, and as having "chuckled," which indicates excellent spirits. On the other hand, the *World* proves a foe of Mr. Tilden's own household, and says that he "husbands his voice now as much as possible in ordinary conversation," and that he has of late "adopted a kind of colloquial stenography." It has, however, been at the pains to interview a resident of Yonkers, where Mr. Tilden is spending the summer, who maintains that though the "sexagenarian" is "saving" of his voice he is by no means losing it, and that the reporter "ought to hear him yell at the railroad fellows around here some morning when he's afraid he's going to miss the train." This, if trustworthy, is as important evidence that Mr. Tilden's physical decrepitude has been exaggerated as his getting his $1,000,000 in his pocket is that his mind still retains its grasp upon intellectual problems.

There is a fresh movement of some sort on foot against the Mormons. Mr. Evarts is reported to have sent a circular to foreign Powers, indicating, we do not know in what terms, the dislike of this Government to the immigration of Mormons into this country, and propounding the theory that anybody who comes here to be a Mormon comes with criminal intent. Of course the European reply is—the London *Times* has furnished it—that there is no way of sifting the emigrants who go to America, or of ascertaining who of them have Mormon designs. Relief will certainly not come from that quarter. We must tackle the Mormon difficulty ourselves. Recent legislation and judicial decisions now not only make polygamy a criminal offence, but exclude Mormons from juries impanelled to try it, and the courts in the Territory, we believe, have laid it down that evidence as to what the Scotch call "habit and repute" will be sufficient proof of "plural marriage." But we still think that the authorities and the public are, as we pointed out some time ago, deceiving themselves as to the ease of obtaining convictions for polygamy, owing to their reliance on the analogy furnished by prosecutions for bigamy among Christians. In these latter cases there is always an angry woman who knows all about the offence, and, in fact, is herself the *corpus delicti*, pursuing the bigamous man; indeed, in most cases he has two angry women at his heels ready to be sworn. Among the Mormons, on the other hand, the wives will be *participes criminis*, and eager to shield the offender, and, what is still worse, will not care for legal marriage, but will be content with any kind of secret ecclesiastical marriage. There is nothing so dependent on local opinion for its efficacy as legislation about the relations of the sexes, and we fear Mormonism will have to be extirpated by the same weapons as other phases of low civilization.

The Sprague-Conkling scandal has been a great windfall for the newspapers, coming as it did in the midst of the hot weather, when people were far readier for a dish of scandal than for the discussion of serious topics. Most of them have treated it in an exhaustive manner, though each from a slightly different point of view; the most profound and far-reaching essay being that of Mr. Henry Watterson, of the Louisville *Courier-Journal*, who surveyed the field from the rocky brow of Block Island. None of them has a good word for Mr. Conkling, but he gallantly refuses to make "the statement" for which they have all been anxiously waiting. He is in strict seclusion in Utica, probably reflecting how the civil service can best be reformed without endangering the political rights of the Southern blacks. The most sagacious female correspondents now say freely that they have long foreseen this trouble, feeling sure that the enormous self-confidence bred by his "torso" would eventually bring him to grief. It is impossible to say as yet what effect it will have on the henchmen; some of the best observers say none whatever; that he will go to the Convention at Saratoga as strong as ever, and will nominate Mr. A. B. Cornell for the governorship if he pleases, in order to avenge that gentleman upon the Administration, but that he will probably refrain, and permit the nomination of some one else—say Judge Robertson—for the sake of "harmony in the party."

The Railroad Investigating Committee at Albany have had before them two important witnesses within the past week, the president of the New York Central and the receiver of the Erie railroads. Both displayed considerable irritation and indignation at the conduct of the investigation, Mr. Vanderbilt suggesting to Mr. Sterne, the examining counsel, that a class of people, whom he referred to somewhat vaguely and uncivilly as "you fellows," would like to prevent transportation companies from making any money at all if they had their way. Mr. Jewett entered a formal protest, on the ground that the methods of proceeding employed or allowed by the committee were unfair. With regard to the question of special rates, the Erie road makes a better showing than the Central; Mr. Jewett testifies that the only special rates allowed on his line are abatements from tariff-rates made to shippers, not arbitrarily but on reasonable grounds, and allowed equally to all persons similarly situated. "Preferential" rates—in other words, rates granted as a matter of favor or caprice—he declares are never permitted on the Erie Railroad. Of course, special rates of the kind described by

Mr. Jewett are unobjectionable. The abuse consists in giving A. better rates than B., when both are doing the same kind of business under the same circumstances. This is contrary to law, but the only remedy now existing—that of a civil action—is utterly inadequate, and needs to be supplemented by some criminal process. The manner of conducting the investigation adopted by the Committee certainly seems open to criticism. They have practically abandoned it to Mr. Sterne, who, naturally enough, starting with a preconceived theory of the case, has really subjected the officials to a severe and searching cross-examination. Cross-examination is well calculated to elicit the truth in a court of justice, where there are pleadings, a definite issue of fact, and a tribunal charged with the duty of administering a fixed system of law; but it is less useful in an examination by a legislative committee, which has before it the task of enquiry for the purpose of ascertaining the best policy for the State to pursue.

There has recently been a good deal of excitement created in Norwich, Ct., by strenuous opposition to Sunday excursions on the part of the Rev. Leonard W. Bacon, who is pastor of a Congregational church in that place. It seems that there is a clause in the Revised Statutes of Connecticut, bearing date of 1702, which prohibits "any sport or recreation on Sunday," and that for a year or two past a little steamer has taken a party of excursionists to Watch Hill and back on Sundays during the summer. This open violation of a time-honored statute went utterly unnoticed, or at least unreproved, before Dr. Bacon became a resident of Norwich. The second excursion during his pastorate, however, induced Dr. Bacon to attempt to secure the prosecution of both the managers and passengers of the steamer under the statute. The city attorney nevertheless appears to have made no move in the matter, and the main result has been a popular agitation. At a mass-meeting of citizens held on the 11th instant Dr. Bacon delivered an impassioned address, which has since been printed and widely distributed. He announced that the glory of the New-England Sabbath was "not endangered but *gone*," that despite this he did not consider the present question "a religious matter at all," and that his whole purpose was to see the civil law executed, "so as to find out what sort of a place Norwich is," which he hoped to know "in about three weeks." "My work is done," said Dr. Bacon. "I have dragged these two most reluctant parties together—the law and the law-breakers." As this could have been done by a note to the city attorney as well as by a mass-meeting, the latter may be objected to as superfluous, but it served to show the philanthropic design of Dr. Bacon. His main argument, except of course the matter of illegality, was that, if Sunday steamboat excursions are allowed, factories will soon run seven days in the week, and then it will not be long "before some gentleman from New York with a foreign accent and a small stock of fancy goods will open a little store on Main Street," after which Norwich might as well be out of New England as in it. Dr. Bacon has more hopes of New London, where the steamer in question touches, and the mayor of that city took some measures to prevent its landing from being profitable last Sunday, all the while, however, "laughing in his sleeve," as the papers report, since he is a Democrat.

The report of the *Herald* that General Grant had declared to Hi-Lung-Chang that he did not desire to serve another term in the Presidency is receiving confirmation from a variety of sources. Mr. George W. Childs, who knows more of the General's mind than almost any one else, affirms positively that the scheme of renominating him is distasteful to him, and that he will not allow himself to be put into the political arena again. But, in addition to this, Admiral Ammen, an old friend of his, has positively announced not only that he (General Grant) will not be a candidate for re-election, but that he has agreed to accept the presidency of an American company for making an interoceanic canal across the Isthmus of Panama under American engineers, and that the scheme is well under way, M. Lesseps having abandoned his project owing to inability to find the capital. If this news all prove true, and we see no reason to doubt it, the country has good reason to congratulate itself. The third-term scheme was concocted by the unclean horde who brought disgrace on General Grant's Administration, and was taken up recklessly by a portion of the Republican party which had apparently lost its faith in popular government. Its extinction will not only help to give politics a healthier tone, but will enable General Grant to close his career in an honorable position both suited to his character and capacity, and in which the memories of his earlier and better days will again grow up about him, and give him back the pure fame he won on the field before politicians began to "poison his mind."

The foreign exchanges continue to rule in favor of the importation of gold. During the week $1,560,000 in gold bars and coin arrived here on the English and French steamers, and it is understood that upwards of $5,000,000 more are afloat and on the way. This gold had not found its way into the reserve of the banks during the week covered by Saturday's bank statement, but that is its ultimate destination, as bank reserves are very low, and the main dependence for protection against a stringent money market is now admitted to be foreign gold. The rates for demand loans were plump 6 to 7 per cent., and there were times in the week when money could not be got at 7 per cent. without paying a commission to secure it. The effect of the advance in the rates for loans was to depress United States bonds, but prices were rallied late in the week. The share speculation at the Stock Exchange resisted the naturally depressing effect of dearer money, and prices were absolutely advanced. General mercantile business continues active and satisfactory. There has been a decided modification of the yield of the wheat crop in the Northwest, which turns out to be smaller in the number of bushels and poorer in quality than was at first estimated. On the other hand, the French crops are better than expected, but recent storms throughout Great Britain have increased the wants of that country and its probable demand on the United States for cereals. The silver market, here and in London, was without important change during the week.

A debate in Parliament on Dean Stanley's proposal to inter the late Prince Napoleon in Westminster Abbey brought out from Sir Stafford Northcote an authorized denial that the Queen had suggested it, and an assertion that the idea was Dean Stanley's own. This led to a communication to the *Times*, evidently inspired, at least, by the Dean himself, declaring that the suggestion came from "the public." As the public now seems dead against it, having recovered from its fit of maudlin loyalty and flunkyism, it will probably be easy for him to slip out of the scheme altogether. That a Christian minister of his standing should look on the Bonaparte family with anything but horror, considering the amount of bloodshed and misery it has brought on Europe within the present century through its ferocious selfishness and unscrupulousness, is a striking illustration of the small extent to which political morality has yet penetrated the pulpit.

The only news from Europe of any importance, which passes beyond the character of gossip, is the retirement of Count Andrássy, who has now for several years piloted the Austrian Empire through stormy seas. Nothing positive is as yet known about his successor, and the reports as to the exact cause of his resignation are more or less contradictory. The results of the late elections have, of course, something to do with it, but the Count's position was not altogether dependent on the Austrian Parliament. The chief interest of Austria is to keep the Hungarians in good humor, as they are not only the most turbulent portion of the Empire but the ablest politicians. It is, therefore, of the last importance that the Prime Minister should be a Hungarian, even if he has not the support of a working majority in the Austrian Parliament. Nobody but a Hungarian would probably have been able to carry through the annexation of Bosnia and Montenegro, and make the occupation of Novi-Bazar, which carries Austria half way down to Salonica, seem to the Maygars a harmless move.

THE STALWART POLICY AND THE PARTY POLICY.

ATTENTION has very properly been called to the fact that both Secretary Sherman and Secretary Schurz in their late speeches in Ohio have disclaimed, in so far as they can do so on behalf of the Republican party, any purpose in denouncing the fraud and violence practised in politics at the South beyond influencing public opinion against the return of the Democrats to power at Washington. This has been made absolutely necessary by the wild talk of a good many Stalwart writers and politicians, who have done their best to persuade people that if they can get hold of the Government in 1880, by putting their man in the Presidential chair, they will repress disorder with the strong hand, and in complete disregard of the Constitution and the laws. Much indignation and disgust as the late Democratic proceedings in Washington may have excited, the Republicans cannot afford to enter on the next Presidential contest burdened with the suspicion even of having any such programme in their minds. The extravagant threats and denunciations which some Stalwart orators find so telling at public meetings in Iowa, Maine, and other States in which Republicans are sure of success under any circumstances, unhappily reach people in other States in which Republicans are by no means sure of success, and are pondered by a body of persons whom, as a general rule, managers are apt to think of small account, but who in several States hold the balance of power.

The recommendation of the Grant Secretary of the Treasury, Mr. Boutwell, for instance, that the Southern States should, in time of peace, with the courts sitting, be reduced to the condition of provinces, and governed, Cromwellian fashion, by major-generals, or the proclamation of the Iowa Republicans that the powers of Congress are unlimited, may be very good reading in the inner circles of orthodox Republicanism, but it was not for any such state of things as these worthies desire that the North fought to put down the rebellion. People fought for the Union because they liked it as it was before the war, and they like the same kind of Union now, with the addition of precautions against slavery and secession and political inequality. They never said, and do not say now, that they are prepared to give up the Constitution and their liberties unless they can have a Union in which there shall be no rioting, no fraud or violence at elections whatsoever, and in which no laborers shall be cheated by their employers or by the corner-grocers. One of the great differences between America and Austria used to be that in the former state people looked for the rectification of these evils to time, to education, to trade, and to the steadying though slow discipline of free institutions; while in the latter it was thought to be the proper work of Radetsky, Windischgrätz, and other "strong men," with cavalry, infantry, and artillery. Austria has learnt much wisdom on these points, and is now trying, as well as her manners and traditions will let her, the American method; but the American method has not been abandoned by Americans, nor is there, whatever the Chandlers and Newmans and Havens may say, any widespread or deep-seated doubt in the American mind of its efficacy.

Below the froth of political discussion there is still profound popular faith in it, however badly it may for the moment seem to work at particular points. If the Stalwarts continue their attempts to prove its failure in the style in which some of them have been lately indulging, they may be refuted in a manner which will not only be a rude awakening for themselves, but will seriously damage the organization which counts them in its ranks. It has to be taken into account, too—and this is undoubtedly the oddest feature in their position—that their plan was tried for several years and proved futile. The South was governed on it, without let or hindrance from any quarter, from 1868 to 1876, and during the whole period it was, according to their own account, desolated by murders and outrages of the most shocking description. General Sheridan reported three thousand as having been committed in the State of Louisiana within a short period, and proposed in 1875 that a whole class of the white population of the State should be outlawed by act of Congress and then tried by military commission, and the Secretary of War acknowledged this recommendation by a telegram of "thorough approval." This was the year before Mr. Hayes's accession to the Presidency and the eighth of the Stalwart régime. The "Mississippi plan," too, was carried out during General Grant's Presidency.

The state of things at the South now, according to the most authentic Stalwart accounts, is vastly better than it was then. The New York *Times* does not, we believe, stick to the tale that two days in the year—Christmas and Election Day—are throughout the South given up to the slaughter of negroes, and that it furnishes a favorite amusement on other days. "Outrages" of the worst kind ceased, it was admitted even by William E. Chandler, after Mr. Hayes's policy was adopted. What the negroes suffer most from now is cheating at the polls, and usury and extortion in their current accounts with planters and storekeepers; but these things do not prevent great numbers of the thrifty from acquiring property, and all from raising crops the size and value of which are the best proofs of the prevailing tranquillity. The Chisholm tragedy, shocking as it was, belonged to a category of crimes of which unhappily the social history of every State in the South, like that of scores of other semi-barbarous and thinly-peopled communities, is full. The Dixon affair, too, was another of the same kind. That such things are not promptly punished is, in the eyes of those who live in happier climes, very dreadful, like the vendetta in Corsica and Montenegro, but it has no political significance whatever. Such crimes are not committed in communities in which their punishment is certain, and in which public opinion reprobates them. The readiness to commit them, and the difficulty of bringing the perpetrators to justice, are two plants which grow on the same soil. The cure for the one is the cure for the other, but nothing has been better established by experience than that that cure is not to be found in the processes of Stalwartism. The civilization of the South cannot be raised or purified by putting the Shepherds, Chandlers, and Caseys once more in power, and giving the Camerons and Conklings a firmer hold of the machine, and diffusing through the ranks of Government employees a contempt for the letter of the Constitution, and a feeling that the war has somehow deprived it of its binding force. Nor is reprobation of Southern violence which plainly has this end in view likely to be effective at the South. The condemnation which will tell on Southern manners and feelings will have to be something deeper and sincerer than party condemnation, or condemnation inspired, or supposed to be inspired, by a desire for votes. The disease with which Southern society is afflicted is not a Democratic disease simply. If every Southern white voted the Republican ticket today, there would still be plenty of outrages and assaults and batteries. The shotgun would be employed for a different purpose, but it would still be employed, if the triumph of the other side threatened something very disagreeable. The South has still to learn how to discuss. Its public oratory and its voting have, for three generations, been always in one direction, and competition for offices has always been complicated and embittered by the family feuds which fill up the time and thoughts of people who live lonely lives and have few neighbors. We here in New York do not know how much we are indebted to the multiplicity of our distractions for deliverance from the danger of being "shot on sight," or from being requested to leave the city within twenty-four hours, because a number of gentlemen do not like our last article, or are displeased with the company we keep.

In fact, the notion that the Southern problem will be solved by keeping any particular party in or out of power, however useful on the stump, will not bear examination in a private room. The strong reprobation which Southern violence and outrage excite at the North among men of all parties is undoubtedly producing its effect, but this is owing to the fact that the Southerner is becoming daily more like the Northerner, is more dependent on him, and more sympathetic with him through increasing similarity of social conditions. The old "Southern gentleman," with his pistols, his juleps, and his nullification rhetoric, who did so much to shape South-

ern politics twenty-five years ago, is becoming so rare as to be somewhat of a curiosity. He was as impervious to the public opinion of the rest of the world as Osman Pasha; his successor, the bull-dozer, is by no means impervious to it. Ferocious as he is he winces under it, and will wince more and more.

THE SAN FRANCISCO TUMULTS.

THE difficulties in the way of the successful working of the California Constitution, arising out of its own defects, were grave enough a week ago; but they will probably be considerably increased by the Kalloch tragedy, which has roused the Kearneyites to the wildest pitch of excitement, and almost made certain the defeat of the "Honorable Bilks," or old office-holders, who proposed to take charge of the instrument themselves and lick it into shape. It is not very encouraging for the business interests of the State, too, that the result of the first election under the new Constitution should be determined not by a discussion of the instrument itself, but by a fight between a preacher of shady reputation and the editor of a scurrilous newspaper; and worse still, that the fight should have arisen not over any political topics, but over their own personal antecedents. De Young, the editor, assailed the character of Kalloch's dead father, and threatened to "expose" Kalloch himself, Kalloch being a man to whom exposure would be very painful. Kalloch retorted by devoting an evening discourse in his own place of worship to an unsavory account of De Young's life and exploits, winding up with a truly oriental assault on the character of De Young's mother. De Young thereupon shot him, and the Kearneyite ticket will probably be successful. This is really a résumé of the political situation, and it must be a painful subject of contemplation for the sober and thoughtful inhabitants of the State.

It may prove useful, however, in more ways than one. It revealed the fact that Kearney, who has always been in talk a man of blood, is not really a fighting man. He was eagerly expected by his followers after the shooting of Kalloch, and they were never in better mood for an armed attack on their enemies, but the police and militia being on the alert, Kearney promptly assumed the rôle of a peacemaker, and warned them against any outbreak in language which would have done credit to a police magistrate. That he is not in earnest when he talks about hanging the well-to-do, and that he really shrinks from musketry and artillery, will probably be a relief to a good many people in San Francisco. At the last advices order had been fully restored, and Kalloch's condition was said to be improving. We do not like to believe that his son, another Baptist minister, harangued the mob and called on them to help him to kill De Young if the law did not kill him, and yet this is what has been reported.

The affair has probably also brought home to the more conscientious and reflective class of Californians the fact—for fact it seems to be—that Kearney and his tribe are, in California as they are almost everywhere, the product of a bad social system, and that there will not be much political rest in the State until this has been in some way remedied. The Constitution owed its adoption not to the city mob—for it was defeated in San Francisco and other large towns—but to the small country farmers, who were incensed, and from all one can hear justly incensed, at the influence in politics of huge masses of property held in the hands of men who use it without the least sense of social responsibility. One of the candidates now in the field owns, it is said, sixty thousand acres of wheat, and in this large tract of territory there is neither church, nor schoolhouse, nor village, nor anything but the hovels in which a few hundred laborers live and the hovel in which the owner lives, for he allows himself nothing better. These vast estates in land and vast mining estates are more numerous in California, probably, than in any other country in proportion to area and population, and they are held in a large number of cases by men whose use of the power their wealth gives them is marked neither by scruple nor public spirit. In fact, we doubt much whether great wealth was ever before presented to an English-speaking community in a form less likely to command respect or even forbearance. For perfect immunity and impunity it needs a population like that of Peru or Chili, or Russia before emancipation, living in whole or partial serfdom, and unused to speculation on the foundations of social order. It illustrates, too, the kind of danger to which the community is exposed from the possession, in these days of agricultural machinery and railroads, of a superabundance of land in proportion to population. The controversy between the small and large holdings, which has raged for many years, seems in our time to be coming to a close in favor of the former. It begins to be acknowledged more and more widely that it is not enough to raise so many bushels of grain to the acre in any way, but the question how it is raised is also one of considerable importance to the community.

The selection of Kalloch by the workingmen as their champion, and the exposition made by Kalloch himself in his pulpit of the nature of his claims to the place, are also useful illustrations of some of the tendencies of the time. There is nothing particularly remarkable in the indifference of the Kearneyites to the moral character of their leaders. Parties made up as this is have never shown themselves at all particular about the private life of their chiefs. The demagogue has almost always been a good deal of a blackguard. Nor is the history of the *Chronicle*, whose editor assailed Kalloch, anything new or altogether peculiar. We are familiar in other places than San Francisco with the spectacle of a newspaper obtaining its first foothold by the preparation and publication of scandal about individuals, and providing itself with capital by selling its silence and forbearance to the timid or sensitive, and then growing gradually more decent, and finally becoming the champion of decorum and "high-toned journalism." The field for such enterprises is still open in nearly every large city in the Union, and especially in cities like San Francisco, and we might say also New York, largely peopled by persons whose past is not much known to their neighbors.

But the entrance of the sensational preacher into politics as a candidate for office, advocating his own claims and assailing his adversary from the pulpit in the language and with the methods of the stump in its lowest state, is a novel phenomenon. Nothing as bad as this has occurred on the Eastern coast, though nobody who has observed the sensational preacher's career for some years back can have been wholly unprepared for it. The popular passion for "eloquence" has for a long time made success in politics possible to men destitute both of character and knowledge. Its evil effects on religion were recently pointed out in forcible terms by a writer in the *Atlantic Monthly*. But it has of late, in a growing number of cases, enabled men to stay in the pulpit after they had lost the better part of the moral equipment of religious teachers. It is, as we now see every day, almost impossible to oust, for any offence, a minister whose oratorical powers have given him a strong hold on his congregation; and the coarser sort of ministers have begun to use their oratorical gifts as a means of asserting a larger liberty in various directions, short of absolute misconduct. Kalloch, without what appears to be his really remarkable gift of the gab, would probably have long ago been utterly and completely turned away from the clerical calling. But his power of making people feel good in their pews by his declamation appears to have brought him back to preaching, in the intervals between other pursuits, wherever he went, and he never returned without a certain measure of success. In San Francisco he delivered, just before he was shot, what was no doubt a powerful exposition of the propriety of clergymen's running for office, and followed it up by the examination of "the record" of one of his enemies, which appears to have been an extraordinary piece of ruffianism. None of the school in this part of the world has gone quite as far as this, but that we have some who, if their vanity was tickled by a nomination, would give their congregations some startling specimens of the same style of rhetoric, there is little doubt. The evil, which consists in using the traditional associations of religious worship to give an air of force and dignity to charlatanism, is a serious one, and if Kalloch's fate does anything to

check it, his death will in some degree make amends for his life. It does not make the matter any easier to deal with to say that the looseness with which theological beliefs are now held has much to do with making such a career as his possible.

QUEEN ELIZABETH AND THE HUGUENOTS.

II.

PARIS, August 4, 1879.

I LEFT Elizabeth of England at the time of the peace of Amboise. I will now follow her after that period, always using the inedited documents published by M. de la Ferrière. Charles IX. announced to Elizabeth from Dampierre the conclusion of the peace, and asked her to give back Havre to France. Elizabeth was very angry with the Prince de Condé, who had hastened to make peace with the King; she thought him ungrateful—in a letter to Calvin she went so far as to call him a *misérable;* she used milder expressions in her official correspondence. Havre was taken by force, and peace was made between the two countries.

In the midst of their struggle Elizabeth and Catherine de Médicis were kept united by one common fear: they were afraid of a marriage between Mary Stuart and Don Carlos. Lord Hunsdon had brought to Charles IX. the Order of the Garter; on the 4th of October he wrote to Cecil from Avignon, whither he had followed the Court: "The marriage of the Queen of Scotland is the great preoccupation; they speak of her, of Lord Robert Dudley, of the Earl of Warwick, and of the Prince of Spain. Others would marry her either with the Earl of Arran or with the young Duc de Guise; but this last marriage would make the house of Guise too powerful, and the Queen-mother does not favor it. They begin to be uneasy about the pretensions of the son of Lord Lennox." Catherine de Médicis made overtures to the ambassador ordinary, Smith, about a marriage between Elizabeth and Charles IX. Catherine did not conceal the difficulties of this union: first, there was the difference of age; but the King told Smith: "If your mistress is contented with my age I will be contented with hers." Secondly, there would be the necessity for Elizabeth to live in France. Thirdly, there would be much discontent among the nobility of both countries. Smith observed that he could make no answer on any of these points, having no instructions on the subject. "If," said he, "the King was four years older, and if he had seen the Queen, and if he had any love for her, I should not be surprised at this haste." "What!" said the King with animation, "but in truth I love her." "At your age," said the sententious Smith, "one does not know what love is; but you will soon know, for all have to submit, man and prince; it is in truth the maddest, the most impatient, the least respectful thing that can be imagined." The King blushed, and the Queen answered for him: "Oh! his is not a mad love." "I confess," said Smith, "that it ought to be founded on serious reasons, on grave and mature deliberation." Catherine, however, insisted upon a prompt answer from Elizabeth. A little while afterwards the same matter was discussed between Catherine and Lord John Somers, at Bayonne; Somers promised an answer within four months.

Civil war had begun again in France, and the Protestant chiefs counted upon the help of Elizabeth, but she did not interfere; and when Charles IX. announced to her a new peace (March 25, 1568), he took the opportunity to recommend to her Mary Stuart, who had taken refuge in England. Elizabeth wrote on the subject of Mary to Catherine: "Of the Queen of Scotland I will write as of a person who coming into my hands will be assured of her life and honor; and whatever you may hear to the contrary, be sure that it will not be through any fault of mine if her cause does not come to a good end. I do not forget that she is a queen, nor that she is my near relation; nor can I disregard the considerations which move and force me to treat her as ceremoniously and with as much pomp as she would desire. . . ." In a short note to Charles IX., written on the same day, she says that nothing will tempt her to forget "the regard which she has always had for the rights of princes touching their subjects." She will do nothing which would be "against God, nature, reason, or fortune." Norris replaced Throckmorton as ambassador. His instructions were to act as a sort of mediator between the Court and the Protestants. Elizabeth never lost sight of Calais; the French ambassador in London, Lamothe-Fénelon, complained incessantly of acts which constituted a real interference between the King of France and his subjects. A bloody war was raging in France; Condé and Coligny wrote letter after letter to Elizabeth; Jeanne d'Albret wrote to her after the battle of Jarnac. Being at peace with France, she was obliged to compliment officially Charles IX. and the Duc d'Anjou on the victories of Jarnac and Moncontour; but her sympathies were on the other side.

The ambiguous character of the Duc d'Anjou at times gave much hope to the Protestants; the Cardinal de Chastillon brought forward the idea of a marriage between him and Elizabeth of England. The same idea was broached by the Vidame of Chartres, who was one of the leaders of the Huguenots. We find in Count la Ferrière's volume a long letter from the Vidame to the Constable de Montmorency, in which he sets forth the advantages of this union and the dangers which would arise from a marriage between Elizabeth and an Austrian archduke. "Monseigneur," says he, speaking of the Duc d'Anjou, "might, with the help of the King, his brother, and of England, and by means of the Prince of Orange, obtain the confiscation of Flanders by feudal right for felony committed. And thus the house of Austria, which builds for itself the hereditary empire, would find in one moment two brothers, kings as powerful one as the other, as a check on his ambition, in league with all the Protestant chiefs of Germany." In this letter you will find the secret of the foreign policy of the Huguenot party: alliance with England, with the German Protestants, with the house of Orange, and the annexation of Flanders, of what is now called Belgium, with France. It was the policy of Coligny, it became the policy of Henry IV.; but after Henry IV. this policy was so completely abandoned that Richelieu could only revive it in some of its parts.

Catherine de Médicis was flattered with the idea of the union of her most beloved son with Elizabeth; but the duke himself wrote to his mother that "he would never marry Elizabeth, even if she wished it—d'autant qu'il a toujours mal ouï parler de son honneur, et en a veu des lettres écriptes de tous les ambassadeurs qui y ont été, et qu'il penserait être déshonoré et perdre toute la réputation qu'il a acquise." The true motives of the disinclination of the Duc d'Anjou are still mysterious. It is quite clear that Elizabeth thought seriously of this union; she asked Catherine to send a special ambassador for this negotiation. Catherine chose Guido Cavalcanti, who had long interviews with Cecil and with the Queen herself. Lamothe-Fénelon, who was ambassador, kept a record of all this negotiation. Elizabeth would sometimes speak seriously of the marriage, and consider its political aspects; then she would speak "of the beauty of the Duc d'Anjou, of his person, of his hand, one of the finest in France." She added with melancholy that in a few years, when he would still be perfect, she would be old, and her days would be spent in "a sepulchre of tears." Had they spoken to the duke of her foot, of her arms? She was excessively fond of flattery, and the French ambassadors lavished all their praise on her charms.

Paul de Foix was sent as an ambassador, and we see in his despatches that Elizabeth was very unmanageable on the subject of the Catholic religion; she said that she could not allow its exercise in her kingdom, "that she would rather die than see it." The Duc d'Anjou was not disposed himself to cede on this point; he claimed some rights for a Catholic; he did not conceal the fact that it did not please him to be "not the king, but the husband of the queen." In short, the negotiation did not make much progress, and finally for the Duc d'Anjou Catherine de Médicis substituted his brother, the Duc d'Alençon, as a candidate for the hand of Elizabeth. Elizabeth did not admire the Duc d'Alençon as much as his brother; he was of small stature, and his face had kept the traces of the small-pox. Alençon boldly offered himself, and sent his favorite, La Mole, to press his suit. Coligny showed himself favorable to this marriage; he was in the midst of the great projects which he had formed against the Spanish Netherlands. The marriage of Henry of Navarre with Marguerite of France was in accordance with the same projects. Catherine was decoying the Huguenots, and everybody knows how the marriage of Henry of Navarre was the opening scene of the great drama which ended in the massacre of St. Bartholomew.

At the time of the massacre the negotiations between Elizabeth and Charles IX. were progressing very favorably. If Elizabeth decided on going to war, Charles offered to help her with 200,000 ducats. He would himself invade the Spanish Netherlands. Such was the state of things when some fishermen brought the first news to Rye. A few Protestants, escaped from Dieppe, arrived in England; in an instant the English people became persuaded that the negotiations about a marriage between Elizabeth and the Duc d'Alençon, the marriage of Henry of Navarre, the overtures made to Coligny by the King, were a part of the same abominable plot. The first despatches from France to Lamothe-Fénelon arrived only on the 3d of September. The Queen was then at Woodstock. She kept Lamothe-Fénelon waiting for three days at Oxford, and then she received him with much ceremony, surrounded by all the members of her

Council and all the noblemen of the Court. Her face was sorrowful and stern ; she asked him in a few words if there was any truth in the strange rumors which were coming from France. The ambassador said that a sudden danger had left the King only a moment for reflection, and that an extreme necessity had obliged him to sacrifice the life of the admiral in order to save his own. Elizabeth answered with much majesty that she hoped that the admiral and his friends were even more guilty than the ambassador intimated, as such a massacre needed a justification, and she had very much at heart the reputation of a king whom she would have liked to love and honor as if she was his own wife. Lamothe made a few more phrases : he denied the premeditation of the act, its connection with religion ; he promised that the edicts of tolerance should be respected ; he hoped that nothing would alter the friendship between the two crowns. Elizabeth answered that she was very much afraid that those who had estranged the King from the Protestants would try to estrange him from her ; she added that many people said loudly that the marriage proposed to her had for its object a similar undertaking in England. Lamothe-Fénelon imprudently said that he hoped that the Queen would still, as she had promised to do, send an ambassador extraordinary to France for the confinement of the Queen. "God forbid," said she, "that I should send over the Earl of Leicester and the High Treasurer, as their lives would be in danger." Thus ended this important interview, which was the signal of a complete estrangement of the two courts. Elizabeth was a true queen on such occasions ; she had seen at once that all was over with Catherine de Médicis, that she had nothing to hope from the house of Guise, which had now become omnipotent.

Saint Bartholomew marked a sudden, a fatal change in the policy of all Europe. Schomberg, who was in Poland, trying to place the Duc d'Anjou on the throne, wrote : "My negotiation is vanishing into smoke." Holland, England, none of the Protestant princes of Germany, could any longer look upon France as an ally against the house of Austria. The Duke of Alva foresaw at once that England would no longer join her policy with France's. When Catherine wrote again to Elizabeth about her son, the Duc d'Alençon, she wrote in answer "that she could no longer hear without tears the enormous excesses of the kingdom of France ; that her advisers shut their ears at the sound of all they heard ; that it would not be decent for her to look to France for a husband, that her subjects would not permit it, and that some of her advisers even went so far as to say that any such proposition coming from France was a mere mockery." The negotiation, however, lasted still some time, but Elizabeth was much more ready to give an audience to the Protestant envoys than to the minions of the Duc d'Alençon.

Correspondence.

ENGLISH STUDIES AT HARVARD.

To the Editor of The Nation :

Sir : A writer in the *Atlantic Monthly* for September, after mentioning with approval a remark recently made by President Eliot, of Harvard University, to the effect that a thorough and elegant mastery of the mother-tongue is the one thing essential to culture, falls foul of the instruction in English given at Harvard, which he accuses of being curiously slight. Other colleges are included in his reprehension, whether justly or not I have no knowledge, but so far as his strictures relate to Harvard they proceed from profound misconception. English, this writer says, is at Harvard "a humble attendant on other studies, counting almost as a supernumerary. There are professorships of rhetoric and of English literature, but they are held in light esteem, I believe, by the other chairs of the Faculty." He is wholly mistaken ; and since what he says appears in the pages of the *Atlantic* it is worth while to correct his errors by a statement of the English instruction now given at Harvard. The candidate for admission is "required to write a short English composition, correct in spelling, punctuation, grammar, division by paragraphs, and expression" (Catalogue). A number of standard works are named in advance from which the subject for the composition will be taken. During further examinations in college a proper attention to the language he uses is exacted of each student and in every study. All Sophomores pursue and are examined upon a course of rhetoric and punctuation; they are obliged to write six themes, at stated intervals, during the year. Themes are subjected to a detailed correction both of manner and matter, and every fault or shortcoming noted in pencil. The student is then required to present a corrected copy, together with his original theme. If this is unsatisfactory he is made to try again. The Junior, who is required to take a course of logic, has also a similar course of themes, though of a larger scope ; in addition to this he has four forensics to write for another instructor, in which attention is paid to correctness of argument and originality of thought as well as to grammar and construction. In the Senior year there are four forensics to be written, usually on questions of politics, government, or political economy. The award of a degree is dependent upon satisfactory performance of the tasks above enumerated. Further than this, Professor Hill has an elective in which advanced instruction in rhetoric is given, with practice in writing, and a study of the best English authors. I need hardly mention Prof. Child's electives in English literature and their value. Of the critic's statement that these professors are held in light esteem, the remark which he quotes from President Eliot sufficiently disposes. The statement that the English electives are "made easy" is a misstatement ; it is well understood that Professor Child's department is shunned by "idle students." Other assertions it would be quite as easy to disprove, but I venture to encroach on your space only to correct the foregoing, which are fair specimens of the loose statements contained in the *Atlantic's* article. K.

New York, August 18.

Notes.

Macmillan & Co.'s new net Catalogue of the Clarendon Press Series of Educational Works (noticed in the *Nation* of June 20) will be ready in a few days, and will be sent free to teachers on application. Their Supplementary Catalogue, which is a part of this, announces among other works in press a new edition of the Anglo-Saxon Dictionary by Joseph Bosworth, D.D., late Professor of Anglo-Saxon at Oxford, completed by T. N. Toller, A.M., Lecturer on English Literature in Owens College, Manchester. Other fall announcements of the same firm are a third series of Dr. Freeman's 'Historical Essays'; 'Collected Lectures and Essays' and 'Seeing and Thinking,' by the late Professor Clifford; 'Darwinism and other Essays,' by Mr. John Fiske ; Mrs. Burnett's 'Haworth's' ; and 'Private Theatricals,' by Lady Pollock (Art-at-Home Series).——Murray announces 'The Moral Philosophy of Aristotle,' by Walter M. Hatch, and a second edition, with additions, of the late Mr. Grote's 'Aristotle.'——Longmans & Co. will soon publish revised editions of Professor Tyndall's 'Heat as a Mode of Motion' and 'Researches on Diamagnetism,' and a new series of Helmholtz's 'Popular Lectures on Scientific Subjects'; also an essay on 'Foreign Work and English Wages, considered with Reference to the Depression of Trade,' by Thomas Brassey, M.P.——Among forthcoming publications by Lippincott are 'Rabelais,' by Walter Besant, and 'Schiller,' by Andrew Wilson, concluding the "Foreign Classics for English Readers" Series ; 'The Climate of America; its Influence in Health and Disease,' by Professor Pepper, of the University of Pennsylvania, assisted in the section on Medical Topography by Dr. John M. Keating ; and 'The Miscellaneous Writings of Francis Lieber, LL.D.,' in two volumes octavo.——Edward Stern & Co., Philadelphia, have in preparation and will shortly publish 'The Political Economy of Democracy,' an essay, by John Lord Peck; and 'First Step in Chemical Principles,' by Prof. Henry Leffmann, M.D.——A revised edition of the 'Descriptive Catalogue of the Pompeian Museum at Fairmount Park, Philadelphia,' has just been published by authority of the Park Commission. It contains fuller information than the first edition, and is appropriately supplemented by a list of works relating to Pompeii for consultation.——The New York Local Committee upon the Harvard Examinations for Women again call attention to the scheme, which our readers know has proved an entire success. Preparations for the winter work are now beginning, and persons who desire complete information concerning the studies and the examinations—which will take place May 26 next—should address the secretary at 59 East Twenty-fifth Street.——The *Cornhill Magazine* for August contains an article called "Leaves from the Laurels of Molière," written curiously enough without any knowledge whatever of the work of the past fifty years, and indeed much as it might have been in the last century. It accepts all the rash assertions of Grimarest, of Voltaire, of the 'Ménagiana,' and of kindred compilations. It ignores all the researches of Beffara, Bazin, Soulié, Campardon, and Loiseleur. The writer seems never to have seen a good edition of Molière, like Moland's or Despois's.

—The September *Lippincott's*—which for the rest is light enough reading—has an interesting article entitled "De Lauzun, De Fersen, and Marie

Antoinette," by Mr. John Austen Stevens, based on the volume by De Fersen's grand-nephew, Baron de Klinckowström, of which ample account has been rendered in our own columns. The inferences which Mr. Stevens draws from certain letters of De Fersen, while they are ingenious, are at the same time so strictly impartial as to seem almost not pertinent; one asks himself which side of the main question Mr. Stevens is on after all. This is especially true of what he has to say concerning De Lauzun. But herein resides the charm of his essay; and, in any view, the reader is provided with data from which to draw his own conclusions in so far as there are any to draw. There are various kinds of literary and historical gossip, and so many of them are worse than valueless that it is worth while to call attention to the happy manner in which a graceful pen can treat a rather unpromising subject.

—Mr. Trollope's essay on Hawthorne in the September *North American Review* is mainly noteworthy for a characterization by Hawthorne of Trollope's novels, which is quoted from a private letter and warrants reproduction: "Have you ever read the novels of Anthony Trollope?" Hawthorne wrote. "They precisely suit my taste; solid and substantial, written on strength of beef and through the inspiration of ale, and just as real as if some giant had hewn a great lump out of the earth and put it under a glass case, with all its inhabitants going about their daily business, and not suspecting that they were made a show of." It would be difficult to describe Mr. Trollope's "wholesome" works in more precise and felicitous language than this. It seems curiously to annoy Mr. Trollope, however, particularly the allusion to beef and ale, and he is betrayed into referring to it now and then in the course of his essay by the same nervousness which possibly made it as impossible for him to omit to quote it as to forget it. There is, to be sure, nothing very severe about it, and most of Mr. Trollope's admirers will doubtless admit that it contains very good grounds for their admiration. But, apparently, Mr. Trollope is a trifle exasperated by reflecting upon its truthfulness on the one hand, and on the other upon the total lack of imagination which it charges. He consoles himself by remarking that, in reading Hawthorne, "For a time, at least, you have been free from the mundane touch of that beef and ale with which novelists of a meaner school will certainly bring you into contact," and by such subtle insinuation as "No one will feel himself ennobled at once by having read one of my novels." The reflection is irresistible that it must have cost him a pang to refrain from italicizing the "at once." Nevertheless, the reader will not regret this exhibition of sensitiveness on Mr. Trollope's part. For, after reading the critical part of his book upon Thackeray, it is impossible not to conclude that what makes Mr. Trollope's literary criticism worth reading is not what he says about his subject, but what he discloses concerning himself. What he says about Hawthorne here—about "The Genius of Nathaniel Hawthorne," as his article is entitled—is of the slightest value; it is safe to affirm that it would not have been printed anonymously, not only because of its omissions, which include mention of what many people will agree with Hawthorne in thinking his most artistic performance, but because of the commonplace of most of its statements. What he discloses concerning himself is chiefly his utter unfitness to write about Hawthorne at all. A writer whose critical equipment consists of unsympathetic analysis, and who lacks the imaginative faculty, is never a sure guide, it is probable; but he is especially untrustworthy when he writes of a mind so "lopsided" as Mr. Trollope maintains Hawthorne's was. He infallibly misses nice distinctions, misses the delicate drift of 'The Marble Faun,' for example, or passes over entirely a work like 'The Blithedale Romance,' which is not more "lopsided" than romances of the beef-and-ale sort, unless it be argued that ideality implies lopsidedness. Perhaps, after all, this is Mr. Trollope's notion, however.

—Several of the daily papers have announced the appointment, by United States Commissioner of Education Eaton, of Henry Hurlbert, a son of the president and a graduate of the last class of Middlebury (Vt.) College, as a travelling commissioner to go to Europe and examine the systems of education in Great Britain and the Continent. It is perhaps within the limits of possibility that Mr. Henry Hurlbert is an accomplished French and German and English scholar, and a young gentleman of acute powers of observation and discrimination. But it of course goes without saying that it is, in the very circumstances of the case, impossible that he should have had the special training and experience absolutely indispensable to the work for which it appears he has been selected, and which, it is assumed, has never been done before. It is far more likely that people will esteem General Eaton, who gave the Phi Beta Kappa oration at Middlebury this year, guilty of an outrageous piece of favoritism in providing for President Hurlbert's son a chance to travel in Europe at the expense of the Government. General Eaton may perhaps be impervious to such criticism, but we should think the president of an American educational institution would take an interest in the cause of American education deep enough to prevent his connivance at anything so excellently calculated to bring discredit upon it as such an appointment. If we are not to look to the presidents of our colleges gradually to bring it about that education shall more and more seem a serious and practical matter to the American public, the problem becomes at once unexpectedly complicated.

—The Cincinnati Public Library has lately published a catalogue of its dramas and dramatic poems, 192 pp. of double columns, brevier type, the same in size and appearance as its Bulletin of accessions for 1878. The first 100 pp., including 8 pp. of additions, is a catalogue of authors; the remainder gives the titles of the plays by languages, and of these 7 pp. or 14 columns are titles of French plays, 19 pp. or 38 columns of German. As is natural, one turns first to the deficiencies, and wonders why it was not thought well to add the 'Théâtre de Campagne' and 'Saynètes et Monologues' to the library before printing. The catalogue, however, is easy to consult, and the large type is an advantage in that way; but it is somewhat uneven in execution, and calls for criticism in the matter of so-called library analysis—*i.e.*, the proper cataloguing of authors and titles in collections as well as otherwise. For instance, 'Plays for Private Acting, translated from the French and Italian,' the volume in the Leisure-Hour Series, is catalogued under Plays, and the contents there given; but the different plays are further catalogued neither under authors nor titles, a very serious omission. So the plays in Bloch's 'Volks-Theater,' the 'Bibliothek Vaterländischer Schauspiele,' and Wallner's 'Thespiskarren,' are catalogued under the titles but not under authors. These three collections are in the additions, and very likely it was not possible to catalogue them at that stage of the printing; yet in the first printed part of the work, under Parlor Theatricals, we find plays by Frank Cahill and George Arnold, who are not in the list of authors; and, on the other hand, although "All is Fair in Love and War" is among the titles, the other five acting proverbs in the same collection are not. It is difficult to decide what principle has been followed in this matter of analysis. The plays mentioned under the titles "Ludus Coventriæ" and "Chester Plays" are not found under the titles, nor the plays in Kühne-Harkort's 'Kinder- und Puppentheater,' although a general reference is made from the authors here included to the collection (catalogued, by the way, not under Kinder- und Puppentheater, according to the reference, but under Kühne-Harkort). Mary Healy's plays are not entered under the titles, nor Henry and Aug. Mayhew's. Mayhew's is a volume of acting charades, and perhaps it was not intended to catalogue charades under the titles; but, if so, we should think that in a series of classified catalogues such as the Cincinnati Library is publishing it would have been desirable to put together, in different groups, charades, proverbs, children's plays, and other such matter which is now scattered about in the catalogue with no clew to it. In the list of titles, under "A Conjugal Lesson" one is not referred to Steele's 'Book of Drawing-room Plays,' in which it is also included; and the same is true of Mrs. Charles Kemble's "Personation," although the reference is made under "Fairly Taken In." This last is the alternative title of "Personation," which is one of the few plays that appear under both of their titles, another serious defect in the catalogue. Plays with double titles should be entered under both titles. Collections also are insufficiently treated. Although the plays in them specially catalogued are all easily found by the library attendants, because their shelf-numbers are marked against them, yet the presence in the library of most of these collections is known only by the list of abbreviations, or the references to them after the names of the plays by the initial letters of their titles. This is true of the Shakspere Society Publications, Ancient British Drama, Lacy's Acting Plays, Classici Italiani, and very many other collections. Again, there is as much reason for giving the contents of the 'Classische Theater-Bibliothek' under that title as of enumerating the contents of Bloch's 'Volks-Theater,' and the same applies to 'Theater-Correspondenz,' 'Theater-Specialität,' 'Deutsches Theater,' etc.; and instead of cataloguing these collections with made-up English titles, and as having no title-page, we should think it would have been advisable, in case books were not at hand to furnish the information, to send to Germany for the proper titles, dates of publication, publishers' names, etc. The 'Classische Theater-Bibliothek aller Nationen,' by the way, is a fine work, neatly printed, and a very desirable addition to libraries that aim at a collection of German literature.—Cincinnati, in June, established a branch library, its first, in Cumminsville, about five miles distant from the main library. The

catalogue, classified and very summary, appears to enumerate about four thousand works therein contained, for which the main library probably had a good nucleus in its duplicates. This branch, looked down upon by the heights of Clifton, of which, however, it is not a part, will undoubtedly secure donations from the residents of this beautiful suburb. Mr. Henry Probasco, who gave to the city the famous Tyler-Davidson fountain, is already the donor of a number of important serials. But, of course, as a branch it is not likely to divert to itself donations at the expense of the general library.

—It was not to be supposed that Mr. Matthew Arnold would neglect the opportunity presented him by the London visit of the French actors—the opportunity of emphasizing again the weakness as an absolute maxim of the catchword, "The state had better leave things alone." Long ago, in an essay on education, Mr. Arnold pointed out that this catchword differed essentially from such universal maxims as "Duty is the law of human life"; and remarked neatly that "Some things the state had better leave alone, others it had better not." The theatre, as a great educational force, influencing the social life and manners of a nation, is naturally to be classed with the latter, and in the current *Nineteenth Century* Mr. Arnold argues that the lesson of 'The French Play in London' is to be summed up thus: "The theatre is irresistible; organize the theatre." He reviews the history of the English drama, and says that when the system of privileged theatres was found to have grave faults, instead of remedying these "we gladly took refuge in our favorite doctrines of the mischief of state interference, of the blessedness of leaving every man free to do as he likes, of the impertinence of presuming to check any man's natural taste for the bathos, and to press him to relish the sublime." The English theatre was left to take its chances, and its present impotence is the result. The visit of the French company, he says, shows Englishmen not only what is gained by organizing the theatre, but what is meant by organizing it. The gain is in keeping before the public the classic drama, and "pieces of truth and beauty which emerge here and there among the questionable pieces of the modern drama," and giving these in perfection; even the questionable pieces lose something of their vice in the hands of such actors—"the acting carries us into the world of sound and pleasing art, if the piece does not." The method is indicated in an examination of the organization of the Français. One of the points emphasized is the need of a school of dramatic elocution. Mr. Arnold supposes the French actors advising their entertainers in this regard as follows: "'Your best and most serious actors' (this is said with a smile) 'would have been better if in their youth they had learnt elocution.'" And, as Mr. Arnold is fond of a two-edged rapier, he makes them conclude: "So you will restore the English theatre, and then a modern drama of your own will also, probably, spring up amongst you, and you will not have to come to us for pieces like *Pink Dominoes*."

—Indeed, the most profound Anglo-Saxon distrust of Mr. Arnold's bias of anti-patriotism and turn for the French cannot well complain of this essay; he compares French and English dramatic poetry in a way which can hardly fail to please the most patriotic of his countrymen. He begins by defining poetry as "simply the most delightful and perfect form of utterance that human words can reach," and after an exposition of this he concludes: "So that, on the one hand, from the absence of conspicuous genius in a people for poetry, we may assert the absence of an adequate poetical form," and the converse. In either way French poetry fares ill at Mr. Arnold's hands. Molière, "by far the chief name in French poetry, . . . is actually most satisfactory in his prose," because of Molière's lack of the highest sort of poetic power—of power which would have enabled him to find a more adequate form of verse than the rhyming Alexandrine, with "its incurable artificiality, its want of the fluidity, the naturalness, the rapid forward movement of true dramatic verse." This is all, we confess, unsatisfactory to us. Doubtless Mr. Arnold's conclusion is just—Molière is certainly inferior to Shakspere, and the French Alexandrine is certainly "incurably artificial." Nor is Mr. Arnold to be accused of arguing in a circle, to which at first glance he may seem open. The trouble is that he is arguing at all; one is reminded of his "I have a profound respect for intuitions, and a very lukewarm respect for the elaborate machine-work of my friends the logicians." His premise about poetry does not go far enough for a major premise, one feels; whereas the same proposition used in a fluid, passing, approximate way, would have been far more convincing. His illustrations and comparisons are admirable, but the argument in which they are used as examples proves too much. Between his definition of poetry and his argument from inadequate poetic form Mr. Arnold is driven to call Corneille and Racine as insufficient as Pope, and to deny that Victor Hugo is anything but a great romance-writer like Scott. Here again one is reminded of an earlier utterance of Mr. Arnold: "One poet may be a greater poetical force than another, and yet have a more unequal style." If we change the word "unequal" to "inadequate" we may apply this remark to his comparison of Corneille and Racine to Pope, or we may apply it just as it is to his association of Victor Hugo with Scott. Who doubts that Corneille is a greater poetical force than Pope, and Hugo than Scott?

—A somewhat singular case has just been tried in England, to which the London *Times* gives a column or two with becoming gravity. It illustrates, the *Times* says, "the uncertainty for persons not acquainted with art as to the authorship of paintings even by living artists and bearing the signature of the supposed painter." A certain zinc manufacturer bought of a picture-dealer at Bury St. Edmund's a picture which he supposed to be the work of Thomas Sidney Cooper, R.A., and for which he paid £25. It turned out spurious, and he sued for recovery. The witnesses were himself, the dealer, and Mr. Cooper. He testified that the dealer had warranted the genuineness of the painting, which the dealer denied, and made the counter charge that the plaintiff had purchased the canvas "on spec." The painter made a more entertaining witness. The picture was not his, he said, "nor any part of it"; the value of it was "about the value of the canvas"; "no respectable dealer would have such a thing in his possession," and he estimated its worth at "about 2*s.* 6*d.*" This was hard on the plaintiff, as the jury found for the defendant, and the former is now in very much the position of the "curious impertinent" who asked the expert opinion of a bank-teller as to the genuineness of a bill and had it returned to him with "counterfeit" stamped upon it in indelible red ink. It was also ungenerous on Mr. Cooper's part, since he got a fee of £5 5*s.* for testifying to its worthlessness, and it appeared afterwards that he had given similar opinions as to 142 of 153 works ascribed and submitted to him; from which it is fair to presume that he derives a respectable revenue too easily to risk it by allowing his vanity to get the better of his prudence. We should say that after reading Mr. Cooper's heated testimony, during which he exclaimed of the painting: "Sir, it is a dreadful thing. It is an insult to me to ascribe it to me," persons with suspected Coopers on their hands would be excessively shy of consulting him. There is another moral, involving the unwisdom of proceedings under any section of "the baby act," which zinc manufacturers about to set up as virtuosi would do well to consider. That which the *Times* draws is also obvious, it must be admitted.

—It will be remembered that about two years ago it was announced that the remains of Columbus had been discovered in the cathedral church of Santo Domingo, where it is certain that they were interred in 1540, and from which place it has been believed that they were transferred to Havana in 1795, upon the occasion of the cession of Santo Domingo to the French. The evidence in the case was referred by the Spanish Government to the Royal Academy of History of Madrid, which has just made its report, adverse to the alleged discovery; and the grounds of the decision are clearly set forth in a monograph by the distinguished publicist, Sir Travers Twiss. The transference of the remains in 1795 was made with the utmost caution and with great formality and solemnity, so that it would require overwhelming proof to conclude that a blunder had been made, and the wrong body carried. Now, the sarcophagus discovered in 1877 was, it is true, inscribed with the name "Cristoval Colon," but he is called "Baron," which title the great admiral did not bear, while his grandson of the same name, who, it is known, was also buried in this church, was, through his mother, of noble lineage. There are several other inscriptions on and within the sarcophagus, mostly abbreviated; and one of these (*D. de la A. Per Ate*) has been interpreted as "*Descubridor de la America, Primer Almirante.*" It is easy to show that the grandson of Columbus, in the inscription upon his body, would never have spoken of the New World as *America*—a name which was never used in Spain until 1672, and which the family of Columbus would have been the last to adopt. The letters of the inscriptions, moreover, do not belong to the period at which the body was deposited there. On the whole the reader cannot but agree with Sir Travers Twiss "that the evidence at present forthcoming is insufficient to displace the established belief." He apparently does not think it a part of his duty to do more than establish this negative conclusion; for, although he hints at fraud, he does not make any direct charge. He does, however, show a motive on the part of the Bishop of Orope, the voucher of the discovery: "the report [of the Academy] suggests that the judgment of the Bishop of Orope may

have been unduly biassed by his desire to procure the beatification of the great admiral, respecting which a postulant has already submitted his petition to the Holy See, and by his hope that the shrine of Columbus in Santo Domingo would become a place of pilgrimage for mariners, as famous in its way as the shrine of St. James the Elder at Compostella, in old Spain." It is hard, on any other theory, to account for the inscription: "*Una parte de los restos del Primer Almirante D. Cristoval Colon Descubridor.*"

—Signor Giuseppe Colucci has just published at Genoa in three volumes the reports of the ambassadors of the Genoese republic at London relating to the American Revolution ('I casi della Guerra per l'independenza d'America narrati dall' ambasciatori della republica di Genova presso la corte d'Inghilterra nella sua corrispondenza ufficiale inedita, per G. Colucci. Vol. i. 2 parte, vol. ii. Genova, 1879. New York: B. Westermann & Co.) The first part (*prefazione*) is a concise history of America from the editor's pen, in 489 pages. The second part begins with the official correspondence of Francesco Ageno, the then Genoese ambassador at London, containing his reports to the *serenissimi signori* of the Council of the Ligurian Republic, from May 4, 1770, to Dec. 26, 1777 (557 pages). Volume ii. brings these down to Dec. 12, 1780, in 810 pages. Colucci says (vol. i. 1, p. 484) that these letters, preserved in the state archives at Genoa, are perhaps the only official documents which Italy possesses relating to the American Revolution, and that they will prove useful not only for the annals of the United States, but also for the history of Italian diplomacy; and he adds, concerning Ageno, that he "at no time deceived himself (*non s'illuse mai*) about the causes or the chances of the war," and points to Ageno's remarkable letter of August 25, 1775, in which he says, concerning the Philadelphia Congress and its enactments, that "they are no evidence of (*non dimostrano*) an accidental or transitory rebellion, easy to suppress; rather, of an undertaking conceived long before (*immaginato da molto tempo*), pursued with vigor, and till now sustained with intrepidity." A man whose judgment at this early stage of American independence is so fully confirmed by subsequent events has certainly written more things worth knowing, and we regret that we must dismiss him with this short notice.

ALBERT GALLATIN.*

II.

BORN at Geneva on the 29th of January, 1761, Albert Gallatin was descended from an old and essentially aristocratic Swiss family. There was no better stock in Europe. Patriotic, intelligent, simple in tastes and strict in morals, uncontaminated by great wealth, and living in that society of which both Gibbon and Voltaire have left us such attractive pictures, the Gallatins had for generations filled all positions of civic honor and duty, or had gone forth to seek their fortunes in every military service in Europe. One of them, for instance, as Mr. Adams tells us, commanded a battalion under Rochambeau at the siege of Yorktown. Left an orphan at an early age, young Albert Gallatin was taken charge of by an intimate friend of his mother, by whom he was educated and ultimately, at the age of fourteen, sent to the Academy of Geneva, from which he graduated with high honors in 1779.

His academical course was, however, the turning-point in Gallatin's life. Naturally himself a sober-minded and very practical man, with little of the visionary about him, he there became intimate with two young fellows, Serre and Badollet by name, who were thoroughly impregnated with the teachings of the French philosophy. The war of American independence was then absorbing the attention of Europe, and these young gentlemen conceived the idea that the unsophisticated wilderness was the field in which human nature, freed from social trammels, would achieve the best results. So two of them ran away to America; and the third, Badollet, presently followed. It was a foolish escapade, and Gallatin alone struggled through, redeeming his fortune by a late though total abandonment of his youthful ideals; poor Serre died in 1784 of the West India fever in Jamaica, and Badollet remained buried in the wilderness.

Arriving in America in 1780, almost wholly without means, Gallatin and Serre at first drifted about Boston, of which place, as it appeared to young Swiss eyes, the former in one of his letters gives us an amusing glimpse:

"Les habitans n'ont ni délicatesse ni honneur ni instruction, et il n'y a rien de trop à l'égard de leur probité. . . . On s'ennuye fort à Boston. Il n'y a aucun amusement public et beaucoup de superstition, en sorte que l'on ne peut pas le dimanche chanter, jouer du violon, aux cartes, aux boules, etc."

From Boston they found their way into the veritable wilderness of Maine, where they passed, not unenjoyably, both a winter and a summer. Exhaustion of means brought them back to civilization, and Gallatin then earned for a time a slender living as an instructor of French in Harvard College. Serre now parted from him to go to his death in the West Indies, and Gallatin himself presently went to New York, and thence to Philadelphia and Richmond. Having now inherited a portion of his patrimony, and still clinging to his ideal of the wilderness, he purchased, after personal examination, a vast tract of land among the mountains of Western Pennsylvania, and there proceeded to bury himself and poor Badollet, whom he had summoned to his side. This was in 1786, when he was twenty-five years of age. The rest of Gallatin's life was passed in getting out of the youthful scrape in which he had thus involved himself.

The wilderness ideal was, however, as Mr. Adams well points out, the key to Mr. Gallatin's subsequent political life; it was the echo of that French philosophy which was the bond of sympathy between himself and Jefferson, and caused them both to labor for the establishment on this continent of a new political system, "broad as society itself, . . . providing for and guiding the moral and material development of a new era—a fresh race of men." The Whiskey Insurrection, which for the moment threatened to destroy Gallatin's political prospects, brought him into political prominence, and his inherent ability afterwards kept him there. His knowledge, his education, his integrity, his clearness of head and singleness of purpose, were needed; and the part they enabled him to play in our politics from 1801 to 1815 was second in importance to none.

It does not need to be said that it is as Secretary of the Treasury during the administrations of Jefferson and Madison, and as such the not unequal successor of Hamilton, that Gallatin will be known in American history. As a minister of finance he cannot be ranked lower than the first class. He was great enough to be perfectly simple. Any one could understand his system, and he himself, by a species of intuitive wisdom, at once saw through all those economical juggles by which smaller men deceive the public as well as themselves. He would have nothing to do with them. He administered the Treasury of the United States as it never has been administered before or since,—as part of a great scheme for the general amelioration of his countrymen, and through them of mankind. By systematic frugality and spending less than the revenue, he proposed to pay off the public debt, and then the surplus was to be remitted in taxation or applied to great projects of national improvement. This was all. The curious part of it is that he both failed and was wrong; he wholly overestimated what was humanly practical under our political conditions. Yet neither at the time nor since has any one ever doubted that he was a great man; in its very massive simplicity his handiwork bears the stamp of greatness. He was, however, much before his time; indeed, it has not yet come—if it ever does come.

In reality it is the story of his failure that Mr. Adams tells, and he tells it with great spirit and ability, interspersed at times with a controlled eloquence which is made doubly attractive by its admirable taste. In this portion of his book, and that relating to the Treaty of Ghent, either from a fortunate lack of original material or because it became too dull even for his digestion, Mr. Adams emerges from under the mass of it and takes up the narrative himself. There are 250 pages (pp. 300–550) of this matter, and in everything which goes to make up first-class historical work it would not be easy to find anything superior to it in the many recent volumes devoted to American, or, for that matter, to other history. It causes a positive sense of aggravation that a narrative so vigorous and interesting should be securely buried under such a load of clumsy and unattractive detail before and after.

Covering as it does the bitter period of national humiliation which preceded the War of 1812, the story is exceedingly amusing as Mr. Adams tells it, but one still unpleasant for an American to read. The redeeming power of faith in mankind, and the influence, as far-reaching and continued as it is subtle, of personal magnetism, never in fact received a greater illustration than in the hold that Jefferson has retained on the admiration of the American people. Naturally his administration should be associated with memories of a character which no people likes to recall. With the world full of combatants, all of whom, as Lord Sidmouth expressed it, looked upon the United States as "a country in which there is little authority in the rulers, and as little public spirit and virtue in the people," the President of that country expressed his foreign policy, and invited England's kick and France's cuff by writing, "I do

* 'The Life of Albert Gallatin. By Henry Adams.' Philadelphia: J. B. Lippincott & Co. 1879.

not believe we shall have as much to swallow from them as our predecessors had." The expression was a most happy one. For eight long years the chief business of America as regards foreign nations was leek-eating; and while, Fluellen-like, it meekly ate its leeks, now at the hand of England and now at that of France, the Government helplessly drifted into a war for which no preparation was made. Jefferson, Madison, and Gallatin were all, in fact, guilty of the unpardonable sin of not realizing that with nations no less than with individuals self-respect is worth something. They did not have the excuse of the New England Federalists, who—the "Copperheads" of 1812—looked upon England as society's one barrier against French propagandism, and, in the frenzy of partisan strife, lost every spark of national spirit. Yet these last never were forgiven by the country, and will be gibbeted in history, while the former, who mildly bore the insults until they became wholly unbearable, and then landed the country, all naked and bankrupt, in a war from the natural results of which it was saved only by the rising spirit of the young West, in which the Administration had not the slightest confidence, and the gallantry of that navy which it had done its best to destroy—these men, because of their other qualities, the country, forgetting its years of humiliation, holds in highest honor. It is well, also, that it should be so, and the popular instinct is right. The mere fact that the ideals could not be carried out did not detract from their nobleness or human sympathy; for the rest, as administrators who blundered into a war with an antagonist immeasurably their superior in strength, Jefferson and his successor had the great political merit of luck. The country acquitted itself well, and they got and will retain the credit for it.

We have no space to refer to the internal history which Mr. Adams now for the first time gives of the negotiations which preceded the treaty of Ghent. Neither are they longer of any great historical importance. This part of his work, however, is perhaps the best done of all, and in it very interesting and life-like glimpses are given of J. Q. Adams and Henry Clay, as well as of Gallatin. As regards J. Q. Adams's diplomacy, his grandson, for fear of seeming prejudiced in his favor, shows some disposition towards leaning over backward. Unless we are very much mistaken, when it came to dealing with Englishmen there was a sort of fiery, self-willed downrightedness about J. Q. Adams, as about his father and his son, with which neither Gallatin nor his biographer seem to sympathize, but which accomplishes better results than any amount of finessing. More than once in this volume Mr. Adams dilates with keen appreciation on what he calls the "brutal directness" of George Canning's method of dealing with Jefferson's diplomacy, and the way it cowed him. It may well be questioned whether, in somewhat the same way, the stubborn, high-tempered New-Englander had not a keener insight than the more suave and wiley Genevan into the best way of meeting their English opponents. According to Mr. Adams's own account of the negotiations, the famous "This, my lord, means war!" of 1863 was also the key of the situation in 1814. Nevertheless it is quite true that to Mr. Gallatin belonged the chief credit of that most successful negotiation.

The Treaty of Ghent was signed on Christmas day, 1814, and accordingly Gallatin was then closing his fifty-third year. Fifteen years more of diplomatic life, during which he filled with unsurpassed ability the French and English missions, then awaited him, to be succeeded by yet nineteen years of retirement and old age. He died in 1848 in New York, where the Gallatin Bank still preserves his name as one of the most honored in the long roll of great commercial names of which that city may fairly boast. He belongs to a period the history of which is yet to be written. Whether generally read or not, this volume ensures to him ultimately the large space which properly belongs to him in that history.

CORRESPONDENCE OF HECTOR BERLIOZ.*

OF the great musicians who have recorded their thoughts in words as well as in tones it may be asserted that Schumann is the most sympathetic and impartial, Wagner the most profound and revolutionary, and Berlioz the most brilliant and interesting. Berlioz, indeed, disputes with Schumann the honor of being the father of musical literature proper; and if his musical compositions are remarkable for their brilliant and original instrumentation or sensuous coloring, no less is this true of his writings, which, in imagination, wit, sarcasm, and champagne-like sparkle, often remind one of Heine and the best French writers. The vivacity and spontaneity of his literary work is all the more remarkable because much of it was done under pressure, and gave him infinite annoyance. The poverty which lasted almost to the end of his life compelled him during twenty years to write criticisms for the *Journal des Débats* at one hundred francs apiece, and he has given numerous indications of the tortures to which he was put by his duty of analyzing and describing ephemeral operas and operettas which he would have preferred to see in the infernal regions, and which the dignified position of his paper did not even allow him to speak of in the terms which, in his private opinion, they deserved. In his letters he often speaks of his "stupide tâche de critique, la seule qui me soit laissée à remplir dans notre cher pays," and expressions like "damné feuilleton," "abominable feuilleton," abound in them. But if he was obliged to make some concessions to popular taste in his criticism—a thing which he never did in his compositions, where he was as stubborn and self-willed as Beethoven and Wagner—he never went beyond a certain limit, to avoid passing which he cultivated a most subtle kind of irony and sarcasm, in which he is one of the greatest masters on record, so that his essays may be recommended as models for all who wish to perfect themselves in this effective style of composition.

As Berlioz was from the beginning an ardent advocate of liberal opinions in art, a ferocious enemy of routine and the tyranny of tradition, it was inevitable that his criticism and his sarcasm, published in a leading organ, should give offence to the conservatives, who, in musical institutions, in France as well as elsewhere, usually represent the powers that be, and who invariably require thirty years longer than the rest of the world to adapt their unplastic brains to the altered environment due to the advent of a new genius. To the sting of his "damné feuilleton," accordingly, must be chiefly ascribed the fact that, while in Germany, Russia, and even England, Berlioz repeatedly reaped abundant laurels when personally conducting his compositions, in France almost every attempt to assert his claims proved a complete fiasco; so that after several trials he got tired of throwing away the money he had earned abroad in an ineffectual endeavor to educate the unwilling ears of his countrymen. And yet such was his patriotism, and almost canine attachment to cruel Paris, that he would gladly have sacrificed his foreign triumphs for others nearer home. This sentiment finds repeated expression in his letters. Thus, in 1846, when he was invited to Vienna to take the vacant place of Weigl, director of the Imperial Chapel, he refused blankly, because it would have cut off all his chances of making an occasional sojourn in Paris. "In regard to this subject," he writes to a friend, "I have made a curious discovery, which is that I have Paris so much at heart (Paris—that is to say, you my friends, the people of culture who live there, the whirlpool of ideas into which one plunges) that at the mere thought of being excluded therefrom my heart has failed me, and I have realized the pangs of exile."

His love of Paris, however, did not prevent Berlioz from using his lash on it on all possible occasions, sometimes with a violence almost sufficient to justify the charge of what Spencer calls the bias of anti-patriotism. "In England," says Berlioz, "at least the *desire to love music* is real and persistent," but from the Parisians it is impossible to obtain the attention requisite for a solemn and sad composition. "Les jugements de la presse et du public sont d'une sottise et d'une frivolité dont rien ne peut offrir d'exemple chez les autres nations. Chez nous, le beau, ce n'est pas le laid, c'est le plat; on n'aime pas plus le mauvais que le bon, on préfère le médiocre." The last four words perhaps throw some light on Matthew Arnold's aphorism: "France, famed in all great arts, in none supreme." One of his letters to Morel Berlioz winds up with the bitter phrase, "Le choléra existe, on le sait, pourquoi la musique Parisienne n'existerait-elle pas?" Another bit of pessimistic realism, almost worthy of Zola, is the following, dated London, March, 1848: "Les arts en France sont morts maintenant, et la musique, en particulier, commence déjà à se putréfier; qu'on l'enterre vite! Je sens d'ici les miasmes qu'elle exhale. . . ."

Had Berlioz known that even after his death ten years would elapse before his countrymen would become convinced of the injustice done him, he might have belabored them still more heavily for not even giving him a fair chance to introduce to them his compositions—those compositions of which he wrote so touchingly to Schumann: "Et puis, vous le dirais-je, je les aime, ces pauvres enfants, d'un amour paternel qui n'a rien de spartiate, et je préfère mille fois les savoir obscurs, mais intacts, à les envoyer au loin chercher la gloire ou d'affreuses blessures et la mort." But the Parisians have at last opened their eyes and fulfilled the prophecy of Berlioz, that they would ultimately go to the mountain which had refused to go to them. The Berlioz revival of the last season was one of the most extraordinary phenomena of the sort ever witnessed. Had Berlioz risen from his grave or fallen from the sky in a meteoric

* 'Correspondance inédite de Hector Berlioz. Avec une notice biographique. Par D. Bernard.' Paris: Calmann Lévy. 1879.

rock (*à la* Thomson and Helmholtz) to conduct a series of his concerts, the excitement could hardly have been greater. Several of his colossal works have been repeated over and over again, and, now that the people have once had experience of their grandeur, in the strictest sense of the word, they will not again let them pass out of sight, any more than the Swiss would be willing to part with their Alps. Indeed, the works of Berlioz present in structure, spirit, and dimensions the appearance of a mountain-chain amidst the forests and meadows cultivated by the other musicians of his country. "Had he been an architect," says Liszt, whose admiration knows no bounds, "he would have built pyramids, gardens of Semiramis, Roman amphitheatres"; and Heine, who was no trained musician, but whose artistic sense commonly served him as guide, compares the impression produced by his music to the extinct monsters of early geological epochs. Such music, appealing as it does pre-eminently to the taste for the grand and awe-inspiring, is hardly adapted to the ears of Frenchmen, who naturally prefer the graceful, pleasing, and piquant, and to whom even the more allied Händel, Mozart, and Mendelssohn long remained distasteful, while Beethoven's works were at first universally pronounced to be "bizarre, confused, disconnected, bristling with harsh modulations and crude harmonies, totally lacking melody, extravagant in expression, too noisy, and terribly difficult to execute"—as we are told by Berlioz, one of whose greatest deserts lay in the strenuous efforts he made through his whole life to acclimatize the music of Beethoven in France.

If we take these things in connection with the enmity aroused by his criticisms, and the undeniable difficulty of almost all his works, it is surprising, in truth, that the Parisians have taken Berlioz to heart so soon instead of letting him slumber for another century or so, as was the case with Bach in Germany. To those not admitted behind the scenes the recent Berlioz revival is a pure mystery; but the explanation is simple enough, and withal quite interesting. It is well known that although (perhaps because) there are not a few points of resemblance between Berlioz and Wagner, they have mutually expressed rather unfavorable judgments of each other. Jealousy evidently had much to do with the matter, for both had the ambition to be the inheritors of Beethoven's genius, Berlioz endeavoring in his choral symphonies to "take up music where Beethoven had left it," while Wagner interpreted the Ninth Symphony as hinting at a necessary connection between words and music, thus leading to the music-drama as the highest form of art. That in the case of Berlioz, at any rate, jealousy was the chief motive of his animosity is rendered clear as day by pp. 270–283 of the correspondence now before us, which present a vivid picture of the rage, envy, and despair that filled his breast when he found that "Tannhäuser" had been accepted for performance at the Opéra, which had so long persisted in refusing to accept his own "Troyens," his favorite work, on which he had placed so many hopes. He does not in the least conceal his delight at the unprecedented uproar to which the performances of "Tannhäuser" gave rise, and which not even the Emperor could subdue. Berlioz endeavored to show his contempt by delegating his critical duties on this occasion to a friend. His sentiments, however, are revealed in his letters of that date, as a few sentences from them will show: "Wagner fait tourner en chèvres les chanteuses, les chanteurs, et l'orchestre et le chœur de l'opéra. . . . Liszt va arriver pour soutenir l'école du charivari. . . . Wagner est évidemment fou. Il mourira comme Jullien est mort l'an dernier, d'un transport au cerveau. . . . En sortant, sur l'escalier, on traitait tout haut ce malheureux Wagner de gredin, d'insolent, d'idiot. . . . La presse est unanime pour l'exterminer. Pour moi, *je suis cruellement vengé*."

But Berlioz was greatly mistaken in regard to this "cruel revenge." Had he known what was to happen in this strange world of ours he would have used all the influence of the *Débats* to keep "Tannhäuser" on the boards, for it is to the author of that work that Berlioz owed his favorable reception in Paris last winter. We are not joking; far from it. We are aware that next to Bismarck no man is more cordially hated in Paris than Wagner. We are also aware that until a few months ago every attempt to introduce one of his works there resulted in a popular disturbance. And yet our paradoxical assertion is true beyond a shadow of doubt. The chief portals of Paris have indeed remained closed to Wagner, yet he long ago got in by more than one backdoor. With the partial exception of Massenet, all the young French composers have been strongly influenced by his scores, and have shown this influence partly in the way of open plagiarism and partly in a legitimate assimilative fashion. The public has become aware of this fact, and has frequently urged that it was about time to know Wagner at first hand. Hence the favorable reception of "Lohengrin" at Pasdeloup's, and hence also the Berlioz *furore*, which without Wagner would have been impossible so early as the year 1878. *Voilà tout!* Strange as are the ways in which the irony of fate often manifests itself, it surely must have learned a lesson from Berlioz before it was able to execute such a master-stroke.

The agreeable fact at any rate remains that justice has at last been done the great French symphonist, and people have discovered that the favorable verdict so many years ago passed by Schumann, Liszt, Bülow, and other equally competent judges, this time, for a wonder, turned out to be correct in spite of the opposition of the professional critics and the comic papers. And one of the most noteworthy results of this change in the direction of the wind has been the publication of the lively correspondence from which we have been quoting in this notice. It consists of one hundred and fifty-six letters to friends of the author, including such names as Liszt, Bülow, Wagner, Schumann, Ferdinand Hiller, etc. For Berlioz had no lack of distinguished acquaintances. According to Stephen Heller, he counted among his earliest admirers Victor Hugo, Lamartine, Dumas, De Vigny, Balzac, Delacroix, Ary Scheffer; and all the young and unappreciated geniuses gathered around him as their leader. To the 'Correspondance' the editor, M. Bernard, has prefixed an introduction of sixteen pages, which gives all the biographical data needed for an intelligent perusal of the letters. They range from the author's sixteenth year to shortly before his death (1819–1868), and thus constitute almost a complete biography in themselves, or, at any rate, a valuable supplement to his 'Memoirs.' Berlioz belonged to that class of writers who do not reserve all their happy thoughts for articles intended for the press, but endeavor to make their private correspondence equally interesting; and though he mostly writes about his own experiences, his own tastes and feelings, we may say that he could not easily have found a more fascinating subject to write about. Selfishness in men of genius is one of the cardinal virtues, and fortunately they usually have a good share of it notwithstanding the popular superstition to the contrary.

FRANCE UNDER FOUR EYES.*

BOTH the ladies whose books are cited below made the Exposition of 1878 the occasion of their going to France, and their stay was nearly of the same length, from three to four months. Except in these particulars, and that they might have met in Paris, a great difference exists between the regions visited by the two authors, the circles in which they moved, their respective points of view, and their literary performances. To Miss Betham-Edwards France was an old story, and a tour through Brittany had resulted in a work on 'Western France,' to which, in the present sketches, frequent allusion is made by way of contrast. Her holidays began in July, in the department of Seine-et-Marne, whence she passed abruptly to the Doubs, Jura, and Ain, and there her excursion terminated, apparently in September. Quite otherwise with Mrs. Gibbons, who landed at Dieppe on the 27th of April, and sailed homewards from Antwerp in mid-August, her chief fields of observation having been Paris, the Puy-de-Dôme (as we guess), not far from Clermont-Ferrand (Charbonnière ?), and, as we are told without disguise, the Nord, besides Antwerp and its vicinity, for which but nine days were available. Miss Edwards's tour was a sort of picnicking, in which she was "welcomed at every stage, and pioneered from place to place by educated ladies and gentlemen delighted to do the honors of their native place." Mrs. Gibbons everywhere paid her own way, and her principal aim, "to describe the citizen of Paris and the farmer of France," was fulfilled with very little association with the cultivated classes. Miss Edwards is an Englishwoman anxious to repair the deficiencies of Murray, and who, at the princely château of the Rothschilds at Ferrières, suggests "to the generous owner of this noble treasure-home of art that the briefest possible catalogue of his choicest treasures would unspeakably oblige his visitors." Her American sister from Philadelphia sometimes forgets that that city is not all of the United States, as when, being informed in the Nord that the school-children pay for their books: "I tell him that our scholars do not." Miss Edwards frequently contrasts unfavorably the towns of England with those of the same size in Eastern France in respect of their dependence upon the capital for theatres, museums, libraries, and other means of culture and enjoyment. Mrs. Gibbons's comparisons are seldom disparaging to her native country, and generally reveal the Yankee gift of discerning "improvements." Thus, she notices "the want of

* 'French and Belgians. By Phebe Earle Gibbons, author of '"Pennsylvania Dutch" and other Essays.' Philadelphia: J. B. Lippincott & Co. 1879.
'Holidays in Eastern France. By M. Betham-Edwards, author of 'Kitty,' etc.' New York: Harper & Bros. 1879. Half-Hour Series.

a little bell" in the communal school, and says of some bunks in a horse-stable: "In the two sleep four men. It seems to me these beds are too short"; or again, of the soldiers' enforced idleness in the barracks: "Could not the people collect journals for them, as is done among us for those in hospitals?" With a lecturer who "speaks of America, of our country, and of emulating our example, and thinks they may yet excel us," she shakes hands in the antechamber and tells him frankly, "that I do not think they will excel us," for causes assigned; but "the slender, gentlemanly Frenchman answers not."

Miss Edwards, with her somewhat too frequent "airily and coquettishly perched" town or fortress, is before all a picturesque tourist. Mrs. Gibbons, on the other hand, perhaps never once deliberately records a prospect in the painter's sense. Here is her nearest approach to it:

"Close by [the cemetery] there is a wind-mill. There is, too, a view. I had spoken of it before; I want to see it now. 'Don't you have views in your country?' rather coolly asks Mrs. Salmier. Nevertheless, I get upon the bank where the wind-mill stands, and look around to count the villages. The bright western sun prevents my seeing very well; but there is a view of the whole country round. We can count six villages. . . . If we could get to the top of the wind-mill, and had a telescope, could we not see forty villages?"

Both ladies are good Protestants, and equally alive to the demoralizing effects of Catholicism. Miss Edwards, we may infer from a passage like the following, would not stop long to argue the question. At the Bernardine convent in Jouarre—

"I had a little talk with the Sister in charge of the porter's lodge, and she took me into the church, pointing to the high iron rails barring off the cloistered nuns, with that imbecile self-satisfaction as much inseparable from her calling as her unwholesome dress."

Mrs. Gibbons has many amicable religious controversies with her Catholic acquaintances, and if she feels that she has got the better of them on the point of omitting image-worship from their version of the Commandments, she is not offended when she draws from them their opinion that Protestants are more impious than Jews. So she can be complimentary to Sisters whose manners in showing her their school are not up to the American standard of politeness:

"There is no effort to show me anything at all. I see no maps nor blackboards; but perhaps I do not stay long enough. When one is not invited to sit down, and when a person stands waiting upon you, it is not very easy to see and do much, especially if that person limits her own conversation. . . . As we are going I notice the pretty flowers in the yard, and the Sister says that they tend them themselves; it is recreation for them. I had before told her of having been at Paris, when she quietly took off her blue apron. What a nice-looking young woman she is!"

Mrs. Gibbons's adventures in seeking admission to the public schools, in Paris and in the provinces, are among the most amusing portions of her narrative, as may be imagined. But her persistence was in general more than a match for traditions, prejudice, and red-tape. In dealing with social topics, whether domestic arrangements or sexual relations, there is in the American book a striking absence of prudery. Such plainness of speech is not often met with in an authoress, and may for that reason appear a little shocking to those in whom there is an excess of prudery. Moreover, if Mrs. Gibbons can record of the Belgian clergy that "a regulation has been passed forbidding their having women-servants under thirty or thirty-five years of age," the more proper Miss Edwards can say of the soldiery: "Householders in Lons-le-Saunier will tell you that, no matter whether their female servants be young, middle-aged, or old, they have to bar and bolt their doors at night as if against marauding Arabs in remote settlements of Algeria," and the rest. Neither writer alludes to the laws of inheritance as a social factor.

Our holiday tourist makes no complaint of a want of familiarity with the language. But Mrs. Gibbons no sooner sets foot on the soil than she is reminded that "you may have studied French for years, and scarcely understand a word of the babel which strikes the ear on landing"; and she constantly prefaces the information she receives in conversation with "I understand"—the understanding being subject to candid correction a few pages later on, when her knowledge of the idioms has improved. This gives an air of *naïveté* to her diary, but it also argues an honest motive and so far inspires confidence, while the minuteness and particularity of her enquiries recommend her daily jottings beyond Miss Betham-Edwards's generalizations. Some surprises Mrs. Gibbons does not fairly get over, as that the countrywomen in France wear caps and not bonnets, that as a rule only one pig is kept on a farm ("I begin to ask whether I shall ever see more than one," she remarks in Belgium), and that the geography of the globe is so little known to the *grande nation*. We may as well conclude our notice of a really instructive book, not devoid of a certain Quaker humor, by quoting from pp. 320, 321 the following passages, the first of which relates to a certain primary history in use in a communal school in Central France:

"Here are another question and answer, which I commend to observation: 'What did God create on the fifth day? The birds and the fishes.' Then this remark follows in fine print: 'It does not seem natural to us that God should have made the birds come out of the water, but who can explain the thoughts of the Almighty? Let us believe and adore.' About ninety pages of this little volume are given to sacred history, two hundred and forty-six to France, and fifty-five, in fine print, to other nations. The Egyptians, Scythians, etc., are mentioned, but our own continent is not described.

"I also see a little geography [approved in 1836], which Henri tells me is now in use, by the same F. P. B. It gives seventy-three pages to France, about two to Great Britain, over nine to Italy, and one to the United States. There is, also, a little description of the characters of different nations. After mentioning the people of the Soudan, the author tells us that the aborigines of the northern countries of America have preserved almost all the usages which they had before the invasion of Europeans; the Iroquois, the Hurons, the Illinois, the Canadians, etc., are intrepid, agile, and great hunters; they worship God under the name of the 'Great Spirit.' Then he speaks of the Esquimaux. The next mentioned are the Mexicans, who are said to be tawny, handy, laborious, mild, loving the sciences, and, above all, the arts. Then we come to the Orinocos, and the Chilians are mentioned; but what I have just given is all that there is about the people of the United States."

Short Notes on the Greek Text of the Acts of the Apostles. By J. Hamblin Smith, M.A., of Gonville and Caius College. (London: Rivingtons. 1879.)—The writer of this little commentary has made many references to Thucydides, and "thinks it certain that the author of the Acts was very familiar with the Sixth Book," in which the Sicilian Expedition is described. He conjectures that "in anticipation of, or in consequence of, his visit to Syracuse St. Luke studied with great care that portion of the history"; and adds that "this supposition alone will account for the large number of words and phrases common to the Acts of the Apostles and the Sixth Book of Thucydides." This certainly is an interesting and alluring speculation; but, after a more careful examination than the work deserves, we conclude that another supposition will fit the facts equally well, namely, that Mr. Smith has himself been lately reading portions of Thucydides with great care, and has indulged in a superfluous exercise of the historical imagination. Out of a score or two of coincidences which he adduces, we find that he has only collected meanings of words which are common also to Herodotus, Xenophon, and Diodorus, and constructions which are the universal usage of the language. Of genuine parallelisms in style or idiom he offers us hardly a trace. When two Greek writers of different antiquities use ἀΐρειν in the sense of *to weigh anchor*, or χωρίον in the sense of *a farm*, or ἀδικῶ in the signification of the perfect tense, or the familiar construction of the relative attracted to the case of its antecedent, there is no *imitation* involved in the coincidence; they are simply using the common furniture of the language. Yet these are the kind of coincidences which Mr. Smith notes. In the eighteenth chapter of the Acts we read: "And Paul after this *tarried* yet *a good while*, and then *took leave* of his brethren"; and again, in Ephesus: "He *bade* them *farewell*." Now, it is quite possible that the colorless expressions we have italicized may occur more than once in Tyndale, or in Latimer's sermons; it is quite unnecessary to assume that the translators of King James's version borrowed them from Latimer or Tyndale. Such idioms are not characteristic, they are common property. In fact, therefore, Mr. J. Hamblin Smith has only been unconsciously proving over again what every scholar admits already. It is conceded that the author of the Acts and of the Gospel of St. Luke uses a diction and a style more classical than the authors of the other Gospels. Whether his favorite reading was Xenophon, or Diodorus, or Thucydides, it would be idle to conjecture or to attempt to prove. He does, in fact, use one construction, the genitive of design or purpose with the infinitive, which is rather a favorite with the latter author; but he uses it much more frequently and with a latitude which shows the decadence of the language. Beyond this there are no traces of a style so marked and individual as that of Thucydides—a style whose influence is so readily detected in the later historians and rhetoricians.

The book contains some brief and useful historical and grammatical notes. It is remarkable, however, for ignoring every other commentary, and for a whimsical mixture of explanations which could only be necessary to the merest beginner, and of references to the classics which presume advanced and extensive reading.

A History of the War Department of the United States, with Biographical Sketches of the Secretaries. By L. D. Ingersoll. (Washington:

Francis B. Mohun. 1879.)—The origin of this book is found in the destruction, during the present summer, of the building used for nearly sixty years by the War Department, in view of its removal into the new building for the State, War, and Navy Departments, and the desire of the present Secretary of War that a permanent record might be made of some of the associations which cling to the old structure. It is much to be regretted that this most interesting task was not committed to some one who had longer association with the War Department and experience in military affairs, or at least whose general ideas of American history would have prevented him from asserting such flagrant nonsense as that "Hamilton was the most unscrupulous political intriguer our country has ever had." The author has been for somewhat more than a year the librarian of the War Department, and has previously written 'Iowa and the Rebellion,' 'The Life and Times of Horace Greeley,' and other works belonging to the ephemeral literature which passed for history during and just after the Civil War. The present book has many of the faults of that class, but it is nevertheless the first permanent continuous record of the origin and development of one of the most important executive departments of the general Government—a department which has been administered during portions of its existence by Knox, Monroe, Calhoun, Marcy, Davis, and Stanton, as well as by Scott, Grant, and Sherman for short *ad interim* periods. In such a department and its operations during our three great wars of this century, its influence in opening up the great West by its pioneer explorations and by subduing and civilizing the wild Indian, there certainly lies abundant material of the greatest interest, and most intimately connected with the salient features of our general history. Moreover, whatever tends to familiarize the public with the growth and present status of the bureaus of our military establishment, and the service of the small regular army which we tolerate rather than foster, is of no less service to the public and the legislators who spring from it and frame our military policy than to the Army itself. In this way this book serves a very useful purpose. It shows plainly the lack of system prevailing in military administration during the Revolution and till after the war of 1812, and its attendant disastrous results; it does proper justice to Mr. Calhoun, who, whatever his political errors, was the first great administrator in the War Department, who placed the Department on a proper basis, which has needed no change except in details to this day, and whose arguments as to the military policy suited to our necessities are as applicable and as conclusive to-day as when enunciated sixty years ago, although, unfortunately, they are unknown to the greater number of the ever-changing members of the military committees of Congress.

In its biographical sketches the book has hardly any value beyond a mere record of dates and names; for a judgment which speaks tenderly of Belknap, uses the language we have quoted in regard to Alexander Hamilton, and calls W. H. Crawford, of Georgia, the greatest Southerner after Washington, Marshall, and Calhoun—ignoring Jefferson, Jackson, and Clay—such a judgment will surely be accepted by no one as a guide in estimating the character of public men.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 4, 1879.

The Week.

THE "National Greenback-Labor Party of the State of New York" assembled with great difficulty at Utica last week. The successful organization of the Convention was not secured till Saturday, Friday up to midnight having been spent in discussing delicate points of parliamentary law, in arranging to pay for the hall, and in admitting the proper delegates from this city. It did not appear that these last, of which there were three sets, were any of them "regular" or irregular, but the question at issue concerned the political affiliations of each set with organizations of real importance. The Convention seems to have been decidedly puzzled to decide between these which was likeliest to sell out the ticket about to be nominated. According to the *Times*, which takes a disinterested view of the matter, as the Republicans are not supposed to be involved, a happy result was attained, and "the men who composed the meeting are to be congratulated upon the fact that they refused all the overtures which were made to them by Tilden and Company on the one hand, and Tammany Hall on the other." "Sensibly declining to be the tools of either side," the votes they represent will at least not be cast for the Republican candidate's most dangerous opponent. The venerable Mr. Richard Schell was mentioned as a candidate for Governor, but the honest and horny-handed sons of labor "literally hissed the Tammany schemers out of the hall." Finally, the Convention nominated Harris Lewis, of Herkimer County, and president of the Farmers' Alliance, for Governor, and a full State ticket. The platform is, in the main, the usual greenback deliverance, but distinguished by the addition of some extraordinary resolutions intended to cheer up Kearney "in his heaven-inspired work," charging "our opponents" with being "really the red-handed Communists," and commending Kearney's recent restraint of the California mob from attacking the same. Apparently Kearney's "peace-policy" has produced a temporary transformation of "the Commune," which is altogether the best thing he has done.

At this writing there is still nothing but uncertainty as to what will happen in the Republican Convention at Saratoga on Wednesday, and, as the result will be known before this reaches our readers, speculation about it is useless. Mr. Conkling is said to stand firm for Cornell, for many years one of his leading henchmen, but possessing no hold on the party beyond what the Machine gives him, and the Senator's friends are confident of his nomination, but talk of Judge Robertson and Mr. Starin in case their anticipations are not realized. Cornell was the Naval Officer of this port who telegraphed about the "impudence" of the Union League Club in opposing Mr. Conkling's Presidential pretensions before the Cincinnati Convention, and who set the President's civil-service order at defiance. His nomination for the governorship of the State the year before the Presidential Convention would be perhaps the most striking bit of defiance to the reform element in the party which has yet been uttered. No one believes in his heart that he could draw out the full Republican vote of the State; but we must say there is nothing in the results of Mr. Conkling's past experiments on the party to forbid his trying this one. Vice-President Wheeler has appeared on the scene to oppose the nomination.

The Tammany Committee on Organization has issued a manifesto against Mr. Robinson of the most pronounced description. It is evidently the composition of some one who has had educational opportunities not open to most of the committee, and is not at all in the peculiar style of ordinary Tammany addresses. It is, in fact, modelled on the Declaration of Independence, and consists mainly of an enumeration of the various acts of oppression and usurpation committed throughout the State by Mr. Robinson. He is denounced as having been "a party to the coalition by which the Democratic party was defeated last November"; as presenting the horrid spectacle of the first Governor of the State who "has abused his judicial power for partisan purposes"; as having "removed one Democrat from an office to which he was elected by the people upon charges so slight that in another case he dismissed the same charges, although resting upon the same proofs." By his action with regard to the Police Commissioners, he has "endangered the peace, the property, and the lives of our citizens, by weakening their chief protection against vice and crime," and he now proposes, "by the appointment of the inspectors of election, to obtain control of our ballots." He has made himself liable to impeachment by consenting to the removal from office "without a hearing" of citizens "who could only be removed for cause." Finally, he is "a Trustee of the Mutual Life Insurance Company of New York." In fact, no thoughtful person can examine the manifesto without seeing that as a cold-blooded and heartless tyrant George III., in comparison with Robinson, was literally "nowhere," and the only wonder is that the latter has been endured so long without armed resistance. That any section of our people should desire his re-election seems incredible; and yet, as we go to press, the indications seem to be that he has got a majority of the delegates to the Democratic convention under his control.

During the present week the political canvass in Maine will terminate, and on Monday the strength of the three parties which have been conducting it will be shown at the polls. Prediction is as hazardous as it is cheap, and all that can be said is that the Republicans are at least as confident as their rivals. They have put forth extraordinary efforts, and to their home orators, like Blaine and Hamlin, and Hamlin's successors *in petto*, Messrs. Frye and Hale, have joined the leading Stalwarts of the party at large, including Secretary Sherman, Zach Chandler, and Gen. Garfield. The national importance of the election has been insisted on, and in a party sense quite correctly. Maine's example will undoubtedly be felt by the States whose elections come later, and the fate of the Greenback party there will be watched with general interest. In 1876 it polled less than one per cent. of the total vote; in 1877, rather more than five per cent.; in 1878, nearly thirty-three per cent. It acquired this sudden bulk chiefly by swallowing the Democratic party to the extent that it was able; if its capacity has not increased in the meantime, or if it has been obliged to disgorge, its occupation as a party will be gone, and in the Presidential election of next year it will hardly hold up its head. Thus far its existence has profited the Democrats solely, as was no more than fair.

Although he has made no important speech during the week, Secretary Sherman has not entirely surrendered himself to a vacation rest from the active duties associated with his office. He has been relieved by an interview in the Cincinnati *Commercial*, which takes pleasure in rendering justice to the Secretary, of the false imputation of having appointed Confederate soldiers and his own relatives to office; has made a speech to the Cincinnati merchants, disposing of the charge that he had extended the time for withdrawal of the proceeds of the sale of four per cent. bonds from the national banks in order to relieve those institutions; and has made a speech at Lexington, Ky., whither he went upon an excursion arranged in his honor by the Cincinnati Southern Railway Company. This speech had, of course, little political significance, and Mr. Sherman did not improve the opportunity to make any explanations of his official acts or any statements of his personal convictions. Necessarily, therefore, his accomplishment of resumption and the

unreconstructed condition of the South were passed over, and the citizens of Kentucky were instead reminded of the heroic deeds of their ancestors in defence of the infant settlement of Ohio. For this he assured them the people of Ohio were still profoundly grateful, and were trying to make it up to the Kentuckians by building "this well-constructed railroad" through the blue-grass region. Nevertheless he ventured to remark that "these sister States are but a part of a great country," and to hope that they would be "filled with hearts beating warmly for each other in the future." He gave no distinct promise, however, of laboring to this end in his future speeches, when he should be released from the thraldom imposed by the urbanity necessary upon a Lexington race-course.

The Freedmen's Savings-Bank became insolvent in 1874, and special machinery for winding it up was created in the same year, in the shape of a board of three commissioners, at a salary of $3,000 a year each. We commented on this machinery in 1875, calling attention to the fact that no depositor or creditor was empowered under the law to sue the commissioners on their bond for the faithful performance of their duties; that they were not required to report to anybody; that they were not made accountable to anybody, and that their decisions were final. News now comes from Washington that the "winding up" is still going on, five years after the failure; that the most shocking falsification of the books has been discovered, pages having been frequently torn out, and the index to the ledger destroyed; "but unfortunately," says the despatch, "the statute of limitations will prevent the prosecution of the persons responsible for this mismanagement of the affairs of the bank." This is exactly what we expected. The perpetrators of this immense fraud were the members of the Washington Ring, which grew up and flourished under the favor of the White House during General Grant's Administration, and the Freedmen's Savings-Bank was simply one of several nefarious schemes. It is very discreditable to the Democrats that they should not have followed this matter up and thoroughly exposed it. Of the effect of it on the thrifty and intelligent portion of the negro population we need not speak. When a bull-dozer goes after a black man with a whip or a gun it fills him with bodily terror, but it does not shake his faith in the existence of morality itself. But when a band of Stalwarts get together, and, after weeping over his condition, offer to take care of his money for him, and, having got it, divide it among themselves and disappear, it makes him doubt whether there is justice anywhere on earth; and this is very much what the Stalwarts of the bank did. We warrant that every one of the rogues is to-day bewailing the "outrages" at the South, and shouting for a "steady hand at the helm" in Washington.

General Smith created a good deal of excitement among the city politicians last week by returning from the country and issuing a notice to Messrs. Nichols, Wheeler, and French, advising them of the fact, and informing them in formal language that he was "ready for business." He followed this up with a notice to Mr. Morrison, warning that gentleman that he looked upon him as a "trespasser," and demanding an instant relinquishment of his claims upon the police-commissionership. General Smith is the only one of the old Board whose movements are looked upon with any degree of physical fear by the politicians who are opposed to him. Owing to his military reputation, he is regarded by them as a man of blood and iron, who will stick at nothing in carrying out the programme agreed upon with his "counsel." There were at first considerable apprehensions lest he should appear at the head of a large and heavily-armed force of desperate adherents, and drive the peaceful Morrison and the unresisting MacLean into the street, reassume control of the police force, and awe the city into submission. The reporters seem, indeed, to have been considerably disappointed by his announcing that he merely means to take legal measures to assert his rights. Meanwhile Mr. Wheeler has got into more trouble through the stoppage of his salary. On Monday Mr. Cooper notified the Board that the Police Department accounts showed Mr. Wheeler to be in arrears to the amount of about two thousand dollars, received from the sale of buttons, and that Mr. Wheeler was not legally entitled to receive any salary until he should make the deficit good. Mr. MacLean immediately called for a vote, and Mr. Wheeler declining to vote, and Mr. French voting no, and Messrs. Morrison and MacLean voting yes, a resolution which practically had the effect of cutting off Mr. Wheeler's August salary was passed. Mr. Wheeler himself, singularly, afterwards allowed his vote to be recorded in the affirmative, an act which he has not explained, and it is believed cannot.

The yellow fever in the Southwest has increased during the week, and in many places given rise to more excitement than has been exhibited since its first appearance. At Memphis there has been a larger number of cases than usual lately, and that the increase is not serious is attributed to the general exodus, which leaves the city with a much smaller population than that of last year. There have been new cases at Mississippi City and Vidalia and New Orleans, and Mobile is quarantined against the last place. At Houston, Texas, the people stopped a through-train and arrested the United States authorities, who were determined to break the quarantine, which had already been "raised"; the passengers were allowed to proceed, but the city still holds the United States officers, who, nevertheless, assert that they acted under the authority of Governor Roberts, as well as of the general Government. The National Board of Health is said to feel some alarm about the situation in New Orleans, but to be encouraged by the lateness of the season and the sanitary work already performed there. Ten thousand dollars have already been expended in the city by the Board, and it is suggested that a similar amount be devoted to purchasing for destruction infected clothing. The fever has struck a shining mark in General John B. Hood, whose death on Saturday is particularly distressing. He leaves twelve children, all of them under twelve years of age, penniless and completely orphaned, Mrs. Hood having also died of the fever within the month. Since the war—in which it will be remembered he was one of the last Southern commanders to surrender—he had been engaged in mercantile pursuits, and had made a fortune only to lose it in speculation in Louisiana consols.

The American Association for the Advancement of Science held its twenty-eighth annual meeting at Saratoga during the past week. This is, we believe, the first occasion since 1860 on which a place of fashionable summer resort has been chosen for the meeting. The result has been a much larger attendance than usual, especially of the older and better-known members, half the whole number of living past presidents taking part in the proceedings. It is also deserving of note that although the "universe-makers" appear to have been present in considerable numbers, there was somewhat more than the usual proportion of papers by eminent members. Still, it is indisputable that the proceedings of the Association convey no adequate idea of what our leading men of science are doing in their respective branches, and we suggest that an attempt at some improvement in this respect is worthy of the consideration of the managers. Possibly a less formal system of organization, such as that of the German Association of Naturalists, would be found beneficial.

Perhaps the most important financial occurrences of the week were the arrivals at New York of gold sent from London and Paris. These arrivals amounted to $3,100,591; and, according to cable advices, nearly $10,000,000 more gold in one form and another is now afloat on the way to this port. It was not until late in the week that any gold was withdrawn from the Bank of England, previous lots having been made up from arrivals at London and from outside stocks. Although the Bank of England has a remarkably large reserve—close upon 60 per cent. of its liabilities—yet as soon as the stock in its vaults began to be drawn upon, the discount market immediately strengthened, and where a week ago the rate was one per cent. it is now one and a half per cent. On the calculation that further withdrawals of gold would cause a further rise in the discount rate, the market here for sterling bills, which

had fallen half a cent early in the week, recovered the fall, and bills payable on demand closed strong. The gold which has arrived here in the last two weeks has gone into the Treasury when it consisted of double eagles, and to the Assay Office when it consisted of bars or foreign coin, and in a majority of both cases legal-tender notes or Clearing-house certificates have been received therefor, so that the banks appear in the item of specie in their statement to have gained little or nothing. It is evident that the domestic shipments of currency to the West were nearly offset in amount by the gain to the banks on account of the large gold importations. Every dollar that can be got from Europe will evidently be needed to keep the loan market in smooth working condition during the remainder of the year. Mercantile business continues active, and there is a decided revival in almost every branch of manufactures. The price of silver bullion in London declined from 51¾*d.* per oz. to 51⅝*d.* per oz. At the close of the week the 412½-grain silver dollar had a bullion value of $0.8643.

There is no change in the tenor of advices from England with regard to the condition of business. The most prosperous mills not only show no signs of paying dividends, but continue to make reductions in wages. The only sign of revival is in the iron business, which is looking up somewhat. The weather has improved, but not in time to save the crops, which are set down as twenty-five per cent. below the average. The tide of emigration to this country among farmers having more or less capital appears to have set in, and small parties are now arriving. Lord Beaconsfield, who seldom opens his mouth on financial matters without putting his foot in it, has offered a sapient solution of the agricultural difficulty which has excited some hilarity among his enemies. He says land *must* always support three classes of persons—the man who supplies money to purchase the land, the man who supplies capital to work it, and the man who works it; but, as the *Pall Mall Gazette* points out, what he takes for a necessary classification of persons is simply a convenient division of bookkeeping. He does not seem to conceive of the possibility of land being of no value to any one but the man who tills it with his own hands, and who would, therefore, perforce unite landlord, capitalist, and laborer in his own person, which is, in fact, the condition of a great deal of the land in this State.

A strong case has been made for the Irish "Home-Rulers," and notably in an article of Mr. O'Connor Power in a late number of the *Fortnightly Review*, where he shows that their plans, however objectionable, are not irrational. The Home-Rulers, too, in their character of "Obstructionists," are admitted by the editor of the *Fortnightly* to have done good service in procuring through their obstructiveness a valuable revision of the Army Discipline Bill. But the course of some of them, and especially of Mr. Parnell, in the vacation, seems to suggest some sort of insanity. He has just been addressing large bodies of excited peasant farmers in Limerick, advising them to pay no rent until they get a reduction, which so roused the crowd that they "stormed" the platform and had a free fight. One of the landlords of Meath, which Mr. Parnell represents, was shot dead at his own door the other day. In fact, the Home-Rule agitation seems not unlikely to take in Ireland the form of an agitation for the forcible establishment of peasant proprietorship, which would probably in its earlier stages be marked by much bloodshed.

The Zulu war appears to be rather suspended than finished. Lord Chelmsford seems to have pushed on energetically when he heard Sir Garnet Wolseley was coming, in order to achieve something decisive before being superseded, and having fought the battle of Ulundi and destroyed the King's kraal, retired precipitately, producing among the natives, it is now said, the impression that his losses were so heavy that he could not stay. He then resigned and went home promptly; the reason being, it is rumored, that he was hurt by the peremptoriness with which Sir Garnet insisted on his giving an account of his movements from day to day. The latter has had a meeting with the chiefs of Southern Zululand, who surrender and acknowledge themselves beaten, but Cetewayo is at large in the northern forests with a force of unknown size, and it is proposed to try the "anaconda policy" on him by getting the Swazies to attack him in the rear, while the British press him in front. It is acknowledged on all hands that the creation of a government to take the place of that of the King will be a serious matter. Cetewayo did control the tribes, but it is doubtful whether his successor will be able to do so, and anarchy in Zululand might be worse for the white settlers in Natal than the neighborhood of the Zulu army, even when composed, to use Sir Bartle Frere's phrase, of "celibate man-slaying gladiators."

Things in Turkey grow steadily worse. The Foreign Office at the Porte was closed a week or two ago, and the work in it suspended, owing to the refusal of the clerks to go on any longer without pay. Some battalions of the regular army, quartered at Janina, have given notice of their intention to disband for the same reason. In Constantinople itself the representatives of the Powers have had to call the attention of the Government to the increasing insecurity of life and property in and around the capital. The British Minister, too, has had to insist on the removal of the Governor of Erzerum for complicity in, or connivance at, murder, pillage, and arson. The policy the British Government is pursuing of multiplying its consuls in Asia Minor is making more vivid than ever the picture of violence and disorder presented by that province. Nevertheless, in spite of all this, the Turks have actually 160,000 troops under arms in Europe, part on the frontier of Rumelia and part on that of Greece, being apparently still under the belief that they will again be permitted to make war. All this is, of course, very unfortunate for the Tories in view of the approaching dissolution of Parliament. If the Turk would only "pull himself together" and try to walk steadily for a few months, it would be worth any money to Lord Beaconsfield.

It is again announced that the Porte has agreed to accept, without conditions, the frontier line between Turkey and Greece suggested by the Berlin Conference, leaving, however, the question on which side of it Janina lies to be settled by the Commission appointed to draw the line. The difficulty with the Sultan is that Mussulman traditions and opinion require him to yield no territory except to force, so that he waits for the Powers to take him by the collar and drag him out of the region intended to be ceded, in order to satisfy his subjects.

The Pope has issued an Encyclical of great length, showing how, in the early days of the Church, the philosophy and dialectics of the pagans were frequently seized upon by the Fathers and converted into weapons which they used with great effect against paganism itself; how there is no real opposition between genuine philosophy and religious truth; and how in later times St. Thomas Aquinas succeeded in both marking the distinction between reason and faith and "uniting both in the bonds of a mutual amity." The Pope therefore urges on the bishops to cultivate, and cause to be cultivated in every way in their power, "the precious doctrine of St. Thomas" in all seats of learning which they have established or may yet establish, and he adds that this doctrine, far from offering any opposition to the cultivation of the physical sciences, maintains that "the understanding can only elevate itself by tangible things to the knowledge of the incorporeal and spiritual." The Encyclical, which is much soberer in tone than similar documents issued by Pius IX., is only remarkable as evidence that the need of "reconciling science and religion" has at last begun to receive in the higher circles of the Roman Church the attention so long bestowed on it by Protestants. The Pope, however, does not discuss the question himself, or enter into any exposition of St. Thomas's philosophy. He simply presents his writings as the source from which Catholic teachers and writers are to draw guidance in dealing with the special religious difficulties of the time.

THE TWO POLITICAL MYSTERIES OF THE DAY.

WE presume most of our readers are by this time thoroughly puzzled by the place Mr. Samuel J. Tilden holds in his own party, as well as by the accounts given of him in the Republican papers. He has been odious to the Republicans ever since the outbreak of the war, owing to his opposition to it, and, in fact, owing to his outspoken "copperheadism" and his prominence in the Democratic party in this State when it was doing its utmost to embarrass the Government in carrying on the war. During the last Presidential campaign nothing was left undone to make him hateful to all honorable men by accounts of his knavery in private life. He was depicted as a dishonest lawyer, a tricky speculator, a defrauder of the revenue; and an unusual substance was given to the regular "campaign charges" against him by a Government prosecution which was instituted solely for an offence of which fully one-half the men of property in the country had been guilty. The campaign articles, indeed, of some of the leading Republican papers consisted mainly of exposures of his personal baseness, so that before the election it had become one of the signs of good Republicanism to believe all the current "stories" about him. Every Republican reader of the newspapers, indeed, professed to understand the various legal transactions in which Tilden was represented as engaged, with sufficient clearness to be able to follow the thread of his rascality from beginning to end. Towards the close of the canvass the belief in his wickedness had almost taken the form of religious enthusiasm. Many people were satisfied that it was spreading over the whole earth, and that even in the interior of China men shuddered when his name was mentioned. That it had taken complete possession of the public mind in European countries there was no doubt left, for it was announced that foreign holders of United States bonds would sell their securities the minute he was elected, feeling sure that the first act of his Administration would be to take measures for the repudiation of the public debt. Attention was distracted from his character for a brief period during the Presidential count, owing to the necessity of defending the conduct of the Returning Boards, which was severely tasking the strength of Republican moralists. There were even signs of a reaction in his favor, when the cipher telegrams were brought to light. This, in spite of his denials, led to a renewal of the old confidence in his depravity which has lasted until now, and will probably be intensified by the news that he has "unloaded" elevated-railroad stock on his too confiding "ally," Mr. Cyrus W. Field. This act has, indeed, in Mr. Field's estimation, and probably will have in that of thousands of others, an *ex-post-facto* operation, inasmuch as Mr. Field says it convinces him that Tilden *was* privy to the attempts to bribe the Southern electors.

In addition to this wide-spread belief in his moral perversity, there is also a profound confidence in his physical decrepitude. He is represented as a feeble old man, whose nervous system has given way, and whose memory, except for lies, is completely gone. What is more remarkable than these Republican attacks on him, however, is the absence of any vigorous Democratic defence. We do not remember having seen during the past two years a single Democratic apology for him, much less eulogy on him. The Democratic press is for the most part silent about both his defects and excellences. Many acknowledge that there are serious objections to him as a Democratic candidate, and mourn over them. There are none of the usual friendly stories afloat about his love of "the poor man," or the simplicity of his manners, or the peaceful serenity of his home-life, or his legal defence of the widow who was falsely accused of stealing towels when acting as charwoman, or of his love of washing his face in a tin basin at the pump, such as circulate even about General Butler. Nor has he any "magnetism" to boast of. In fact, if we are not greatly mistaken, he is the first man who has run for the Presidency within fifty years whom no one has ventured to describe as "magnetic." No one feels disposed on seeing him to embrace him, or expects him to lend him five dollars, or asks him if he has an apple or peanuts about him. Nor has Mr. Tilden the "bluff, hearty manner" and the nautical utterance which captivate the crowd. In fact, one of the charges against him is that he is "saving" of his voice, and whispers in the ear of his admirers instead of shouting to them "cheerily," as other great political leaders do. Nor is he great on the stump. He has no fame as an orator. He seldom or never exposes the Republican atrocities in glowing periods. Nevertheless, in spite of all this, he is admitted on all hands to be at this moment the most likely man to get the Democratic nomination for the Presidency again. Powerful as Tammany is, and dextrous as John Kelly is, there is a general feeling that Tilden will get the better of them in the long run. When Tilden is understood to be in pursuit of anything, in caucus, convention, or committee, there is a general expectation that he will get it.

This certainly seems a great mystery, and it is a mystery. It is a bigger mystery, but one of the same order, than Conkling's ascendency in the Republican party in this State, and they are both useful mysteries, as illustrating the perfection to which the nominating machinery has been carried, and the completeness with which it may, even under the very eyes of the voters, be separated both from opinions and character. Conkling has never had the charges made against him that Tilden has. In fact, as regards money matters, no reproach has, so far as we know, ever been cast upon him, although we feel quite sure he might have erred very seriously in this direction without shaking his influence. But he, too, is not "magnetic." He does not encourage friendly familiarity with his person. He has a far more imposing exterior than Tilden, but it is a cold and repelling exterior, with which no one feels tempted to take liberties. He has a good cross-roads-store or post-office flow of political gossip and "chaff," but no conversation calculated to impose on the plain people with an appearance of "culture" or profound reflection. His forte in the Senate is the thing which plain people most of all dislike and are most puzzled by—"scorn" expressed in "sarcasm." All of his predecessors from this State—that is, Senators who have easily retained their places for several terms—have been men made famous by their opinions, and by their long association with great lines of public policy. But we believe very few, if any, know what Mr. Conkling's opinions are on any subject except the wickedness of the Democrats. Upon nearly every question in which his State is specially interested he has been carefully reticent. There is, in fact, nothing on the surface of his career to account for his prominence, except his readiness to stump in every canvass previous to the expiration of his own term. In all others his health is apt to give way and he remains discouragingly silent. Nevertheless, in spite of these disadvantages, which are, among politicians, usually considered fatal to success in the political arena of our day, he has his own way in the Republican party in his own State to a degree to which no man before him has probably attained. He gets whatever the State can give him in the shape of office without difficulty. He imposes his will on every convention in the matter of nominations with almost unbroken success. Every year there are mutterings of revolt against him, and once or twice the malcontents have ventured to hold meetings and to give open utterance to their insubordination, but when they meet him face to face in the convention they are forced to content themselves with a platitude or two in the platform, about which he cares little. He does not, in other words, care who arranges the toasts as long as he orders the dinner. He is at this moment engaged in forcing the Republicans to nominate for the governorship of this great commercial State one of his own henchmen, who is only known to the public as a master in the art of low political intrigue, as if to show his contempt for the popular talk about "reform" and the popular complaints of the tyranny of the machine.

The explanation of both mysteries is the same. Mr. Tilden has had much more to contend with than Mr. Conkling, because he is not only laden with more personal defects but has had to create his "influence" without the help of the Government; but they are both masters of the same art. Each has created a "machine" to the perfect working of which he attends carefully, and which, sim-

ple as it seems to the inexperienced eye, represents a large amount of labor and ingenuity, and, in fact, may be called a beautiful piece of mechanism. It consists simply in having in his employ, or under his thumb in each district, the men who have the necessary knowledge and skill to see that the right people attend the primaries, and that the primaries elect the right delegates to the county conventions, and the county conventions to the State conventions. At the State convention, having received the reports of his subordinates, the chief takes charge of the arrangements himself, soothes the irritable, humbugs the simple, bargains with the shrewd, prepares for the public the needed amount of rhetoric, and then rings the bell for the rising of the curtain and the exhibition of the final tableau. Afterwards, during the canvass, all that is needed is to supply the people with a certain amount of declamation, showing that whatever may be our objections to "the machine," or however low our opinion of Tilden or Conkling may be, none can deny that the defeat of the ticket at this particular juncture would be an irreparable misfortune; that if the other side is allowed to go on unchecked in its course even for another year, the destruction of the public liberties or the overthrow of the Government will be the probable result; that the machine can be abolished at any time, but that the country must be saved now; that a party is, after all, not to be judged by the character of its leading men, important as these may be, but by its tendencies and antecedents, and that any one who examines these must see that the Democrats will, if successful, at no very remote period reduce the blacks to slavery and repudiate the public debt, or the Republicans convert the Government into a centralized despotism, and put every man in jail who comes to the polls with a Democratic ticket in his hand; that the question before us is not whether Tilden is a good man or Conkling a good man, but whether this last and greatest attempt for the elevation of mankind shall succeed or fail miserably.

THE SITUATION IN AUSTRIA-HUNGARY.

TWELVE years have passed since the Austrian Empire, after a disastrous shock which brought it to the verge of ruin, was reorganized on a dualistic basis, and transformed into a constitutional Austria-Hungary. In these twelve years Hungary has proved by her parliamentary life that she represents a nation and constitutes a nationality, and Cis-Leithan Austria that she does neither. Nor are these opposite results of the trial in the least surprising. Hungary's admirable geographical position, the dominant or leading part taken by her strongest race, the Magyar, and the influence of her history of a thousand years, are sufficient to counterbalance all difficulties arising from a great variety of ethnological elements and the clashing of their tendencies. The Magyar knows what he wants, and he rules the state which he has created, defended, and preserved in its freedom. Whether Andrássy, Szlávy, Ghyczy, or Tisza leads the Diet, and through it the nation, the aim is always the same, clearly the same, and never lost sight of; and even the means and the methods employed are not essentially different. Croats, Serbs, and Magyar Radicals clamor and threaten, but they are not able to clog the wheels of government, and still less to turn them back.

In Cis-Leithan Austria things are entirely different. *She* has no natural boundaries, no leading race, no really national history, no common aim, no constitutional traditions, and, therefore, no national statesmen either. The bond created by the dynasty, formerly powerful enough to cement together the most heterogeneous elements, is too feeble now, in these days of royalty in decadence, to counteract natural centrifugal proclivities and antagonistic animosities. Vienna is still proud, it is true, of her Burg and her Kaiser, and her own imperial metropolitanism, but her intellectual pretensions have ceased to be Austrian, and have become German; her aspirations are vague, inconstant, and not sufficiently loyal. The Tyrolese still love the house of Hapsburg, but they love Catholicism better, and the Hapsburgs, now constitutional emperors, are no longer the upholders of the faith. The Czechs of Bohemia and Moravia are determined to be loyal only as long as there remains a chance of transforming the monarchy into a confederacy ruled by Slavs, and virtually by themselves. The Poles of Galicia cling to the Austrian throne only so far as it offers a protection against Russia, and not without a distinct protest dictated by their love for Polish independence, and their hope of ultimately restoring their dismembered fatherland. Trieste inclines toward Italy, and Dalmatia is a focus of South-Slavic agitation. These aims and tendencies have their distinct representatives in the Cis-Leithan cabinets, and Auersperg, Potocki, Hohenwart, and Taaffe, at the head of the cabinets, are far from unanimous in their endeavors.

What has made governing and parliamentary life in Cisleithania possible is, on one side, the influence of the Court, whose wishes are still sacred to the majority of the nobility, of the official world, and other pre-eminent classes, and, on the other, the extravagance of the extremes of opposition, leading to frequent boltings, which have given the Constitutional party a majority over all other shades of the Reichsrath. Czechs, Poles, Tyrolese, and Dalmatians more than once have refused to take their seats in a body whose workings they considered antagonistic to their rights or cherished opinions, and the Czechs, firmly believing in Palacky's "We can wait," have spent many years of masterly inactivity in this temporary political self-annihilation. The heads of the various cabinets have had to bend before the will of the Liberal Constitutional element, which, rooted in Lower and Upper Austria, Styria, and Carinthia, drew also considerable strength from the minorities in Bohemia, Moravia, Galicia, and other provinces, where it set Germans against Czechs or South-Slavs, Ruthenians against Poles, and so on. The foreign affairs of the Empire, which are not subject to the dictation of the Vienna or the Pesth parliamentary forum, but decided by delegations yearly deputed by the two parliaments, have, in the meanwhile, been for eight years under the executive control of Count Andrássy, as head of the common Imperial Ministry. This statesman, even under the most embarrassing circumstances, always knew how to obtain from the majorities ruling at Pesth and Vienna the subsidies required for a policy essentially imperial, but based on the view that Hungary forms the nucleus of the Empire, and that her national interests are to be guarded above everything—a policy anti-Russian in spirit, pro-German from calculation, and cautious from necessity.

The adaptation, however, of this foreign policy to the extraordinary, though by no means unforeseen, events of the last years, called for so much reticence, so much manœuvring and veering, that it naturally led to great dissatisfaction on both sides of the Leitha. The occupation of Bosnia, a necessity of the course pursued, was decried in Pesth as a betrayal of the Magyar interest, and n Vienna as a waste of German blood and treasure for adventurous purposes without a definite object. The support of the Upper-House portion of the Cis-Leithan delegation, added to the majority of the Hungarian delegation, which Andrássy's Magyar eloquence knew how to win, made it possible to run the gauntlet in safety; but the Constitutional party of Cisleithania was split into atoms during the manœuvre, and there was no party, nor any fraction of a party, able to take the helm in that division of the dual monarchy. An entire change of base was therefore deemed necessary by the Court, if it were to go on governing at all. The Constitutional party was abandoned by the remnants of the late Adolf Auersperg Cabinet, and a coalition formed before the late elections with the Federalistic, National, and Feudal camps. The Court and the Cabinet threw all their influence into the scale, and the consequence was a disastrous rout of the German Constitutionalists all over the field. The Czechs were triumphant in Bohemia and parts of Moravia, the Poles over the Ruthenians, and Conservatives in many of the strongholds of the Liberals. The new Cis-Leithan Ministry under Taaffe is the first result of the elections. Hungary, of course, remained unaffected by this result of the ballot beyond her border.

The general situation, however, has suddenly become aggravated by the resignation of Andrássy. It is hard, at this distance, to decide whether the many assertions are true which attribute this step

to the ill-health of the Count, or whether to trust the isolated hints that the changed aspect of affairs west of the Leitha, or the new resolution of entering Novi-Bazar, in south-eastern Bosnia, has something to do with the retirement of the statesman to whom the monarchy is so much indebted. Andrássy evidently continues to possess the well-deserved confidence of his monarch, and it is he who, while anxious deliberations are taking place concerning his successor, is still negotiating with Bismarck in regard to foreign matters apparently of grave import. It would be rash to utter opinions in regard to these new apparitions on the diplomatic horizon. One thing, however, is certain: no anti-Magyar policy will be instituted by Andrássy, though he has proceeded, and from necessity may still do so, in a direction not entirely pleasing to his countrymen. An opposite policy must, of course, meet with the stern disapproval of Russia, and there are signs which indicate that Bismarck and his Court are just now greatly out of favor in the surroundings of Gortschakoff and the Tzesarevitch, if not of the Czar himself. While the sky is thus, perhaps, clouding again beyond the frontiers of the Austro-Hungarian Monarchy, what will be the attitude of the majority of the new Reichsrath? Will the Czechs take their seats, and consent to co-operate, if the Magyar influence continues to prevail in the Delegations and the common Cabinet? Will the Poles be moderate enough to give support to a guarded and cautious management of foreign affairs? Will the Constitutional party reunite and profit by the good intentions of Taaffe and his associates to regain a part of its leadership? Will Federals, Nationals, and Ultramontanes form a phalanx against Liberalism? Will the moderating influence of the Court be strong enough to create unity, or at least a semblance of it? To all this a near future must bring an answer.

Centrifugal forces have done their natural work in Cisleithania. But this natural work has its narrow limits. Cisleithania is bound to remain united, and connected with Hungary. The reason is not of a positive, but of a negative, nature. The principal parts tending toward separation are unable to detach themselves. Separate the seats of Liberal Germanism from its associations, and Vienna becomes a provincial frontier-town, which a Hungarian protective tariff will reduce to beggary. Give the Czechs their dreamed-of independence of the crown of Saint Venceslas, and in a few years they will be engulfed in Germany, to lose their nationality for ever. Release Galicia from the hated bond of union with the destroyer of Poland, and in a month she will be swallowed by Russia. Destroy the union between Cisleithania and Hungary, and the monarchy which shields so many feeble nationalities, unable to stand alone, will break down. All this is felt, though not acknowledged, everywhere. The loud talk is all against the monarchy; the logic of history, the fatality of position, is in favor of its continuance.

ONEIDA COMMUNISM.

DISSENSIONS within and public opinion without have combined to force the abandonment of "complex marriage" on the Oneida Community. This "change of the social platform," as it is called, purports to have been made merely "in deference to the public sentiment which is evidently rising against it," and was formally proposed by the founder of the Community. But it appears that the real initiative was taken by some of the younger members, and the rather artificial excitement which found vent in the ministerial Syracuse Conference of last February may very possibly have been instigated by the same party, seeking to strengthen itself by means of external pressure directed against the obnoxious practice.

However it has been brought about, the event is one of considerable significance in the history of fanaticism as well as of American socialism. The Community, henceforth composed of "two distinct classes—the married and the celibates—both legitimate, but the last preferred," possesses scarcely greater interest than the Shaker sect, and its success will furnish only economic lessons. For what remains of the original conception there is no longer any need of Biblical sanction. It takes its place with all other forms of industrial co-operation, and in the future as in the past its failure will in nowise depend on interpretations of Scripture. That, apart from its sexual vagaries, its example has been wholesome and will continue to be, there is little doubt. Its growth, if desired, will certainly be easier; but its numbers will now be more rapidly replenished by natural increase, and as its hold upon those born into it will become stronger, voluntary accessions will probably be discouraged. It remains to be seen, however, whether the present compromise between the family idea and the communal, as respects the rights of persons, will not sooner or later be succeeded by a crisis involving property rights in which no compromise will be possible. As in churches the great value of the "plant" is a powerful incentive to harmony and the suppression of scandal, so in the Oneida Community it may very well have operated to extort a concession opposed to the whole theory of its founder. But it would be powerless against a tendency to convert the Community into a joint-stock corporation, with liberty to withdraw and sell out, which would be a logical development of the individualism and egoism now beginning to be tolerated.

That the split in regard to sexual relations has come with the second generation was only what was to be expected. Nothing but a Chinese wall and the adoption of a conventual stringency could have prevented it. But, to its credit be it said, the Community surpasses all its contemporaries in intelligence; it has always been accessible to visitors; its library and reading-room keep it in much closer communication with the outer world than, for example, the Quakers as a body were or perhaps are wont to keep themselves; its travellers and agents went freely throughout the country; its young men were even sent to college. All this showed a sublime confidence in the soundness of its faith, but a hardly less sublime ignorance of human nature or of the scientific basis of civilization. Nothing is surer than that the Oneida system of complex marriage was a reversion to barbarism—to ways repudiated by the race in its efforts to rise above the promiscuous intercourse of the brutes. All the attention it deserved at the hands of social philosophers was due to this fact, and to one other, that it was justified by an appeal to supernatural sanctions. As a cancer in the body politic it was so palpably self-limited that it gave no real occasion for alarm. Its pretensions on the score of "stirpiculture" did nothing to extenuate it on the one hand, or to raise curiosity on the other. A single socio-physiological feature of some importance was grafted upon it, which consisted in the regulation by common consent of the production of offspring.

What is most surprising in Mr. Noyes's message to the Community is his declaration that he did not regard the hitherto existing social arrangements as "essential parts" of their profession as Christian Communists. He has been saying this, it appears, for a year past. But ten years ago, in his work on 'American Socialisms,' he still held to the doctrine laid down in his 'Bible Communism' in 1848, that "the restoration of true relations between the sexes is a matter second in importance only to the reconciliation of man to God," and that "the sin-system, the marriage-system, the work-system, and the death-system, are all one, and must be abolished together. Holiness, free-love, association in labor, and immortality constitute the chain of redemption, and must come together *in their true order*." Now we are told that the order is of no consequence; "belief in the principles and prospective finality" of complex marriage is still retained, but the institution can wait, and "new wonders of success" are even anticipated because of its suspension. Quite other is the prospect held out on p. 634 of the work already quoted from:

"A Community home in which each is married to all, and where love is honored and cultivated, will be as much more attractive than an ordinary home as the community outnumbers a pair. These principles remove the principal obstructions in the way of Association. There is plenty of tendency to crossing love and adultery, even in the system of isolated households. Association increases this tendency. Amalgamation of interests, frequency of interview, and companionship in labor, inevitably give activity and intensity to the social attractions in which amativeness is the strongest element. The tendency to extra-matrimonial love will be proportioned to the condensation of interests produced by any given form of Association; that is, if the ordinary principles of exclusiveness are preserved. Association will be a worse school of temptation to unlawful love than the world is, in proportion to its social advantages. Love, in the exclusive form, has jealousy for its complement; and jealousy brings on strife and division. Association, therefore, if it retains one-love exclusiveness, contains the seeds of dissolution; and those seeds will be hastened to their harvest by the warmth of associate life."

This passage furnishes a timely admonition to the Community itself, to its neighbors, who have just been congratulating themselves on the change of social platform, and to the prosecuting clergymen who have promised a "breeze of general good-will" in its favor. Immorality, apparently, is just about to begin, and the Community's days are already numbered. Perhaps, however, Mr. Noyes hopes that the little band of celibates will save the organization. He recommends a renewed and

earnest study of the seventh chapter of I. Corinthians, for it was Paul who placed "property in women and property in goods in the same category, and speaks of them together, as ready to be abolished by the advent of the Kingdom of Heaven." One is reminded of Father Miller carefully reviewing the texts on which his calculations of the Millennium were based, after the anti-climax of 1843.

Mr. Noyes's compulsory retreat from a fundamental position strikingly exhibits the weakness of communism. The uniform lesson of the socialist wrecks with which the pages of his History are strewn is, that the strength of a community is in its founder; that if he has executive ability the organization may endure as long as his powers are unimpaired, but that it seldom survives him. Mr. Noyes has, we conceive, outlived his headship. His successor, who should be the Community as a whole, competent to maintain its principles and its business, is the self-appointed head of the party which has become dissatisfied with complex marriage. In other words, there is no real succession. A revolution has taken place: the Community as it was has suffered a mutilation which practically destroys its identity, and will by the coming historian be added to the list of extinct Utopias. Meantime, all must wish well to the industrial experiment from which "everything audacious" has been eliminated.

THE FAILURE OF BRITISH RULE IN INDIA.

LONDON, August 6, 1879.

OUR Indian Empire has at last attracted the attention of the nation. Hitherto the most of us have been content to accept it as "the brightest jewel" in the crown of our constitutional monarchy, and to think no more about it. Knowing nothing of the subject in detail, and repelled by its dryness and difficulty, we cheerfully acquiesced in the official assurances that all was well. As a matter of fact, we knew that blight and corruption had hitherto followed in the wake of despotic governments; that it is of the very essence of such governments to substitute the caprices of individual will for fixed principles of law and equity; that under their shadow intellectual and political capacity are subjected to an inevitable eclipse; that the longer they endure the worse they become. We knew all this, I say, but it never occurred to us to apply our knowledge to India. There we calmly assumed that a sort of political miracle was being worked for our special advantage. A divine commission had been entrusted to us to spread "the blessings of British rule" in India, and we were doing it. In carrying out this divine work an Englishman here and there might have wandered from the strict path of rectitude, but the national heart was in the right place. The natives could not fail to see this and rejoice. It never occurred to us to remember that the rule we had set up in India belonged to the worst order of despotism. There is in despotism no vitality, no progressive power, even when the ruling authority is one in race and language with those over whom it rules. But in India the rulers were a race of aliens divided from their subjects by language, by religion, by manners and customs. There, of necessity, the absence of private friendships, of intermarriage, of familiar social intercourse, prevented any mitigation of the asperity of arbitrary rule. We chose to ignore all these hard facts on the strength of certain vague feelings of benevolence towards India of which we were conscious in ourselves. And thus it has come about that after a century of English rule, carried on to a ceaseless chorus of self-congratulations, we find these effects resulting: a profound gulf existing between rulers and ruled; a peasantry sunk in poverty and indebtedness, and swept away in millions by periodical famines; an increasing debt, an exhausted exchequer, and other indications of an impending collapse. These ugly facts have at last succeeded in forcing the knowledge of their existence upon the nation, and hence the general anxiety and increasing interest about India.

So far our failure to govern India well has been well-nigh complete. We may improve in the future, but we shall not do so unless we not only frankly acknowledge that we have failed, but discern *why* we have done so. I am not hopeful that we shall succeed in discerning the *why* before we have been tried by many bitter experiences. We have failed in India because we undertook a task beyond the compass of human capacity. We were not content to plant principles in the native mind, and allow them to develop in virtue of their inherent vitality; we—that is, a few thousand Englishmen—imagined that we could fulfil the functions of an earthly Providence towards two hundred millions of human beings. The natives were to deliver themselves into our hands like so many corpses, and we were to regenerate them. If in future we succeed, where hitherto we have failed, it can only be by withdrawing from the direct government of the larger part of our Indian Empire. It is frequently remarked that, while in the independent states eminent men rise up in abundance, such as Sir Salar Jung, Sir Dinkur Rao, Sir Mahdara Rao, and others, no such able men are to be found in British India. The reason is obvious: there is no career for them. Our system starves all native ambition and ability till they perish of inanition. Thus there exists in the body of the people neither the energy, nor the knowledge, nor the intellectual capacity to bear up against and rectify the blunders of the officials. What is needed in India is a rekindling of national life in the people, and this can be accomplished only by emancipating them from the cast-iron bureaucracy which holds them in its grip. British rule properly so-called will have to be limited to the rich provinces lying on the sea-coast. The people of these provinces are incapable of standing alone on account of their unmilitary rule. The rest of the countries will gradually have to be formed into tributary states having relations with the paramount power not dissimilar to those which formerly attached Servia and Rumania to the Porte.

I need not say that to suggest such a system in England at present would be to excite incredulity and contempt. The set of opinion, for the moment, is rather the other way. The Indian Government, conscious that it has forfeited the confidence and affection of the natives, regards with fear and antipathy any relics of freedom which are still possessed by them. It desires to extinguish native states, not to call new ones into existence. We are all familiar with this phase of feeling in despotisms which are beginning to be found out. The instinct of self-preservation impels them to make a solitude and call it peace. But, should we revive the policy of Lord Dalhousie, and begin absorbing the native principalities of India, we should merely hasten the day for the carrying out of the opposite policy. For we have failed to administer India because the work was too vast for our powers; if, then, we extend our direct rule over large additional tracts of country our failure in this respect will be rendered still more conspicuous. We shall be compelled to allow the natives to govern from lack of time and strength to discharge ourselves the routine of administration. But these are generalities, and it will perhaps interest your readers if I state precisely some of the defects and difficulties which beset British rule in India.

First and foremost, then, is the want of what Mr. Arnold would call "sweetness and light" in the governing classes. We, with our usual placid assurance, like to speak of British rule in India as an "enlightened-despotism." It would be more correct did we call it a "benighted despotism," for benighted it is in a manner which an American or a European will find it hard adequately to appreciate. But contrast for a moment the conditions under which government is carried on in a country, say, like England and in India. In England, upon any political question, a flood of light from all points of the compass is poured in upon the politician who proposes to deal with it. He is, perhaps, in greater danger of being blinded by excess of light than of missing the right solution by reason of the obscurity. A question does not become a subject for legislative action until it has, so to speak, been threshed out by historians, philosophers, and people of practical experience. Only when the utterances of all these people have leavened the public mind, and not only prepared the way for change but indicated almost the precise character of the change that is to be made, does the legislator step in to give legislative expression to the wishes of the majority. Thus there is no violent rupture between the old and the new; no interests are unjustly sacrificed from undue haste and ignorance, and time is given to those affected by the new law to adapt themselves to the novel conditions. But in India we have no class of trained thinkers. Our practical men have, in such spare moments as they can redeem from official duties, to do their own thinking. They have to legislate on a multitude of obscure and difficult questions, unenlightened by public opinion and unrestrained by it. Not that they shrink from undertaking these vast responsibilities; it is the effect of irresponsible power to produce an undue amount of self-confidence in those who are possessed of it. A more commonplace body of men than our Indian civilians it would be hard to bring together. Many of them are, of course, downright stupid. Few, very few indeed, are men of liberal views or extensive knowledge; but each, within a certain sphere of action, is an irresponsible despot. As he rises in the service this sphere enlarges, and it is not in human nature—at least, not in human nature as exhibited in an Indian civilian—to doubt that his legislative wisdom increases in proportion to his authority. The consequence is that when a civilian has become a member of Council or the ruler of a province he generally regards himself as a being of quite exceptional wisdom. He would be willing at the shortest notice to take command of the Channel fleet or perform an operation for stone. Of course, legisla-

tive innovations of the widest character are as child's play to him. He fearlessly rushes in where angels would fear to tread. "During long years" (to quote a writer on this subject), "in the remote jungle, he elaborates some mysterious scheme which is to inaugurate the Golden Age. No carping criticism ever visits the tender plant with its rude air, and it grows broad and fair in the garden of the soul. Little do some of our English thinkers know what effects their thoughts produce. A casual seed wafted to some remote station germinates in the mind of a man who will some day have the opportunity of applying it (long after it has been modified or rejected by its author) to a state of society for which it was never intended." This is perfectly true. The English civilians have treated India as a *corpus vile* delivered over to them for purposes of experimental legislation. A rapid succession of rulers has resulted in a rapid succession of experiments. Each new governor has, as it were, pulled up the legislative saplings planted by his predecessor, examined their roots, pronounced them to be without vital sap, and on the clearance thus effected begun planting his own, to meet a few years afterwards the same fate. The absence of all continuous purpose or fixed principles in our administration of India has been a main cause of its present unhappy condition.

The war in Afghanistan which has just terminated is a remarkable illustration of this. Since the fatal retreat from Kabul it had been held as a kind of axiom in Indian politics that we should abstain from all direct participation in the internal politics of Afghanistan. There had, however, always been a section of our Indian administrators who had rejected this axiom, and at every movement of the Russians in Central Asia had shrieked out that the Empire was lost if we did not hasten to seize Afghanistan. Suddenly the whirligig of time places these men in a position which enables them to convert their theories into action, and in a month the fruits of forty years of a policy of conciliation are destroyed. The warning voice of Lord Lawrence—perhaps the greatest Englishman that India has made known—is no more regarded than that of an infant crying for a light. Afghanistan is invaded; an old and faithful ally hunted to death; all the old crimes, all the old blunders, are repeated with exactitude as if it had been done for a wager; and now, when too late, the very men who urged this policy are becoming aware of the fatal blunder they have perpetrated. Afghanistan, rent asunder by internal dissensions, is fast tumbling to pieces; and Yakub Khan and Major Cavagnari are at this moment in precisely the same position in Kabul as were Shah Soojah and Sir William Macnaghten in 1840. It will be little less than miraculous if the former Englishman succeed in escaping the violent death which fell upon the latter.

Supervening upon blunders of this magnitude comes another peculiarity of British rule in India which has worked incalculable mischief. It is the application of what is known out there as "eye-wash." Many years ago when Lord Lawrence was king he made a tour through the Punjab. Sir Robert Montgomery was at that time Lieutenant-Governor, and his private secretary wrote the chief civil officers at sundry places which the Governor-General was about to visit the following characteristic note:

"Sir: The Governor-General will be at —— on the ——, and you are expected to have the cantonments in first-rate order, particularly roads, drains, and general conservancy—in fact, *eye-wash*. . . . Sir Robert Montgomery is most anxious about the church-steeple. . . . He is anxious to have it well forward when the Governor-General comes. . . ."

This little note expresses the very spirit and outcome of British rule in India. It is a gigantic system of "eye-wash." The ludicrous and ignominious failure of our recent raid into Afghanistan is notorious throughout India. It would be difficult to find in India a single Englishman or an educated native that would not frankly acknowledge this. But it is not for the benefit of the discerning that these liberal applications of "eye-wash" are made. They are for the ignorant public at home. They are intended to provide Indian Secretaries of State with weapons of defence against the assaults of too inquisitive members in the House of Commons. And so the war in Afghanistan is depicted in public despatches as a brilliant success and an immense gain to India.

It is not difficult to understand how profoundly demoralizing is such a system to all who participate in it. Not only is all regard for veracity sapped and destroyed, but the mind loses its hold upon realities altogether, and grows to look upon the administration of a vast empire as a business made up of "cooked" statistics and official reports which are as much works of fiction as the romances of Victor Hugo. The hackneyed simile of the ostrich who hopes to escape from his pursuers by burying his head in the ground, illustrates exactly the attitude of the Indian Government towards the dangers and difficulties which are fast accumulating round it. It has not the courage or the ability to confront and grapple with them; all that it can do is to pretend not to see them, and to utter panegyrics without ceasing upon itself. But incapacity leads, by way of natural consequence, to tyranny and rapacity; the consciousness of failure to an abject terror of criticism. The administration of Lord Lytton is a conspicuous illustration of this. It will be remembered hereafter as that period of our rule in India when all its special shortcomings were exhibited in the greatest perfection. Never before has the Government been so transparently false, never so cruel and rapacious. These are bitter words, but in my next letter I think I shall justify them abundantly. The "Famine in the North-west Provinces," which occurred during the winter of 1877–8, is an occurrence virtually unknown in Europe. This story, if you can allow me space, I will relate in my next letter.

Correspondence.

THE FUTURE VALUE OF LAND IN ENGLAND.

To the Editor of The Nation:

Sir: In your issue of July 24 you quote Mr. Bright as saying in Parliament, in the debate which led to the appointment of a commission to investigate the causes and remedy for the agricultural depression in England, "It would increase the price of land all over the country if you would abolish all ancient and stupid and mischievous legislation by which it is embarrassed in every step you take in dealing with land." In the same discussion Mr. Chaplin said: "The least price at which American food, including cost of freight and transport, can be supplied there (in England) with profit to the importer," will in future control the price of food. This last proposition, under a continuance of free-trade, is self-evident; but how the price of the land, which is to produce this cheaper food, is to advance, when it is now more than five times the price of our land which competes with it, is not so evident. It has long been a favorite idea of mine that the price of British lands must decline, and that decline will begin, if it has not already begun, when the "stupid and mischievous" legislation by which dealing in land is there embarrassed is abolished —*i.e.*, when the ownership of land ceases to be basis of titles, of social position and political preferment. When English land can be dealt in with the same facility as can our lands, it will be chiefly bought and held at prices on which a fair return for the investment can be made. There are many people and not many acres (as compared with America) in England, and it was but natural that ownership of land should come to be the foundation of the aristocracy when there was but little food importation. But what folly, in this age of cheap transportation, for a tenant farmer to pay £5 per acre per year for land on which to raise potatoes near Edinburgh (as I have seen), when equally good land could be bought here in fee for twice the yearly rent, say $50 per acre, on which potatoes can be grown and shipped to Edinburgh at perhaps no greater cost, counting fertilizers, tithes, etc., than is required to grow them on the Scotch land. That land, estimated by their rule, was worth thirty times its yearly rent, or say $750 per acre.

But this is an extreme case. The average rent of land in England in 1851, when it was cheaper than now, was, according to Mr. Caird, about $6 70 per acre, making it worth at that time, on the average, say $200 per acre, or probably more than eight times the average of equally good land with us. If we bring into the estimate those favored individuals who are raising immense herds of cattle and sheep on the public domain, without a dollar invested in land, the disproportion will be still greater. Present transportation facilities render such relative valuation artificial, and contrary to sound economic law. It is, therefore, only a temporary state of things which makes it expedient for the present few British landowners to receive say one and one-half per cent. revenue from their lands, and about as much more in social position and political preferment. When a vast estate enables an English gentleman to get his younger sons appointed to civil, ecclesiastical, military, and naval positions for life, with better salaries than are paid for the same service in any other country, he can afford, from a business standpoint, to accept a low rent for his land.

When will the British landowner cease to reap these traditional advantages? When he finds that he can't afford to eat his own beef. He can't now, nor his butter, nor cheese, nor indeed scarcely any staple food, except milk, and cream will soon be an exportable article; but it will take him several years to realize it fully. The American dairyman, herdsman,

and grain-grower are working a great revolution in England, not only in the price of food and land but social and political. The Blue Book which holds the report of this royal commission will, if I mistake not, be gloomy reading for the British landowner and encouraging for the American; for the same causes which are at work to bring English land down in price at a rapid rate will bring ours up slowly, because we have so much, and because as a people we have none of the English land sentiment and tradition. One may almost say that with us certain political and social disadvantages attach to owning land; they certainly do to working it. In England landowners make the laws—and good ones they are, as a rule; here lawyers make them.

English tenant farmers, many of whom are now losing money and but few saving, will soon, I believe, emigrate here in large numbers, and will be a valuable acquisition to our population. Conclusion: Mr. Bright had best sell his land now. T. B. B.

Newburgh, N. Y., August, 1879.

ENGLISH STUDIES IN COLLEGES.

To the Editor of The Nation:

Sir: In reply to my comments, in the September *Atlantic*, on our collegiate instruction in the usage of the mother language your correspondent "K." has given a sketch of the Harvard courses of study in that branch of education. Allow me to call his attention to the gross result of these courses, which is that a man may go through Harvard and yet write only twelve themes and eight forensics, or twenty English compositions in forty-eight months. It should be noted, also, that the forensics are properly exercises in research, statement and argumentation, rather than in the handling of the mother tongue. Obviously this amount of practice is very far from sufficient to make a correct and elegant writer. As for the "memorizing of rhetoric," it is well and necessary, no doubt, but it helps little. In mastering a good English style the great secret is writing, much writing, painstaking writing.

Prof. Child's courses in English literature are no doubt worthy of their fame; but they are not exercises in composition, and so do not bear directly on our subject. Of Prof. Hill's elective in advanced rhetoric, with practice in writing and study of the best English authors, I of course approve highly. But both these courses are optionals, while their aim, we are told, is an essential. Whether it would be best to place them among the enforced studies I do not pretend to decide. I should be sorry to see some other branches (Greek and Latin, for instance) less thoroughly taught than they are.

Let me explain, with regard to my comments in the *Atlantic*, that I was not thinking of Harvard alone, nor even of Harvard and Yale alone. J.

Notes.

THE sixth volume of Freeman's 'Norman Conquest,' just published by Macmillan & Co., is wholly devoted to the index, which, with an un-Teutonic disregard of economy and regard for ease of reference, fills 291 pages.——The preliminary matter to the Beedham-Springer 'List of the Reproductions, both imitation and in facsimile, of the Productions of the press of William Caxton, England's First Printer' (New York: Jonathan S. Green) turns out to be quite double the list itself, which contains only eleven numbers. Mr. Beedham's notes generally quote a part of the preface or prospectus of these reproductions, and afford much curious information concerning the modes of making facsimiles. Most noteworthy are the remarks of Mr. G. I. F. Tupper (p. 23) on the superiority of hand-made facsimiles over photographic, which has at first a paradoxical sound. In regard to Caxton's device, Mr. Beedham gives reasons for thinking the central character devoid of significance, as being, for one thing, not peculiar to Caxton. This hardly seems satisfactory. Has it been suggested that this character might be a monogram combined of alpha and omega?——The *Athenæum* announces that Mr. W. B. Scott is about to make a *livre de luxe* of his researches into the history and artistic characteristics of the Little Masters. It will be illustrated by fifteen or twenty autotype copies of their best works. From the same journal we learn of a forthcoming work, by G. W. Marshall, LL.D., of the 'Genealogist's Guide to Printed Pedigrees,' which should prove a companion of Durrie's and Whitmore's indexes in this country. The publishers will be George Bell & Sons. Other new English works are 'Life and Society in America,' by Mr. S. Phillips Day; and a 'Vocabulary of Sea-Words,' in English, French, and German, by Commander Littleton, of the Royal Navy.——No. 81 of the *Zeitschrift* of the Berlin Geographical Society (New York: L. W. Schmidt) contains a review by K. Zöppritz of the most recent American explorations for a ship-canal across the Central American isthmus. A map of the Nicaragua route accompanies the text.——B. Westermann & Co. are the American agents for *La Semaine Française*, a weekly journal published in London, and obtainable here at the subscription price of $7 per year, or correspondingly for six months. The thirty-seventh number before us bears date of August 13. Its contents are obviously regulated for English readers, and its great variety ensures entertainment. All the fine arts have niches, and the "Passe-temps grammatical," "La Mode," "Économie domestique," "Échecs," etc., will attract their respective devotees. The musical critic is Camille Saint-Saëns.——M. Ernest Leroux, a young but very active French publisher, gives notice of the early publication of three new periodicals under the following titles: *Revue Égyptologique*, edited by Brugsch-Bey, Chabas, Revillout; *Revue de l'histoire des religions*, edited by E. Guimet; and *Archives de l'Orient latin*, under the direction of the society of that name——We would direct the attention of such of our readers as are desirous of assisting in the spread of sound financial doctrine to a not bulky pamphlet on 'The Contraction of the Currency,' laboriously compiled by the editor of the Detroit *Post and Tribune*, and published and gratuitously distributed by the Honest Money League of the Northwest, whose headquarters are in Chicago. The information comprised in its tables is not easily accessible, and the exposure of the contraction fallacy is irresistible. The League will furnish it on application.

—The widow of the late Edward Moxon, the original publisher of Lamb, Wordsworth, and Tennyson, has in her possession a portrait of Charles Lamb, by Hazlitt, which her present circumstances induce her to desire to sell. It has not only the interest which attaches to all Hazlitt's work, but the interest of resemblance to its subject, which in this instance is of course great. At least Mrs. Moxon vouches for its merits as a portrait, and she was a great friend of Lamb's in her early years and figures in Talfourd's 'Memorials' as "Emma Isola." The price asked is $300. It is certainly safe to say that the benefactors of our public galleries have frequently paid a much larger sum for a less interesting work. Mrs. Moxon's address is 34 Buckingham Road, Brighton, Sussex, England.

—Unusual interest attaches to the September number of the *Magazine of American History*. The opening paper, by the Rev. B. F. De Costa, treats of the Lenox Globe, a tiny affair, but apparently entitled to the distinction of being "the oldest post-Columbian globe now known to geographers" or "that shows any portion of the New World," and "the oldest instrument of any kind showing the entire continent of South America," or "that the discoveries of Columbus formed no part of the Asiatic continent, and that America was absolutely 'Mvndvs Novvs,' or the New World." A facsimile representation of the globe at scale enables the reader to judge of the plausibility of Mr. De Costa's conjectures, which to us do seem plausible. A dislocated island near Madagascar he makes do duty for Australia. The second paper has for its title "The Old Stone Mill at Newport—Construction *versus* Theory." The writer, Mr. George C. Mason, Jr., made a careful survey of this building last October, with a firm belief in the theory advanced by the late Mr. Hatfield in *Scribner's*, viz., that the mill was the remains of a Norman baptistery. We pointed out at the time what we considered the weak points in Mr. Hatfield's argument, and our objections are fully confirmed by Mr. Mason, who convinced himself that the fireplace and windows are part of the original construction, and discovered that, besides the first floor above the arches, a second floor existed, connected by a flight of stairs with the lower, as is shown by the holes left to receive the ends of the treads. Into the technical evidence advanced in support of these statements we cannot go far, but it is conclusive. The fireplace was found to have two flues, one in each corner, which seems most improbable as an afterthought; besides which the southern flue is perfectly pargeted with a mortar identical with that used in the construction of the piers, and with mortar used in the dwelling-house and tomb of Governor Arnold, the owner of the Mill. This personage, who owned a so-called Leamington farm, had resided in England not far from the Leamington (Warwickshire) mill, of which the shape is circular, and the construction (upon arches) as like that of the Newport structure as cut stone can resemble rubble. It is suggested that the latter may have been built to replace the wooden windmill blown down in 1675. Mr. Mason furnishes diagrams and elevations to enforce his points, and his paper is so creditable to his

professional acuteness that one almost regrets it did not appear in the *American Architect*.

—The "Confession of an Agnostic" in the current number of the *North American Review* suggests an interesting question respecting the possibility of immorality in reasoning, or rather, in methods of persuasion. Is it morally right for the opponent of a sect to personate one of its members for the purpose of describing its tenets and results in such a way as to make them distasteful? The so-called confession is signed "An Agnostic," and purports to be written by an agnostic, but it is designed to disgust the reader with the irreligion of the day, and is understood to be the work of a distinguished divine of the Presbyterian Church. Is this a legitimate stratagem of warfare, or is it to be classified with the act of signing another man's name to a confession of crime? Suppose that Colonel "Bob" Ingersoll should prepare an article purporting to be a description of the creed of a Presbyterian by the Presbyterian himself, but skilfully arranged to disgust the reader with religion and bring religious doctrines into ridicule, and should sign it "A Presbyterian," would that be right? We should like to see the religious press discuss this question, and would set so high value, for example, on Dr. McCosh's opinion as to be quite ready to subordinate our own to it. A strong reason for wishing the question decided is that the article alluded to seems to be one of a series, in which the anonymous writer is personating the various irreligious sects of the day in succession.

—The Historical Dictionary of the English language which the Philological Society has had in hand for more than twenty years is at last to be published. The Delegates of the Clarendon Press, in the University of Oxford, have assumed the entire financial responsibility of the publication. Dr. Murray, the President of the Society, has undertaken to edit it with a corps of sub-editors. A first part of four hundred pages, containing the letter A, is to be ready in 1882, and the rest to follow in the course of ten years, if possible. The raw material for the work consists of quotations illustrating the use of all the English words by all writers of all ages, and in all senses. These are written according to a uniform plan, each on a slip of paper of the size of half a sheet of note-paper. An appeal was made in January, 1859, to the English and American public to assist in making these quotations. Dr. Murray finds some two tons' weight of slips accumulated. In the earliest period, where the books are few, the work is fairly done or promised, but in the later centuries many books remain untouched. A new "Appeal" is now issued for help. A thousand readers are asked for to complete the reading, and send in the slips within the next three years. For American readers American books are left. Hardly any have been touched. Dr. Murray has also, with generous confidence in American scholars, left them the unfinished books of the eighteenth century. At least four or five hundred American readers are needed in order to accomplish thoroughly so soon what is thus allotted to them. Any one can help, especially with modern books. Dr. Murray's pupils have supplied him with five thousand good quotations during the past month. But of course persons who have access to original editions of authors of the eighteenth century, and who have some scholastic preparation for the work, must do the most important part of it.

—A few specimens of the slips will give a clear idea of the nature of the reader's work. The earliest slip for any word should give its first appearance in English literature. Thus, the earliest slip yet turned up for the word *castle* is found to read as follows:

Castle, sb. *obsolete.* A village.
1000. *Cott. Gosp.*, Matt. xxi. 2.
Farath on thaet castel.

This indicates that the word first appears in the year 1000, in the Cottonian Gospels, in Matthew xxi. 2, with the spelling *castel*, and meaning *a village*. American readers will not get first slips for words of that age; but let them not despair—many words are younger. For *arrow-root* the earliest slip yet made is as follows:

Arrow-root, sb. Food prepared from Maranta starch.
1848. THACKERAY, *Vanity Fair* (ed. 1853), ch. xxxix., p. 340.
They smooth pillows; and make Arrow-root.

This, it seems, appeared originally in 1848, but was read in an edition of 1853. The first appearance of *affinition* is as follows:

Affinition, sb.
1879 W. D. HOWELLS, *The Lady of the Aroostook*, ch. xiv., p. 165.
By some infinitely subtle and unconscious affinition she relaxed toward him.

A reader of Bancroft's 'History' noted 2,000 words suspected of there making their first appearance. But it is not only first appearances that are wanted. Readers are requested to make a quotation for *every* word that strikes them as "rare, obsolete, old-fashioned, new, peculiar, or used in a peculiar way."

Agrin, adv.
1879. W. D. HOWELLS, *The Lady of the Aroostook*, ch. viii., p. 80.
Half the ship's company . . . were there silently agrin.

Ethnic, adj.
1879. W. D. HOWELLS, *The Lady of the Aroostook*, ch. viii., p. 81.
The cook's respect having been won back through his ethnic susceptibility to silver.

Phrases and proverbs are to be carefully quoted:

Bacon, sb. *To save one's bacon.*
1698. MILTON, *Defens. Populi*, trans., p. 561.
He was resolved to take a course like the soldier in Terence, to save his Bacon.

Form, sb. *To be good form.*
1879. W. D. HOWELLS, *The Lady of the Aroostook*, ch. xxiii., p. 259.
Your voice was too good to be good form—that's an expression you must get—it means everything.

But sometimes readers will go through a book without finding anything rare or extraordinary. They are reminded that the Dictionary is to contain all words, ordinary and extraordinary, and that a quotation in each century is wanted for every sense or construction of every word. Each reader is therefore requested to give quotations for common words in their common senses, whenever good, apt, pithy, short sentences containing them occur.

Diplomatist, sb.
1860. J. L. MOTLEY, *United Netherlands* (ed. 1868), I., ii., 24.
If diplomatic adroitness consists mainly in the power to deceive, never were more adroit diplomatists than those of the sixteenth century.

—Minute directions to readers are printed, and will be sent to any persons who ask for them; and there are lists of books of the eighteenth century which are specially wanted, and some other printed matter. Considerable correspondence is needed to explain and to arrange, so that the same book may not be undertaken by many persons. Readers in the United States are notified by Dr. Murray that "they will save time by first communicating with Prof. F. A. March, of Lafayette College, Easton, Pennsylvania, whom," he says, "we have asked to organize and guide the work of our American friends." It will save a letter or two to each, a thousand letters in all, if all volunteers or enquirers will mention in their first note the titles of four or five books which they have at hand and incline to take, so that a selection may at once be made. If original editions of eighteenth-century books are to be had, those are to be preferred; if not, American authors of other date are to be taken. Early books of travel, law, or records are to be sought, in which the names of American objects, acts, habits, relations are likely to have made their first appearance, and, of course, later books of the same kind. We must read the works of our great statesmen, lawyers, and theologians, and of our men of science, as well as our poets, novelists, and historians. The Dictionary will be one of the great books of the world, a standard work for many generations. American authors should be fully represented in it. One thing more. The readers cannot be paid in money. Dr. Murray mentions that he will pay their postages, and will furnish slips for those who wish them. He has copies of a few books to give to those who read them, and the reference-list of books at the end of the dictionary will record the names of their readers. His address is Mill Hill, Middlesex, N.W., England.

—After a long period of inactivity the theatrical world began towards the end of August to show signs of renewed life. At Wallack's a "preliminary season" was invented to afford an opportunity for the appearance of Mr. J. T. Raymond in Mr. George F. Rowe's play of "Wolfert's Roost." His part is that of *Ichabod Crane*, but, beyond a similarity of names here and there, it is difficult to detect any connection between the play and Washington Irving's "Legend of Sleepy Hollow." Shakspere took a great many of his best plots from the current literature of his day, without putting himself to the trouble of communicating the fact to the public; and it is difficult to see why modern dramatists should not follow his example, unless, indeed, it be that with the modesty of their profession they hope that their own merits may be enhanced by the association with an established reputation. "Wolfert's Roost," however, is decidedly the product of Mr. Rowe's own genius, and it may be questioned whether it is quite fair that it should be fathered on Irving even "in part." The play is of a school for which a name has been for some time wanting, and for which we might suggest that of Rustic or Cheerful Melodrama. There is a designing villain, a damnable plot involving the peace of mind of the heroine, *Katrina Van Tassel*, an act of arson in the first degree, an ardent lover, whose life is supposed to be lost, but who turns up at the end in a transparent disguise as the avenger of the piece; on the other hand, the action of the play takes place chiefly on old Van Tassel's farm, and we are surrounded from first to last by green

grass, and gentle domestic affections, and pleasant fireside "sets," which produce an effect not satisfactorily expressed by the general term melodrama alone. There can be no doubt that *Ichabod Crane*, as played by Mr. Raymond, is a comic character, though it is perhaps open to the objection of being considerably burlesqued. Mr. Raymond is an excellent actor, but he has become of late a "one-character" actor; and for a "one-character" actor to recover his versatility is almost an unheard-of thing. The scenery of "Wolfert's Roost" is unusually good; a better theatrical picture than that afforded by the interior in the fifth act, with the old Dutch farmer (capitally done by Mr. Shannon) and "Brom Bones" for *dramatis personæ*, we have seldom seen.

—At the Park Theatre Miss Marion Darcy has made her first appearance in a drama put down as "new and emotional," called a "Living Statue." Like all emotional plays, its success depends mainly on the acting, though this of course may be reinforced by careful dressing. Miss Darcy is a young lady with whose name we are not familiar, but who may be suspected of being a child of the boundless prairie. English is with her clearly a comparatively recent acquisition; and, though she has made much progress, she has not altogether mastered it. But a somewhat extensive acquaintance with the American stage has convinced us that what the American people care for is not pronunciation, but genius. Such an actor as Mr. H. Dalton, for instance, who plays the part of *David* in "A Living Statue," habitually substitutes "reel" for "real," changes "orphan" to "off'n," makes "presteedge" out of "prestige," and in many other ways shows a spirit superior to rule. It would clearly, however, be a waste of his time to correct such trifling errors, for the audience passes them by unnoticed, and, whatever reformers may think, it will be a long time before actors, who are not paid to do it, undertake to exert an educating effect upon the audiences to whom they play. Governmental aid to the stage is hardly practicable in New York, but it may interest lovers of the drama to speculate upon what the probable dramatic results might be if the Park Theatre were subsidized by Mr. John Kelly.

—Under favoring circumstances the Egyptian obelisk known as Cleopatra's Needle may be expected to arrive at this port by the end of the present year. Already the ponderous constructions for lowering and embarking it, specially manufactured at Trenton, have been shipped to Alexandria *via* Liverpool, while the able naval commander who has, at his own request, been detailed for the work and has designed the means that will be employed, is now on his way to Trieste in quest of the timber necessary for blocking, beds, and ties. Unlike its sister obelisk, the Needle will be brought over in the hold of a steamer, into which it will be introduced through the bow port; the listing of the vessel being overcome by careening-lighters prepared for heaving down on the opposite side, and its sinking under these combined weights being neutralized by pumping out the water-ballast compartments. The operations of unloading and of erecting the obelisk in New York will be the reverse of loading and lowering, and will be effected by precisely the same apparatus. The name of the public-spirited citizen who has guaranteed the expense of transportation is as yet a profound secret, but it is well understood that for obtaining the gift of the obelisk from the late Khedive—an act confirmed by his successor—as well as securing the money for its removal, the city is indebted to the persistent efforts of Mr. Hurlbert, editor of the *World*.

—Dr. Isaac Taylor, apparently undaunted by his late sharp passage-at-arms with Mr. Newton upon the genuineness of the Castellani sarcophagus (see *Academy* for February and March), now offers a fresh contribution to knowledge—'Greeks and Goths: A Study on the Runes' (Macmillan & Co.) Briefly stated, the author's position is this: the Runes were derived not from the Latin alphabet, but from the Greek, more especially the Thracian form during the pre-Christian period when Greek and Goth were in close contact in the regions between the Danube and the Dnieper. By way of appendix we get the theory that the so-called Ogham (Irish) characters are borrowed from the Runic Futhorc. This matter of the Oghams we leave to the professed Celtic scholar, but as regards the relations between Greek and Goth we must protest against Dr. Taylor's total want of method and insight. Not only is he unacquainted with the latest researches into the development of Germanic speech—*e.g.*, Verner's now celebrated essay in Kuhn's *Zeitschrift*, xxiii. 97—but we doubt if he even fully understands the old-established principles laid down by Grimm and Schleicher. Thus, 'Grimm's Law,' which is nothing more than the statement of a phenomenon or set of phenomena, is constantly used by the author as if it were a mathematical formula adapted to solve all sorts of problems. It is, on the contrary, itself the problem to be solved. And then what shall we say of a scholar who writes (p. 79), "The tendency of gutturals to weaken into breaths and vowels is illustrated by the development of the Greek breaths and vowels out of the Semitic gutturals." Does Dr. Taylor really mean to say that Greek breaths and vowels are developed out of Semitic gutturals? or merely that the *signs* for Greek vowels are modifications of the *signs* for Semitic gutturals? If the former, he is uttering sheer nonsense; if the latter, his words are not only intolerably careless, but they fail to prove anything. What has the history of a purely conventional matter like an alphabet to do with the history of speech-sounds which are subject to definite laws? What is to prevent us from spelling "head" "hed," or even "'ed"? Yet all the conferences and spelling reformers in the country could not force a single man to confound in *pronunciation* "head" and "heed."

—Admirers of Sainte-Beuve will be neither edified nor greatly instructed by a work which is being generally discussed by the Continental press, 'Sainte-Beuve et ses inconnues,' by A. J. Pons. Mr. Pons was for some time the great critic's secretary, and thus necessarily informed of many of his master's private affairs, all of which, so far as they relate to women, he here narrates for the benefit of the public, which is thus favored with a long chronicle of the worst kind of scandal. Of all the criticisms of the book the most interesting is probably that of the novelist Zola, who makes Sainte-Beuve's life the text of some general reflections, none the less noticeable from the evident *arrière-pensée* of the writer. "When an author is audacious in ideas and words, and his work burns with the fire of life, then," says M. Zola, "the public will deem him a man obscene and immoral." On the other hand, when, in treating certain subjects, a writer displays "calm and lassitude, drapes his ideas in gauze, and talks of chastity," he is supposed to lead a clean life and to set a good example. Sainte-Beuve, according to Zola, is but one more proof of the fact that a judgment resting upon such appearances is sure to be wrong.

SEELEY'S LIFE AND TIMES OF STEIN.*

I.

PROFESSOR SEELEY has not the genius of an historian. The first of all traits by which historical talent is marked is the capacity for narrative, and Mr. Seeley, though endowed with great literary skill, though conscientious in working up his subject, and though fertile in theories which, if they sometimes are little better than ingenious paradoxes, are also at times worthy to be called original and instructive speculations, has not the power which, simple as it seems, is in truth a very rare endowment, of telling a complicated tale in an orderly and lucid manner so as to bring into view the main outlines of a subject. Throughout the whole of his 'Life of Stein' readers will find much valuable information about Prussian institutions; they will find many facts about Stein; what they will not find is a history of Prussia or a biography of the great Prussian minister. "Here," writes Mr. Seeley, "the extract must be interrupted, for new matter for reflection is before us." This sentence, if you change one word, describes the whole work: "Here the history must be interrupted, for new matter for reflection is before us." The so-called "Life" is, in fact, a mixture of history and biography, in which the course of the narrative is constantly broken by the necessity of "stopping a turn" to listen to Mr. Seeley's reflections. His speculations are fatal to his story, but they have sufficient ingenuity to deserve consideration, and the fair mode of dealing with his book is to consider it as the work not so much of an historian as of an historical theorist, and to examine with candor and attention the nature and worth of his historical speculations.

Nor is it hard to select from among the views which crowd his pages the theory by which the merit or demerit of his work ought to be judged. The real theme of the book is neither Stein nor Prussia, but the rise and development of what Mr. Seeley terms the Anti-Napoleonic Revolution of Europe. This move is, in his view, something much more than merely the rising against Napoleon of a great European coalition, by which the Emperor's power is ultimately overthrown; for the anti-Napoleonic revolution is, in our author's eyes, the commencement of the great change of sentiment and policy which distinguishes the movements of the nineteenth from those of the eighteenth century. It is the first outbreak of the passion for nationality opposed to the sentiment of cosmopolitanism.

* 'Life and Times of Stein; or, Germany and Prussia in the Napoleonic Age. By J. R. Seeley, M.A., Regius Professor of Modern History in the University of Cambridge.' London, 1879. Boston: Roberts Bros.

The struggle, commenced in Spain, continued in Russia, carried to its conclusion by Russia, Germany, and England combined, is on this view a new and on the whole nobler revolution, by which the spirit of the French revolution is first met and then overthrown. Of the truth and the worth of Professor Seeley's theory we may say something in a future article. Justice to one of the ablest writers of the day demands that we should, to the best of our ability, state how that theory stands as put forward by its author.

The point from which his work starts, though characteristically enough not brought into view till the first chapter of his second volume, is the Spanish Revolution, which gave the fortunes of Napoleon their first serious check. Mr. Seeley shows how striking this first repulse was, and how difficult in some respects a thoughtful historian even now finds it to account for the sudden break-down of the Napoleonic policy. Spain was the weakest of nations, and yet Spain in her weakness was far more dangerous to Napoleon than the whole power of Prussia and of Austria. To propound the paradox that the mightiest of empires was brought low by the feeblest of nations, and to show that the seeming paradox admits of lucid explanation, is a task exactly fitting Professor Seeley's talents. He finds the solution of what to many writers appears little less than a providential miracle not in any heaven-sent madness disturbing Napoleon's clearness of vision, for his calculations, though daring, were by no means insane; not in any special military aptitude of the Spaniards, for, though Spanish insurgents fought well, Spanish armies were at least as much hindrance as use to their English allies; but in the fact that Napoleon at the head of an empire met, for the first time, with the strength of a nation, and that the weakest of nations has in it elements of force not to be found in the strongest of states which is not inspired with the spirit of nationality. Hence, at the beginning of this century, the marked contrast between Spain and the Italian or German States which had succumbed, first to the revolutionary leaders and next to Napoleon:

"Spain was Spain, but those Italian and German states were not Italy and Germany, but only *in* Italy and Germany. How momentous this difference is we do not now require to be told; it is the peculiar political lesson of the nineteenth century. But it was not dreamt of in Napoleon's political science that the state which is also a nation is an organism far surpassing in vigor and vitality the state which is only a state. . . . The German States, I have said, were only *in* Germany, but the Spanish State was Spain; the state and the nation were in a manner convertible terms; this is as much as to say that all the feelings of kinship or clanship were in Spain enlisted in the defence of the Government, whereas in Germany the same feelings had no relation whatever to the Government."

This sentiment of clannishness existed in its highest form in Spain:

"The result of this was that when the Spanish Government in its corruption and feebleness was entirely unable to resist Napoleon, it was discovered that no such consequences followed as in Italy and Germany. When the state fell to pieces the nation held together, and proceeded to put forth out of its own vitality a new form of state. When the work seemed to Napoleon finished it was found to be barely commenced; when he had surmounted all the obstacles which he had foreseen, another obstacle presented itself which he had never imagined. This obstacle was not only insurmountable, but in its total effect it proved fatal to Napoleon's Empire. . . . It is this Spanish Revolution which, when it has extended to the other countries, we call the Anti-Napoleonic Revolution of Europe. It gave Europe years of unparalleled bloodshed, but at the same time years over which there broods a light of poetry; for no conception can be more profoundly poetical than that which now woke up in every part of Europe—the conception of a nation. Those years also led the way to the great movements which have filled so much of the nineteenth century, and have rearranged the whole central part of the map of Europe on a more natural system."

The uprising of Europe against Napoleon, looked upon as the beginning of a new revolution, gives a new character both to men and to events. Stein himself becomes the embodiment of German patriotism. This is clearly the light in which the German statesman mainly interests Mr. Seeley. Stein's land laws, his administrative reforms, his whole action as a Prussian official, fall into the background, whilst his activity in Russia, his attempts to organize a great German movement, his hostility to France, his dislike of, to use his own term, metapolitics—that is, the metaphysical as opposed to the historical or practical view of political science—his zeal in promoting the study of German history, even his leaning toward Catholicism, are brought into great prominence as the characteristic traits of the minister who was at once a reformer and at the same time the unyielding opponent of French policy. What Stein was in practical life that, in Professor Seeley's view, was Fichte in the realm of speculation. The one struggled through his whole career against every kind of policy which menaced or seemed to menace German nationality; the other taught to his class in a philosophic form the doctrine of nationality, and connected the doctrine with the far nobler and more permanent truth that the source of national life was to be found in a true system of education. In his addresses to the German nation "is heard the tocsin of the Anti-Napoleonic Revolution and of all the Nationality Wars that were to follow," for "Fichte proclaims the nation not only to be different from the state, but to be something far higher and greater."

If Stein and Fichte are the representatives of the German revolution in virtue of their full sympathy with national patriotism, the true character of the anti-Napoleonic movement is illustrated by the attitude of eminent Germans unable to enter into its spirit. Much has been said of Goethe's so-called want of patriotism during the War of Liberation, and friends and foes have put forward various theories to account for the fact that by far the most eminent of modern Germans was, to say the least, cool in the cause which roused the enthusiasm of his countrymen throughout the length and breadth of Germany. Goethe's position is, however, on Mr. Seeley's view, not to be explained or attacked as one peculiar to the great writer himself. Goethe's genius made his course of action conspicuous to all men, but he acted and felt in the matter of the War of Liberation in the manner which was natural to any man imbued with the spirit of the eighteenth century, and which in fact characterized the conduct of other men less distinguished than the author of 'Faust,' but still persons of mark in their day. The perfectly genuine belief that patriotism or national feeling was a narrow sentiment, unsuitable for philanthropists or philosophers, and that such a sentiment ought, especially in Germany, to be subordinated to interest in humanity, to zeal for science, and generally to the love of culture, was a characteristic not of one man but of one generation. The person who above all others represents in Mr. Seeley's pages the spirit of cosmopolitan philanthropy and of zeal for culture, as contrasted with the spirit of national patriotism and zeal for liberty, is Dalberg, Archbishop of Mainz. His name, never perhaps well known to the English or American public, has now, outside of Germany at least, become utterly forgotten; yet he was in the day of his greatness at least as well known as Stein. Of the fair side of his character the best monument is to be found in these words of Humboldt:

"I have a really strong wish to see Dalberg's character—which . . . was quite unique in his age—rescued from oblivion and depicted for posterity. . . . He must be shown, where he was really unique, in the great nobleness of his feelings and views, the infinite grace, the susceptible temperament, the inexhaustible abundance in provocatives to ideas, even if ideas did not actually come out of them (whence also came his wit), in his freedom from all petty considerations."

The history of this model of all the virtues (and, whatever were Dalberg's defects, he was certainly no hypocrite) is recorded in Mr. Seeley's work. The archbishop's kindliness, his general beneficence, his pre-eminent success in fulfilling the duties of a paternal ruler, the admiration which he excited in some of the best minds of Germany, his political weaknesses, his gradual subjection to the influence of Napoleon, the mode in which he became a tool in the hands of the foreign despot who oppressed his country, his fall from power at the very time when Stein stood before all Germans as the incarnation of victorious patriotism, are set forth in the 'Life and Times of Stein' with all Mr. Seeley's literary power, and with all the force given by an element of perhaps unintended but nevertheless cutting satire. For Dalberg is in very truth, as painted in Mr. Seeley's pages, the incarnation of that spirit which, even seen from its best side, is clearly as hateful to Stein's biographer as it was to Stein himself, and Dalberg's fall is made to appear not so much the mere failure of a weak man to act up to his own ideal, as the moral defeat of mere philanthropy and love of culture by the new-born spirit of national patriotism.

STICKNEY'S TRUE REPUBLIC.*

MR. STICKNEY'S book is one that will set people thinking more and more on the present defects of parliamentary government, not in the United States only but all over the world. He describes these defects, by the aid of illustrations both from English history and from our own, with great clearness and vigor. Every man who takes any interest in politics knows what they are, though probably few could have made out the list with Mr. Stickney's terseness and incisiveness. Parliamentary government has been converted into party government, and party has become a combination not for the promotion of certain legislative measures, but for the purpose of effecting a new distribution of the offices. This is true in a certain degree of England, though the disease is there kept down by fixity of tenure in the subordinate places in the public service,

*'A True Republic. By Albert Stickney.' New York: Harper Bros. 1879.

and by the infrequency of parliamentary elections. But the efficiency of the Government is, as has often been remarked, seriously interfered with by the dependence of the ministry on its success in retaining a party majority in the House of Commons, and by the fact that members of the Cabinet have to pass a large part of the time which should be devoted to purely executive duties in defending themselves in debate against party attacks. In the United States the perversion of party has, as every one knows, reached the dimensions of a plague, all offices being held for short terms, and being offered as prizes for party success at the polls, with the result that "politics" has ceased to be a name for the aggregate of public affairs, and denotes simply speculation as to the probable results of the next State or Federal election. When a man is "talking politics" he is not discussing any question affecting the public welfare; he is discussing the chances for office of certain persons. A "politician" is not a legislator, or a jurist, or an economist, or a financier; he is simply a man who is skilful in carrying elections, or who has the means of foretelling how elections will go. In fact, parties are completely divorced from measures of all kinds. No party, when it comes into power, is expected to embody in legislation any of the ideas embodied in its platform. The platform is simply a manifesto intended to help in carrying the election, but to which no one thinks of referring after the election is over. So, too, the man skilful in electioneering has become the mighty man of our time. He may be grossly ignorant of everything a legislator ought to know, and be utterly untrustworthy in private life, but at conventions and caucuses he has the bearing of a great ruler, and treats the wisest heads in the nation, the most skilful specialists, the clearest thinkers, and most experienced administrators, with a sort of good-natured contempt. In fact, about election time the most authoritative voices in the land, those of which the ring is loudest, and which are most eagerly listened to, often come from persons with whom a respectable man does not care to have any dealings in business, and to whose opinion on any public concern no serious-minded man would think of giving five minutes' attention.

The disease, too, has worked down into all classes of the people. Most men under fifty, and the great body of foreigners who have come to the country since 1850, firmly believe that free government means frequent elections, and that the more elections there are the better the government must be. When the rich and well-to-do, too, are reproached, as they so often are in the newspapers, with not giving more time to their political duties, what is meant is, not that they are not sufficiently interested in the trade and commerce of the country, or in its revenue, or in its administration of justice, or its foreign relations, and do not discuss them enough, but that they do not go more constantly to caucuses to help to nominate people for office, and are not more industrious in getting voters to vote candidates into office. Two-thirds, too, of the editorial space of the newspapers is taken up either with extravagant praise or blame of candidates, and with spreading stories or views of political opponents which will be likely to affect the election which is always near at hand. The evil, which would have proved a serious burden for a small agricultural community with idle winters, like that which fought the Revolutionary War, has become an intolerable burden for a rich, busy community like that of our day, with a vast population, and a trade, commerce, and manufactures which are assuming gigantic proportions. Mr. Stickney only speaks the thoughts of thousands of patriotic men when he asks how much longer the country can be governed by such machinery.

The changes Mr. Stickney suggests will probably be considered startling by most of his readers, though they consist of nothing more than the application to public business of the principles and methods by which private business is carried on. He would have the President or chief executive officer and the legislature elected by popular suffrage, but nobody else. The President should appoint heads of departments, and they their subordinates. All officers should hold office during good behavior, and their superiors should be charged with the duty of removing them when incompetent. Even the President would be removable in like case, by the legislature, on a two-thirds vote. The legislators, too, should hold office during good behavior; and it is shown by an examination of the terms of the judges that this would amount in practice to about twelve years' tenure—that is, that in about every twelve years the legislature would be entirely renewed, inasmuch as a man would not generally be elected to such an important office as that of a legislator would then be, until he had reached, or nearly reached, middle life, and had had time to give proofs of capacity in other fields. These changes would, of course, make elections rare, or would, at all events, put an end to electioneering as a profession, and compel men in public life to give attention to public questions.

In support of his plan Mr. Stickney points out that parties, except at very great crises, occupy themselves simply with office-getting; that office-holding for short terms makes every office-holder, from the President down, perforce a professional electioneering agent; that the fact that his place will be vacant at a certain date creates a great army of competitors for it, who seek it also through electioneering; that this same knowledge that he has not long to serve makes everybody, including the office-holder himself, indifferent to the manner in which he discharges his duties, and weakens the sense of responsibility; that it prevents, for like reasons, the presence in our legislatures of the only men who are competent for legislative work, and deprives the public business of the benefit of the experience of the most experienced men of the nation; that the passion for short terms is a tradition of the period when the main business of legislative assemblies was to fight the crown and resist its exactions, and when constituents were in constant fear of their members selling them out or joining the court party; but it is absurd now, when the sole duty of the legislature is to see that public affairs are properly administered and supply machinery therefor.

We cordially recommend the book to the perusal of those to whom politics is a serious subject. We can hardly call it a plan of reform, because the chance of any adoption of its suggestions is too remote; but it is certainly an excellent and important contribution to the body of grave, we will not say alarmed, reflection which the present working of party government in the United States is causing among all classes and conditions. If the changes it recommends were surer of serious popular consideration we should perhaps indulge in detailed criticism. As it is we shall confine ourselves to remarking that the author ignores one of the most effective causes of the evils he combats, namely, the passionate ambition for political office by which the bulk of men in every community are animated. It is this which does most to make party government what it is. It is this which prevents the administration of any government on a purely business basis. As a matter of fact men do not desire good government pure and simple; they desire as much good government as is consistent with the gratification of their personal ambition, or vanity, or self-interest, or love of their friends, and with their desire to see their enemies humiliated or foiled, and their prophecies, whether of good or evil, fulfilled. The idea that government is business, a most serious business, has lost much of any hold it ever had on the popular mind. To restore it to its proper place among political ideas may seem a long and difficult task, but it is the one to which American reformers must now address themselves, and there is nobody but will feel encouraged about it by the strong and hopeful tone of Mr. Stickney's book, coming, as it does, from a professional man, who has no interest in the subject but that of love of his country.

FROUDE'S CÆSAR.*

MR. FROUDE'S 'Cæsar' shows all his excellences and all his defects as an historian. That he is the most graphic and brilliant of the historians of the day will probably be conceded by all; that he has a genuine historical sense—a capacity to see clearly and appreciate the leading ideas of a period, and to trace their relations—is, we think, no less true, and we shall endeavor to point out his substantial merits in this regard in the work before us. But these high excellences are joined with a carelessness of statement, and a laxity in weighing evidence, that make it impossible to trust him as an historian should be trusted. The historical sense is not enough; it is only a *capacity*. The person who possesses it is able, when he is sure of his facts, to combine those facts into an instructive picture. But without the most painstaking study of the evidence, his combinations will be nothing but possibilities, or at best probabilities; he must have also the industry of the antiquarian joined to a power of clear, logical reasoning, and a conscientious devotion to truth for its own sake; all these qualities are necessary to convert his probabilities into certainties.

Now, Mr. Froude's inaccuracy is, after all that has been said, a constant surprise. One can hardly read a page without questioning some statement—as overdrawn or distorted, even if not positively untrue. To be sure, these errors are often slight, and generally about unessential points of detail, so as not to interfere with the general correctness of his views; nevertheless, when we find that a writer is habitually inaccu-

* 'Cæsar: A Sketch. By James Anthony Froude, M.A., formerly Fellow of Exeter College, Oxford.' New York: Charles Scribner's Sons. 1879. 8vo, pp. 550.

rate in trifles, we cannot know where it is safe to follow him. He who is not faithful in little things will not be faithful in great things. A few examples will illustrate this fault: We are told on page 24 that Tiberius Gracchus "was chosen tribune in the year 133"; it was *in* 134 and *for* 133. On page 29 precisely the same error occurs in relation to Caius's tribunate. On the next page is the statement: "All cases of importance, civil or criminal, came before courts of sixty or seventy jurymen, who, as the law stood, must be necessarily senators." Now, civil cases never came before such a court; and at the time in question (B.C. 123) there was only one class of criminal cases—those of *Repetundæ* (Extortion in the Provinces)—that was thus administered. It is stated (p. 48): "the Senate might have appointed him [Marius] Dictator, but would not." But the Senate had no power to appoint a dictator, this was exclusively the function of the consul (or magistrate with *imperium*); only once (B.C. 217), in the absence of the consul, a dictator was irregularly elected by the people. It is said (p. 82) that, after the battle of the Colline Gate (Nov., 82), "Sertorius fled to Spain"—where he had been already several months; if he had been still in Italy, perhaps Sulla would not have gained so easy a victory. We read (p. 127) "Cicero was prætor this year, and was thus himself a senator." But a seat in the Senate was given by the quæstorship, which office Cicero had held nine years before (B.C. 75). On page 138, "he [Cæsar] had not aspired to the tribunate." Of course not, for he was a patrician of the bluest blood, and the tribunate could be held by none but plebeians. When Cæsar presents himself for the chief pontificate, he is said (p. 140) to aspire to be "Pope of Rome"!—as if the two dignities had anything in common but their name and their exercise of ecclesiastical functions.

But, in spite of all this blundering, Mr. Froude has made a sketch which is generally correct, not merely in its outlines (the main facts are, of course, undisputed) but in its leading conceptions. Perhaps there is no better—there certainly is no more graphic—sketch of the misgovernment of the Senate and the aspirations of the popular party. The leading politicians, too, are well depicted, except where the writer's eagerness to vindicate Cæsar makes him partial in his judgments; Marius, for example, Cæsar's uncle and the leader of his party, is systematically whitewashed, while Lucius Lucullus, no doubt a thorough aristocrat and pleasure-lover, is, wholly without evidence, represented as being the venal commander described by Cicero in the thirteenth chapter of his oration for the Manilian Law. And, whether he is always right or not, the observations of a man like Mr. Froude upon the fall of the Roman Republic must be worth reading. As to the main purpose of the book, to depict Cæsar as the greatest man of history, and his work as an indispensable and beneficent one, we shall perhaps not differ from Mr. Froude, except in certain limitations. He himself says, in his preface, that "the materials do not exist for a portrait which shall be at once authentic and complete"; much less, then, for a complete survey of his career and work. That Cæsar, as a man, deserves on the whole the praise which Mr. Froude gives him, we have no doubt. As to his work—the conversion of the Republic into an Empire—a distinction must be made. It is not difficult to show that the Roman republic had outgrown its constitution; that stands confessed. It is not merely that the city type was not adapted to the administration of a world-empire; the city constitution itself had long ceased to develop with the growth of the city. The history of the Roman constitution is the history of a series of compromises, by which the most fatal defects were superficially glossed over; new needs were not met by large and statesmanlike measures, but by cheap devices which would help over the immediate crisis, yet would not guard against future mischiefs. The old bottle was made to serve for the new wine, and repeated patching did not prevent its bursting at last. To mention only two of the most glaring cases—what large state could endure a magistracy armed with a medley of powers so enormous and so irresponsible as those of the tribunate; or to have its chief executive authority capriciously distributed among a varying number of consuls, proconsuls, prætors and proprætors? The constitution imperatively needed to be reformed; some systematization and concentration of the powers of government was indispensable; and perhaps the form chosen by Cæsar was the best, as it was certainly the most natural outgrowth of the national institutions. This was, as Mr. Froude very well expresses it (p. 539), "the transfer of the administration from the Senate and annually elected magistrates to the permanent chief of the army"; only he here narrows the scope of the title *imperator* by conceiving it as exclusively military; he should have said, "to a single permanent magistrate."

But this is not an adequate description of the Roman Empire *as it existed*, nor have we in any sense a right to make Julius Cæsar responsible for the institutions established by his nephew. It is a notorious fact that Augustus was a conservative in temper and policy, and that his sympathies—so far as so absolutely selfish a politician can be said to have had any—were not with the revolution by which he obtained his throne. As we said before, our materials are too scanty to warrant us in passing an absolute judgment upon the work and aims of Cæsar; but so far as we do attempt this, we must look simply at what he did, not at what was done by those who came after him. The whole question of the *rightfulness* of Cæsar's rule—as distinguished from its usefulness—depends upon his responsibility in opening the civil war; a question full of delicate and difficult constitutional points, but in which it seems on the whole agreed that the blame is fully as much with his antagonists as with him. This granted, his subsequent career can hardly be called unconstitutional or abnormal. He died before he had completed his work, but all his reforms, all his constitutional changes, were made in due constitutional form. We are apt to forget that the ancient method of revising constitutions was not to call a convention, or even to lay the proposed scheme before a deliberative assembly, but to invest a single man (as Solon or Sulla) or a commission (as the Decemvirs and the Triumvirs) with authority, not merely to draw up a plan of government, but actually to take possession of the government, superseding the ordinary functionaries, and thus themselves to set in operation the machine which they had constructed. This is, to all intents and purposes, what Cæsar did. To be sure, he converted an effete republic into an hereditary monarchy; but this he did by virtue of powers explicitly conferred upon him, and it by no means follows that his monarchy would have been less free than the oligarchy which it superseded.

The fault of most great men and organizers is to take too much into their own hands and leave too little scope for independent action on the part of their subjects. This was where Cromwell and Napoleon failed, and the fatal mistake of the Roman Empire was the same—that it put an end to self-government. This was all the more a crime in that the Romans, by tradition and practice, possessed a vigorous and healthy system of self-government, which the Empire systematically stifled. The concentration of executive authority in the hands of one man was no doubt a great gain; but a true statesman at this crisis would have made it his first aim to revive and purify the institutions of self-government, which had, it must be confessed, sadly deteriorated. "*Omnia erant excitanda*," as Cicero said to Cæsar; and chief of all, the spirit and exercise of free government. Perhaps the task would have been impossible; perhaps, as Mommsen says, an "absolute military monarchy was the copestone logically necessary and the least of evils." It is certain, at any rate, that this is what came; that from Augustus to Diocletian free institutions steadily decayed. But it is one of the chief merits of Julius, one of the things that contrasts him most strongly with others of his type, that while seizing the supreme power of control he yet made a strong effort to revive in the republic a genuine internal life. By his extension of the suffrage and enlargement of the Senate he brought into the active service of the state capable men of all nationalities; by limiting the distributions of corn to persons actually in need, and by extensive colonization, he reduced the numbers of the proletariat—that is, raised paupers to citizens; and, above all, his municipal law organized local self-government in all parts of the Empire, creating a system which subsequent emperors suffered to be neglected and abused, but which, even as it was, did good service in the last days of the Empire. It was Cæsar who organized the Roman Empire—the creative ideas of it are his; but it was not he who made it the agency for destroying all free life.

A Ragged Register (of People, Places, and Opinions). By Anna E. Dickinson. (New York: Harper & Brothers. 1879.)—Miss Dickinson's title well enough describes her book. It is a record of her wanderings to and fro in the United States, well spiced with reflections, and it is ragged. We have descriptions of the Yo-Semite country, where Miss Dickinson enjoyed the grandeur of nature and killed with her own hand two rattlesnakes; of New England towns and villages, in one of which she was robbed of a night's rest by a rat drowning in a foot-tub; and of various places between these limits. We have portraits of people who have introduced themselves to Miss Dickinson on numberless railway journeys; who sometimes seem very well-worn types and sometimes very individual indeed; who always engage in discussions with her, are generally uncivil, and uniformly get as good as they send. Of opinions we have a great profusion and a bewildering variety. They are very precisely expressed, they spring from manifest conviction, and they have an air of disposing of their several questions—*e. g.*: "For me, I

think the Chinese are gentlemen. Let them so stand recorded." There are a great many anecdotes such as one would naturally enjoy telling to one's mother, "for whom," as Miss Dickinson says of hers, "the manuscript of this book was originally penned." Some of them enforce the truth that women are or should be abundantly able to take care of themselves, and that at the same time men should display towards them the chivalry of the Middle Ages, when they were but weaklings; others intimate that there are men still incapable of perceiving this. One of them, at least, is extremely amusing—that in chapter thirty-four. Few political allusions are discoverable, although there is, perhaps, an intimation to be heeded in this reference to the late Thaddeus Stevens: "I hope, with all my heart, that when the dark waters close round us again there may be found such another head and hand at the helm." The book appears somewhat late in the season, since it is too slight and, in a certain sense, too unpretentious for other than summer reading; but we believe success may be predicted for it, for, though it has not the narrative interest of the summer series initiated by 'That Husband of Mine,' it neglects none of the arts of rhetoric in its attempt to be vivacious and, so to speak, serio-comic. The reader whom it begins to depress at the fiftieth page will at least remark that at the two hundred and eighty-sixth Miss Dickinson is as fresh as ever. We would say "flippant" if the word would be understood to apply not to the matter, but only to the style. The style is at times strikingly like that employed so graphically by Alfred Jingle; at times it is plainly Miss Dickinson's own—at least, one is puzzled to tell "where she picked it up."

The History of Co-operation in England: Its Literature and its Advocates. By George Jacob Holyoake. Vol. ii. The Constructive Period—1845 to 1878. (London: Trübner & Co.; Philadelphia: J. B. Lippincott & Co. 1879. 12mo, pp. 491.)—Mr. Holyoake's second volume is interesting reading. It contains a graphic account, enlivened by a number of anecdotes and personal reminiscences, of the various co-operative experiments in England which began in 1844 with the "Equitable Pioneers of Rochdale." There is, as we remarked of the first volume, too much detail, and it is not always well arranged in the several chapters, although the chapters themselves are well sketched and distinct in their purpose. They are twenty-six in number, some narrative, some discursive, some statistical; and chapter ii. contains the substance of a pithy speech made by the author at Rochdale at the beginning of the successful experiment. Chapter vii., "Nature of the Co-operative Principle," is especially worth study for its elucidation of the principles upon which the movement is founded.

Upon a subject like this it would be very weak praise to say that a book is interesting. It is also very profitable reading. It not only tells the story of co-operation in such a way as to carry conviction; it sets forth its theory effectively and cogently, and discriminates true co-operation from what often passes under the same name, as resting upon an imperfect application of its principles. The author says: "Nothing is more astounding to students of industrial progress than to observe, in conversation among commercial men and politicians, the utter absence of any idea of distribution of gains among the people. The only concern is that the capitalist or the individual dealer shall profit. It is nobody's concern that the community should profit" (p. 453). And, as to the manner in which the profit of the entire community is to be accomplished: "Co-operation is an industrial scheme for delivering the public from the conspiracy of capitalists, traders, or manufacturers, who would make the laborer work for the least and the consumer pay the utmost for whatever he needs of money, machines, or merchandise. Co-operation effects this deliverance by taking the *workman* and the *customer* into partnership in every form of business it devises" (p. 77). The italics are ours. Co-operation, as thus defined, is one form of socialism, taking socialism, with Mr. Greg (as quoted on p. 70), to be "a fraternal union among men for industrial purposes, a working in common for the common good, in place of the usual arrangement of laborers and capitalists, employers and employed." But the "Continental craze" of *Communism* the writer wholly discards. Neither does he apprehend any serious trouble to society from it; and his judgment is entitled to some weight, from his intimate knowledge of the working classes.

It should be noted that "industrial partnerships"—the generally familiar type of co-operation—are reckoned here as only partially co-operative. When it was announced a year or two ago that the co-operative scheme of Messrs. Briggs, of the Whitwood Collieries, had fallen through, by reason of the obstinate adherence of the men to their trade-unions, it was lamented as the failure of a hopeful experiment. It is only fair to say that Mr. Holyoake lays the responsibility for this upon the employers. It had "brought them great gain," he says, "while it lasted," but it was never undertaken by them in any hearty faith, and they were unreasonable in their requirements to the men. This is Mr. Holyoake's view of the affair; at the same time he gives the Messrs. Briggs credit for honest intentions, and recognizes the difficulties in their way. The decisive thing would appear to be that they "were not themselves co-operators," and their relation to their men was always a *patronizing* one.

Perhaps the most vital point in Mr. Holyoake's theory is worked out in chap. ix. ("The Co-operative Workshop"), viz., that in true co-operation capital should be paid only once, and strictly what the use of the money is worth. This payment having been made to capital, in the shape of interest, the profit belongs to the co-operative laborers, with the very important reminder that the higher grades of labor should receive a higher proportion of profit. "The working-class," he says, "are rather apt to fix all salaries at the workshop rate, and begrudge every sixpence over that. For a man's brains, devotion, interest, and experience they award nothing willingly" (p. 127). A second vital principle, that of "admitting the consumer into partnership," was first carried out in the Rochdale store; and in chap. ix. Mr. Holyoake insists upon the same principle being applied to productive co-operation. As a matter of theory it is not so easy to maintain, but he appears to make it clear that it would be a wise piece of policy in production, as it has proved in distribution.

Considering the wide scope assigned to co-operation in this work, and the importance of co-operative productive enterprises, one would expect more than a passing mention (p. 99) of the peculiarly German phase of co-operation, and the Credit Banks of Schulze-Delitzsch; it would seem of the first moment in the discussion. We suppose it is passed over for the reason that this is primarily a history rather than a treatise. In the chapter on "Co-operative Farming," we have a significant expression of Lord George Manners, when he has stated the satisfactory results of a partial experiment of co-operation on his estates:

> "Many will shake their heads and say, 'All very well; but if the next is a bad year, you will have to bear the whole loss.' My answer is, 'Quite true; *but who can say that my loss may not be less than it would otherwise have been, owing to the stimulus which this system can scarcely fail to exert on the laborer in his daily work*'?" (p. 305).

An American correspondent of Mr. Holyoake says (p. 345): "The people of America, I think, are not ripe for co-operation—they have not been *pinched* enough, and the opportunities for individual enterprise are too good." Nevertheless, we wish that this volume—with considerable of its English detail omitted—could be very widely circulated in this country; it could not fail to do good.

Salomon et ses successeurs; Solution d'un problème chronologique. Par Jules Oppert. (Paris, 1877. 8vo, pp. 100.)—The author concludes this little book with the words, "We believe that the chronological problem concerning the kings of Judah and Israel is now solved." We are not in a condition to tell our readers whether this is really the case or not; for the plainest verification of the conclusions reached by the eminent archæologist—so complex and tangled is the subject—would require the labor of months, and the passing of a decision would need either the support of an elaborate dissertation or that of a superior authority. Thus much, however, we can say, not without examination, that we find the author to have applied to his arduous task a vast amount of minute investigation, executed with mathematical precision, and according to the soundest rules of criticism. Of course, he must here and there have recourse to conjectures, but his conjectures are of a plausible kind. His general view of the authenticity of the Biblical narratives concerning the two lines of Hebrew kings may be said to be strongly conservative. He finds it in several important points corroborated, and in no point essentially shaken, by results conclusively obtained from hieroglyphic or cuneiform inscriptions. Wherever discrepancies exist, he thinks the burden of proof, with few exceptions, still lies with the inscriptions, most of which are as yet very imperfectly deciphered and explained, while the harmony of the documents drawn from the chronicles of the houses of Judah and Israel is almost perfect. After having established the fact that, although the Hebrews had an acknowledged era, the starting-point of which was the date, real or falsely reputed, of the exodus from Egypt, the years of the rulers stated in Kings and Chronicles do not coincide with those of the national era, but are to be reckoned from the day of each accession to the throne, and that a given number of years may be precise, or embrace some months less or more than belong to it, M. Oppert by strict computation reduces the whole number of cases in which

the Biblical chronology can be proved to be at fault to the surprisingly low figure of eight. Nor are the errors the correction of which is needed for the restoration of a full synchronistic accord of any particular magnitude. "Ahab did not reign twenty-two years, but twenty-one"; "Menahem did not reign ten years, but at least six months longer"; "Joram could not have reigned eight consecutive years," etc. It will thus not be surprising that the dates as reconstructed by M. Oppert do not materially differ from those hitherto generally given in works on Bible history. The principal of them are: death of Solomon, 978 B.C.; accession of Ahab, 920; death of Ahab, October, 900; accession of Jehu, 887; fall of Samaria, June, 721; expedition of Sennacherib, 700—not in the 14th but in the 27th or 28th year of Hezekiah (the gravest concession to the Assyrian records); accession of Nebuchadnezzar, July, 605; destruction of Jerusalem, August, 587; release of Jehoiachin, April, 561. In order to avoid the difficulty arising from computing months within converging lines of years, M. Oppert uses in his chronological lists an additional column of dates, based on the addition of 10,000 to the years of the Christian era. 9,023 thus corresponds to 978 B.C., and 9,440 to 561 B.C.—the year 10,000 being the same as 1 B.C. There are some sharp remarks in the book directed against the critical methods of over-confident Assyriologists and Egyptologists, and some superficial processes are amusingly illustrated. Of a number of misprints which have struck us, the following deserves to be pointed out as misleading: "*dans* le prophète Isaïe" (p. 68), for *sans*, etc.

Aryan Philology according to the most Recent Researches (Glottologia Aria Recentissima). Remarks Historical and Critical. By Domenico Pezzi, Membro della Facoltà di Filosofia e Lettere della R. Università di Torino. Translated by E. S. Roberts, M.A., Fellow and Tutor of Gonville and Caius College, Cambridge. (London: Trübner & Co., 1879. Pp. xvi. 200.)—Prof. Pezzi aims to discuss only those works which treat of the entire Aryan stock of languages and do not confine themselves to any particular branch of that stock. He also says that he does not intend to notice those works which treat of the connection, real or supposed, between the Aryan and the other families of languages, though in fact he devotes considerable space to the connection between the Aryan and Semitic tongues. By the great majority of philologists it is believed that all the languages usually included under the term Aryan (Indo-Germanic, Indo-European) are descended from one common tongue spoken, in a period long anterior to any historical record, by people dwelling somewhere in Central Asia. Prof. Pezzi endeavors to give a sketch of the various speculations which have been put forth during the last dozen years in regard to the character of this primitive language, to which he gives the name *Proto-Aryan*. Of the unsatisfactory nature of these speculations our readers can form a notion when we tell them that they include every variety of opinion between the extremes of those who deny the existence of any such primitive tongue, and those who have attempted to construct a continuous text in the very words which they suppose were used by that primitive but problematical people. The book commences where the history of philology was left by Benfey and Schleicher about 1867. It gives, perhaps, as good an account of what has been attempted rather than achieved since that time as it is possible to crowd into rather less than two hundred rather small pages in rather coarse print. It is divided into two parts, of which it may be said that the first contains the details and the second the general conclusions drawn from them. To the general reader the details will appear somewhat dry, and to the philosopher and man of science the general conclusions will offer the appearance of a set of somewhat vague and wholly unsettled problems. Nearly half a century ago Bopp, in the preface to his great work on the comparative grammar of the Indo-Germanic languages, said, in substance, that the question why in almost all these languages the root I meant *to go* and the root STA meant *to stand*, was one which he would not attempt to answer. We are no nearer the answer to-day than we were then. Where he left the question there it remains.

When some years ago M. Wurz made the assertion, in the opening of his 'Histoire des Doctrines Chimiques,' that chemistry was a French science, he raised the ire of a large number of the scientific men of other nations. But we think hardly any one would venture to dispute the proposition that philology is a German science. We have taken some pains to estimate the comparative numbers of books in different languages cited by Prof. Pezzi, and we find that four-fifths of them are written in German, while of the remaining fifth a considerable portion are by authors who, though writing in other languages—for example, Max Müller in English—are nevertheless Germans by birth and education. Our own Prof. Whitney, of Yale, of whom Prof. Pezzi makes frequent and honorable mention, although a full-blooded Yankee, is, we suspect, more at home, scientifically speaking, in Berlin than in New Haven, and finds it easier to treat a philological subject in German than in English. The principal value of the present work will, we think, be that it will serve as a sort of bibliographical guide to what may be called the speculative philology of the last twelve years.

Lectures on the History of England. By M. J. Guest. With maps. (London and New York: Macmillan & Co. 1879. 8vo, pp. 582.)—These lectures were prepared by a teacher for the use of her pupils with the object—certainly the first of all objects in teaching history—"to awaken a real and vivid interest." They lay no claim to original scholarship; they are worked out from materials furnished by others, especially Mr. Green, to whom the author particularly expresses acknowledgment; but they fairly deserve the credit of accomplishing what they set out to do. For young people beginning the study of English history the book is exceedingly well adapted. Its peculiar merit is its suggestiveness. It aims, and we think successfully, to interest the reader in the movements and the personalities of the history, and to stimulate him to read for himself. It abounds in citations from contemporary writers, and in details of a homely and graphic nature. We will mention in illustration the description given of Henry II. in a contemporary letter (p. 171), and the account of the daily life of the Earl of Northumberland (p. 329). Compare also the Anglo-Saxon list of months (p. 94) with its descriptive terms ("Windy-month," "Wine-month," etc.) with the *Pluviose* and *Fructidor* of the French Revolution.

It must be admitted that the author is not always happy in her citations, often giving us second-rate authorities where better were accessible. This fault is seen in the passing of judgments rather than the depicting of periods; contemporary writers are always welcome, but when it comes to telling us what people of another age have thought of a man or an institution we are entitled to the opinion of the persons best qualified to form one. We notice that, on page 453, Mary, Queen of Scots, is spoken of as undoubtedly implicated in the Babington plot; if we are not mistaken, the best evidence exculpates her from this. The book somewhat lacks proportion, fully two-thirds of it being taken up with mediæval history. We could not well wish this part shortened, and, on the other hand, to have entered with equal detail into modern events would have made the book inconveniently large. The modern portion, therefore, must be taken as hardly more than a sketch, and the reader must be content to give less time to the great civil war of the seventeenth century than to the blind fighting of the Wars of the Roses. This is certainly a fault, if an unavoidable one.

A Continental Tour of Eight Days, for Forty-four Shillings. By a Journeyman. (London: Sampson Low & Co.)—This eight days' tour implies several things besides those which it directly tells. A Journeyman who is so watchful of his health, and reckons up so soundly advantages and disadvantages that seem of small moment, has attained a kind of training which may be otherwise arrived at, but which is almost necessarily given by fixed, limited circumstances. He has about eleven dollars to spend for his "outing," and he weighs the exact amount of sea-air, variety, good food, and physical gain which he is to get for that sum. Any variation from the schedule is noted, any good hint is carefully booked, because next year again he will have but eleven dollars to spend, and he means to get the utmost out of it. The book hardly gives as many details as might be desirable (why not print the author's accounts?), and the journeyman hand appears in a want of grouping and perspective; but it is a good little book, and might well be helpful, if we Americans were not compelled to traverse so many leagues before we can reach variety, and if it were not assumed by those who provide for the public that quiet, cleanliness, and reasonable hours can only be desired by travelling millionaires.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 11, 1879.

The Week.

THE New York Republican Convention met at Saratoga on Wednesday week, and all went off exactly in accordance with the programme. Mr. Conkling was there looking his best, and all the henchmen reported for duty promptly. There was much discontented and insubordinate talk among the Reformers and Administration Republicans during the two or three days previous, but it quickly subsided as soon as Mr. Conkling arrived and fixed his eye on them. They also brought three or four "dark horses" with them, which they led about in the corridors of the hotels, and asserted they were ready to back to any amount; but when Conkling saw them they pretended they knew nothing about them —that they were the horses of a strange dealer which they happened to be looking at just as he came in. There does not appear to have been the slightest doubt of the success of Cornell, Mr. Conkling's candidate, from the beginning; in fact, all the arrangements were made beforehand. No introduction or eulogy of the candidate was necessary, and none was offered. Everybody knew Mr. Conkling's wishes, and that was enough. For the same reason Cornell was not cheered when nominated on the first ballot, any more than a horse is cheered which wins a race. The applause was given to the owner and trainer. There was nothing to be said of Cornell except that he was personally honest, had been dismissed from office by Mr. Hayes as an enemy of civil-service reform, and was a favorite adherent of Mr. Conkling's. The rest of the ticket is, with the exception of the State Engineer, more than usually good; but then the other offices to be filled are unimportant compared to the governorship.

The platform declares that the Republic is a nation and not a league, and is, as the Republicans say, "supreme within its own constitutional sphere," and castigates the Democrats; declares that to refuse supplies to compel the consent of a co-ordinate branch of the Government is "revolution," and accuses the Democrats in Congress of "revolutionary attempts" and of "nullifying schemes," and again castigates them; approves of "free and pure elections," and pronounces any attempt to repeal the national election laws "a conspiracy" to overthrow the safeguards of free suffrage; bestows "hearty approval" on President Hayes for his veto messages; repudiates military interference with elections, but maintains that when Republicans use soldiers at the polls it is "to protect the ballot-box from the interference of force and fraud," while the Democrats bring "armed clubs" to the polls to "intimidate the citizens," and "remain silent when the assassin's bullet seals the fate of political independence"; castigates the Democrats again for "partisan purposes," "revolutionary methods," "disturbing measures," and "dangerous designs" "under the sway of those who were lately in rebellion, and seek to regain in the halls of legislation what they lost on the field of battle"; approves of the resumption of specie payments, and disapproves of "debasing the standard, depreciating the paper, or deteriorating the coin"; protests against putting Confederate soldiers in offices taken from "old Union soldiers"; points with pride to the reforms in the State Prison and Canal management effected by the Republicans, and pronounces those who claim these reforms for the Democrats "public impostors"; declares that the system of taxation ought to be reformed, and would have been reformed before now, under a commission created by the Republicans, if their righteous designs had not here also been defeated by the Democratic Governor; approves of the supervision and regulation of railroads, which is apparently the only good thing the Convention proposed or had ever heard of that the Democrats had not diabolically tried to hinder or mar.

It will be observed that there is only one mention of President Hayes and the Administration, and this very cold and guarded, and that no measure of any kind in Federal legislation is supported, the greater part of the platform being taken up with denunciation of the Democrats in Congress, although there is this year no Federal election. Only one question of State concern—the supervision of the railroads—is alluded to except for the purpose of pointing abuse of the Democrats. In fact, the platform is a thoroughly Stalwart document, in that it proposes nothing except that the Democrats should not get the offices and should not be allowed to legislate, and affirms nothing except that the Democrats are bad fellows, and that the South is still animated by the spirit of rebellion. The two principal speeches—indeed, the only ones—those of Mr. Conkling and Vice-President Wheeler, were in the same strain and covered the same ground, the latter especially being very violent. In so far as the Stalwart idea of the duty of a party in power can be gathered from them, it would seem to consist in the distribution of offices among "workers," the carrying of elections by "workers," and an annual meeting in each State to denounce the opposition and show that *all* its aims are highly criminal in character, and have the air of having been concocted in a penitentiary by the bad element among the convicts.

The most curious part of the performance is the perfunctory joy with which all parties profess to receive the result. All have gone home "to work heartily for the ticket," and Cornell is to direct the canvass with his accustomed skill. It is admitted that there may have been some grounds for dissatisfaction with the way the nomination was made, but then everybody must see the necessity of presenting a united front to the enemy this year—the implication being that there are certain years in which discontent may be allowed to show itself at the polls, but this is not one of them. Next year, it has been suggested, reformers can, if they please, oppose the Machine, but if they were to do it this year unknown consequences of a grave character would follow. The New York *Times* has an amusing story of "a gentleman of the utmost respectability" and of "marked ability," "wise, able, and eloquent," and "known to be true to the party," somewhere near Albany, who desired to "attend to his political duties," and to serve as a delegate at the Convention. He is promptly defeated at the primary, for "the sole reason that he would not" pledge himself to vote in the Convention for a certain man, and afterwards, if necessary, transfer his support according to the instructions he might receive from the political hack who controlled the party machinery in his district. The gentleman was simply an impudent theorist, and got his due. What had his "wisdom" or his "respectability" or his "eloquence" or his "faithfulness" to do with the matter, this year anyhow? Next year will be the great year for wisdom and ability at conventions.

Both California and Maine have gone Republican at the State elections held on the 3d and 8th instant respectively. In California, Perkins, the Republican candidate for Governor, naturally ran somewhat behind the rest of his ticket, owing to the union of the Democrats and New Constitution party upon Glenn. But his majority is large enough to indicate the utter demoralization of the Democrats and the virtual extermination of the "Honorable Bilks." The Workingmen gain the most substantial benefit from the election, perhaps, as they secure two of the three Railroad Commissioners, whose powers are great, and who can only be removed by a two-thirds vote of the Legislature. They also elect Kalloch mayor of San Francisco, and in dividing the other city offices with the Republicans rather get the better of them. The latter elect all four of the Congressmen, however, and a majority in the Legislature which chooses a United States Senator, and thus place Califor-

nia "in the Republican column of Congress." As there were five State tickets in the field and eighty-seven offices to be filled in San Francisco alone, there is still some guesswork about the result, which will not be positively determined before the official canvass. In Maine, also, the returns are unusually slow in coming in. It appears at present that Davis has no majority, though a considerable plurality over Smith—Garcelon having made a wretched run—and will be elected by the Legislature, which is likely to be Republican in both branches; altogether a decided Republican gain over last year. The vote was the largest ever cast, and will probably reach 140,000. The constitutional amendment providing for biennial elections and legislative sessions was carried. Mr. Blaine estimates Davis's plurality over the Greenback candidate at 20,000, and over Garcelon at 40,000. The Greenbackers seem to have gained from the Democrats but lost as much and more to the Republicans. One thing is clear, that the currency issue and not the bloody shirt occupied the voters.

During this week and next in Massachusetts the half-dozen conventions which represent the discordant politics of that State will meet, and from their proceedings some idea may be formed of the probable result of the November election. Since the withdrawal of Governor Talbot the Republicans have been involved in a conflict of personal claims to the succession which has been marked by unusual persistency and acrimony, and has led some of the party press into precautionary denunciation of the crime of bolting. The hand of Butler is more or less discernible in the quarrel (for it is almost that) between the friends of Mr. Long and Mr. Henry L. Pierce. His quondam organ, the Boston *Traveller*, is now working hard for Long, and reports Butler himself as saying that he could beat Pierce rather more easily than any other candidate. The danger that the Republicans will take advice of Butler is, of course, not very great under any circumstances, and especially when, in the very act of making his boast, he opens on Mr. Pierce's character with a battery that ought to have been masked till after the nomination. He accuses Mr. Pierce of having engaged near the close of the war in a contraband trade with the rebels through the lines, and has brought to light proceedings had in 1873 by one of Mr. Pierce's associates against their agent in the business, which ended in a decision that the trade was illegal, and that no contract based upon it could be enforced. Mr. Pierce states that he has only just learned of the facts brought out in these proceedings, to which he had refused to be a party, that he never suspected that his money (which had been advanced at the request of a Republican friend) was being used improperly, and that his character as a Union man is too well remembered to be affected by such a charge. His word has never been impeached, and cannot be now, on the imperfect evidence adduced; but the Long men, and the Butler men, and the men who are Butler all the time and Long when it suits them, will use this reminiscence for their common purpose, at least up to the adjournment of the Republican Worcester Convention.

Mr. Garfield explained the other day to a *Herald* reporter, with the aid of a diagram, that the chief cause of uncertainty in forecasting the result of elections in Ohio was the movement of population. He estimated that while Ohio has received from the East about 750,000 of her population, she has parted with 770,000 to the West, and in like manner has acquired 25,000 from the South while retaining but 20,000. The voters that come from the East are apt to be laborers attracted by the mining and manufacturing demand, and are consequently Democratic "at first"; those from the South of course adhere to the same party. But Mr. Garfield seems to have underrated this Southern accession. A well-known correspondent of the Cincinnati *Commercial* reminds him that by the census of 1870 there were no less than 138,000 Southern-born residents of Ohio, part of an increasing movement northward which has been going on for at least seventy years. Comparing the statistics for other States, it appears that the Southern emigration to Indiana and Illinois was considerably larger than that to Ohio, and that regarding the whole of both sections, "where one Northern man goes South to live, *five* Southern men move into the Northern States and stay there" What the approaching census may have to tell of this movement will be awaited with great interest, and not for political reasons only. Mr. Garfield opened another vista to curious speculation when he stated that the Western Reserve contributed more than a third of its strength to the Greenback party in Ohio. They were stalwart Republicans until carried away in 1872 by Greeley, since when they have been like sheep without a shepherd. Mr. Garfield now expects the Republicans among them "to be drawn back into our ranks by sheer party magnetism, assisted by their resentment of the revived Democratic extreme State-sovereignty doctrines."

The Cincinnati *Gazette* keeps up its fire upon the new Governor of Kentucky by asking daily whether or no he is the Blackburn who attempted to introduce yellow fever into the North during the civil war. It has now what it calls a "Blackburn department," wherein it prints communications, extracts from other papers, and investigations by its own reporters. One of these has made a polite call upon Governor Blackburn in order to offer him the opportunity of denying the ugly rumors which have found their way into the columns of the *Gazette*, but the Governor failed to take advantage of it, and has indeed preserved a uniform silence upon the subject. Another, no less a trained investigator than "H. V. B.," has unearthed the report to Secretary Seward of the United States Consul at Bermuda in 1864, which implicates some Dr. Blackburn or other in very infamous business. The *Gazette* protests that it is "surprised and pained" at certain unwarrantable intimations that it is "unfriendly to Governor Blackburn and the State of Kentucky," but still regrets its inability to get any light upon its constant conundrum from either of them. The *Courier-Journal* cannot be persuaded to contribute any information; but we believe a beginning has been made in inducing one Democratic journal in Kentucky to echo the *Gazette's* daily question. The Chicago *Tribune* is, however, a stanch ally, and the *Journal* shows its friendliness by printing the interrogation occasionally. On the other hand, since Secretary Sherman's plea for a closer union between Kentucky and Ohio, the Cincinnati *Commercial* seems disposed to silence its contemporary. "The trouble with the Cincinnati *Gazette* touching the Governor of Kentucky is on the increase," it says flippantly.

Mr. Field has returned to his attack upon his late "legislative ally" in a letter to the editor of the *World*, answering, as he says, "some very plain questions" addressed to him by the latter, who seems anxious that nothing to Mr. Tilden's disadvantage shall be unwisely hushed up. The letter is plaintive in its appeal to one's sympathies, but it is chiefly designed to show that the writer mistook the character of his ally, which appeared in Mr. Field's first interview. It seems clear that when Mr. Tilden whispered in Mr. Field's ear at the latter's residence, on the eve of his departure to Europe to visit his daughter, that elevated-railroad stock was "booming," he was expressing personal rather than convivial hilarity. And Mr. Field's failure to perceive this, and his consequent inference that Mr. Tilden would be guided by him in the disposal of his stock as to time, place, and price, will be regarded by none more than by Mr. Tilden's enemies as inexcusable weakness. The reporters have as yet not been able to draw any reply from Mr. Tilden, who is probably taking time to prepare a defence against the main accusation of the letter, namely, its implication that Mr. W. T. Pelton, in whose name Mr. Tilden's stock stood, is still honored with the intimate counsels of his uncle. We have heretofore pointed out that Mr. Tilden exploded the wicked-partner theory by reducing it to the absurdity involved in supposing so experienced and discerning a person as himself capable of being imposed upon by persons like Weed and Woolley and Pelton. But the fact that at the time of the cipher-despatches exposure this theory was his defence, will, we should say, make it particularly difficult for him to defend himself successfully now against the

charge of having restored to his confidence a partner whose wickedness he has publicly deplored.

Although no new shipments of gold were made during the week from London to New York, the arrivals here since we last wrote were no less than $5,760,000. Including this sum and the amounts on the way, not far from $20,000,000 gold has been gained from Europe, and this, too, before the cotton exports have been much felt in the foreign exchange market. It seems a reasonable calculation that fully as much more gold will be received during the remainder of the year. It is most fortunate for the money market that so much has come already, for otherwise it would have been in a distressing condition, as the borrowing demand has been greatly increased by reason of the rise in prices at the Stock Exchange, the creation of new collateral, and the enlarged volume of business, while New York bank facilities have been much reduced since 1873. During the week the ruling quotation for demand as well as time loans was 5 to 6 per cent., U. S. bonds and railroad bonds were firm, and the speculation in stocks was "strong to buoyant," notwithstanding the high prices current at the beginning of the week. The volume of mercantile business, judged by Clearing-house transactions, is nearly one-third larger than a year ago, and several branches of industry, like iron-making, are strained to the highest pitch of activity. The silver market has been dormant, the London price ruling at about 51⅛*d.* to 51¼*d.* per oz., and in New York the bullion value of the 412½-grain silver dollar ranging at 86¼ to 86½ cents, closing at $0.8623.

We have discussed elsewhere the news from Afghanistan. The way in which Lord Lytton, the Governor-General of India, under instructions from home, forced a quarrel on Shir Ali, the late Amir, was by demanding that he should receive a resident ambassador at Kabul. He refused on the ground that the mere appearance of being controlled or overlooked by a British agent in his own capital would ruin him with his subjects, and that he could not answer for the safety of such an agent. No attention was paid to this, and his successor was compelled to receive one. This, combined with the fact that he had to go to the British camp to make peace, put Yakub Khan, in the eyes of the Afghans, in the position of Shah Soojah in 1839—that is, made him appear a foreign tool. His troops have accordingly mutinied, and, joined by the mob, have stormed the British residency and slaughtered the Minister, Sir Pierre Cavagnari, and his escort of British troops, seventy-seven persons in all. At this writing it seems likely that Yakub Khan, to ensure his own safety, has joined the insurgents, and the war will have to begin again.

The lesson of the tragedy of 1841 was that there is nothing the Afghans will not sooner submit to than anything like a sacrifice of their political independence; that the Amir is not a real despot, holding undisputed sway, and able to answer for his subjects, but simply a sort of suzerain ruling a number of turbulent tribes whose first allegiance is paid to their chiefs; that treaties with him, therefore, containing conditions which are likely to run counter to the popular sentiments are of no value, and that the only way of retaining influence in Afghanistan is to avoid all appearance of meddling, while privately keeping the Amir in good humor by presents and other favors. This lesson was acted on by the Indian Government from Pollock's retreat down to the accession of the Beaconsfield Ministry and the inauguration of "the Imperial policy." The inflated novelist who then took charge of the Empire determined to disregard it, and sent out a brother novelist and poet, nearly as inflated as himself, to discipline the Afghans and acquire a "scientific frontier," and we see the result. As to the future, of course Kabul will now be occupied; it was easily occupied in 1839 and 1842. The Afghans make no stand in the open field, but it can hardly be that the British public will allow the Premier to work out his plot any further. They must by this time have had enough of him.

The end of the charges against Captain Carey, of the 98th Regiment, who was with Prince Napoleon when killed, is very curious and hardly more creditable than the charges themselves. The court-martial, which appears to have lost its head as completely as the public at home, found him guilty of misconduct before the enemy, and sentenced him to be dismissed the service because he did not go back to rescue the Prince (though it said nothing about his not rescuing the two troopers who were also killed), and there was an answering groan of indignation all over England. It is now admitted, however, that Carey was not on duty at all; that the Prince, though he held no English commission, was in command of the party; that it is the duty of a reconnoitring party not to fight, but to fly; and that Carey did nothing wrong. So the proceedings of the court-martial have been quashed, and he has been ordered to return to his regiment after he has paid a long visit to his family. In fact, he was received on his return as a popular hero, and it only remains for Dean Stanley to offer to inter him in Westminster Abbey to make the affair a complete illustration of what appears to be the growing mercurialness of the English temperament. Apropos of the Prince, there is in a recently published letter of Prosper Mérimée, who was an old friend of the Empress, an account of an interview with her at the Tuileries in September, 1870, just before her downfall, but when the end was certain, in which he says: "Elle n'avait plus la moindre illusion, et disait que ce qu'elle désirait pardessus tout pour son fils, c'était une vie heureuse et sans ambition." Unhappily she got over this resignation when she reached England, educated him as an intriguing pretender and a thorn in the side of his country, and spent her money supporting Bonapartist newspapers in France.

There have been rumors, more or less definite, ever since Prince Bismarck obtained the support of the Ultramontanes in Parliament, and Dr. Falk resigned, that he was negotiating a peace with the Pope; but it looks somewhat as if he had started them himself, and as if peace was really no nearer than ever. The Vienna *Correspondance Politique*, a semi-official sheet, has a letter from Rome which professes to tell the story of the negotiations which Monsignore Roncetti was sent as nuncio to carry on. The writer says that Bismarck is firm in refusing to surrender the state control of religious corporations, or the obligatory university education for priests, or the obligatory communication by the bishops to the Government of all their appointments, or the State Ecclesiastical Court at Berlin, which has jurisdiction of clerical offences against the law, or the obligatory return by the bishops of all fines above a certain amount inflicted on priests. As these are the principal matters in dispute, it cannot be said that much progress has been made towards a settlement. In fact, it would appear that all Bismarck offers is to fill the places of the dead bishops and let the exiled ones come back to their sees.

There is a singular but instructive contest pending in Belgium between the Catholic clergy and the state. The Liberals, having now a majority in the Parliament, have determined to take the public schools out of the hands of the priests, who, since 1842, have had complete control of them. Under the law recently passed religious instruction is to be given in the schools at a certain hour, by priests, to those children whose parents shall call for it, but beyond this the clergy is to have nothing to say to the management. The bishops, however, have not only forbidden the curés to give such instruction, but have directed them to refuse the sacraments to any teacher who attempts to supply their place by teaching the children the catechism. It is reported that in some dioceses the bishops have gone still farther, and have directed that absolution shall be denied to all masters of primary schools serving under the new law, and to both the teachers and pupils of the normal schools. This report is not thoroughly authenticated, but the Ultramontane papers have not as yet denied it. The affair is useful, as showing what the Catholic clergy will do when circumstances are favorable, and how thoroughly conditional their liberalism is apt to be.

THE NEW YORK MACHINE TRIUMPH.

IN spite of the threatenings of the mutinous Republicans, there never has been much doubt that the late Convention at Saratoga would nominate Mr. A. B. Cornell, if Mr. Conkling insisted on it. The only question was whether he would insist on it, and the chances were all in favor of his doing so. There was nothing in his career to justify the belief that he would be prevented by a regard for the success of the party. He has never shown any hesitation in leaving the party to its fate at any election which was not likely to affect him personally. This year his personal position made it extremely desirable that he should produce some striking proof of his power, both by way of avenging himself on the Administration which had deprived him of the New York Custom-house, and by way of showing that the recent scandal has not damaged him politically. For this purpose he could not have hit on a better thing than the nomination of Cornell for the governorship of New York. The greater Cornell's unfitness for the place, judged by the ordinary standards, the more valuable is the nomination as a proof of his patron's ascendency. There was, therefore, every reason for expecting Mr. Conkling to insist on it, and he did insist on it, and carried his point after the usual amount of babble among his opponents about other candidates. There was nothing in the history or condition of the opposition to him to make him waver for one moment. The Machine which he controls has now been in operation for several years, and is probably the most perfect instrument of its kind in existence. He constructed it with great care during the Administration of General Grant, who put into his hands the whole patronage of the Government for that purpose, besides fortifying him with every other mark of confidence. The accession of President Hayes and the withdrawal of the Custom-house have not broken it up, or even slightly deranged it, for reasons which we set forth last winter when commenting on Mr. Conkling's triumphant re-election to the Senate, but which will bear repeating.

Mr. Hayes was elected as an ardent civil-service reformer, and was to aim at a "thorough, radical, and complete reform." It was this more than anything else which brought down on him from the very first the hostility of the old party managers. They pretended that it was his desertion of the freedmen, but it was in reality his violation of the rules of the game in his mode of filling the offices from the Cabinet down. His Cabinet was made up in complete breach of the established usages, and his great offence at the South was his giving so many good offices to persons who not only had not worked for the party, but had really never belonged to it. Now, if he had carried out the reform policy thoroughly and consistently, and made no departures from it, two results would have followed. In the first place, the zeal of the Independents, whose influence was acknowledged both on the platform and in his letter of acceptance, would have been still further kindled. They would have felt that they had at last got a champion of their ideas; that by standing by him they could open a considerable future for these ideas, and if not build up a party on them, at all events secure for them a firm and permanent foothold in the Republican party, and make opposition to them in the party discreditable and impolitic. In the second place, his policy would have made such an impression on the public mind that the Democrats would not only have found it unassailable, but would have been compelled at all events to feign acceptance of it, as the rule of their conduct also, whenever they got into power; so that, altogether, it would have assumed in all eyes the air of something permanent, of a return to the early and better practice of the Government—at a time, be it remembered, when legislation was no more favorable to the purity of the civil service than it is now—the air, in short, of a solid and fixed improvement in the machinery of administration from which any succeeding President would hardly have ventured to depart.

But President Hayes did not do this. He has unquestionably made improvements in the civil service, which we do not mean to belittle; but side by side with these improvements he fell into some of the very worst practices of the old régime. He used the offices lavishly to reward party and personal services. The dispute about his title ought to have made him exceedingly careful about using Government patronage to reward persons to whom he was indebted for his accession to the Presidency, and this is true whether such persons acted ministerially or judicially. But he showed no more hesitation than Conkling or Blaine would have shown, in providing for nearly every one of them, good, bad, or indifferent, by means of offices, the disposition of which, as he acknowledged, was committed to him as a solemn trust. This was a great mistake. It had various grave consequences, but the gravest of all were the diffusion among the real friends of civil-service reform of the belief that, having been again deceived, they were pursuing a chimera, and the diffusion among the politicians of the belief that such changes as Mr. Hayes had made in the direction of reform had taken no hold of the popular mind, and were not permanent, and would be disregarded by the next Administration, whether Republican or Democratic.

It is to this last that the continuance of Mr. Conkling's strength is due. No one can deny his skill as a Machinist, and the party believes that as soon as Mr. Hayes goes out the Machine will work again with the old gearing; that the Custom-house belt will be again put on the wheel, and all go on as before; and that if his successor is a Republican, Mr. Conkling will again wield his old power in the State. Men who care, therefore, for political activity, and fancy they have a political future, refuse to quarrel with him. He is to them still the coming man, and when they find him bent on any scheme, they sooner or later support him in pursuing it. This is the whole secret of the two recent degrading exhibitions in the politics of the State—his unanimous re-election to the Senate by the party majority in the Legislature, and the total collapse of the opposition to his putting his chief henchman in the chair which Seward and Marcy and Dix have filled. The Republican papers all acknowledge that without his support Cornell would probably not have received one hundred votes, so that we are driven to the conclusion that one man has nominated the Republican candidate, and that the meeting of the convention and the balloting were in reality mere forms which might have been dispensed with, and that the work might have been done by a letter to the newspapers from Mr. Conkling. The final touch was given to the scene by the failure of the Convention to applaud the successful candidate when his nomination was announced. The cheers were reserved, and appropriately enough, for his master.

Whether Mr. Cornell can be elected will, of course, depend a good deal on what the Democrats do. But the argument by which condonation, connivance, or approval have been claimed for all other errors and shortcomings of the Republican managers during the last ten years—"the bloody shirt" and the wickedness of the Democrats—is as strong for his election as for anything else, and the speeches of Mr. Conkling and Mr. Wheeler showed that their reliance on it is as great as ever. If it is successful this time, it will undoubtedly send Mr. Conkling to the Presidential Convention next year with greater prestige than before, but it will also commit the Republican party to a decided return to all that is worst in its history and composition. It will strengthen all the evil influences in the Convention to know that "the pivotal State" of New York is in such hands and can be carried by such means.

The readiness with which the Independents, or Reformers, or "Administration Republicans," or whatever one pleases to call them, have fallen in with the Stalwart view of the proper work of the party, is of itself, even if he had not had abundant experience of their timidity and vacillation, sufficient justification of the small account in which Mr. Conkling holds them. It was plain from the first month of Mr. Hayes's Administration that if they conceded that denunciation of the South (for legislation about the South, be it remembered, is admitted to be at an end) was the chief and proper business of Republican politicians, their rôle was ended. In this business the Stalwarts cannot be excelled, and it furnishes them with an abundant excuse for the neglect of everything else. A Reformer waving "the bloody shirt" is, in the nature of the case, a

ridiculous spectacle, and nobody enjoys it more than Conkling, and yet, with strange fatuity, for the last three years Reformers have been deliberately trying to show that they could wave it as well as anybody. The appearance of Messrs. Garfield and Foster as Stalwarts has been a somewhat discreditable performance, but not half as bad as Mr. Sherman's attempt to outrun the whole field by declaring that the question whether the Federal Government should supervise elections was more important than the condition of "money, property, and labor." That question has, of course, a certain importance. Now and then, as at this moment in South Carolina and Mississippi, it may be desirable that the Federal Government should be able to supervise elections when certain districts are in a disturbed condition, but it could only have supreme importance in case the majority of the States, at least, became too turbulent or corrupt to conduct elections at all; and in that case where should we get the pure and good men for the Federal Government who would see that right was done? Where does the Federal Government get its morality, as well as its physical force, but from the States? There is no school for Federal statesmen except the school of State politics; and whenever State politics become generally so depraved that the State authorities cannot be trusted to conduct elections fairly, we may rely upon it the Federal Government will not trouble itself with the task. It will find shorter ways of evolving law and order. The great interests of this country, as of all countries, are, and must ever be, "money, labor, and property." On these its morality, its strength, and its future depend. A party which ostentatiously neglects them, or pushes them into the background, for the purpose of indulging in declamatory vituperation of communities which it does not control, must of necessity be led by tricksters and machinists.

THE REVOLT IN KABUL.

IT is difficult to overestimate the gravity of the news which has been received from Afghanistan, of the rising of the troops and populace at Kabul against Yakub Khan, and the massacre of the entire British Embassy, including its chief, Sir Pierre Cavagnari, so conspicuous in the late operations. The effect of this tragedy on both Indian and British politics is likely to be serious in the highest degree. As regards Indian politics, it means that the occupation of Afghanistan with a considerable force will now be deemed necessary, and that the expense of this will fall with crushing weight on the already greatly embarrassed Indian treasury.

It is a difficulty, too, from which there is no escape without the loss of that prestige in the eyes of the natives which is one of the conditions on which the Indian Government exists. In fact, one of the strongest objections to the policy of annexation or extension of the frontier line is that the Government cannot anywhere afford to be beaten or to be compelled to retreat, for fear of being lowered in the estimation of the bulk of its subjects, and therefore ought not to expose itself to slights or indignities where it can possibly avoid it. It will not only have to go to Kabul, but stay there; for one of the unfortunate positions taken in the controversy with the late Amir Shir Ali was that there must be a British Resident in Kabul to watch the Russians, and, in fact, superintend the Amir's foreign relations. What has happened now shows that this Resident must have an army for a body-guard, and that no ruler set up by the English, or supposed to be in the pay or under the influence of foreigners, is likely to be much stronger or better able to assert his authority than the unfortunate Shah Soojah, who was put on the throne by a British army in 1839 and killed when the British were driven out two years later.

Our correspondent, himself an Indian officer, writing in the *Nation* of last week on the present condition of India, made a singularly shrewd estimate of the situation in Afghanistan when he said:

"Afghanistan, rent asunder by internal dissensions, is fast tumbling to pieces; and Yakub Kahn and Major Cavagnari are at this moment in precisely the same position in Kabul as were Shah Soojah and Sir William Macnaghten in 1840. It will be little less than miraculous if the former Englishman succeed in escaping the violent death which fell upon the latter."

An army for a body-guard at Kabul, however, means the occupation of the whole country, the garrisoning of the principal towns, and the policing of the great lines of communication—in other words, the occupation and government of the country; and there is no difference of opinion as to its being the most difficult country to govern of its size in the world. The Indian revenues already are unequal to the demands of peace; there has been a heavy deficit during the past year, necessitating a loan from the Home Government; the depreciation of silver, in which the taxes are received, shows no sign of coming to an end, and the loss on exchange in paying the interest on the debt held in England is therefore heavy. What is worst of all, however, is the fact that the limit of endurable taxation has been reached; there appears to be no difference of opinion on this point among competent observers.

How the Ministry will face the crisis, however, it is hard to see. It is not possible to postpone a dissolution of Parliament beyond next year, so that there will not be time in the interval for the Afghan difficulty to be got out of the way. The achievement of the "scientific frontier," of which Lord Beaconsfield boasted recently at the Lord Mayor's dinner, was due to a series of apparently lucky accidents and blunders—that is to say, it could not have been obtained if Shir Ali, instead of offering a vigorous resistance, had not fallen sick and died. Nor could it have been obtained if the Russians had not substantially got all they wanted under the Treaty of Berlin, and therefore abandoned their intrigues in Afghanistan. The independence of Bulgaria, the virtual independence of Rumelia, and the virtual surrender by the Turks of their right to occupy the Balkans, together with the retention of the claim for a war indemnity, came so near the original provisions of the Treaty of San Stefano that there was no longer any motive for stirring up the Afghans, and Shir Ali was left to get out of his scrape as best he could. But it turns out that his objection to receiving a Resident—that it would discredit him with his own subjects—was not a mere pretext. It was based on a better appreciation of the situation than his son, Yakub Khan, seems to have possessed. The "scientific frontier" has, therefore, vanished. The frontier of Herat and of Balkh, which the British were bound to defend if attacked, by the treaty with Yakub Khan, and which therefore became the real frontier of British India, is not a scientific frontier, but a remote and very difficult and costly one, and up to it the British must apparently now go, not to repel an attack from Persia or Russia, but in order to keep order in Afghanistan itself. In other words, the object of the late war has not been achieved, and the boasting of the Premier at the Lord Mayor's dinner turns out to be empty.

The gain for the Liberals is obvious enough. They have all along maintained that the wisest thing to be done with Afghanistan was to let it alone; that there was no meddling with it at all without meddling a good deal; that the agreement made with Russia in 1868, to treat it as outside the sphere of international complications, was the best possible arrangement, and that the best frontier India could have was the one she had before the late war. The late tragedy, which repeats the lesson of 1841, must powerfully support this view in the eyes of the voters, enforced as it is by the badness of the times. Nearly all the most eminent Anglo-Indians concurred in it, and especially the late Lord Lawrence, one of the highest authorities, if not the highest authority, during his life; but nothing availed against the Premier's self-confidence and the desire of his colleagues to carry out, as Lord Salisbury says, the policy which has been the real policy of England since the days of Elizabeth. This sort of talk was very potent two years ago, and if the murder of Sir Pierre Cavagnari had occurred then there is little doubt it would have roused the Jingo enthusiasm of the period to boiling point. But there has been within the year a complete loss of interest in foreign affairs. The course of events in Turkey, in Cyprus, and in Africa has brought nothing but disenchantment. Some things which then stirred men's blood now excite a smile when mentioned, such as the

protectorate of Asiatic Turkey and the acquisition of Cyprus. In Afghanistan alone was there any appearance of success in carrying out the ministerial programme; but the Afghan policy too must now be set down in the list of ministerial failures. The revolt in Kabul, instead of rousing enthusiasm, will probably only deepen reflection, and bring home more surely than ever to the bulk of Englishmen a sense of the tremendous responsibility entailed by the possession of India.

It will probably also help to bring the public to something like a final decision of the precise shape which the foreign policy of England is hereafter to take. This question has never been settled since the rise of trade and commerce, and the growth of the public conscience after the peace of 1815, made the rôle of a mere bully distasteful to an increasing portion of the community. The path traced out by Cobden, or the Manchester school—that of a peaceful trader—was never really acceptable to the great body of the people. It involved much too wide and sudden a break with the great traditions of English history, and seemed to many who had no sympathy whatever with a hectoring or aggressive demeanor to involve the waste and loss of an influence which, whatever objections there might be to the mode in which it was acquired, might be made to work immense good for less fortunate divisions of the human family. So that when Lord Beaconsfield first began to swagger, before his real aims were known, he touched the imagination of great numbers to whom the England which he has since conjured up, fighting right and left for "British interests," and prepared to sacrifice 30,000 Bulgarians sooner than suffer a diplomatic check in the harem at Constantinople, was inexpressibly odious. It was these, doubtless, whom Sir Charles Dilke had in his mind the other day, when he said that it would not do for the Liberals to extinguish Jingo enthusiasm; that the task before them was to direct it rightly—that is, so to use it as to make English influence the result of a better thing than naked displays of power; that is, of sincere sympathy with all "who are desolate and oppressed," or nobly ambitious. If the foreign policy of the country passes into the hands of this class, they will certainly begin the work of reform as any prudent philanthropist would in private life, by establishing a stern proportion between means and ends. They will see that the world has grown too big and populous and rich for England any longer to play the part in it she once played. Other people have got ships and men and money, too, and the cruelty and injustice of promising what cannot be performed, and meddling where one cannot mend, has been wonderfully illustrated by every one of Lord Beaconsfield's late enterprises abroad.

THE PEOPLING OF HAWAII.

THE Hawaiian aborigines are decreasing; the total population of their islands is increasing. The movement of the population in the Hawaiian group, as shown by the census of December last, will not, indeed, attract attention on account of its magnitude. The lately-published account of that enumeration would not fill more than three of the 2,326 pages which are required for the ninth census of the United States; the ratio of these numbers nearly represents that of the island to the American population. Yet the transformation of the Hawaiian has something of the interest of a chemical experiment in which the combinations go on without disturbance and swiftly; and the smallness of their scale renders them, to use a convenient Baconianism, a more maniable subject. The total island population is now scarcely 58,000; but for the first time since the European occupation of the group it is increasing—in what way and with what promise we will show briefly.

The repopulation of Hawaii might be called a problem of three bodies. Three races are mainly concerned in it—the aboriginal Polynesian, the Chinese, and the Anglo-Saxon. The first, as a pure race, are still losing ground for reasons which we have lately pointed out (*Nation*, July 24, 1879). It is, however, an error to expect their extinction in the course of a few years, even should their present rate of decrease continue. Calculating a diminution of ten per cent. for each of seventeen sexennial periods following the census of 1878, there would still remain in 1980 an aboriginal population of 7,347. Its numbers, though always lessening, would, theoretically at least, disappear no sooner than a conchoid curve would meet its asymptote.

The Chinese are rapidly gaining ground, by immigration chiefly as yet. The whites are increasing with moderate rapidity both by immigration and by the multiplication of their descendants of unmixed blood. A fourth class, however, seems destined in the natural order of development to become the dominant one in the Islands, though it is not as yet very strong numerically—it is the half-breeds. The table annexed will indicate the movement of each of these classes:

Population of the Hawaiian Islands.	Dec 27, 1872.	Dec 27, 1878.	Differences.
Total population	56,897	57,895	1,088
Number of Aborigines	49,044	44,088	—4,956
" Half-breeds	2,487	3,420	933
" Chinese	1,938	5,916	3,978
" Americans	889	1,276	287
" Britons	619	883	264
" Portuguese	395	436	41
" Germans	224	272	48
" French	88	81	— 7
" other foreigners	364	666	302
Total number of foreigners	5,366	10,477	5,111
Number of Hawaiian-born, of foreign parents	849	947	98
" native males	26,130	23,388	—2,742
" native females	22,914	20,700	—2,214
" all children under six years of age	6,869	7,608	739

The ratios of decrease of the total population by periods have been as follows: 1850 to 1853, three years, 13.10 per cent.; 1853 to 1860, seven years, 4.70 per cent.; 1860 to 1866, six years, 9.67 per cent.; 1866 to 1872, six years, 9.62 per cent.

From this it appears: 1. That the decrease of the aborigines, amounting to more than ten per cent. during the six years from 1872 to 1878, has been more than compensated by an increase in all of the other leading elements of the population, the gain in the total amounting to 1.91 per cent. 2. More than half of the numerical gain is credited to the Chinese; but this, as the census figures do not inform us, is due in main part to the immigration of Chinese laborers, who have been brought over from San Francisco in large numbers to work upon the sugar plantations since the reciprocity treaty of 1876 with the United States went into effect. For thirty years past, however, Chinese merchants and sugar-planters have formed a much-respected class of island residents. Never having been outlawed, like the Chinese in California, they have thriven in business and have settled permanently on the islands, often marrying the native women. As lately as March, 1876, a Government paper stated that "even the lower orders of Chinese are, we believe, reckoned by the Hawaiian women to make more faithful and attentive husbands than the similar class of Hawaiians." They sometimes even educate their children in the Christian religion. But the island Chinese—if a digression may be permitted—keep up a heathen respect for their ancestors. The present writer has often seen them finding their way in the spring to the graves upon the slopes of the hills near Honolulu, and depositing upon them their pious offerings of food, sweetmeats, and colored candles. It must be added, however, that practices more reprehensible and less pagan than these have been observed among the later Chinese immigrants; notably that the laborer, after marrying and accumulating his savings, would sometimes desert his Hawaiian wife and children and return to China, perhaps to a wife and family of an earlier date, to enjoy his little independence. This practice became, indeed, so frequent that it had to be repressed by law, with the result of encouraging the growth of the half-breed population.

3. The whites, American and European, supply the dominant element in the business and the religion of the islands, and take also a considerable part in their politics. They are distributed in the census under several items. The American and the British-born residents number 1,276 and 883 respectively; the "Hawaiian-born of foreign parents" (mostly American parents), 947. With other white foreigners the sum total of European birth or descent will not be less than about 4,000; and their sexennial increase has been about 25 per cent. In the numerical repair of the population the whites thus rank next after the Chinese. But the immigrant population is comparatively unstable in either case. That is to say, the American, European, or Asian-born resident may at any time return to his own country, and frequently does so; while the half-breed quits the island scarcely oftener than the aborigine himself. One might say that complete foreign parentage prevails against nativity, but that nativity and one aboriginal parent prevail as against one foreign parent. It need scarcely be added that in the islands, as gene-

rally where a more civilized is crossed with a less civilized race, the aboriginal parent is always the mother. As for the aboriginal Hawaiian, he never quits the islands permanently; and his leaving them temporarily, even as a foremast hand on a whaling ship, is permitted only under legal restrictions.

The immigrants, therefore, are likely to be in themselves a somewhat less important element in the rebuilding of the Hawaiian people than might be supposed from the census figures. The American merchant, physician, planter, returns with his savings to the United States; the American missionary too returns; but commonly without any savings, and to no asylum. A considerable part of the children also settle in the fatherlands, in the spirit of country lads who seek careers in the city. But with the second generation of unmixed descent a considerable increase of the white population may be expected. The resident children and grandchildren of American Protestant missionaries already number several hundreds, and early and fruitful marriages are scarcely less common among them than they were among their New England ancestors in the seventeenth century.

4. The half-breeds, though fewer in numbers as yet than either the whites or the Chinese, form under the present conditions the strongest element in the growth of the population. Theirs is no mere residence; it is an indigenous and permanent growth; more than this, it is an adapted growth. The half-breed does what the aborigine cannot do: he adjusts himself to the changed conditions of life around him; he is healthy and fertile. His Hawaiian mother generally dies young; his white or Chinese father perhaps deserts him; but he retains a firm foothold upon the soil. The children of white fathers by native women are of an energetic but somewhat volatile character; those of Chinese fathers have often a less active temperament, but are susceptible of a good degree of education and even of refinement. Both prefer the Hawaiian to the paternal languages. "Some of the largest families which have been borne to Hawaiian women have been by Chinese fathers," says the report just mentioned. The extreme fertility of the Polynesian-European cross has needed no further proof since the peopling of Pitcairn's Island, where indeed extreme fertility accompanied the closest in-and-in breeding. The "plantation," again in Bacon's phrase, of 1789 consisted of nine English sailors and nineteen Tahitians, six men, twelve women, and one infant—twenty-eight souls in all—of whom all the men but one were dead, either of disease or at each other's hands, by the year 1800. The accession of four "outsiders" only to the colony is recorded (1823 to 1832); but in 1856 the colony numbered 194 persons. It should be remembered, however, that no attempt to change the Polynesian conditions of living, at least as regards the women, was made during the first generation in this little community. They led the Polynesian life of license. The Europeans killed first the native men, and then each other; and it was not until all the males but two were gone that the survivors, Smith and Young, turned their hearts to religion and "diligently sought for the Bible and Prayer-book," for which they had not had any occasion before. The swarming children of that earlier and turbulent time were brought up under strictly Christian principles; and as the little island grew crowded they had to discourage early marriages. The Hawaiian half-breeds take equally kindly to civilization.

We have compared the movement of the Hawaiian population to the processes of a chemical experiment that has been thus far undisturbed. What disturbance of the movement, social and physiological, may come at any day from abrupt interference, as by foreign annexation or seizure, or by the importation of foreign labor, now greatly in demand, cannot of course be foreseen. But in the absence of such incident forces it seems that the repair of the island population is likely to come mainly from the half-breeds. Under present conditions Hawaii, like Chiloe, Brazil, and parts of Fiji, would replace its people with a mixed race, in which the white, the Chinese, and the Polynesian blood would be mingled. The blood of the pure Polynesians is thus fading as much as perishing. Judge Fornander, an American of thirty-four years' residence in Hawaii, dedicates his recent book on 'The Polynesian Race' (London, 1878) to his daughter Kaonohiulaokalani "as a reminder of her [Polynesian] mother's ancestors." The aboriginal Polynesian will be sought for in vain; but the strain, as in this case, will not be absolutely lost; it will have blended with stronger currents.

THE OPPOSITION LEADERS IN ENGLAND.

LONDON, August 23.

THE close of the session leaves the Government weakened, but it can scarcely be said to leave the Opposition strengthened. What the former have lost the latter have not gained. It is not in politics as in the physical world. There forces are simply transferred or transformed. Here they seem, at least, to be spent. As Conservatism always profits by the public indifference and apathy, the balance of advantage arising out of this state of things will too probably remain with Lord Beaconsfield and his colleagues. The fault, to speak the truth without reserve, lies mainly with the leaders of the Opposition, and may be distributed in about equal proportions between Mr. Gladstone and Lord Hartington. Mr. Gladstone's incessant and passionate activity wearies and estranges those whom it is his business to win. His denunciations and arguments are like too powerful shocks from too strong a battery, which exhaust instead of stimulating. Lord Hartington, on the other hand, fails to stir any active force at all. This apathy and Mr. Gladstone's overpowering excitement contribute equally to the same undesirable result:

> "Professus grandia turget;
> Serpit humi tutus nimium timidusque procellæ."

Both fail to captivate.

It would be too much to say of Mr. Gladstone, as Victor Hugo said of the first Napoleon, that he *gêne Dieu*. Mr. Gladstone's eminent virtues and his affectation of the part of a sort of terrestrial and human Providence to England may be endured. There is some reason, however, in the complaints which are made, not only by adversaries but by friends, of Mr. Gladstone's recent tone and language. He does not, indeed, after the fashion of Alexander, in Dryden's lines, "assume the God, affect to nod, and seem to shake the spheres." He is too humble and Christian for that. His fulminations are rather papal in their tone than pagan. Occasionally his denunciation of his adversaries seems to require that sort of check which the lines suggest:

> "Let not this weak, unknowing hand
> Presume thy bolts to throw,
> And deal damnation round the land
> On each I judge thy foe."

Mr. Gladstone is always careful to say that he never imputes motives, but he lets it appear, or rather in spite of all his efforts he cannot help it appearing, that he thinks his adversaries very bad men. Mr. Gladstone is essentially a theologian among politicians, and the theological temper is apparent in his denunciations. Like *Sir Fretful Plagiary*, when he is most excited he protests that he is perfectly calm. His angriest denunciations are accompanied with the assurance that they are the deliberate and well-weighed expression of his most mature convictions. His extremest exaggerations are followed or preceded by the statement that he is prepared to make them good in detail, word by word, and syllable by syllable. This is a phenomenon of temper rather generally human than peculiar to Mr. Gladstone, but it is a misfortune to see it exhibited in so extreme a shape and with such uninterrupted repetition by a man of his high character and historic fame. He still lives in a region of clouds and tempest. The ampler ether, the serener air, into which advancing years should raise a man he has not yet attained. The calm equity, the habitually gentle and indulgent judgment, are lacking which suit his experience and which would give additional gravity to an occasional severity of judgment. As it is, Mr. Gladstone's censure too habitually seems to spring rather from an excited temper than from a calm and fair estimate of men and things. There can be no doubt that men are getting tired of these displays. If Mr. Gladstone does not *gêner Dieu*, he bores the British public. His occasional writings and speeches—I do not, of course, use the word occasional in the sense of infrequent—seem to spring from a temperament which must express itself, from impulses which must find a vent, rather than from any urgent necessity making their utterance a duty. They are not confined, as all the world knows, to politics. Literature and art and theology, social conduct and domestic economy, suggest to Mr. Gladstone improvisations, both on the platform and in the periodical press, which are perfectly wonderful as examples of versatility and readiness, but which cannot be said to possess any permanent or intrinsic value. With immensely quick faculties of observation and thought, with interests to which scarcely anything human is foreign, with a memory at once ample and minute, Mr. Gladstone has acquired in the intervals of a busy public life an immense variety of opinions upon almost every topic which interests mankind. But the engagements of his public life have not allowed him the leisure to reduce those opinions to principles, to connect them with each other in an orderly and logical fashion, or to give them that form which raises their expression to the rank of literature. His various writings and addresses, so far as they lie outside the range of political debate, give little more than the haphazard notions, about things in general, picked up during a long life by a man actively

engaged in business of a special sort. This phenomenon is a very common one. The ideas about all kinds of topics which shrewd and intelligent men engaged in active life express at dinner-tables and in their private correspondence are often very interesting and suggestive; but they would not bear publication. Unfortunately, Mr. Gladstone does publish these incidentally and accidentally acquired opinions and half-formed impressions, hastily clothed in language which an unexampled copiousness of words suggests to him with a facility too great for happy choice or careful artistic effect. Mr. Gladstone's essays and addresses, outside the limits of contemporary politics, are for the most part the table-talk of a very able, variously, and of necessity superficially, informed and incessantly active mind upon all sorts of topics. If they had been collected by some assiduous admirer of the Boswell order from his casual conversation they would have possessed very great interest and permanent biographic value. Reduced by himself to writing, and published as contributions to controversy, they do not rise to the level of the professional magazine. Mr. Gladstone's reputation as a scholar and as a man of varied thought and cultivation would unquestionably have been higher if he had never written a line for publication.

In English politics, in spite of representative institutions and the ultimate power of general public opinion, individual character is an immense force. Personal government in one sense of the word will always exist. Unfortunately for the Liberal party, its leaders are less interesting persons than their opponents. Lord Beaconsfield and Lord Salisbury, in spite of many faults which a cool criticism detects, impress the imagination of their countrymen more powerfully, or, at any rate, take their superficial fancy more pleasingly, than any of their rivals. The strange curiosity which Lord Beaconsfield excites, the sympathy due to the courage with which he has fought his way and held his own, his self-command and self-restraint, and his whimsical cleverness, have a charm of their own. Lord Salisbury's heroic vein is often mere swagger and bluster, and his sarcasms have the coarseness of stage repartees; but he is, at any rate, trenchant and decisive. When an effect is made, few people will stop to analyze the worthlessness of the elements of which it consists. If Mr. Gladstone had understood how much more the half sometimes is than the whole, if he had practised some economy of his intellectual resources and personal appearances, if he had known the degree in which reserve and reticence not only stimulate interest but are essential to that personal dignity which no statesman in England, or anywhere else, can safely lay aside, he might have held his own against any antagonist in public opinion; but he has wasted and is wasting these elements of popular influence and legitimate moral ascendency. Lord Granville is rather a politician of society than of the great world. He rather greases the wheels of the political machine than contributes to the forces which propel them on. He is a man, probably, of finer taste and more delicate discernment than the late Lord Palmerston, whose good-humored jocosity he imitates. But there was a force behind Lord Palmerston's occasionally somewhat coarse bluster and his very bald jokes which the public does not recognize behind Lord Granville's more urbane raillery, and his more suave and fluent eloquence. Lord Granville seldom makes a speech which does not contain several good jokes and more than one apposite and telling anecdote. But the humor is usually a little in excess of the substance of the speech; the sack is out of proportion to the bread. If it may be said without offence, Lord Granville a little over-does the comic business. He is in danger of sinking the part of the hero of the Liberal stage in that of the first funny old man. If he could communicate to Mr. Gladstone a little of his playful and airy detachment in minor matters, or Mr. Gladstone could contribute to him something of his earnestness on grave things and his grasp of great questions, two at least of the elements essential in a successful political leader would be combined.

Lord Hartington's straightforwardness and a certain homely good sense, negative and slow indeed, but valuable as a check upon rash courses and heedless enterprises, are very good qualities in the leader of an established and secure majority; but they are not those which win victories against great odds, and convert minorities in the country and in Parliament into majorities. Lord Hartington wholly wants initiative, and he follows where he might at least seem to lead simply by his being a day or two, or occasionally only a few hours, too late in making up his mind. His conduct on the flogging question was an instance. In that matter, as in some others, he yielded, after a vain and public struggle, to the youngest but most active of the three members for Birmingham, and gave occasion to the Tory joke—it was Mr. Beresford Hope's, I believe—of his being the Vice-Chamberlain of the Liberal party. Mr. Bright and Mr. Lowe are rather surviving names than surviving powers. Mr. Bright retains much of his old eloquence; but he has not that general political knowledge and that acquaintance with administrative detail which are necessary to leadership. A certain roughness, partly due to temperament, partly acquired in the work of political agitation, partly, perhaps, attributable to the Quaker habit of bearing truthful testimony to the faults and to the faces of friends and foes, would make him impossible as a leader, even if advancing years, and energies declining more rapidly than his years advance, did not otherwise put such a choice out of the question. Mr. Bright has elevated a natural gift of personal rudeness to the level of a fine art, and the consequence is a personal dislike towards him which to a great extent undoes the influence that his great oratoric powers and his unselfish and consistent career have deserved. Mr. Lowe has been never more than a guerilla warrior, and seems of late to have lost his firm grasp even of the few and narrow principles which he used to apply at once with logical and rhetorical effect. If he has not retired from public life, public life seems to be retiring from him. With these men in the front rank of the Liberal party its leadership appears to be in suspense. The hour, perhaps, may bring the man. Whether it is to be Mr. Forster or Sir William Harcourt, Sir Charles Dilke or Mr. Chamberlain, or some yet undiscovered hero, is a secret of the future.

† † †

JULES SIMON AND THE FERRY LAWS.

PARIS, August 22, 1879.

I ONCE met one of my friends, a very humorous journalist, who informed me that he had just arrived from Vienna, where he had been studying the politics of Austria. "How did you manage, as you don't know German?" "Oh!" said he, "I followed the military bands." In Paris the best method for a foreigner not acquainted with our language would be a daily visit to the kiosks, where the newspaper venders exhibit the caricatures. A superficial inspection would prove to him that the man of the day, the best-abused man of the season, is M. Jules Simon. "Comment en un plomb vil l'or pur s'est-il changé?" Two years ago, on the 16th of May, on that famous day which marked a period in our political history, Jules Simon was dismissed almost contemptuously by Marshal MacMahon, and his forced retirement was followed by a dissolution. Who deserved better than M. Jules Simon the support of the Republican party? The success of this party in the general elections was almost a personal success for him: his policy was vindicated, the country stood by him. Still, when the retirement of Marshal MacMahon took place, as a logical consequence of the general elections, and after a period of uncertainty during which the power of the Marshal was little more than nominal, the name of Jules Simon remained in the background. It seemed as if he alone could not recover from the blow of the 16th of May. Another man had become the acknowledged leader of the Republican party, another man had canvassed the country and roused the popular passion—the very man who had once been the adversary of Jules Simon at Bordeaux. When peace became necessary after the capitulation of Paris, the Provisional Government sent Jules Simon to Bordeaux, and ordered that general elections should take place in France, even in the provinces occupied by the Germans. When Jules Simon brought the decree of the Government to Bordeaux, Gambetta, who had during the siege of Paris assumed the position of a dictator, thought for a moment that he could continue the war, and tried to hinder the elections. He meditated for several days a *coup d'état* at Bordeaux; with his friend Ranc, with Spuller, and a few others he made all the preparations for resisting the decree signed by Jules Favre, by Simon, by the other members of the Government. It is well known that the interference of Prince Bismarck put a stop to these designs; Jules Simon and Thiers, who stood by him at the time, triumphed over the resistance of Gambetta. The elections took place; Thiers was made chief of the Executive power, and peace was signed. Gambetta, whom Thiers publicly called at that time a *fou furieux*, retired in disgust to San Sebastian in Spain, and remained there during the French Commune.

Ever since that time there has been a deep feeling of enmity between Gambetta and Jules Simon, and this enmity has now become quite apparent. Gambetta has given in France the signal for the *Kulturkampf;* he said in his last manifesto at Romans, "le cléricalisme, c'est l'ennemi." M. Jules Ferry may be considered as his lieutenant; Spuller and the physiologist Paul Bert (who writes the scientific articles in the *République Française*, which was long edited by Gambetta) are Gambetta's intimate friends. Jules Simon has taken his stand against Article vii. of the Ferry laws, and he advocates the principle of free teaching. I do not be-

lieve that he has chosen this position merely as a strategical one. He may have been deeply wounded by the ingratitude of his party; he had been the principal victim of the 16th of May, and he had been completely forgotten by the *triomphateurs*. It seemed as if his political friends could not forgive him the anxieties of a long electoral struggle. Still, the motives of M. Jules Simon must be of a higher order. He is himself a very distinguished professor of the University; he has been a disciple of Cousin, he has long professed philosophy in our higher schools; but in all his books—and he has written many—he has always given himself out as a perfect Liberal. Liberty for all has been his motto during a lifetime—liberty of teaching as well as liberty of thinking. He believes in the excellence of truth, and does not believe in the efficacy of persecution. He has a perfect right to say now that it would be a *shame*—he constantly uses this word—if, after having supported the principles of liberty when they were weak, the Republicans abandoned it now that they are strong and believe that the country is on their side. His opposition to Article vii. of the Ferry laws (the article which forbids all the members of unauthorized congregations to open schools) has been fatal to the law in the Senate. The Chambers were adjourned for three months before any public discussion could take place in the Upper Chamber, and in the Senatorial committee which was appointed on this subject the majority pronounced itself adverse to the article. This vote, which was given almost on the eve of the separation of the Chambers, does not involve the vote of the Senate. The result is therefore still quite unknown, and during the recess there is naturally a constant agitation in the country. The anti-clerical papers keep up an incessant fire on the unfortunate Jules Simon; he is represented in the caricatures in the costume of a Jesuit, and, as I have said, he is just now the best-abused man in France.

What will be the result of this agitation? I confess that I would not venture to prophesy it. The anti-clerical agitation is entirely artificial; it was not rendered necessary by any encroachment of the Church, or by any open attack on the Republican Government. One of the leaders of the Republican party, to whom I remarked that since the Republicans had had the majority after the 16th of May, they could not accuse the Church of having made France anti-republican, confessed that his friends had not much to complain of in respect of the Church; but he thought that something was needed in order to keep together the various factions of the Republican party. He argued that the 363 deputies who had stood together against MacMahon were divided in their political tendencies; they were all, or almost all, afraid of the Commune; they had to find some common ground on which they could stand together, and Gambetta, who is the leader of the majority, could only find the clerical question. France was completely surprised by his declaration of war against Catholicism. Though he called it clericalism, it is clear that Catholicism and clericalism are the same thing in a country where the immense majority of the population is Catholic. The French clergy has really given no serious offence to any Government for a long time; it has followed the rule, "Render unto Cæsar the things that are Cæsar's, and unto God the things that are God's." Some of its members may have a sentimental attachment for the House of Bourbon—a French priest can hardly forget that Saint Louis was a king of France—but did the clergy make any serious opposition to the Republic of 1848? Did they refuse their homage to Napoleon III.? During the invasion of France our priests behaved with much patriotism, and when the Commune broke out in Paris the Communists chose many of their victims from the ranks of the clergy.

It has been found so difficult for the supporters of the Ferry laws to bring serious accusations against the clerical teaching, that they have had to fall back on books of casuistry published in the seventeenth century; they read chapters of the 'Provinciales' of Pascal; but these old folios of casuistry are as much forgotten now as the books of the University of Paris which were in use in the lifetime of Abélard. Jules Simon, who is much more versed in French literature than M. Ferry, has chosen his opportunity with great art. He cannot be accused of harboring dark designs against the Republic—he is a Republican of long standing; he cannot be accused of being a clerical—he has always been known as a philosopher; he belongs to no church; his religious feelings are of the rarefied and idealized sort, which are neither Catholic nor Protestant, nor even Christian. He is as much in harmony with Plato as with Saint Paul. He is not so much of a Christian as Renan. All his philosophical works show him to be a mere Theist; and it may even be said that his Theism is not very remote from Pantheism. Such is the man who says to the Republicans: "Do not turn the Jesuits by force out of their schools." They can give him the hat of Basile in the caricatures; everybody knows that he is not Basile.

It is undeniable that the opposition of Jules Simon to the Government has produced a great effect on the country. I am inclined to believe that the majority of the people is on the side of toleration, and would prefer the policy of Simon to the policy of Gambetta and of the Government. But it must not be forgotten that no people is so politically timid as the French people; no people is naturally so little inclined to opposition when the Government seems a little determined. The ministers have all spoken strongly in the Councils-General, which are just now convened, in favor of the laws on education; they have tied their fate to the fate of their colleague, and with him they will stand or fall. The Councils-General have even been invited by the Home Minister to pass resolutions on the subject of these laws. Last year the majority of these Councils were still Conservative, and many resolutions were passed in favor of the liberty of teaching. I am sorry that I cannot yet give you a precise account of the declarations of our Councils-General. They are now just beginning their sessions, and a few days must elapse before the great question of the day is finally discussed by them. It would seem at first that the Councils-General must speak this year as they did last; but the political pusillanimity of the provinces is such that one year's tenure of office of the present Cabinet must already have worked great changes, not in the feelings, perhaps, but in the expression of the feelings of the respectable Councillors who represent the departments. The Government must not be offended, even if the Government is wrong: such is the state of mind of the great majority of those who call themselves conservative in the provinces. This spirit of submission made it possible for Napoleon III. to rule so long without meeting any opposition, and to engage France in many wars; and the misfortunes of 1870 have not changed this instinctive feeling of the Conservative party. This party will always cling to anything that has the appearance of an established power. It will be hard for M. Jules Simon, who is out of office, to triumph over his friends in office. Perhaps a compromise will be found at the end of the parliamentary recess, but what this compromise could be I confess I cannot well imagine.

Correspondence.

THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

To the Editor of The Nation:

Sir: Your suggestion that "a less formal system of organization of the American Association for the Advancement of Science, such as that of the German Association of Naturalists, would be found beneficial," may be followed up with further suggestions on the same line—*e. g.*: 1. That the Association should print only the addresses of its President and Vice-Presidents, or such other addresses, lectures, or reports as the Association itself provides or calls for, along with a brief abstract of proceedings. 2. That the money thus saved be devoted to furthering hopeful researches, or facilitating the publication elsewhere of the best papers brought before it which may need such aid. It is, of course, understood that the greatest benefit of the meetings comes from personal conference of the members, both in the general sessions and especially in the sections, and in their presentation and discussion of the scientific work done during the preceding year.

A. G.

THE ONEIDA COMMUNITY'S CHANGE OF BASE.

To the Editor of The Nation:

Sir: Your editorial in last week's *Nation* on Oneida Communism shows the penetration and sagacity which a reader of your paper from the beginning naturally expects; but you have been slightly misled by the Froudes and Macaulays of the daily press. It is unfortunate, if they must chronicle an internal cause for the late action of the Community, that they are obliged to fabricate one by piecing together old notes and conjectures, for they must try again. I explicitly deny that, "self-appointed" or otherwise, I have led any movement in the Community which has extorted this concession from my father, with whom I have been in substantial agreement for some time. We have had trouble from time to time for several years on account of my tendency towards what he calls "Positivism," but I have never allowed these differences to force me into any party antagonism. Your conjecture of collusion between the opponents of complex marriage in the Community and the clergy is unfounded.

Yours respectfully,

Theo. R. Noyes.

Oneida Community, Sept. 8, 1879.

MR. HULBERT'S APPOINTMENT BY THE BUREAU OF EDUCATION.

To the Editor of The Nation:

Sir: My eye has just fallen upon a paragraph in your paper of August 28 which does great injustice to the parties involved. You are aware that statements often get into the papers which are painfully inaccurate, when not wholly false, and which, in their celerity of movement, defy all attempts at their arrest. Such is the item to which you have referred as going the rounds of the papers concerning my son in his service for the Bureau of Education at Washington, and upon which you have animadverted with such caustic severity. I have not made haste to correct the misstatement for the reason, suggested in your criticism, that it carries on the very face of it proof of its own falsity. I am surprised that a paper of the character of your own should put a moment's confidence in such an absurdity, and then advance, without enquiring into the truth of the rumor, to your ungenerous personal assaults. It is not true that my son has received what may properly be denominated an *appointment* by General Eaton; much less is it true that he has been sent forth "as a travelling commissioner to go to Europe and examine the systems of education in Great Britain and the Continent." But it is true that, having an half-formed purpose to visit England, and possibly the Continent, and to defray his expenses by his own exertions, that purpose was made complete by the Commissioner's engagement of his services in behalf of the Bureau while travelling in the *rural sections* of England, and for the period of *two months;* and for this service he does not receive a compensation which will more than cover one-half of his expenses. General Eaton has not provided "a chance" for my son to travel in Europe at the expense of the Government. As to whether the Commissioner is "guilty of an outrageous piece of favoritism" in engaging my son to render a responsible service, limited as to place and time, for a simple pittance in compensation, and whether there has been such an unworthy "connivance" as that which you charge upon the Commissioner and myself, and whether I have acted a part unbecoming my official position, I will leave for the public to judge.

Respectfully yours,

C. B. Hulbert.

Middlebury College, Vt., Sept. 2, 1879.

[Yes; but why should a young man who has just left college, who knows nothing of England, and cannot have much, if any, experience of systems of education, be employed on a public service which, if worth doing at all, ought to be done by a thoroughly competent person and in the best possible manner, even for two months and even in "the rural sections of England," and even for half his expenses? Why should official weight and character be given to his reports on education in any part of the world? The story, as circulated, is undoubtedly a great exaggeration, and does injustice to Mr. Hulbert; but if we cannot rely on college graduates to refuse even countenance to abuses, great or small, of the public patronage, on whom can we rely?—Ed. Nation.]

CIVILIAN APPOINTMENTS IN THE ARMY.

To the Editor of The Nation:

Sir: In your issue of the 7th of August, remarking upon the list of civil appointments to vacant second-lieutenancies in the regular Army, you say: "It is well known that the first or 'orderly' sergeants of the companies of the line perform virtually all the official work of their companies beyond certain signatures and parade posturings." The *Nation* is usually so correct in its statements that it is painful to see it falling into the error so common to uninformed civilians, that Army officers are ornamental appendages with no labors or duties connected with their positions. The remark must have been hasty and ill-considered, for heretofore the *Nation* has not been slow to acknowledge the services of the poorly-paid and hard-worked officers of the Army.

The duties of a first sergeant are responsible and important, but they are strictly those of an enlisted soldier, are subordinate in their nature, and are confined to such details of administration as can best be performed by a soldier who lives with, and is in constant association with, other soldiers. His duties require but a very limited amount of education, but require habits of self-control, of honesty, firmness, and impartiality, which entitle those who worthily occupy the position to much respect and confidence. They are duties which could not be performed by a commissioned officer, but yet it is necessary that they should be constantly supervised by one; and if it were possible for a company commander so to neglect his duties as to leave the virtual performance of all of the official work to his first sergeant, the fact would at once become evident in the non-effectiveness of his company. Under our present system of inspections and responsibility it is not possible for an officer thus to neglect his duties and retain his position. If a moment's consideration is given to the multifarious nature of the wants and needs of a company, be it infantry, cavalry, or artillery—its equipment, its discipline, its instruction, and its command—it should be evident that the company commander must have official work, and plenty of it, "beyond signatures and parade posturings," which cannot be delegated to the first sergeant.

I believe the fact that so few non-commissioned officers are appointed to second-lieutenancies is due rather to a want of material than to any disposition on the part of line officers to ignore the claims of deserving men. If the class of men spoken of by the *Nation* existed, it would seem that the company commanders, with whom the recommendations originate, would prefer, for their own comfort, the appointment of well-instructed soldiers to that of green civilian youths, who can be of but little use until they have served for some time. But the fact is that the number of non-commissioned officers fit for promotion, deplorable though the fact may be, is extremely small. In the vast number of cases where there is sufficient education and ability, the soldier is unfitted by habits of dissipation. In my own regiment there have been two recent cases where it has been found necessary to cancel the recommendations for this cause.

The cause of the want of character in the enlisted men may, I think, be found in our vicious system of recruiting; in which the officers are located in the slums of large cities, and, of necessity, pick up a large percentage of the vicious and depraved, who degrade the service and discourage the respectable class from entering.

The real evil in the appointment of these civilians is the method of their selection and the very slight educational requirements.

A Line Officer from the Ranks.

To the Editor of The Nation:

Sir: In your issue of August 7 you say, with reference to appointments in the Army, that "when commanding officers of military subdivisions and members of boards find that they cannot secure the appointment of their own friends and relations in civil life through the rejection of soldiers, there will be plenty of the latter who will pass the required examination," etc. Will you kindly specify what commanders of military subdivisions or what members of boards you refer to, for if you have no facts to sustain your innuendo you are unjust, while if you have any it will be of advantage to the service, and indirectly to the country, to name the offenders. You are probably ignorant of the nature of the examinations passed by such non-commissioned officers as have been rejected, but your ignorance on the subject gives you no excuse for making unfair reflections.—Yours with due respect,

A Member of a Board.

[To this we reply that it is not possible to enter into the consciences of the five hundred members of boards and commanding officers recently connected with the examination and recommendation of candidates for promotion from the ranks of the Army, or to expose the motives of any of them in any particular case. Neither the endorsements of the commanders nor the actual examinations of the boards are made public; but if they were, the former may be, and often necessarily are, expressed in terms of personal opinion not within the range of criticism; and the latter, unless conducted altogether by written questions and answers, or phonographically reported, would prove nothing. There is, however, no injustice in drawing from the only facts that are officially published deductions applicable not to persons but to whole classes of public servants and to a general system, though we freely admit that the wording of the observation to which our correspondent objects was unfortunate and liable to misconstruction. We remarked, wholly without reference to individuals, upon the grand result of a perfunctory compliance with a statute of the United States preferring soldiers, next after the graduates of West Point, before civilians, which ended in the appointment of four enlisted men (exclusive of two or three from the Signal Service, whose cases are under special law and in another category), and a preliminary list of twenty-three civilians, a number of whom are officially designated by the

War Department as relations of Army officers, as if that were the avowed motive for their selection. It is not essential to a comment regretting this result that any of the successful civilians should be proved to be the actual blood relatives or personal friends of any particular officers charged with the duty of examination and recommendation. Commissioned officers pride themselves upon constituting one military family, with close ties offensive and defensive, and, besides those on the favored list, there were several hundred unsuccessful civilian applicants, in some of whom some officers among the hundreds concerned probably took a natural interest. It must be noted also that the list of twenty-three forms only the advance of the civilian invasion, as the soldier element is supposed to be exhausted for an indefinite time to come.

The matter is one too comprehensive and serious to be disposed of by, or to be allowed to degenerate into, a personal controversy, as it affects the relations of the whole body of officers to the whole class of soldiers. It is either true that there exists among commissioned officers of our Army a strong prejudice against promotion from the ranks, with the hope of, and apparently recognized claim for, favor to "the military family" in the filling of vacancies—the whole tendency being to influence, perhaps unwittingly, the discharge of a duty imposed by law; or, on the other hand, the personnel of the rank and file of the Army of the United States is abominably bad and hopeless. There is something wrong about one of the two classes, if not about both. Twenty-five thousand men are now in service, any of whom can be appointed by his immediate commander to the grade of non-commissioned officer and be eligible under the law for examination as second lieutenant. If during many months only four out of these thousands have been found to be fit by general education and moral character for that promotion, having already the military skill not possessed by civilians, there is surely something radically vicious in our present system. The fact is the more surprising when it is officially asserted, and is obviously true, that the recruits to the Army during the last five years have shown a high standard both in education and morals. It is quite possible that few applications were actually made and pressed by enlisted men for the examination in question, but that explanation would be a fatal admission, suggesting the cause to be that the soldiers are generally impressed with a feeling that it would be of no avail for them to combat the prejudice before referred to. It is probable that if, by an amendment to the present law, suggested in our remarks, the selections for vacancies should be strictly limited to actual soldiers, after exhausting the Military Academy, those soldiers would be offered an honorable incentive which would redeem them from their present miserable condition. If their past failure is wholly due to defective education, that could readily be supplied by the military schools of all well-ordered posts, and if it is their moral character that constitutes the objection, ambition is more likely to improve it than despair. So that while it is neither practicable nor profitable to charge criminal malfeasance in the matter under discussion upon any particular officer or in any special case, all the facts publicly known corroborate the statement made by us, that when officers find that no vacancies can be filled from that class outside of the ranks which is now actually favored by the appointing power, and in which they take a natural interest, there will in fact be found plenty of soldiers who will pass the required examination, even if the latter shall be rendered able so to do merely through the working of a more judicious system, and through release from a possibly unjust suspicion of prejudice.—Ed. Nation.]

THE INDEPENDENTS IN THE COMING CANVASS.

To the Editor of The Nation:

Sir: In the *Nation* of August 21 you echo the enquiry, which had already been made by *Harper's Weekly* and the Boston *Herald*, as to what has become of the Independents of 1876. As one of that body, and a not inactive participant in the Fifth Avenue Hotel conference, I have waited with some curiosity for any response your enquiry might call forth. None seems to have come—at least you have made none public; and yet the enquiry was certainly a most pertinent one. Under ordinary circumstances the Independents ought to make their presence felt in the discussion which precedes the Presidential canvass. Then the party lines are forming, and their formation can be influenced. After they are formed the Independent can do little more than join himself to the one side or the other.

The question, however, naturally suggests itself, Are the existing circumstances ordinary? I think they are not. They are wholly different from what they were in 1876. In May of that year I attended the Fifth Avenue conference, and in November I voted for Mr. Tilden. Little confidence as I then had, and less as I now have, in Mr. Tilden personally, I regret that he was not inaugurated, as he certainly was elected. Under his skilful and cunning manipulation, the Democratic party, rendered timid by the possession of power, would have become highly discreet and conservative; while the Republicans, transformed into an energetic and aggressive Opposition, would both have prevented any serious public harm and educated the country to better things. The greatest boon this country can now hope for is just that—a weak Administration and a powerful Opposition.

The total incapacity for political leadership and the absolute genius for blundering which the Democratic party has displayed during the last three years are qualities certainly not calculated to allure recruits. As a force in opposition it now is, as for eighteen years it has been, a complete and utter failure. In itself this is a small matter, but unfortunately in all free countries it is to the Opposition that you must look for the aggressive enunciation of principles. Political parties should come into power not to hold the offices but to carry out a public policy which has been matured while the long struggle for power was going on. It was so with the Republican party in 1861. This the modern Democratic party has never been able to appreciate. Accordingly it has had no principles whatever, and has none now. A reed shaken by the wind, it has relied for a return to power on the popular discontent with the long-continued rule of the Republican faction. The one idea of its leaders has been to catch votes, and to do this they have not hesitated shamelessly to consort with every political strumpet who has flaunted through the land. Greenbackism is the last.

These are not ordinary circumstances. The strength of the Independent rests in the fact that party leaders believe that, under certain conditions, he will assuredly join their opponents. This is the ground he stands on. By their course during the last three years the Democratic leaders have done their very best to cut this ground out from under our feet. On the other hand, during these years Mr. Hayes's Administration has been thoroughly clean and respectable. Under such exceptional circumstances as these how can the Independent be otherwise than silent and quiescent? If, for instance, the understood candidate of the Administration, Secretary Sherman, should next year be nominated for the succession on the financial and business issues, I take it there is very little doubt that the Independents will quietly fall into line and vote for him. On the other hand, should any of the "Stalwarts" receive the nomination, there can be as little doubt that such of the Independents as do not stay at home will vote to put the Republican party in opposition.

Is not this view of the situation sound? and if it is sound, why should the Independents bestir themselves? They are there, and every party leader knows they are there. The only difficulty is that, until instructed by the elections in Maine and Ohio, the Republican leaders are not sure that the Bourbons of the war issues are not a more numerous element for conciliation; while the Democratic leaders incline to think that the Greenbackers count more votes. With each it is a pure question of vote-catching. They will make up their minds presently in the light of the election returns. Meanwhile, in the even balance of parties, things seem to be going on very comfortably. The Republicans seem likely to be beaten in New York, and the Democrats in Ohio. Both results are desirable, as the first will smash the Republican machine, and the last the Democratic-Greenback alliance. Then we shall see clearly. If the Republicans make respectable nominations and put themselves on the business issues, well and good. If they fail to do so, the alternative is not a very dreadful one. With a powerful and aggressive Opposition, led by incomparably the best parliamentary ability in the country, even Democratic stupidity in power could not in four years do any considerable public harm. In every way it would be far less politically dangerous than four years more of what the Grant régime was. Times of bad administration are times of active political discussion; and, looking to the best results ten years hence, it may well be doubted whether any intelligent Independent would now feel called upon to lift a finger to put

one of the two political parties in power, or keep the other out, as the end of all the President-making which the coming year is to witness.

I sincerely hope, however, that in response to your enquiry I shall not be the only one of those who met at the Fifth Avenue who is now heard from. A.

Boston, September 7, 1879.

Notes.

A. WILLIAMS & CO., Boston, have just issued a facsimile, at scale, of Hales's large map of that city in 1814. The details are carried so far as to indicate by the mode of etching the public or private character of the buildings, and their construction of wood or otherwise. In point of outline and general topography this map marks the division between old and new Boston, and possesses a high degree of interest for all students of the city's history.——Some maps in the seventh annual report of the Boston Board of Health, which reaches us at the same time, show forcibly the consequences of the growth of population in the last half-century. The dependence of the health of the city on a connection of its sewage system with that of its suburbs in the watershed of the Charles and the Mystic was undreamt of in 1814, but here proves to be a fact calling for immediate recognition. The Board makes some practical recommendations about inspection of all drainage plumbing, and traces in a striking manner the relations between diphtheria and unsanitary premises.——Mr. Ervin T. Case's 'Battle of the Mine,' in the Rhode Island series of personal narratives of the rebellion (Providence: S. S. Rider), to which we have often alluded, is one of the most graphic yet published. Slighter, yet not wholly valueless, is Mr. Edwin Metcalf's reminiscences of service with the 3d Rhode Island. "Rhetorical finish is of no consequence," doubtless, in these familiar papers, but perhaps the proof-reader should be allowed greater license than to pass such expressions as (p. 28) "I don't know as I asked myself . . . but I recollect very well of thinking."——The late General Hood is said to have left a manuscript history of the war, which he had intended to publish this autumn. It is to be hoped the report is true.——The seventh Congress of Women is to be held in the Capitol at Madison, Wisconsin, on Oct. 8–10. The topics for discussion embrace the fields of science, education, and social science, and the number of speakers set down under each increases in the order just given. Five doctresses are among them, besides nine married and three single ladies. Mrs. Dr. Mary Putnam Jacobi will discourse on the Physical Basis of Mind; Mrs. Anne Mitchell Macy on Children's Books; Miss Abby W. May on the Work of Women on School Boards; Miss Charlotte E. Finch on Girton College; Miss Lavinia Goodell on Women in the Law; Mrs. Julia Ward Howe on Women in Western Europe, and there are numerous other pertinent subjects announced to be treated by less well-known names.——The following English announcements we take from the *Athenæum*: 'England: its People, Polity, and Pursuits,' by T. H. S. Escott; 'Morocco,' from the Italian of Edmondo de Amicis; 'American Painters,' by G. W. Sheldon; 'With the Armies of the Balkans and at Gallipoli in 1877–78,' by Lieut.-Col. Fife-Cookson; 'Natural History of the Ancients,' by the Rev. W. Houghton; and a 'Biographical Dictionary of Scotchmen,' by Joseph Irving, which may deserve a place beside Mr. Alfred Webb's 'Compendium of Irish Biography.'——In the same issue (Aug. 23) Dr. Schweinfurth furnishes the *Athenæum* with an interesting account of the travels of Dr. Wilhelm Junker on the upper Nile. This well-qualified explorer was able to correct Schweinfurth's own itinerary, and his discoveries along the divide between the Nile, the Albert Nyanza, and the head-waters of the Welle are of the first importance. At this writing he should be on his way to the Monbuttu country again.——The report prematurely made in the latter part of May of Prof. Nordenskiöld's safe arrival in Eastern waters has now come true. The *Vega* was released on the 18th of July, and passed East Cape into Behring Straits on the 20th. After some dredging in those northern waters, Yokohama was reached on Tuesday, September 2. It is a singular commentary on the supposed perils of Arctic navigation that this unprecedented voyage was achieved without loss of life or property, while the ship *Nordenskiöld*, sent eastward to the *Vega's* relief, was lost off Yesso a fortnight after the former had entered the Atlantic.——Of Prof. Daniel Sanders's 'Ergänzungswörterbuch' ('Dictionary of the German Language' supplementary to all existing dictionaries, including that of Grimm), which has been already mentioned in the *Nation*, the first two parts, comprising the letter A and a small portion of B, have appeared.——Part 6 of Oncken's 'Allgemeine Geschichte' (B. Westermann & Co.) continues the history of Greece to the battle of Mantineia and enters upon the Macedonian period. The illustrations of statuary and architecture are as numerous and as well executed as usual, and include the great Attic poets, historians, and orators of the time. Maps of Attica and Laconia are added.

—Recent bulletins of the Treasury Department contain decisions of Secretary Sherman upon certain art matters that are interesting. The customs officers at this port having charged a duty upon engravings printed in this country from an American plate, but sent abroad for the signature of the artist who painted the original picture, appeal was taken to the Secretary. The decision was sustained on the ground that the engravings return in a different condition and with an increased value. This has led to the suggestion that foreign autographs, especially those of crowned heads, for collecting which some persons have a mania, ought not to be allowed the benefit of the free list, as they are at present, unless the receiver is prepared to make affidavit that they are not imported for sale. In Philadelphia Miss Sarah Hecker has been obliged to pay a higher duty on some pottery she imported because it had been decorated abroad, and so came under the head of decorated china-ware. In her appeal to the Secretary she set forth that this decoration had been done by an American artist, and that, therefore, her pots and jars should have been admitted as undecorated pottery, the duty on which is low. Her appeal, it is needless to say, was not sustained, and American artists residing abroad may heed the hint thus given them and take care to paint only on American material if they do not wish to be suddenly summoned some day to pay the same duty as that charged on foreign pictures. The law, again, now allows the free importation of "cabinets of coins, medals, and all other collections of antiquities, specially imported and not for sale." The last clause was added in 1874, and has, no one needs to be told, a prohibitory effect in many instances. Museums and galleries are proverbially poor, and it is impossible for them to watch European opportunities to enrich their treasures. Such duties as have recently been imposed on classical antiquities will, of course, prevent their importation with any chance of disposal to any of the museums or private galleries. But it is evidently in vain to rely for relief on "a liberal spirit of interpretating the law," as the appellant usually does. In the words which generally deny his appeal, "relief must be sought from Congress."

—The latest report of the excavations carried on at Olympia by the German commission under Prof. Curtius chronicles among the discoveries made in April the finding of three heads and three torsos in marble, besides numerous inscriptions. The commission is now principally interested in completing the groups of the east pediment of the temple of Zeus. The first found was the head of Kladeos, a river god, which exactly fits the torso found in the first year of the excavations. The whole figure is described as the type of the Greek youths of the best period, but conceived in a somewhat ruder spirit than that of the best statues. The entire left leg of an aged man "seated in a meditative posture" was found at the east end of the Altis, though belonging to the western pediment, a circumstance of importance in connection with the investigation hereafter of the west-end débris. The massive legs and right hand of the colossal figure of the west pediment were discovered about 170 metres from the body. Among the metopes found was a fragment of the helmet of Geryon, a head of Hercules, looking to the right and the third of the kind found last spring. Most of the other important fragments belong to the Roman epoch: a nearly perfect head of Faustina, the wife of Antoninus Pius; a draped and headless figure supposed to be one of the statues of empresses by Metroon; and a number of nude torsos, the remains of idealized portrait-statues apparently, which were dug up from the ruins of a cottage built on the side of the Leonidaion. One of the most important inscriptions discovered is on a pedestal erected by Mummius "to efface the sad memory of the destruction of Corinth by fire." Another is signed by a Macedonian artist, Herophon, hitherto unknown; still another is on the pedestal of the statue of Alexander the Great's messenger, Philonides, mentioned by Pausanias.

—No. 57 of the supplementary numbers of *Petermann's Mittheilungen* contains an exhaustive statistical account of the production of precious metals from the time of the discovery of America to the year 1875, by Professor Soetbeer, of the University of Göttingen. The author mentions in his introductory notice the great difficulties of his task, and acknowledges that many of his figures can only be proximate. Nevertheless, they are as exact as it is possible to make them, no doubt, and are

both valuable and suggestive. There are no trustworthy data down to 1568, when the Frenchman Jean Bodin gave his details of the importation of precious metals from the New World. All later publications on the same subject gain in interest and trustworthiness as the knowledge of the countries in question extends over a wider range. Details of value are found in Sancho de Moncada's work on the same subject (Madrid, 1619), in Ussariz's celebrated 'Teoria y practica del commercio y de la marina' (1740), and in the Abbé Raynal's well-known 'Histoire philosophique et politique des établissements des Européens dans les deux Indes' (Geneva, 1782). Humboldt's statements and statistics on this subject are contained in chapter xi. of his 'Essai politique sur le Royaume de la Nouvelle Espagne' (Paris, 1811). They are distinguished from previous similar publications by a careful enquiry into the product of a few of the most important mining districts during certain limited periods. His figures regarding the gold and silver products of the countries over which he travelled in the beginning of this century, as well as the aggregate amounts of precious metals that had come into the markets of the world from the South American mining districts since their discovery, have been quoted again and again to this day as trustworthy authority. We cannot, however, follow Prof. Soetbeer in his exhaustive critical examination of the sources and material from which his own and other statements have been drawn, and merely give in a tabular form the results of his laborious enquiries:

View of the aggregate Amount of the Production of Precious Metals in the World from 1493 *to* 1875.

(The weight is in kilogrammes : 1 kilo.=2.20 lbs. avoirdupois. The value is in German marks : 1 mark=about 23.84 cents.)

Country.	Weight.		Value.		
	Silver, Kilogr.	Gold, Kilogr.	Silver in 1,000 Marks.	Gold in 1,000 Marks.	Total Value in 1,000 Marks.

making in American money a grand total of about $14,716,725,000. The gold product in Germany and other European countries, as well as the silver product in Africa, New Granada, Brazil, and Australia, is included in "sundries."

—Prof. Soetbeer divides the 362 years from 1493 to 1875 into twenty-five periods of different lengths. In the first (1493–1520) Austria-Hungary ranks first with a total production of the value of 9,900,000 marks. Africa comes next with a gold product of 8,370,000 marks ; the West Indies next with a yield of 2,232,000 marks. In the second period (1521–1544) the South American countries come into consideration for the first time : Mexico with a total of 1,198,000 marks ; New Granada with 5,580,000 ; Peru with 6,867,000. In the third period (1545–1560) Potosi in Bolivia heads the list with 35,766,000 marks, almost one-half of the aggregate yield of the world, which amounts during the sixteen years to 79,830,000 marks. Forty years later, from 1580 to 1600, Potosi produced the enormous sum of 49,122,000 marks out of the whole world's total product of 95,992,000. The beginning of the eighteenth century witnessed the development of the rich Mexican silver-mines, which from 1701 to 1720 yielded 163,800 kilogrammes of silver out of an aggregate of 355,600 for the entire production, while New Granada yielded 5,000 kilogrammes of gold out of a total of 12,820. A century later (1801–1810) Mexico reached the fabulous amount of 553,800 kilogrammes of silver, of the value of 99,864,000 marks ; New Granada producing during the same period 5,000 kilogrammes of gold, Brazil 3,750, Chili 3,110. The United States appear for the first time in the period 1821–1830 with the modest figure of 110 kilogrammes of gold of the value of 307,000 marks. This is increased for the ten years following (1831–1840) to 850 kilogrammes, valued at 2,372,000 marks. The last years of the following decade revolutionize the gold market by the discovery of the California gold-mines, and the United States take the second place with a gold product of 17,600 kilogrammes (next to Russia with 22,515 kilogrammes). In the five years from 1850 to 1855 the United States yielded the greatest amount of gold ever produced in any country during the same period—88,800 kilogrammes, valued at 247,752,000 marks, or nearly one-half of the total gold product of the world, which amounted during these five years to 197,515 kilogrammes. A formidable rival sprang up in the same period, Australia producing 67,700 kilogrammes. The production of these five years has never been reached since in the United States. In the following five years (1856–1860) Australia stands first with a total of 86,700 kilogrammes of gold ; the United States next, with 77,100 kilogrammes. The following period (1861–1865) is that of the first development of the silver-mines of Nevada, the United States producing 174,000 kilogrammes of silver against 6,200 kilogrammes for the five preceding years, and second only to Mexico with 473,000. The last period of Prof. Soetbeer's estimate (1871–1875) shows a total production of 1,969,425 kilogrammes of silver, and 170,675 of gold. Mexico comes first with a silver product of 601,800 kilogrammes ; the United States next with 564,800 kilogrammes ; Bolivia next with 222,500 kilogrammes. The principal gold-producing countries are : Australia with 59,900 kilogrammes, the United States with 59,500 kilogrammes, Russia with 33,380 kilogrammes. A final table in Prof. Soetbeer's book gives a view of the production of precious metals during the twenty-five years from 1851 to 1875 :

Country.	Weight.		Value.		
	Silver, Kilogr.	Gold, Kilogr.	Silver in million marks.	Gold in million marks.	Total val. in million marks.
Australia	.....	1,812,000	.....	5,055.5	5,055 5
United States	5,271,500	1,840,500	948.9	5,135.0	6,083.9
Mexico and South America	18,570,500	231,935	3,342.6	647.1	3,989.7
Russia	397,790	694,080	71.6	1,936.5	2,008.1
Other countries	6,763,745	177,850	1,217.5	496.2	1,713.7
Total	31,003,535	4,756,365	5,580.6	13,270.3	18,850.9

—Prof. J. D. Butler writes us from Madison, Wis., under date of August 30 :

"The Genoese ambassador in England mentioned in your last number was by no means the only European who at no time deceived himself about the causes or chances of our Revolutionary struggle. Another noteworthy instance is Frederic the Great. The father of Sir John Moore, 'interviewing' that monarch in the summer of 1776, thus writes :

"'He said there were accounts from Holland that the English troops had been driven from Boston, and that the Americans were in possession of that place. I told him that our letters informed us that the army had left Boston to make an attack with more effect elsewhere. He smiled and said : "If you will not allow the retreat to have been an affair of necessity, you will at least admit that it was *tout-à-fait à-propos*." He observed that it was a difficult thing to govern men by force at such a distance ; that if the Americans should be beat (which appeared a little problematical), it would be next to impossible to draw a revenue from them by taxation, etc. He concluded by saying: "*Enfin, Messieurs, je ne comprend pas ces choses-là, je n'ai point de colonie: j'espère que vous vous tirerez bien d'affaire, mais elle me paroit un peu épineuse.*"'

This testimony from the first soldier in Europe has not, I think, been before drawn out of the obscurity of a forgotten volume of travels."

—We find in the *Perseveranza* of August 17–19 some interesting speculations on the future distribution of languages and nationalities on the globe, by E. Littré. He imagines Strabo, at the time of the greatest expansion of the Roman Empire, conjecturing that the world, or at least the ancient world, would ultimately be filled with the Latin name ; and yet nothing of the kind has occurred. The globe then had neither been traversed nor measured, and the unknown portion was too vast. In our time calculations can be made without risk of being confounded by the discovery of new regions, or new races of mankind. M. Littré begins with what he calls the Britannic group, and concludes that at no distant day the English-speaking peoples will number three or four hundred millions. The race which immediately challenges comparison with it is the Chinese, already arrived at that figure. So long as it remains inferior, in point of science, to the nations of Europe, M. Littré expects no great modification in its conditions. Perhaps he underrates the readiness of the Chinese to leave their native country, though he pays in passing a compliment to President Hayes for maintaining the sacredness of treaties against the "unbridled liberty" of Congress. Of the obstacles to their assimilation with the peoples who receive them he makes no mention. Russia is his third colossus, and his fourth the Spanish race, to which he consigns without a rival all of South America, except Brazil and the European colonies on the northeast coast. No other European race can dream of competing with these, unless it be Portugal. He assumes it as

certain that the vast territory of Brazil, capable of sustaining a hundred millions of inhabitants, will be all placed to the credit of Portugal in the partition of the globe. That one destiny and one nationality will finally unite the Brazilian littoral with the valley of the Amazon is, it seems to us, scarcely more than a probability. Germany has no chance in the contest; France can do nothing unless by encroachments on northern and central Africa. In the East, British rule in India may so leaven with science the native subjects that independence will be the result, in which case the Indian race must be counted one of the chief factors in the problem. Modern science might even revive the Arab influence over a wide area, but the Turks have had their day. Anglo-Saxon, Russian, and Spanish fecundity will eventually make the Christians outnumber all other religionists. The full development of Russia and the United States menaces possibly the independence of the non-expansive European States, and is quite likely to alter their rank in the scale of greatness. M. Littré hopes, however, that the progress of civilization will provide the same safeguards for the life of states that it has done for the life of men. The seat of the highest culture may, as was fancied by the author of the 'Vestiges of Creation' ("a remarkable book, written some twenty years ago in the United States by an Irishman"), some day be transferred from the banks of the Seine to beyond the Hudson and the Susquehanna; but there is no evidence that the result for Europe will at all resemble the effect on Babylon, Syria, Asia Minor, and Egypt of the passage of civilization from the East to the West.

HERBERT SPENCER'S DATA OF ETHICS.*

THE facts of evolution have crowded upon the thinking world so fast within the last few years that their philosophy has fared rather hard. Chaotic cohorts of outlandish associates, the polyp's tentacles, the throat of the pitcher-plant, the nest of the bower-bird, the illuminated hind-quarters of the baboon, and the manners and customs of the Dyaks and Andamanese, have swept like a deluge into the decent gardens in which, with her disciples, refined Philosophy was wont to pace, and have left but little of their human and academic scenery erect. Many of the previous occupants, though broken-hearted at the desecration, have submitted, in a sort of pessimistic despair, to the barbarian invaders. Others, temporarily routed, are uncertain what to do. The victors meanwhile, intoxicated with success, assume, for the most part, that Philosophy herself is dead, or that, if she still has vitality enough left to continue propounding any of her silly conundrums, she will be shamed to silence, as now one, now another, of the conquering ragged regiment stands forth to face her down. We are the truth and the whole truth, they cry. Emotion, in short, has paralyzed reflection on both sides, as it always does in sudden revolutions. But when the newcomers grow accustomed to their situation, and the original possessors get better acquainted with their strange bedfellows, things will settle down on very much the old basis. Mr. Spencer's successors will probably not feel, as he now does, that the study of the habits of filthy savages is far better than that of the lives of illustrious Europeans; and it will then be seen that questions as to the fundamental elements of existence, the fundamental grounds for belief, and the fundamental reasons for action and endurance, remain to be discussed as subtly after as before we learned that each phenomenon was evolved and had a peculiar history of its own.

The question about action is the most urgent of all, and it is therefore matter of rejoicing that such an incarnation, such a perfect sawmill, we were going to say, of evolutionism as Mr. Spencer should have seen fit to publish his Ethics in advance of their proper place in the work to which he has devoted his life. He has been led to do this, he tells us in his preface, from the fear that failing health may perhaps force him to leave unexecuted that final part of his immense task to which he has always regarded all the rest as subsidiary. "My ultimate purpose, lying behind all proximate purposes, has been that of finding for the principles of right and wrong, in conduct at large, a scientific basis." He adds that the volume now published, though it cannot, of course, contain all the specific conclusions to be set forth in the entire 'Principles of Morality,' of which it forms a part, yet implies them in such wise that definitely to formulate them requires nothing beyond logical deduction. These two hundred and eighty pages contain, then, the essence of Mr. Spencer's life-long meditations on human life. It is easy to feel, in the carefulness of the composition, the wealth of illustration, and clean-cut perspicuity of the style, that the author has done his very best to make the form worthy of the matter, and to render the book, if possible, a popular classic on the subject of which it treats. Such being the case, we shall best fulfil our reviewer's function by endeavoring to give as faithful a report as possible of its contents, unmixed with criticisms which, made on such a work in so brief a space, could not but appear shallow, or even impertinent.

Mr. Spencer's fundamental ideas are very simple. In the first place, we must, he says, in order to discuss rightness and wrongness in human conduct, have a fixed point from which to make our measurements. Such a point may be called Absolute Ethics, the conduct of the perfect man. But an ideally perfect man cannot be conceived to exist except in an ideally perfect social state. An absolutely just or perfectly sympathetic person could not maintain himself in a tribe of cannibals. To lay down the conditions of this perfect social state is then the purpose of the present volume. First and foremost, then, it is the state towards which evolution inevitably tends. This all-important assumption is one which Mr. Spencer takes no pains to justify here. Probably the inductive proof of it will be given in the unpublished volumes of the 'Principles of Sociology.' The deductive proof would probably run somewhat in this way: All social discord is friction; all friction makes resistance; all resistance ends, if prolonged, by stopping motion. The motions of society will thus perforce come to run exclusively in lines without resistance —that is to say, that the tendencies of each social unit will eventually harmonize with and be aided by the movements of the other units, and of the whole. If we grant that this is the inevitable upshot, we must see that this final condition is the one of all most favorable to extent of life, for not only is, by the hypothesis, every incompletely evolved degree of life accompanied by some murderous friction, but Mr. Spencer shows, in a chapter on "The Evolution of Conduct," that, taken in a broad sense, all action is for the maintenance of life, and that those forms of action which prevail where by common consent existence is most evolved (as in pacific and industrial human societies) are also those where life has the greatest length and "breadth"—by which latter word Mr. Spencer means variety, "depth" being a dimension for which no equivalent exists in his scheme—and where it is least exposed to waste or sacrifice.

Consequently, then, the perfect state, the definitively final state, and the state of maximum vitality are all synonymous terms. Every step towards one of these ends is a step towards the others. But what general end guides the steps of human beings? Happiness or pleasure—this is the universal object of pursuit; and Mr. Spencer shows that even those ethical theories whose avowed first principle is not "hedonistic," really do make conduciveness to happiness or unhappiness the test by which conduct shall be judged virtuous or the reverse. Does, then, the line of greatest happiness coincide with the three other lines of tendency which we have traced, so that those who pursue happiness will find that at the same time "evolution," perfection, and the maximum of this earth's life have been added to their portion? Most emphatically so, says our author; and whatever appearances may speak to the contrary do so only because they are interpreted in the light of too narrow an experience. This is another cardinal pivot of his doctrine, and is so important a matter that it is to be regretted that he has not gone more thoroughly into its discussion. He seems to content himself with a brief repetition of the theory advanced in his 'Psychology,' that any creature which should be made happy by actions noxious to its welfare, and unhappy by useful conduct, would end by expiating with its life its ill-adjusted æsthetic constitution. We find many misadjustments, it is true, in human beings, but these, like the love of murderous "sport" in industrial communities, are survivals from an older predatory social state, and are already dying out; or else, like drink, theft, murder, etc., are causing their unfortunate subjects to perish more rapidly than the rest of mankind.

Thus, little by little, none but life-subserving tendencies to behavior will remain. In a number of chapters Mr. Spencer tries to show what the complexion of the behavior must necessarily be among mankind if life is to flourish in a maximum degree. It must not be anarchic, nor, when social states are formed, must their mutual attitude be that of war. Though self-regard be for each individual the primary virtue, yet it must be so transmuted by sympathy that we shall preserve ourselves for the sake of our uses to mankind. Altruism and egoism will, however, be so justly balanced that "each takes care that others shall have their altruistic satisfactions; the highest altruism being that which ministers not to the egoistic satisfactions of others only, but also to their altruistic satisfactions. Far off as seems such a state, yet every one of the factors counted on to produce it may already be traced in operation among those

* 'The Data of Ethics. By Herbert Spencer.' New York: D. Appleton & Co. 1879.

of highest natures. What now in them is occasional and feeble may be expected with further evolution to become habitual and strong; and what now characterizes the exceptionally high may be expected eventually to characterize all. For that which the best human nature is capable of is within the reach of human nature at large. . . ." Although latent ideas will exist of the evils which non-conformity with perfect rectitude will bring, "these will occupy the mind no more than do ideas of the evils of starvation at the time when a healthy appetite is being satisfied by a meal." Nay, more; Mr. Spencer's is usually reckoned a dry sort of imagination, but can we longer so consider it when we read his Fourier-like account, in §94, of the way in which our facial expressions, our bodily movements, and our vocal cadences will become transfigured after our feelings have become all sympathetic, and there is no longer any utility in concealing any part of them from our companions?

Mark that in this perfectly-evolved condition all our virtue is to flow spontaneously from our natural constitution. There will be no self-compulsion in our justice, nor shall we be aware in the midst of our righteous behavior that we are acting for any ulterior end other than the love of the behavior itself. Increasing the total amount of vitality on earth will be far from the thoughts of most of us, unless, indeed, perchance the theory as well as the practice of evolution shall have become ingrained into the nervous systems of us all. This matter of blind spontaneity in virtue, resulting from the *means* acquiring an intrinsic attractiveness which makes it an immediate object of pursuit, and drives the *end* out of consciousness altogether, is much insisted on by our author as distinguishing his own from other ethical systems. These all, however, embody portions of the truth, and this is how he briefly awards to each its share:

"The theological theory contains a part. If for the divine will supernaturally revealed we substitute the naturally revealed end towards which the power manifested throughout evolution works, then, since evolution has been and is still working towards the highest life, it follows that conforming to those principles by which the highest life is achieved is furthering that end. The doctrine that perfection or excellence of nature should be the object of pursuit, is in one sense true; for it tacitly recognizes that ideal form of being which the highest life implies, and to which evolution tends. There is a truth, also, in the doctrine that virtue must be the aim; for this is another form of the doctrine that the aim must be to fulfil the conditions to the achievement of the highest life. That the intuitions of a moral faculty should guide our conduct, is a proposition in which a truth is contained; for these intuitions are the slowly organized results of experiences received by the race while living in presence of these conditions. And that happiness is the supreme end is beyond question true; for this is the concomitant of that highest life which every theory of moral guidance has distinctly or vaguely in view."

If now I, a defective and imperfectly evolved creature, full of joy of battle and other survivals from a savage state, say to Mr. Spencer: "I know nothing of your highest life, or, knowing, despise it"; and if I add to my other riotous deeds the sneering at evolution and the writing of sarcasms on its eventual milk-and-water paradise, saying I prefer to go on like my ancestors and enjoy this delicious mess of fears and strivings, and agonies and exultations, of dramatic catastrophes and supernatural visions, of excesses, in short, in every direction, which make of human life the rich contradictory tissue of good and evil it now is, how shall Mr. Spencer reduce me to order or coerce me to bow the knee? He is impotent over me by any theoretic appeal, and frankly confesses as much. Moral *obligation* he admits (p. 127) to be a transitory element in the moral life, and he tries with considerable originality to show how the sense of it arises by association of wrong conduct with external natural penalties and social restraints. With advancing evolution and increasing, orderly spontaneity, the coerciveness of the *ought* will little by little disappear. Even now I *ought* to do a thing only on *condition* that I dread certain consequences from the not doing of it. If I do not happen to dread them, I go free. This polemically weak point Mr. Spencer shares with all hedonistic or otherwise confessedly subjective systems of morality. His only superiority over them is this: that he has one more material bribe to offer me in behalf of virtue than they, one more bugbear to deter me from the path of vice. Your way will inevitably fail, he can say. Evolution's fatal tide will leave you naked, and high and dry, unless you join it. But if I am so ill-conditioned as to prefer remaining alone as a spectacle of impotent perversity to the ages, his *arguments* are at an end, and he must resort to brute force, if to anything, in order to lead me at his chariot-wheel.

And here comes in the peculiar personal bias of Mr. Spencer in this ethical matter. Whereas to all other evolutionary moralists the *status belli* has received a new consecration from the new ideas; whereas in Germany especially the "struggle for existence" has been made the baptismal formula for the most cynical assertions of brute egoism; with Mr. Spencer the same theories have bred an almost Quakerish humanitarianism and regard for peace. Frequently in these pages does his indignation at the ruling powers of Britain burst forth, for their policy of conquest over lower races. Might, in his eyes, would hardly seem to be right, even when evolution is carried on by its means. And this brings us to the only criticism we care to make: We can never on evolutionist principles altogether bar out personal bias, or the subjective method, from the construction of the ethical standard of right, however fatalistic we may be. For if *what is right* means *what succeeds*, however fatally doomed to succeed that thing may be, it yet succeeds through the determinate acts of determinate individuals; and until it has been revealed what *shall* succeed, we are all free to "go in" for our preferences and try to make them right by making them victorious. Now, it may be strictly true that, as Mr. Spencer says, no preference of ours possibly *can* succeed in the long run, unless, with its other contents, it be also a preference for peace, justice, and sympathy. But we still are free to decide *when* to settle down on the equitable and peaceful basis. A postponement of fifty years may wipe the Sioux and Zulus out of the game, and with them the type of character which they represent. Evolutionists must not forget that we all have five fingers merely because the first vertebrate above the fishes *happened* to have that number. He owed his prodigious success in founding a line of descent to some entirely other quality—we know not which as yet—but the inessential five fingers were taken in tow and preserved to the present day. So of minor moral points; we have to decide which of them the peace and sympathy shall take in tow and carry on to triumph. What kind of fellows shall we be willing to be peaceful with, and whose sympathy shall we enjoy? An unlettered workingman of the writer's acquaintance once made the profound remark: "There's very little difference betwixt one man and another, but what little there is is *very* important." Shall we settle down to peaceful competition already now with the Chinese? shall our messmates in the millennial equilibrium be of the fat-minded Esquimaux type? or shall we put up with some generations more of *status belli* in order to get a good congenial working majority of artists, metaphysicians, wits, and yearners after the ineffable with whom we may live contented? According to evolution each human type and exemplar of character has small beginnings, like everything else. The "best" is that which has the biggest endings. Mine may have these if I get ahead and violently crush yours out *in time;* yours, if I let the precious occasion slip and you outgrow and suppress me. For the conditions which once produced me, just as I am, may never recur again.

Mr. Spencer has forgotten to consider this inevitable field of warring antipathies, in which each must just fight doggedly and hope the event may prove him right. Or probably he has not so much forgotten as contemned it in his vast dream of universal fatalism. His work contains masses of strikingly-expressed criticism and illustration of the incoherence of our actual ethical standards. It is certain to form a powerful centre of crystallization for the fluid thought of recent days, and is, it seems to us after this first perusal, decidedly the most noteworthy production of its energetic author.

SEELEY'S LIFE AND TIMES OF STEIN.*

II.

PROFESSOR SEELEY has discovered a great historical revolution. Side by side with the English and the French Revolutions we must now, on his view, place "a third revolution not less important than either, which is the Spanish Revolution." Its importance consists, first, in its having given a new character to the struggle against Napoleon; secondly, in its having inaugurated the movement in favor of oppressed nationalities which has changed Italy into a nation and Germany into an empire. That any theory propounded by a man of Mr. Seeley's knowledge and talent contains elements of truth and deserves consideration, may be assumed as a matter of course; and whoever reads the 'Life and Times of Stein' will see that the book brings into prominence matters, such as the moral influence exerted throughout Europe by the Spanish insurrection, which do not always receive due weight at the hands of historians. But when every concession which is due to Mr. Seeley's learning and ability is made, the question still remains, What is the real worth of his discovery? has he revealed a new aspect of history, or has he sim-

* 'Life and Times of Stein; or, Germany and Prussia in the Napoleonic Age. By J. R. Seeley, M.A., Regius Professor of Modern History in the University of Cambridge.' London, 1879. Boston: Roberts Bros.

ply exaggerated a truism till it appears like a paradox? After careful consideration of Mr. Seeley's work candid students will, we are convinced, find it impossible to answer these questions in a way satisfactory to the professor's admirers. The discovery of a "Spanish Revolution" as full of import as the great French Revolution is certainly of more solid value than the discovery that Cobden was as truly an historian as Macaulay. But the introduction into history of a new revolution is, after all, an achievement due rather to literary ingenuity than to historical insight. For the account given of the Anti-Napoleonic Revolution, in so far as it is more than a statement of facts known to all persons and fully appreciated by all competent students, rests on a very one-sided version of the struggle against Napoleon, and on a very doubtful estimate of the importance and character of the movement which, according to the tone of Professor Seeley's work, was first revealed to the world by the Spanish insurrection, much as the first French Revolution was made patent to the world by the fall of the Bastile.

That Mr. Seeley's version of the contest with Napoleon does not square with all the facts of the case is, we think, obvious. The steadfast resistance of the Spanish nation to the imperial invader was undoubtedly an important and startling phenomenon, but the Spanish people were not the first to reveal the difference between a nation and a state. The whole contest between England and Napoleon exhibited to the world the force derived from national spirit. It was England, not Spain, which first pitted the strength of united patriotism against the gigantic force of imperial power. It was England, not Spain, which stood in the way of Napoleonic policy. The war in the Peninsula derived its permanent importance far more from its affording a field for the display of Wellington's generalship than from the strength of the insurgents, and at least one competent critic has doubted whether British resources might not have produced more speedy results if they had been employed nearer the centre of the imperial power, instead of being to a certain extent cooped up within the limits of Spain. The soldiers who cheered the English general as "the chap who knew how to leather the French," saw clearly one aspect of the war which Professor Seeley shows a tendency to overlook. Years of warfare had revealed to one general, at least, the secret of success. Napoleon trained up, so to speak, his own destroyers. From the minute when it was made manifest that tactics could be found which baffled the armies of the Empire, the charm was broken, and it became all but certain that the number of Napoleon's foes would at last crush the power even of his genius.

Nor, taking Professor Seeley's own account of the Anti-Napoleonic Revolution, does it appear that in Spain, Germany, or Russia popular insurrection achieved as much as is even by ordinary writers put down to the credit of popular enthusiasm. The people rising "as one man" is an impressive idea, but those who count on the effectiveness of patriotic insurrection should remember Palmerston's dictum, that if the people rise as one man they are extremely apt to be at once knocked down as one man. Palmerston remembered the Napoleonic wars, and drew from his remembrance the indubitably right conclusion that trained armies, not popular enthusiasm, are the one means of resisting a power based on military force. National enthusiasm no doubt contributed an element of importance to the struggle with Napoleon, but after all he fell before the combined states of Europe, and was but very indirectly the victim of aroused national feeling; and if the Napoleonic Empire fell partly because it outraged the growing sentiment of Spanish and German patriotism, it owed its fall at least as much to the conservative forces which had always opposed the Revolution. It was no mere accident that the ruin of the Empire led to the restoration of the Bourbons. The diplomatists who met at Vienna aimed, in the main, first, at guarding against future French aggressions; and, secondly, at restoring what may be termed the principle of legitimacy. The one thing they did not regard was national aspirations, and this oversight in the long run broke up their arrangements and gave birth to the doctrine of nationality, which has disturbed and remodelled the states of Europe during the last forty years. It is, however, of great importance to recollect what Mr. Seeley seems practically to overlook, that the enthusiasm for nationality was excited far more by the settlement intended to prevent the revival of Napoleonic power than by the aggressions of Napoleon, and that the revolution of the nineteenth century, if so it may be called, has its parentage not in Germany or in Spain, but in Italy, and that its heroes will always be, not Stein or Fichte, but Mazzini, Cavour, and Garibaldi.

That the movement in favor of nationality which has colored the politics of the nineteenth century cannot, even if Mr. Seeley be right in connecting it with the Spanish insurrection, be placed on anything like the same level as the French Revolution, may not be at first sight obvious to all our readers, but is nevertheless a position in which persons who weigh carefully the true character of political, social, or moral changes will, on reflection, acquiesce. The nature of the so-called French Revolution is obscured by the name which the greatest of all changes since the Reformation has received. The revolutionary movement in France was a part, and not, perhaps, in the long run, the most important part, of a general revolution throughout Europe, which may, in very general terms, be described as the effort of the European world to shake off the influence of feudalism. From its very birth the revolutionary spirit broke down national barriers and divided nations into parties, zeal for which overpowered local patriotism. Burke who denounced, the revolutionists who applauded, De Tocqueville who criticised, the Revolution, each at any rate perceived that, to use Burke's language, it "broke the locality of public affections," or that, to cite De Tocqueville's words, "*elle a formé au dessus de toutes les nationalités particulières une patrie intellectuelle commune, dont les hommes de toutes les nations ont pu devenir citoyens.*" Hence followed the result, which Mr. Seeley hardly appears to appreciate, that the Napoleonic Empire, the defeats and successes of the governments opposed to France, form only episodes in a movement of which the course has not yet run out. Hence, further, the Revolution influenced different countries at different dates. The ideas which have worked visibly in France since 1789 moulded the course of English politics in 1832, still convulsed Europe in 1848, and cannot yet be said to have lost their power. To judge of the Revolution viewed as a great effort to emancipate mankind from moral and intellectual prejudices, and from political oppression, it is vain to look at single events marking its course. To estimate the great changes of the eighteenth and nineteenth centuries by the Reign of Terror, by the pacific triumph of 1830, or by the follies of 1848, is as vain as to test the merits or defects of the Reformation by the massacre of St. Bartholomew, by the defeat of the Armada, or by the horrors of the Thirty Years' War. All that mankind can as yet say is that a great effort to realize great ideas has caused some great calamities, and has not yet been crowned with complete success.

The moment the Revolution is regarded as a whole, the impossibility of balancing against it the movement in favor of nationality becomes apparent. This movement, whatever its worth, was to a great extent an effort of reaction. Admiration is due to Spanish patriotism, but it was mainly the patriotism of ignorance, and one may be permitted to doubt whether the worst effect of Napoleonic rapacity was not that in Spain it forced virtue and patriotism into an unnatural alliance with dulness and fanaticism against enlightenment and improvement. To the German war of liberation it is possible to give far more unmixed sympathy, principally because the enthusiasm which resisted the tyranny of Napoleon was also aroused against the still baser despotism of petty German potentates; but those who mark the really brutal language in which a person so eminent as Stein could in his old age address gentlemen engaged with him in public business, may feel that the revolutionary doctrine of so-called equality needed after the Napoleonic wars, as it probably still needs, to be impressed on Germans trained under the influence of feudal ideas. The nationality movement, again, never could from its nature be a universal movement. It has no application to a country such as England, nor had it till 1870 any application to France. The doctrine of nationality is, in short, either, as it was in Italy, a form under which people protest against oppression (in which case it may ally itself with revolutionary dogmas), or it is a reactionary movement against not only the errors but also some of the truest conceptions of the eighteenth century. The cry for nationality, if made an end in itself, may rouse race against race, on the ground, not of resistance to oppression, but of some supposed right to constitute a nation. Compared with the so-called French Revolution, the movement termed by Professor Seeley the 'Spanish Revolution' sinks, even when looked at as a whole, into comparative insignificance. The great Revolution is a European movement in favor, in the main, of rational principles applicable to the whole civilized world. The nationalist movement is either the revolutionary spirit under a disguised, and in some sense improved, form, or it is a reaction, which no doubt has a side of romance, but which from its nature appeals to local feelings, and therefore to what may be termed limited principles; which leads its votaries to aim rather at romantic ideals than at the attainment of good government; which may aid the cause of freedom in Italy, but which may foster military government in Germany or aggression in Russia. The revolution, in short, which Professor Seeley has discovered is, to speak plainly, no discovery, and has, further, no claim to be compared in importance with the great revolutions of the world.

THREE BRITISH VIEWS OF AMERICA.*

NOTHING could better illustrate the change which has taken place within comparatively few years in the attitude of the educated British public towards this country than these three books. They are, to be sure, written by British Liberals, who have for some time now had an interest in manifesting a certain American bias; whose American bias is, indeed, more or less the logical outcome of their distinctive principles. After Mr. Bright's championship, and considering the enthusiasm for "popular institutions" of the more radical of his party, it is not surprising that we should have gained so many advocates and admirers among his countrymen as to account for the conservative indignation awakened by Mr. Gladstone's recent article on "Kin Beyond Sea." But the Englishman may usually be so completely trusted to maintain the bias of patriotism that one is not altogether prepared for the heartiness of appreciation, the unprejudiced investigation, the evident predisposition towards not only our political "institutions," but our habits, manners, character, and institutions of all kinds, exhibited by Mr. Dale, Sir George Campbell, and Mr. Saunders in about equal proportions. Of course they by no means see everything in rose-color, and of course discrimination is quite as characteristic of their examination as candor is of their temper; but that their temper should be so unlike that one not unfrequently notices in English papers—for example, in the comments on the speeches of Rev. Mr. Talmage, recently—and yet so far removed from anything sentimental on the other hand, is matter for some surprise, perhaps, as well as for satisfaction. Sir George Campbell especially takes great pains to controvert, or rather expose, Mr. Trollope, who was prejudiced in his account of us possibly by a sentiment of filial piety. He notes, with well-bred astonishment that they should have been made, a score of Mr. Trollope's misconceptions and misreports and is as emphatic as any American could desire in his condemnation of them. And in each of these volumes we are a long way not only from the temper of the 'American Notes,' which was to have been expected, but also from the much more recent provincialism—still characteristic of serious English periodicals—of supposing even geographical blunders concerning "the States" trivial which, if made concerning the centre of Africa, would be deemed unpardonable.

Mr. Dale and Sir George Campbell spent but two months here; Mr. Saunders a much longer time, and so was enabled to make his examination more complete and searching. Mr. Dale's book, indeed, is entitled 'Impressions' with accurate modesty. He appears to have visited out of New England only the larger cities of the North, and to have been excellently taken care of by the ministers of his own denomination in New Haven and elsewhere. Sir George Campbell certainly made the most of his time, and took an extended trip through the South, making it a special point to investigate the relations of the whites and blacks and the condition, social and political, of the States which had recently "thrown off the carpet-bag rule" when he visited them. Mr. Dale considers, in four separate chapters, "Society," "Politics," "Popular Education," and "Religion," respectively, and his conclusions are of a general and comprehensive nature. Sir George Campbell's survey was perhaps as cursory—at least, one infers it to have been necessarily so from the far larger field which he covered in the same time; but he has an extraordinarily acute power of observation, he is an unusually experienced traveller, who was but yesterday "round" at China, and he confines himself to strict reporting and the simplest inductions, without attempting to systematize his inferences into the shape of a parliamentary commission's practical report. This last is done by Mr. Saunders much more thoroughly than by either of the other writers. He does, indeed, permit himself an abundance of general observations, but he made the subject of government, its comparative cost, extent, and practical workings here and in his own country; the system of bank management, the temperance question, the railway question, the land question, matters of especial and systematic investigation. We should say that his book was the most valuable from a political and industrial point of view; Sir George Campbell's from a social and literary, possibly human, standpoint; and Mr. Dale's for its educational chapter and the conciseness of its summing up.

Mr. Dale thinks us "a very reserved people," except in the matter of religion, which he found many persons—chiefly evangelical and accustomed to prayer-meeting frankness, perhaps—ready to talk about. As a rule, he concludes we are undemonstrative, which he attributes to New England influence, and not given to making a fuss, which he thinks due perhaps to the military discipline we got during the civil war. We are so apt to ascribe social demoralization to that event that we are inclined to doubt this, though the explanations of Sir George Campbell and Mr. Saunders, who note the same trait, are not perhaps more satisfactory. Sir George Campbell thinks it possibly due to direct English influence, and Mr. Saunders to the marching to the sound of the piano practised in the public schools—a form of discipline hardly old enough, we imagine, to have yet had universal influence. "To an English radical," Mr. Dale observes, "the conservatism of the people generally is very striking." He thinks that transported to England they would, after speedily disestablishing the national Church, join the ranks of the Conservative party. Mr. Saunders, on the contrary, says that the American would be very likely to look at the question of disestablishment in a practical way. "He would make himself acquainted with what the Church was doing, how far the work was useful, and what it cost the state; and it would be upon a balance of advantages to the community that an American would decide for or against disestablishment." Mr. Dale also thinks we have an almost superstitious respect for the rights of property. Mr. Saunders, on the contrary, says: "Public interests are regarded as being of far more importance than the rights of property, or private rights of any kind." Mr. Dale even finds a distrust of popular institutions "far from uncommon among the wealthier and educated classes." As to politics, he says: "America is the paradise of Home-Rulers"; he deplores the condition of the civil service—from responsibility for which he relieves Jefferson on the authority of Mr. Parton, by the way—credits Mr. Hayes with excellent intentions, but says Mr. Conkling's course illustrates "the magnitude of the task which the President has undertaken." As to the tariff, he makes the neat observation that "the unquiet ghosts of Lord George Bentinck's speeches are still 'walking' in Massachusetts, Pennsylvania, and New Jersey." He views with some trepidation the hostility of "the Roman Catholic hierarchy" to the public schools, but still thinks its defeat certain, as any other result "would imply a complete revolution in the spirit and temper and habits of the nation." The subject of education, as we have said, he treats exhaustively; he notes the lack of grammar-schools, which he deplores, but thinks the elementary schools far in advance of those of England, though he finds much to criticise in our elementary education—among other things, that "the teaching is too good," the teacher does too much, with result of too much memorizing and too little discipline. His chapter on "Religion" is very nearly all sympathetic praise. One paragraph is worth quoting:

> "Our temper is, therefore, a 'militant' temper. I do not think that among my friends in America there was really less of Evangelical zeal, but they seemed to be less impressed by the constant presence of hostile forces which it was their first business to subdue. They were under less tension. They had more religious rest. They seemed to live at home—not in a camp. To me there was something very charming in the change."

And, remembering that Mr. Dale comes from Birmingham and is so expert in ecclesiastical and other controversy, there is something very charming, we may add, in this testimony.

Sir George Campbell is not what one would call a literary artist; there is a kind of frankness of attitude and hearty, good-humored disregard for the graces of composition in him which makes his book lacking somewhat in proportion and arrangement. Part of it is lectures delivered familiarly to various Scotch audiences, part is an article republished from the *Fortnightly Review*, part selections from a very copious journal which he kept during his trip. Despite this, or possibly owing to this, his book is an effective one. There is, for one thing, no possibility of suspecting it of any *arrière-pensée*. One goes along with the writer as trustfully as if he were having the same actual experience. Furthermore, Sir George Campbell's perceptions being as acute as his temper is candid, one feels the unlikelihood of his being humbugged by any one—a danger to be avoided certainly in a tour through the South—or misled by anything; seriously, that is to say. And as he has a quick eye for what is picturesque, and is, perhaps, a good deal of an artist by disposition without suspecting it or evincing it in his style and manner, his observations have an interest that is at times even vivid, as well as an air of trustworthiness. He sets out by telling his readers that our manners and language are based upon a foundation almost entirely English, and that what are called "Yankeeisms" are really obsolete English expressions. Naturally, too, he "found that an immense number of the best and most prominent men wherever I went claimed Scotch descent," and regrets that the founders of the Republic "didn't introduce a little Scotch cooking"; he found even oatmeal called "Irish oatmeal," and presumably came across no "haggis" at all. Speaking of other races and the emigration from New England

* 'Impressions of America. By R. W. Dale.' New York: D. Appleton & Co. 1879.

'Through the Light Continent; or, the United States in 1877-8. By William Saunders.' London, Paris, and New York: Cassell, Petter & Galpin. 1879.

westward, he thinks "it would be a very curious thing if Puritan New England became a Roman Catholic Irish colony," as indeed it would. The typical "Daisy Millers" were all in Europe when he was here; the independence of "our girls" he decidedly likes, and "American women are among the nicest of their sex." The typical Yankee was "just a month fra Glasca." Political meetings are so orderly as to be dull. The cities are too big; in connection with which he appositely remarks: "I am almost tempted to say that for every man who works with his hands there seem to be two who seek to live by speculating upon him." No one sees America who does not see the small farmers who are the backbone of the country. Higher education somewhat disappointed him; "there is still a good deal of Latin and Greek taught." In rascality we are about on a par with England, though we sometimes punish our rascals "more adequately." He does not think that religion is "suited to the genius of the people of America, white or black"; from which opinion Mr. Saunders as well as Mr. Dale dissents. All three note a national preference for dearness over cheapness, which leads Sir George to advise winning a fortune here and spending it abroad.

This brings us to the most valuable part of his book, his statement of the condition of the South—especially valuable to an American. "I think the tone and temper of the people of the Southern States is very highly to be praised," he says at the outset; but his praise is by no means indiscriminate. The rapid civilization of the blacks through their political education surprises him, and he contrasts it with the slow improvement of the white serfs of Europe. In industrial arts, however, they have made, he says, almost no progress whatever. They are "inaccurate," "lacking in mechanical skill," do not make good factory operatives, and so on. Mr. Saunders notes, by the way, that where from any cause, such as climate, they do not come into direct competition with the whites, necessity has educated them to an equality with whites, even in factory labor. The notion that the blacks are improvident, in raising only enough to eat, Sir George says is false. On the contrary, they raise what will bring them the most money, and import bacon and corn from the West. However, they live too freely to save money to buy land and make themselves independent, as they might. Their migratory tendency he explains on the ground that they did not feel free till they had changed their place of living. The best class of the blacks is to be found in South Carolina, where more has been done for them and where they have done more for themselves. Beginning under unusual disadvantages, they now make a living where the whites could not—*e. g.*, in growing Sea Island cotton. The general condition of the negroes throughout the South is good, and the industrial relations between the races unstrained. His advice to the blacks is to "stay at home and make the best of an excellent situation," and to the whites, "Do all you can to keep this people, conciliate them, and make the most of them." As to the matter of carpet-bag rule and its succession of "bull-dozing," the writer manages to steer a very successful middle course between the "shot-gun" Scylla and the Stalwart Charybdis, it seems to us. At any rate, he preserves a quiet, "low tone" in treating the matter, which, if it pleases men of neither extreme, gives no comfort to their respective opponents, and furnishes small material for stump-speeches in Maine or Georgia.

Mr. Saunders's book is, as already mentioned, exhaustive, and has a permanent value. We have left ourselves only space enough to speak of a few of its more salient points; some of its statistics are worth giving. In considering the liquor question he finds that 47,000,000 of people here consume £93,000,000; whereas 33,000,000 in the United Kingdom consume £142,000,000; according to the alcoholic test—that is, taking the alcohol in spirits at 50 per cent., in wines at 15 per cent., and beer at 5 per cent.—we consume 1.024 gallons of alcohol per head, against 2.37 in Great Britain. In another view we do not justify this showing, as Great Britain drinks 40,000,000 gallons of spirits against our 58,000,000; Great Britain's consumption of beer and wine being 3½ times ours. The taxation for our 3,500,000 square miles is £59,750,000, or 25*s.* 6*d.* per head, for support of the general Government; Great Britain, to govern 121,000 square miles, £70,000,000, or 43*s.* a head. Our entire taxation, general, State, and municipal, is 44*s.* 6*d.* a head, and Great Britain's is 67*s.* 10*d.* a head, which is 52 per cent. greater in proportion to population. The three largest items of expenditure in both countries are given as follows: Great Britain, interest and charges on debt, £25,000,000; army, £15,645,700; navy, £10,586,894. United States, interest and charges on debt, £19,000,000; army, £5,867,-145; navy, £2,837,476. Details of comparison between this country and his own Mr. Saunders gives in great abundance. Our roads are much worse, a disadvantage partly overcome by the numerous "tramways." Great Britain is better prepared to repress violence, but on the whole order is better preserved here; life and property are equally secure in both countries. We spend twice as much for public education. Our public offices are arranged more simply, our officials are more prompt, and hence department transactions are easy for laymen; whereas "no civilian would go to a public office unless he was too poor to obtain legal help" in England. The cost of government here is increased, of course, by the large extent of territory; but, even if the army and navy of Great Britain were abolished, there would still be spent, for a more compact population, £40,000,000 more than we expend, as compared with population. The statistics collected as to the cost of railways furnish an excellent argument against the building of railroads by Government. The policy of giving away land is strongly reprehended. The national banks are highly eulogized; our savings-banks are called "very peculiar and dangerous institutions," and it is noted that in England the latter, which are under Government superintendence, are the more secure, while other banks are subject to disastrous failures; and that with us the converse is true. In fine, there are few chapters in the book from which an American may not obtain both instruction and food for reflection.

"The course of the *Nation* newspaper in its treatment of subjects connected with money, currency, financial legislation, and capital and labor, has always, I believe, been eminently sound and wise; and its files contain the greatest body of serviceable teaching respecting these subjects which can be found in this country. It has also many valuable studies of some of the changes which have been going on during the last fifteen years in our laws, in our methods of political action, and in the character of our people. It is a necessity for clergymen and all students of our national thought and life."—REV. J. B. HARRISON, in the *Christian Register* of August 17, 1878, in an article on the American Literature of Capital and Labor and the Organization of Society on the Principles of Justice.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 18, 1879.

The Week.

THE long-pending conflict between the two sections of the State Democrats, the Tammany party, headed by John Kelly, and the Robinson party or Tildenites, as they are supposed to be, came to a head at the nominating convention at Syracuse on Thursday. In spite of several furious speeches against Governor Robinson—in which the only charge made was that he had disorganized the party by his removals of city officers—it was plain that his nomination was a foregone conclusion. Whereupon, amidst great disorder, the Tammany delegates, numbering seventy-two strong, withdrew from the convention to a hall of their own, where they nominated John Kelly for the Governorship. The Robinson men, whose Machine worked beautifully, thereupon nominated him for the Governorship, and Mr. Clarkson N. Potter for the Lieutenant-Governorship. The bolters were led out by Messrs. John Kelly, Dorsheimer (the present Lieutenant-Governor), David Dudley Field, and Augustus Schell. Kelly made a speech denouncing Robinson, acknowledging that he did not expect to be elected himself, but promising to defeat his enemy. It would probably be difficult to discover, either in ancient or modern history, a more corrupt and rascally political constituency than that which Kelly now heads, and its separation from the decent element in the party must be regarded by every one as a distinct gain for the whole community. The journey by which Mr. Dorsheimer has, after starting from Grant, reached Kelly through Greeley and Tilden, is in many respects equal to the 'Odyssey,' and could be only fitly described in an epic poem. The cycle of his political experience must now be complete; there can hardly be anything beyond Kelly to which he can look with hope or affection. And Kelly has David Dudley Field too, in many respects the noblest Roman of them all.

The platform asserts the political principles laid down by Washington and Jefferson; holds to the Constitution with the amendments; condemns centralization; pronounces the United States a nation to the extent defined in the Constitution; deprecates feuds, and strife, and "passions of the past"; demands honest elections and honest counts; denounces "the encroachments of capital" and "the despotic greed of corporations"; approves of gold and silver coin, but rebukes the Secretary of the Treasury for his "favoritism" and his "so-called syndicates"; looks with "shame and sorrow" (this appears to have been received with perfect gravity) "on the disgraceful repudiation of their professions of civil-service reform by the Executive and his supporters"; condemns the electioneering of Federal officers; congratulates the people of the State on the payment of the State debt and the reduction of expenses; applauds the Democratic State officers; calls for railroad reform; and winds up by a categorical demand for equal burdens on property, and prohibition of discrimination on railroad freights, of the competition of prison with free labor, and of Federal supervision of elections. It is a much better drawn platform than that of the Republicans, as entering more into details and giving more attention to State concerns. It distinctly pledges the party to the prevention of electioneering by Federal officers. This, no doubt, does not amount to much, but it is more than the Republicans ventured on, or could venture on, inasmuch as their candidate, if he represents any political principle at all, represents the principle that Federal electioneering is a Federal officer's principal work.

What the effect of the split will be in the party at large remains to be seen. That it has caused some trepidation is shown by the fact that the National Executive Committee is going to meet and discuss it. There is a strong desire prevalent, apparently, in the West and South to get rid of Tilden, but this does not seem to be possible. He owns the Machine, which he has constructed with much care and at great expense, and thinks, very truly, that at this important crisis in the history of the party it would be very injudicious to dispense with him and try a new man with very inferior apparatus, particularly as the Republicans in his own State have decided to fight a Machine battle. We wonder whether he personally shares "the shame and sorrow" of the Convention at the spectacle of Mr. Hayes's failure to carry out his promise of civil-service reform? If so, he must with his sensitive nature be fairly bowed down by it.

An excellent address to the Republicans of New York has been circulated during the week, calling upon them to scratch the names of Cornell and of Soule, the candidate for State Engineer. It opposes Cornell on the grounds of his having, as chairman of the State Committee, manipulated votes to secure his own nomination; because of his want of fitness for the office; "because he was nominated not in the interests of the Republican party but in order to demonstrate who controlled it," an undeniable proposition; and "because he is a notorious opponent of President Hayes and of administrative reform." Mr. Soule's election, it is declared, "would give practical encouragement to canal corruption." The address points out the danger, in case the appeal for "harmony" is listened to, and no protest is made now, that "the machine element will force upon us, in the supreme issue of 1880, a candidate who will be defeated by the disheartened apathy of his own party"; that the attempt to thwart this element in primaries and conventions has always proved abortive; and that "the one way for the ordinary citizen to oppose the machine politician, with his professional skill, is to make his trade uncertain, by giving him practical notice that a bad candidate may be defeated by those independent votes within the party which he chooses to defy." The Independent Republican Committee, as the promoters of the address in this city call themselves, offer to supply at cost Republican ballots with the names of Governor and State Engineer in blank, and invite correspondence "with a view to a more general organization after this election."

The other political movements of the week may be briefly summarized. The Wisconsin Democrats are at a loss for a candidate for Governor, Mr. Alexander Mitchell, who was nominated for that office last week, having telegraphed from Europe an absolute declination. Mr. Mitchell is said to be "probably the richest capitalist in the entire Northwest," and so much the best candidate his party could have selected that his refusal to run leaves them in distress. The Wisconsin Democracy does not deserve much sympathy, however. Being elated two years ago with its reduction of the Republican majority, it imagined that all it needed to carry the State was the Greenback vote, which it accordingly solicited with a rag-money platform. The result was disastrous, and this year it resolved that "the constitutional currency of the country and the basis of all other should be gold and silver coin," which, perhaps, was as far as it could go with any show of consistency. The Maryland Republicans held their Convention on Friday, adopted verbatim all of the Saratoga platform which relates to national affairs except the section referring to Democratic ill-treatment of "old Union soldiers," declared that the people of Maryland would "never condone the fraud that was perpetrated by the Democratic party in the election of 1875," and nominated Mr. James A. Gary, of Howard County, for Governor, ex-Postmaster-General Cresswell declining to have his name brought before the Convention. The Massachusetts Greenback-Labor party met in Faneuil Hall Friday, and, after a tumultuous session, nominated General Butler for Governor and Wendell Phillips for Lieutenant-Governor, and adopted a platform which is a marvellous mosaic. It asserts that "the Greenback philosophy has been grandly vindicated" by the stoppage of contraction in

1878 and the receiving of greenbacks for customs duties, which perhaps would indicate that Secretary Sherman's popularity is increasing in an unexpected direction if it were not followed by the observation that "the coin resumption of the Republican party is a sham and a delusion." Kearney will read with surprise that his Eastern friends believe "labor-saving machinery is a boon of God to the sons and daughters of toil," though they want "the contract system of convict labor abolished." It seems a little singular that there should have been some slight and temporary objection to a resolution calling upon the Government to make up to "the soldier" the difference between the gold value of his pay in 1864 and that of "the bondholder's dollar" with interest. To pass this required a good deal of reciprocal personal abuse.

The supporters of Mr. John D. Long for Governor of Massachusetts proved to be a decided majority of the delegates to the Republican Convention at Worcester, on Tuesday, and he is accordingly the candidate of the party. The platform begins with an assertion of national supremacy in protecting the rights of citizens, especially at the polls; accuses the Democrats of having revived sectional animosities, and of attempting to establish by legislation the doctrine of State sovereignty defeated in war; congratulates the Republicans on resumption, and demands that the paper and coin circulation of the country be kept on a par with the gold standard of the world; praises President Hayes for his late vetoes and for his pure administration, and promises him support in his efforts to carry out the principles of civil-service reform embodied in the Cincinnati platform and in his letter of acceptance. What we may call the contemporaneous exposition of these resolutions showed that the first two were the only ones of any importance to the Convention, and presumably to the party. Ex-Governor Bullock, the chairman, and Senator Hoar made the only two speeches of the occasion, and declared the coming election a part of the Presidential election next year, and the Southern question the main one in both. Each speaker, in his own way, addressed himself to the Stalwart sentiments of the Convention to the exclusion of every other consideration. We are to have, therefore, in Massachusetts, as in Maine, the spectacle of a nominal contest over war issues on the stump, and a real division on the financial issue at the ballot-box. A less wholesome condition of politics has seldom been seen there.

A remarkable recommendation from the State Department has lately been published concerning the Weil and La Abra claims against Mexico, on which the Joint Commission made awards of nearly $1,200,000. In the distribution to other claimants of the instalments paid over by Mexico, Congress authorized an investigation of the charges of fraud in those two claims, and directed that "if the honor of the United States, the principles of public law, or considerations of justice and equity" appeared to require that the awards should be opened and the cases retried, the moneys to the credit of those claims should be withheld and the awards "set aside, modified, or affirmed," as decided upon such retrial. This course was in accordance not only with the suggestion of the umpire, Sir Edward Thornton, that "no government would insist upon the payment of claims shown to be founded upon perjury," and with the action in the analogous cases of the Gardner claim under the Treaty of Guadalupe-Hidalgo, and the claims against New Granada, but with the position assumed by the United States in protesting against the late fishery award. It amounted to a notice to the class of claimants who rolled up an aggregate of $470,000,000 of claims against Mexico that international commissions, limited in their duration and necessarily defective in their modes of investigation, cannot continue to be a successful field for speculation, and that, under the pretence of the finality of their awards, our Government will not knowingly enforce unjust claims against a friendly power.

After examining the newly-discovered proofs filed by Mexico, Mr. Evarts concluded that neither the principles of public law nor considerations of equity and justice demanded a new trial by an international commission, but that the honor of the United States did require a thorough investigation of both claims; and as the Executive had not the facilities for making such investigation, he recommended that the proofs be sent to Congress "for the exercise of their plenary authority in the matter." In the Abra claim, however, he states that the main imputation is of "fraudulent exaggeration" of damages, that in his opinion the proposed investigation should be confined to that question, and that upon a "careful estimate as to any probable or just reduction" he thinks it would be safe to distribute the three instalments (nearly $150,000) already paid to the credit of that claim. The Government would thus hand over to persons who appear to be at least liable to the charge of "fraudulent exaggeration" a large sum with which to urge before Congress the other three-fourths of their claim, upon the "estimate" of an officer not specially authorized by law to make one, and who anticipates the result of an investigation which he expressly declares the Executive "is not furnished with the means of instituting and pursuing." Nor is this all. The charges of Mexico against the claim—which, together with the proofs, were published at the time its re-examination was ordered by Congress—in fact are, not only that the ores of the Abra mine, for which the umpire awarded $100,000 and interest, were worthless, but also that the company abandoned the mine for that reason voluntarily and without any interference. In recommending an investigation of the apparent "fraudulent exaggeration" of the claim the Secretary admits that Mexico has made a *primâ-facie* case as to the first part of the charge, but having done so he unaccountably disregards the presumption thence arising as to the voluntary abandonment of the unproductive mine. Should the latter ground of defence, which is a natural consequence of the former and inseparable from it, be substantiated by the investigation recommended, the entire claim must be unjust, and the "honor of the United States" would surely require, in accordance with the precedent in the *Caroline* claim against Brazil, that the money paid out by the State Department should be repaid to Mexico out of the National Treasury.

The almost instant acquittal of Gully, one of the notorious "Chisholm murderers" of Kemper County, Mississippi, has been accepted by the Republican press unanimously, so far as we have seen, as an evidence of the blindness of Southern justice in political matters. This may not argue a wise and temperate judgment, and it does not, indeed, take account of the long-standing feud which led up to the slaughter of the Chisholms; but the Southern Democrats certainly have themselves to blame for any misinterpretation of the event. Gully was indicted and prosecuted for a particular crime—the murder of Miss Cornelia Chisholm—and it is possible that he may have been guiltless of it. But the circumstances of the trial indicated that he would be acquitted whether guilty or not. What we have not noticed in the comments on the verdict, and what we are glad to see mentioned by General Woodford, who accompanied Mrs. Chisholm to Kemper County as a kind of body-guard, is the fact that a sincere effort was made by the State authorities to secure justice in the case, in accordance with the promise made by the Governor two years ago. General Woodford says the jury was fairly drawn; that Judge Hamm did his duty "fearlessly and justly," and Ford, the District-Attorney, his "well and bravely"; that the latter was assisted by eminent and able counsel, and that all was done that could be done to secure Gully's conviction. This is far better news than much that we had from the South while there was "a strong hand at the helm" at Washington. "In 1879," says General Woodford, "at least the forms of law are observed and an orderly trial is held. This was not an investigation before a partisan Congressional Committee, but it was a thorough and deliberate trial, conducted in due form of law by a Democratic District-Attorney before a distinguished and learned Democratic judge." The progress indicated in this implied contrast is not only substantial but promising.

A number of gentlemen constituting a "Congress of the National League" held a convention in Cincinnati on Saturday and Sunday for some purpose not very distinctly defined, and perhaps somewhat general in its nature. Mr. Elizur Wright presided, and Professor Toohey, of Boston, Mr. Parker Pillsbury, Mr. Wakeman, of this city, and Elder Evans, of the Shaker settlement at Lebanon, were prominent actors. Colonel Ingersoll was perhaps the most animating figure, however; he "brought his better half," as one of the delegates said, adding: "I know of no other two hemispheres that compose a grander globe." The call for the convention had been addressed to all those who were oppressed by the grinding tyranny of the Sabbatarian spirit which permeates our modern society, and comes to the surface in various shameless ways, from openly resting one day in seven to frowning upon the distribution of obscenity through the mails. Of this offending, President Hayes was declared to be the head and front, and he was charged with "having allowed himself to be bull-dozed by the clerical party" out of executing his intention to send Colonel Ingersoll to Berlin, "because Ingersoll is an infidel." To this influence also were ascribed the choice of Foster over Taft by the Ohio Republicans, the action of Governor Talbot, of Massachusetts, in signing a petition against the pardon of the notorious Bennett, and, "the last crowning act of infamy," the refusal of the President to grant the said pardon. The sessions were spirited, and the members, united only by the negative tie of grievance, naturally somewhat unruly. Various speeches were delivered expressing sympathy with Bennett, denouncing the frightful obscenity of the Bible, and urging the repeal of "the Comstock law" and of the laws against profane swearing, inasmuch as "the punishment of heresy and blasphemy should be left with God, the only being supposed to be injured." It was announced on Sunday that the convention had been "captured by Socialists" before its adjournment, but there does not seem any good reason to fear this; at least the individual liberty of the League's members was not rigorously restrained, and in any event very little was done except to postpone the consideration of effective relief measures till next year.

The importations of gold continue to be the main feature of the financial situation. These since our last issue have aggregated about nine million dollars, making with previous receipts a total since the middle of August of some $22,000,000. Since we last wrote, about $6,000,000 more gold has been started to New York, mainly from Paris, and the calculation that $40,000,000 to $50,000,000 will have been received here from Europe by the first day of January next does not now seem unreasonable. There is a suspicion, however, that the business has of late been somewhat overdone, bankers having ordered gold in anticipation of a supply of cotton bills, which is this year from three to four weeks later than last year. Large as have been these importations, they have only been sufficient to offset the demand for currency on the New York banks, and it is instructive to reflect upon what the New York money market would have now been if no foreign gold had been received. At the Stock Exchange speculation has gone on as if the gold received were a surplus, and would make what was good much better, and all manner of wild schemes have flourished. Of course, the rise in many stocks has been well founded, but on the other hand the shares of companies which are yet in the hands of receivers and can only be made valuable by a miracle, have been "ballooned," until it has come to be a saying that forged certificates, if started in price below ten dollars per share, can be "bulled" successfully to twenty dollars a share. The silver market was dull and steady throughout.

The news from Afghanistan grows worse every day. It was at first believed or hoped in India that the attack on the embassy at Kabul was a sudden outburst of fury on the part of mutinous soldiers and the mob, and that Yakub Kahn was deeply grieved by it and tried to prevent it. But this theory had to be given up before the news that there were signs of a general rising among the tribes, and that Yakub Khan had apparently no authority over anybody. Later accounts point to his complicity with the massacre, or at all events his subsequent acquiescence in it, and it is now reported that Kabul is covered by a considerable Afghan army. Though this is said to be sensation, General Roberts, who commands the British avenging force, evidently cannot advance with the army now at his disposal, and will have to wait for reinforcements, which come tardily, and for means of transportation, which are deficient owing to the enormous destruction of camels by the late expedition. The snow falls in the passes early in December, and after that communication becomes difficult or impossible, so that it may be said that he must be in Kabul and have made himself comfortable in winter quarters by the first of December at the farthest. He can probably do this, but it is an arduous enterprise, and its success will not solve the problem. For after having taken Kabul the question presents itself, Can the Indian Government afford to conquer and occupy Afghanistan; and if not, who is to rule it in a manner satisfactory to England? Yakub Khan, as an instrument of British policy, has broken to pieces.

We are yet without full accounts of the effect of the disaster on English opinion; but the damage it has done to the Jingoes merely by discrediting their prophets must be enormous. One has only to read the article of Sir Henry Rawlinson, in a late number of the *Nineteenth Century*, to see that the party will not be again able to raise its head in the press. Sir Henry is an old Indian officer. He served in the Afghan war of 1839, and has for thirty years been a high authority on the affairs of Central Asia, and has been one of the great guns of the Ministry in the defence of their Afghan policy, and a great Russophobist. In the August number of the *Nineteenth Century* he tramples the Liberals in the dust. "We were told," he says, "that our so-called Jingoism in the East would inevitably lead either to national disaster or national bankruptcy; and now, because these sinister predictions have not been realized, but, on the contrary, a short, inexpensive, and not inglorious campaign, skilfully conducted and bravely supported, has been crowned with a peace promising substantial results," etc., etc. It is easy to see that he and others like him can be of no further service to the Ministry.

It will also be very interesting to see what the effect of the news will be in Russia. An expedition under General Lazareff, who died recently while on the march, started some time ago across the Black Desert for the chastisement, it was said, of the Turkomans, a peculiarly ferocious tribe who prowl on the borders of Persia. There has been great fear in England that this expedition would diverge to the east and seize on the oasis of Merv, and a question was asked on the subject in the House of Commons some weeks ago, but Mr. Stanhope said that the Russian Government had promised not to go to Merv. Recently, however, and before the news of the late disaster at Kabul, the St. Petersburg semi-official papers have been asking, in a very suspicious manner, whether the British success in Afghanistan has not changed the aspect of affairs, and whether it would not be in the interest of both countries for the Russians to take Merv, and thus virtually bring the frontiers of the two empires into contact, and root out the intervening barbarism. Merv is not over twelve days' march from Herat.

No little excitement has been caused in Italy by an unexpected article in the Austrian *Military Gazette*, written by Colonel Haymerle, brother of the Austrian ambassador to Italy, which assumes that the agitation for *Italia irredenta* still continues and has overcome by terrorism even the cultivated classes, and, proceeding to examine the fighting capacity of the Italian army and navy, and the chances of an offensive alliance, concludes that Austria need not fear an attempt to seize the Trentino and Trieste. Official apologies have been made for the article, but the Italians suspect an agreement of Austria with Germany which bodes them no good.

THE INDEPENDENT VOTER IN THE NEW YORK ELECTION.

THE nomination of Governor Robinson by the Democrats at Syracuse, and the bolting of the Tammany faction, promise to make the coming State election one of more than usual interest, especially to those who care much for the cause of good government, but on whom the yoke of party sits lightly. We would, therefore, call the attention of this class—which we believe to be a large and growing one, in spite of the discouragements of the last few years—to the fact that even those Republican papers, such as the *Times*, the *Evening Post*, and *Harper's Weekly*, which complain most loudly of the tyranny of the Machine, and are most disappointed by the proceedings of the late Republican Convention, have no remedy to suggest. They do not propose to mark their sense of the evil of Machine nominations in any way but by grumbling for a few weeks after the nomination is made. They propose to act, and to advise others to act, in all respects as if the nomination of Cornell was entirely satisfactory, by casting their ballots for the entire ticket as framed by the Machine. They do this, they say, because of the influence which the election in this State this year is likely to have on the Presidential election next year. If the Republicans lose New York this year they will probably lose it next year, and the loss of it next year, if it should prove, as is likely, to be a "pivotal State," would give us a Democratic Administration with all its attendant horrors. They therefore propose that the task of overthrowing the Machine, the importance of which they do not deny, should be postponed to a more convenient season—*i. e.*, to some period when resistance to the Machine will not be likely to secure the triumph or improve the prospects of the Democrats. Their position, in short, is that of a Good Man in a firm of grocers which contributes largely every year to the Board of Foreign Missions, but contains a Wicked Partner who sands the sugar and puts bits of lead on the bottom of the scales. The Good Man feels deeply the guilt and shame of the Wicked Partner's proceedings, and is firmly resolved to break with him some day, but wishes to choose a year for doing so when the Board of Foreign Missions will not miss the annual subscription; but, as the Board is always short of money, this year never comes, and the Wicked Partner at last smiles grimly when he hears the Good Man talking of a dissolution, and increases the proportion of sand in the sugar and adds another bit of lead to the scales.

The danger which prevents the discontented Republicans from resisting the Machine is not likely to disappear within the present century. The composition of the Democratic party is not likely to improve much in our time; and even if it vanished, another of similar materials and very similar aims and ideals would take its place. It contains and will long contain the least intelligent portion of the white community, and the one most hostile to all change which involves self-restraint and self-sacrifice. That it does not contain the ignorant blacks as well as the ignorant whites is a mere accident. The chances are that before 1900 it *will* contain them, and they will then be found on the wrong side in the battle of civilization which the Republicans have been so long fighting on their behalf, just as the Irish at the North are found on the wrong side. In saying this, however, we by no means admit that the dangers of Democratic rule are as great as some of our Republican brethren are in the habit of representing. To admit this would, in our mind, be to admit that the end of free government on this continent was close at hand. The Democratic party contains well-nigh half the voting population; and a state half whose voters were intent on the destruction of its credit and the ruin of its institutions, and were only prevented from accomplishing their designs by a trifling majority at every election, could not be far from extinction.

But granting that the Democratic party is as bad as its worst enemies say, there is no immediate prospect of its improvement. As long as the nation owes anything, that party is as likely to be as "dangerous to the public credit" as it is now. It is likely to connive at corruption and oppression as long as poverty or ignorance or weakness exists; so that, for all practical purposes, the question before Republicans who do not like the Machine is whether they will make a vigorous effort to bring about "reform within the party" *now*, or postpone it indefinitely, and cease to talk about it. Nor will it do to say that they will resist the Machine on some "off-year"—that is, a year in which not only are there no Federal elections, as this year, but in which the State election is not likely to affect the Presidential election. The Machine meets this device by not working in "the off-year." It has more than once or twice happened in this State that, when Conkling feared the reformers were going to rise on him and defeat his nominations at the polls, he has put out his fires, discharged his hands, and locked up the mill, and has himself gone to bed with a headache. In this way he was able to say with perfect truth that the victory of his opponents meant nothing as far as he was concerned, as he was not entered for the competition. The years he chooses for displays of his power are always years, like the present, in which he is able to threaten the reformers with calamitous results to the party, and to the country generally, if they refuse to work for the ticket. So that we may confidently predict that an opportunity for defeating him, without running any risk or hurting anybody, will never be offered to our prudent brethren of the *Times*, and *Post*, and *Harper's Weekly*. They would evidently like to make omelettes without breaking eggs, or smash the Machine without loss of "harmony," but this blessed privilege Conkling is much too shrewd to allow them.

The independent voters—that is, those who exercise their judgment freely about the probable consequences of their votes, and do not allow their ticket to be finally settled for them in the Convention—will do well to bear in mind that the election of Cornell will be, more distinctly than any election which has taken place in our time, the triumph of one man, and that not a man identified with any great cause, or principle, or idea, or policy, but a thoroughly and undisguisedly self-seeking politician. It will send him to the Presidential Convention next year with the air of having the State of New York in his pocket, and of being, therefore, entitled to a weightier voice about the nomination than any one else there. That his voice will be thrown in favor of whatever nomination seems most likely to restore the régime in which he was the leading figure from 1868 to 1876, there can, of course, be no doubt, and, should he have his way, the Republican party would be committed to the very men and principles and methods which frittered away the majority of 1872 so rapidly that by 1874 the Democrats had possession of the House of Representatives, and probably elected their President two years later. It is difficult, in fact, to understand the mental processes of a person who attaches great importance to the continued possession of power by the Republicans, and yet is willing to vote so as to strengthen Mr. Conkling's hands in the Convention of 1880.

The alternative is plain enough. Every Republican voter can indicate his continued confidence in the party, and his continued determination to adhere to it, and can thus make the election tell as he desires it to tell on the Presidential contest of next year, by voting the whole ticket except Cornell and Soule, the Canal Engineer. These two men stand for Conkling and the Machine, and electoral jobbery, and the perversion of the public service to personal and partisan purposes, and for nothing else. To scratch them both, while voting the others, would indicate hostility to these things, and nothing else. If they run behind their ticket it will indicate that Mr. Conkling does not control the Republican vote of this State, and cannot use it in making bargains at the Convention next year, and nothing else. If, in consequence of Cornell's running behind his ticket, Governor Robinson is re-elected, there will be no harm done. If he is the only man on the Democratic ticket who is elected, the lesson of the result will be too obvious for Tilden to gain anything by it, even if it be true that Robinson is Tilden's man. Whether he is or not we do not pretend to know. In any case, he has been on the whole a very good governor. We know of no cor-

rupt or hasty or crude legislation which he has not opposed. He has opposed also many good things, it is true; but we believe in every case through the prejudice, or ignorance, or narrow-mindedness of a country lawyer of but a limited range of experience, and not through the too common politician's motive in opposing anything—a desire to make terms with its supporters. There could hardly be a higher tribute to his integrity than the fact that the Tammany faction is ready to bolt sooner than accept him. We may take it as an axiom of New York politics that Tammany would not need to bolt the nomination of a corrupt man. If Kelly and his followers understand any art it is the art of bargaining, and they must have found Robinson a man of extraordinary virtue before resorting to the desperate course of leaving the Convention. We may add that the reasons they openly assign for disliking him—such as his removals in New York City—must, in the eyes of all honest men, reflect the highest credit on him. It is possible that these removals were "Tilden moves"—there is no social or political phenomenon to which a Tildenite origin is not nowadays ascribed—but it is certain that most of them were removals eminently fit to be made. Finally, let us add that the belief that Kelly has, or will have, a secret understanding with the Conklingite Republicans is more than a suspicion, and does no injustice to either side. In fact, the Conklingite managers would probably be amused by the innocence which could see anything wrong in an alliance with Tammany Hall and the very dregs of the Democratic party, in this terrible year, when that party entertain so many "partisan purposes," "revolutionary methods," "disturbing measures," and "dangerous designs."

THE LATEST PHASE OF THE ENGLISH LAND CRISIS.

THE discussion of the land question in England is gradually making the problem very clear. A very important contribution to the solution of it, and one which has evidently produced a good deal of impression on the public mind, has been made within a fortnight by the publication of the experience of a gentleman named Prout, farming his own land, who has actually during all these bad years been making fifteen per cent. on his annual outlay off a naturally poor soil, and one peculiarly unfitted to bear the recent wet weather. He has sent his accounts to the *Times*, and if they be correct, as there is no reason to doubt, what the farmers have to ask for becomes plain enough. Mr. Prout charges himself rent in the shape of 3½ per cent. on the price of the farm, or fully 1½ per cent. more than landlords get on the value of estates bought within the last thirty or forty years. He charges himself, too, with 5 per cent. on money expended in improvements which the landlord customarily makes, and the same on money expended in improvements which the tenant usually makes. In fact, he leaves out no item of expense to which the farmer is exposed, except the living of the farmer's family. The land cost him $50,000, and his average annual outlay during the last thirteen years was $18,540; his average annual income $21,540, leaving a profit of $3,000. This would give the farmer a very comfortable income after paying a higher rent than landlords usually receive, and during seasons which most English farmers have found ruinously bad, and off heavy land. Moreover, his crops for this year are up to the average.

This seems a very encouraging showing, but when we look into the details we find no comfort in them whatever for the present race of landlords. Mr. Prout has not only enjoyed what no English tenant-farmer enjoys, complete liberty as to his methods of tillage, but he has violated nearly all the rules which English landlords are in the habit of imposing on their tenants to prevent the deterioration of the soil. Not only does he sell off every thing the farm produces, which is considered in English agriculture an outrageous proceeding, and buy all his manures, but he totally disregards all the established usages regarding the rotation of crops, by raising wheat, oats, and barley year after year in steady succession off the same fields. These are things which no English landlord now permits. In other words, Mr. Prout treats his farm as a manufacturer treats his mill. He manages it just as he pleases, makes whatever experiments he thinks best, and in spending his money looks not to this year or next year simply for his profits, but to a series of years, and takes no advice from anybody whom he does not himself select as a counsellor.

Farming, as ordinarily carried on by tenants, is something very different. The farmer is for the most part a tenant at will, and therefore compelled to conduct his business under a system of rules laid down by the landlord, who does not share any of the risks—that is, expects to get his rent, whether the crop turns out well or ill. In cases where the farmer has a lease, the rules of agriculture adopted by the landlord are inserted in the lease, and violation of them would involve a forfeiture, and any relaxation of them is the result of the landlord's generosity. Moreover, the landlord also reserves the right to keep wild animals, in the shape of rabbits, hares, partridges, and pheasants, which are to be permitted to prey on the farmer's crops, and if he makes any allowance in the rent for the damage they do, it is also the result of his generosity. Added to these purely material drawbacks on agriculture as a business is the custom which makes the farmer, *ex-officio* as it were, the social inferior of the landlord. This is one of the survivals of feudalism, and is a very curious feature in the English land question. It would be considered very ridiculous if the landlord in the city were to treat anybody who hired a house of him as unfit to associate with him on terms of equality; but it is considered the most natural thing in the world for a tenant-farmer to acknowledge the superiority of his landlord, though the latter may himself have made the money with which he has bought the estate by selling blacking. It is needless to say that if manufacturing industry had to be carried on under these burdens and restrictions, English manufactures could never have assumed their present enormous proportions. If mill-owners in the cotton and woollen trades had been compelled to conduct their business under rules laid down by the Government, as in France under Colbert, or by the makers of machinery, or by the cotton-growers, and had been compelled by contract to allow pigs and goats free access to their works at all hours of the day and night, we should never have heard of England's industrial supremacy.

The probabilities are, therefore, that long before the Royal Commission has made its report, public opinion will have been fully formed as to the nature of the changes which will not simply be made, but which will take place, in English agriculture. One of these changes has already begun and is in full progress—viz., a heavy fall in the value of land. An estate which five years ago brought £150,000 has recently been offered at $110,000 without bidders. Though this rapid decline probably is somewhat the result of panic, yet there can be little question that the price hereafter will seldom go beyond the point at which the purchase money will yield five per cent., which of course points to an enormous permanent depreciation—fully one-half from the value five years ago. It is as yet only the difficulty of letting farms and getting rents that is telling on the price; the loss of the land-owner's political and social weight has still to be felt, and that will come more gradually as the lesson of Mr. Prout's success becomes plainer. That lesson is that the principles of free-trade must be applied to farming as well as to every other business, and the landholder resign himself to the condition of the owner of ground-rents on ninety-nine years' leases in London; that is, the condition of a man owning a rent charge, but having little or nothing to say as to the manner in which the premises are made to produce his due. This means, of course, considerable impoverishment of the landlord class, and the loss by landholding of all social prestige. Some estates will be let without difficulty in large farms to capitalists, as water-power is, to be used in their own way; some the owner of the fee will try to farm himself, probably in a large number of cases unsuccessfully, partly owing to the want of capital and partly to the want of business capacity. Many others, probably the larger number, must fall into the hands of farmers of from fifty to one hundred acres, doing most of their own labor, like those in Saxony and Prussia whom Mr. Barham Zincke has recently described, and either holding in fee or under

leases tantamount to perpetuity. For there is no sort of doubt that a heavy fall in the value of land, and greatly reduced rentals, will make imperatively necessary the adoption of some such measure of relief as the Irish Encumbered Estates Act, which was enacted after 1847. Most estates are now heavily encumbered by mortgages or by charges under wills and marriage settlements, which the owner will hereafter be unable to meet, and from which he must extricate himself somehow, and he can only do so by obtaining legislative authority to sell the property, and to give a "parliamentary title" to the purchaser. This will throw a great deal of land on the market, but with this difference: that when the Irish Encumbered Estates Court began to operate, land was considered the best sort of investment by everybody who had money in hand, whether he knew anything about farming or not, whereas whenever the English Estates Court begins to operate, land will probably have lost a large part of its attraction as an investment to everybody but working farmers.

BERGAMO.

MILAN, September 2, 1879.

I HAD passed several times on the railway line between Milan and Venice, and looked with envy at the beautiful site of Bergamo, standing on an outlying hill at the foot of the branches of the Alps which give shelter to the lakes of Lecco and Iseo. A visit to Bergamo is not often undertaken, and, so near Milan, the place is seldom visited by travellers. It is only a minor star among so many of the first magnitude which attract the foreigner. I found time, however, yesterday to pay a visit to Bergamo. I left Milan in the early morning; the weather was intensely hot even at six o'clock, and when the train left me at the station I had to ascend the hill on the top of which is built the old city. This old city was for me the chief attraction; it is now fallen from its old glory; it has ceased to be one of the defences of Italy, one of the great centres of communal life of Lombardy. A new city long ago sprang up at the foot of the hill, and now extends in every direction—four or five *borgos* spread over the plain, intersected by rivers and canals, and covered with green trees and fields. I went up the hill on foot by one of those Italian lanes which have been so admirably described by Manzoni in his 'Promessi Sposi,' following at a distance a Dominican monk and a girl who wore on her head, as all women here do, a light lace veil falling on the shoulders. This veil, with a fan, was her only protection against the sun and the heat. I found it somewhat difficult to sustain the reputation of my countrymen, for you must know that in Spain there is a proverb which says that at twelve o'clock noon you can see nothing in the streets but dogs and Frenchmen. It was not twelve, it was only eight o'clock in the morning, but the sun was already so hot that a veil of light vapor caused by the heat was beginning to cover the great Lombard plain; the canals, the rivers were steaming; the elegant campanili were emerging in every direction from what seemed a forest of mulberry-trees, of poplars, and from the great fields of Indian corn.

After a long ascent on the pebbled little road, beside walls covered with flowers, I found myself in one of those dark Italian streets which show only two great walls of stone, with a few openings, solemn *portoni* and small windows. This street led me directly to what I recognized at once as the centre of old Bergamo. As usual, I had taken no guide-book, for I like nothing so much as a voyage of discovery, and I find most guide-books intensely stupid. But could there be any doubt? Every Italian town has a centre of life, a heart where at certain hours all the life of the city goes on. It is invariably a place surrounded by monuments. I took a seat on the chair of a little café and began my first inspection. The Piazza was called Piazza Garibaldi, but this did not signify anything, as the Italians have filled all their cities with new names, so that you find everywhere a Street or a Place "dell' Indipendenza," a "Via Cavour," a "Via Vittorio Emmanuele," a "Via Garibaldi," "Principe Umberto," etc., etc. The Piazza Garibaldi of Bergamo was till 1862 the Piazza Vecchia; so I was informed by a little hunchbacked bookseller with whom I conversed, and a bookseller of Bergamo must be expected to know something of the history of the city. This Piazza has all the characteristics of a communal centre; on one side is the old City Hall, a huge palace supported, so to speak, only by gigantic pillars and by four columns. This construction rests entirely on vaults, and under the vaults is an immense shady place where the citizens can talk and meet; it is what we should call "la salle des pas perdus." The citizens can in a moment pass from the open place to the shady place, and if they go out of this in another direction they find themselves on a small place in front of the ancient Basilica and of the famous chapel built by the Condottiere Coleoni, who was a native of Bergamo. On one side of the City Hall is the indispensable tower, with the bells and the clock.

Here you have at a glance all the elements of public, of civil, of religious life in the Middle Ages and under the Renaissance. All the streets of the city, dark, narrow passages, mount like veins to this real heart of the city. During most of the day the inhabitants live concealed in their houses. Very few creep along the shady parts of the town, and only when they are forced by their avocations. At certain hours the population emerges, and then the Piazza now called Garibaldi becomes the scene of gregarious life such as can only be well seen in Italy. As I sat musing on this place, looking at its elegant fountain, whose iron chains are held alternately by lions and by serpents, twined round a tree; as I saw under the vaults of the City Hall and behind its pillars and columns the red and rosy tints of the old marbles of the door of the Basilica, the mosaic in marble of the Cappella Coleoni, which is close by this door, I could fancy in imagination all sorts of scenes—fine processions, pageants of every description. I could see the Coleoni returning from Venice after one of his expeditions, and greeted by his friends; I fancied that that beautiful eagle so well carved on the front of the City Hall was a trace of the old Ghibelline propensities of Bergamo. From the great window, which is the centre of the City Hall and is as large as the famous window of the Palace of the Doges at Venice, many a leader addressed the populace assembled on the Piazza, as the Doge spoke to the people. How often did the men who kept the watch on the top of the gigantic tower announce the arrival of enemies, either from the plains of Lombardy or from the mountains' side! Some imagination, to be sure, is required in order to reconstruct the past—some knowledge, also; but the first impressions of imagination have a peculiar charm, and it is seldom that they are not in harmony with facts. What if in gilded letters you see now printed on the City Hall "Biblioteca pubblica"? It is quite clear that this building was not intended for a library. It was built at the very beginning of the Middle Ages. It was burnt in 1513, and reconstructed, but its Renaissance look is an illusion; and even under the Renaissance it was the centre of the Commune. The great tower which flanks it was built in the thirteenth century. It is the second tower of Bergamo, as there is another, not far distant, called Torre di Gombito, which was built in the twelfth century.

The old Basilica was built in the Roman, which is sometimes called the Lombard, style—a style which you will find in its perfection at Verona, in San Zenone and other churches. It is, to my mind, an admirable style—so rational, combining strength with severity, and allowing, nevertheless, any amount of decoration. The Basilica is really the *house* of God; it has the same elements as a house, only it is a house fit, like the Roman basilicas, for an immense number of people. The Basilica of San Palermo was built in the twelfth century; in modern times it has been as much altered as it could well be. In the inside you will find what I call a Jesuit church—an immense accumulation of marbles, of columns, of pilasters, of altars; everything shines, everything is brilliant. There are here and there fine details; the original design of the church is completely lost. I do not dislike this gorgeous style in itself; I think it well adapted to the Italian character, to the Italian climate. Only it is a great pity when the inside and outside of a monument are no longer in harmony, and the old Lombard Basilica was never made to receive all you will now find in it. The sole remnant of the past is an extraordinary porch in the style of the porch of San Zenone, with columns supported by lions, and with an immense figure over the porch of a mounted warrior, lance in hand.

The Cappella Coleoni is a little jewel; it is placed like a toy beside the great Basilica, and is altogether in a different style—in the best style of the Renaissance sculpture. It reminds you at once of the famous Certosa of Pavia. But here the work of restoration, which is now attempted all over Italy, has not been very fortunate. There is, indeed, a very unfortunate artistic dissonance between the parts which are undoubtedly old and the parts which have been remade. Nothing can equal the charm, the delicacy, the gentle flexibility, if I might say so, of the marble carved by the order and at the expense of Coleoni. The modern parts seem too dry; they have a certain *préciosité*, to use a French word, without having any real artistic merit. The tomb of the famous captain of Bergamo is inside; he is placed on it, on horseback; horse and warrior are entirely gilt. This equestrian statue is not without merit, though it cannot com-

pare with the famous Coleoni of Venice, which is one of the great wonders of a place so full of wonders. The *custodi* are very proud of some little details of the Cappella Coleoni, which I do not think are worth looking at. They will show you also with great pleasure the modern marble statue of Music dedicated to Donizetti, and placed with his tomb in the Basilica. It is a statue which is hardly fit for Père Lachaise.

After my inspection of the sleepy old city of Bergamo I went down again towards the plain, in order to pay a visit to the Museum, which has unfortunately been placed in the lower city. I never saw people more astonished than the *custodi* of this Museum when I arrived. They were asleep, and did not seem to have seen a stranger for many a day. They would force me to admire some small masters of Bergamo; my admiration was wholly given to a picture of Mantegna's, a Virgin Mary and Child, which is considered a perfect gem; but a picture which would adorn the National Gallery or the Louvre is lost in Bergamo. I never felt so much as before this little *quadro* that Mantegna was one of the stars of the first magnitude among the painters of the world. I spent the evening in the lower city, dined in the court of the "Capello d'Auro" among good farmers and their wives, who had come for the great annual fair at Bergamo. What a noise! what screaming, and shouting, and singing, and drinking! It was an amusing sight; and meanwhile slept quietly on the crest of its hill, under the rays of the full moon, old Bergamo, with its quiet streets, its churches and towers.

HERMANN LOTZE.

BERLIN, August, 1879.

IF we compare the influence of the idealistic philosophy of Germany with that of Puritanism in America, Kant with Edwards, and the systems of Fichte and Hegel with Methodism, Presbyterianism, etc., we shall get a fair and not very extravagant idea not only of the moulding power of speculation on the Teutonic mind in the past, but of the difficulty yet rapidity with which these influences are now being cast off. Professor Lotze stands in some sense between the new and old order of intellectual things in Germany, where he is by far the most revered and influential of living teachers of philosophy. Thirty-five years ago, when he settled in little, old-fashioned Göttingen, where he still remains, despite attractive calls to larger universities, leading a life almost as uneventful as that of Kant, he was an authority in at least three of the medical sciences, and now there are very few intellectual men under forty-five who have not been influenced by his writings. He has a veritable genius for the quiet enjoyment of art and nature. He never quotes, never indulges in polemics. His mental assimilation is so perfect that there is no trace of cram in his pages, but the professor is sunk in the academician—in a word, he is now one of the noblest living humanists as contrasted with the speculist, on the one hand, and with the eclectic, who holds that all is done and that the thinker has only to pick, on the other. His opinions are among the sanest and healthiest in the history of philosophy since Aristotle. Few men have enjoyed in a higher degree the supreme intellectual luxury of giving an all-sided and free expression to their personality. His philosophy is his daily inner and outer life. He never indoctrinates, but holds that the deepest motive of philosophizing is to utter and share humanities, doubts, and ignorances with others. This is the deepest bond of sympathy between man and man. His pupils are not made disciples, but confirmed and strengthened in their own natural individual positions, which he is sure to enrich by a wealth of suggestions and *aperçus*, so that rational reflection becomes thereafter the most satisfactory instead of, as it is too often, the most unsettling and weakening of intellectual pursuits. Philosophy, he holds, is not a system but a developed intellectual character, and hence entirely valid only for the one who evolves it.

I do not purpose to epitomize his opinions in detail, but to show briefly that the 'System of Philosophy' which he began two years ago, the second and recent volume of which I have just perused with pain, by no means represents the Lotze whom I, with so many American students, have been wont to revere and love. The mechanical view of nature regards her invariable laws as universal, the world as an extremely complex and as yet imperfectly understood machine, and even men as automata. It asserts that there is no chaos and no real freedom, and holds that to obtain clear mental pictures, making thought the surrogate of sense, and mathematical formulæ of relations in time and space the highest science, is the end of all thinking. Even virtue has become mechanical, regulated by artificial moral laws which regard certain specific acts as everywhere and at all times right or wrong. Trade has become an immense engine which is nowhere understood and still less controlled. The modern festival is the industrial exposition. Business, that monstrous creation of modern life, has usurped, specialized, and degraded, if not destroyed, honest, independent man-making work. Teaching addresses mainly the eye with charts, curves, and apparatus. Even religion and the Church, says Lotze, are mechanized. The Church belief is a creed, its duties formal; its evidences are historical, external, or at best syllogistic, and Christian teachers favor these tendencies, and refuse to see that their cause is one with the ideal philosophy. This to him is the saddest aspect of modern times. Opposition to this view has become the ground-motive of all Lotze's philosophizing, and as his early advocacy of it has given his former materialistic friends occasion to charge him with apostasy, so the concessions he now makes to it will surprise, and perhaps at first disconcert, many English readers who have heard him quoted as a great champion of religion against science by the Rev. Joseph Cook, for instance.

Atoms, he says, need not be simple or unextended. It is enough that they are hypersensuous. Perhaps, although the most subtle and primitive of all things, even they have their periods, and are circuiting back to an earlier condition. Indeed, they may have already had thousands of changes and conditions, so that we do not eternalize memory by making it inherent in them. Thus, the ground of all life is chemical change unmodified and uncontrolled by any vital force. The only possible definite conception or mental picture we can form of ourselves is as an eddy or whirlpool in the straight current of natural forces. As the waves made the reef which causes them, so they will wear it away. This, the mechanical view of things, he says, is absolutely universal in extent but everywhere secondary in importance. The *Gemüth* has other needs, and, according as they are unanswered, men fall into pessimism. The world of forms and means should be subordinate to the world of worths and ends, which latter alone are "really real." There is a realism of conscience, he says, where ideals are actual without their instrumentalities, where supreme happiness exists without being bound to its conditions, and where intuitions of truth do not depend upon either their logical or their causal connections. The universe is all miracle and poetry, it is lawful and prosaic only to a one-sided apprehension. In his new logic he asserts that there is a final synthetic truth, not merely actual but self-evident, not merely logical but æsthetic, proved by the absurdity of the opposite and not by the impossibility of thinking it. Logical progress is henceforth to consist not in the formulation of new laws of thought, but in increasing knowledge of what is presupposed as the highest self-evolving principle. Its content is pure being—beauty, goodness, personality, etc. The so-called laws of association are but a weird and casual reconstruction of this universe, broken up by the weakness and finiteness of ordinary consciousness into glimpses. The soul must have or make objective expressions for its own needs and nature, and these will be superstitions just so far as the world of understanding is insufficient for such expression. The supreme postulate of logic, according to Lotze, is some one major premise for all its conclusions, which expresses the movement of the collective cosmos. This bottom principle is nowhere defined, and is, in fact, undefinable, but is best described as teleological. Theological philosophy thought it was giving to this supreme principle, which is more than can yet be called thought, an honorable elucidation by raising it out of the dimness of being clung to by the whole soul to the dignity of an objective notion, calling it God and analyzing it into attributes, and making it the hero of a creative drama, etc. This he regards as idolatrous. Thus, in his unprinted lectures on religious philosophy he has little or nothing to say of Christianity, partly, as he lately told the writer, because so many of his hearers were Jews, but principally, no doubt, because he regards it as a special and chiefly practical solution of the more general problems which underlie all religions and philosophy alike.

No system, however, is perfect, and I believe Lotze's to have several minor and one fundamental error. Instead of urging that philosophy is at best the expression of personal opinion, and can never have anything like authority over others, as at first, the tone of his later work is often assumptive, even dogmatic. In all, feeling, "which more than knowledge expresses the true nature of *Geist*," is made as much the organ of a transcendental world as Fichte's practical ego. Lotze's mind is essentially poetic, and yet he remains strangely insensible to the new and incomparable sources of poetic inspiration which modern science has opened to the world. Much as he adds to the noble enjoyment which those who read him will know how to extract from life, the line cannot be drawn too hard and fast between speculations like Lotze's and a truly scientific philosophy. The world of law is to him like the old dispensation, to be

superseded, not entirely without a break in the development, by a new. He refuses to trust science to work out its own salvation. He is the noblest of modern sentimentalists. His demands upon the world for individual æsthetic enjoyment are exorbitant and almost unparalleled. It never occurs to his refined and subtle hedonism that man's right to happiness at all is as yet quite assumptive. I deem this position in its practical effects scarcely less than immoral and socialistic. We are in the world to work. It costs hard labor of muscle or brain to live, rear a family, be respectable, and provide for decent burial; and what right has this philosopher, idly perched upon his twig, to talk with such moving, maddening pathos about a world of "worths and goods to be purely and passively enjoyed," when his own department was never more hopeful and in such crying need of self-sacrificing toil as now? We want to push on the psycho-physic studies which Fechner has begun and left in the most interesting and suggestive stage of incompleteness ; to carry on the analysis of æsthetic sensation of the Helmholtz school ; to determine how far physiological psychology can justify new or old methods, critical judgments of art, etc.; to advance investigations respecting the structure and functions of nervous tracts and centres ; to know more about the senses, the muscles, and the will, the origin of man and the unfolding of his faculties, in the hope of learning something more thereby of the validity of human experience, the scope, laws, and limits of knowledge, and, above all, of the methods of education, and of the nature and forms of duty. That, with his fitting scientific training, early bias, and rare psychological acumen, Lotze has contributed almost nothing since the 'Medical Psychology' to the solution of any of these questions, I am sometimes tempted to consider as no less than reprehensible ; for, great good as he has done, he might, with his rare gifts, have done far more had he not been led away by the sirens of æsthetic optimism to reverie and pensive quietism. If the universe is composed of personal spirits, with "free inner spontaneity" consenting to be harnessed into mechanism in order to realize and unfold in corporeal form the beauty and goodness of the eternal idea, and if "personality can never become an intellectual problem to persons," then the whole psychological tendency of recent natural, and even physical, science is simply the greatest illusion of modern culture.

Correspondence.

THE HONEST MONEY LEAGUE.

To the Editor of The Nation :

Sir : In your last number the announcement is made that the Honest Money League distribute gratuitously its pamphlet on the "Contraction of the Currency." This is not quite correct. The Honest Money League has given away many pamphlets, but its policy has been to sell its publications at about cost. Last year it fixed its prices for single copies as near to cost as possible, giving itself, commonly, the advantage of any fraction of a cent which might appear in the result of the calculation. It then paid its own postage. This year it has raised the prices of single copies to include postage, but the prices of quantities have remained barely covering cost, and such quantities are sent by express, charges not prepaid. The practice, however, has always been to give away pamphlets where there was good reason to believe that such gifts would be valued and properly used.

The League, however, just now has but a small stock of its publications on hand. In the opinion of those most active in its organization and management, the object of its existence is nearly accomplished. The advocates of dishonest money are everywhere discouraged. It is plain that the American people cannot be successfully marshalled to demand an irredeemable currency or a debased coinage. We look to see the coming election in Ohio effectually demonstrate this fact, and we expect the numerous demagogues who have championed these errors to acknowledge, in practice if not in words, that the coming prosperity and the common sense of the people have effectually killed and buried their favorite issues.

If our hopes in this regard are realized, the Honest Money League will have no further excuse for being. It has done an important work. The influence which its publications have exerted has, without doubt, been considerable. Of its own publications, all of which have been pamphlets, well printed on good paper and fit for preservation, there have been distributed more than 200,000 copies. But it has supplied the matter for more than 1,000,000 tracts, printed and circulated by campaign committees. The New York *Tribune* reprinted one of its pamphlets and circulated it as a "*Tribune* Extra," and many other newspapers throughout the country have made a similar use of its material. In nearly every case where its publications have been so used, no credit has been given to the League. Political speakers throughout the country, advocating resumption and redeemable currency, have used our pamphlets as text-books. The editors of weekly papers, far and wide, administered to the eager appetites of their readers numberless able leading articles taken bodily from these pamphlets, to the great gain of the readers and the great relief of the editors. In fact, the publication business carried on by the Honest Money League has exerted a wide and effective influence. In addition to this it has been instrumental in frequently furnishing speakers and in the holding of many public meetings.

But it is especially of its publication business which I wish to speak here, for I intend to point this communication with a suggestion which will explain this otherwise inexcusable account of details. Ought not a society similar to the Honest Money League to be organized for the education of the people on the economic questions which are likely to be of political interest ? A society, supported for the most part by voluntary contributions or by membership fees, which would offer to the people at cost price carefully-prepared and plainly-written explanations of important subjects would be of immense advantage. There is a demand for literature of this sort which cannot be supplied by regular publishers or by newspapers. The Honest Money League has proved this, and has marked out a path which others may think worth following.

M. L. Scudder, Jr.

Chicago, Sept. 10, 1879.

CIVILIANS AND THE ARMY.

To the Editor of The Nation :

Sir : Permit me to submit a few remarks upon your editorial paragraphs on Army appointments in No. 736 of the *Nation*. Our experience with promotions from the ranks has not, up to the present time, been encouraging. They have not, as a class, made the best officers. The objection to them has not been so much that they came from the ranks, as that they came from abroad ; and not so much that they were foreigners, as that they were, in many instances, uneducated foreigners, and, to use the phrase commonly applied to them, "as self-assertive as the devil." It is this self-assertion rather than any inherent fault that has induced quite a marked antagonism to the class. Where an American is promoted from the ranks that fact is soon forgotten, but this is not true of a foreigner. There should be many different sorts of men in an army, and it is well to have a certain proportion of the rough and ready. Yet, not to mince matters, we find that men of the best families make the best officers. Why ? The best society, not the richest or the most pretentious, but really the best, is made by a process of exclusion. In time the fools, knaves, pretenders, and bores are excluded. The older the society the more effectual the process. A college course is also a winnowing process, and army life in some regiments is a fiery ordeal. The drunkard, the libertine, the gambler, and the drone are sure to come to grief. Of course it is a great advantage to an army to have its lower grades filled by young fellows whose standing at home proves that they are none of these.

We are trying to get a better class of men, and we are succeeding very well. Six out of seven recruits are now of native birth, and many of them are very intelligent men. Nevertheless, only a small proportion of them are the kind of men that will make good officers. Yet no matter how small the proportion, it is only fair that they should have the first chance for promotion. We all favor that, while we believe in making a close scrutiny into their characters. Scholarship is only one qualification in an officer. Moral force is a greater one.

It is true, as you say, that the orderly sergeants can instruct newly-appointed civilian youths in their duties. It is only for a time, however, that the man who has learned by rote can instruct the scholar. As a rule the old sergeants go to a certain point and stop, but you can place no limit to the attainment of a man who comes from what Dr. Holmes calls the Brahmin class.

There is great diversity of opinion as to the advisability of commissioning officers' sons. Some will tell you that for gentlemanly malingerers they would commend you to the young fellows who are raised in a camp ; that they have, from their salad days, all the tricks of old soldiers. Others assert that there is a hereditary capacity for command, as for other work.

You are very incorrect in your assertion "that the orderly sergeants perform virtually all the official work beyond certain signatures and parade posturings." Some company officers may begin with this kind of

shirking, but after getting their pay stopped once or twice for inaccuracies in their accounts, even the laziest men will be driven to keeping their own. It is the misfortune of the Army that civilians see only its parades, and know but little of its work. A.

AUGUST 15, 1879.

[The best friends of the Army will not lay too much stress just now on the "Brahmin class" if they are anxious to avoid giving a handle to its enemies. Our correspondent admits what we have been contending for when he says that six out of seven recruits are now of native birth and not lacking in intelligence. But this has been measurably true for some time past, and yet the fact is not borne out by the recommendations and examinations for promotion. The sergeants are often much more than mere learners by rote, and it is by no means certain that the new appointees are "scholars." Our correspondent is doubtless familiar with the military adage that a company is better off with a good orderly and a bad captain than *vice versa*.—ED. NATION.]

THE MAINE ELECTION.

TO THE EDITOR OF THE NATION:

SIR: The Maine Republicans have played rather worse than a drawn game, although accident gives it the semblance of a victory. There is to be a Republican governor in January in spite of an anti-Republican majority in September, because the Republican vote happens to be so distributed among the towns and counties as to elect a majority of both branches of the Legislature, upon which the choice of governor will devolve. This result is pure luck, and cannot safely be counted on again. An anti-Republican popular majority next year would probably secure an anti-Republican Legislature, governor, and State officers and United States Senator, as it certainly would, if united, secure anti-Republican electors. The accidental allotment of votes this year is no credit and no reproach to anybody, and its ascription to the superhuman adroitness of the chief politician of Maine is as obsequious and absurd as it would be to give him credit for the two full moons in August. A similar streak of luck gave Senator Douglas the Illinois Legislature in the memorable canvass of 1858, although Abraham Lincoln obtained several thousand majority of the popular vote.

Viewed independently, the Maine election is a Republican defeat and tends toward discouragement. Its inspiration is derived solely by contrasting the vote of 1879 with that of 1878. Had Maine given its average Republican majority of 13,000 last year, the loss of the State even by a few hundred votes this fall would have been regarded as a portentous catastrophe. It is the reduction of last year's anti-Republican majority from more than 13,000 to less than one thousand which seems to mark a turn of the tide, and kindles the hope that another year may restore Maine to the rank of a Republican State.

But the future is beset with dangers which it is the part of folly to deny or conceal. Perhaps the greatest peril is the fact of our partial success. The prospect of an accidental repossession of the visible and tangible fruits of victory, the insignia of office, the lictors, the fasces, and the curule-chair, is of itself enough to turn the heads of our lighter politicians, who, in the intoxication of this questionable success, are sure to put on airs which had become almost insufferable even in the days of old-fashioned majorities. Already the Maine Bourbons, incorrigible by the sharp discipline of the past year, have begun where they left off last September, and, with oriental servility, ascribing what they call victory not to the people nor yet to the rank and file of the party, but to some of their leaders, are calling upon independent Republicans to bow the knee while those sycophants shout, "These be thy gods, O Israel!" Such blind guides evidently do not yet comprehend that those idols which are again set up for Maine worship are the same that led the party into the Waterloo defeat of 1878, and that nothing but the dread of their restoration to despotic power could have prevented a thorough redemption of the State this year.

Widespread discontent with the management and managers of the Republican party rather than confidence in the transparent sophistries of Greenbackers wrought the revolution of last September. For years thousands of the best men in the party would, like ex-Governor Chamberlain, have been "glad to see a combination of men with an issue that they could sustain, for the purpose of overthrowing the men who control our State politics." The dilemma presented to them by their political masters has been to turn the State over to the Opposition, or to continue to grace the triumphal car of men whose principles and methods they detest —to minister to a personal ambition which knows no scruples and no bounds. Last year more than ten thousand Republicans forgot the wise conclusion of the meditative Dane, and, unwilling longer to bear the ills they had, illogically fled to others that they knew not of. This year a part of them have patriotically sacrificed their feelings to their sense of duty, while thousands of others who voted the Republican ticket last year under protest have done so again this fall because, like the ex-governor, they "could not go so far as to endorse the heresies of fiat-money and communism, even if the result would bring about the purification so much needed."

The causeless and suicidal warfare waged by the Maine political leaders in the name of the party against its national head during the first eighteen months of the Administration was so abruptly silenced by the shock of last year's election that we are not likely to witness its open revival. The same politicians who had bull-dozed two State Conventions into an apparent sympathy with their own quarrel, wilfully risking the party's ruin for the furtherance of their personal schemes, hastened last June, with superserviceable zeal, to endorse that President whom they had spent a year and a half in belittling, annoying, and embarrassing at one of the most critical periods of the national history. But the assertion of the one-man power, the bane of recent Maine politics, has experienced no abatement. Direct assault upon the President and Cabinet has given place to a guerilla attack upon their friends and supporters, seeking to ostracize every independent Republican. Thanks to this perpetual and ubiquitous manipulation, Maine still bears too close a resemblance to Rome at that epoch in her history when *Cassius* asked *Brutus*—

> "When could they say, till now, that talked of Rome,
> That her wide walls encompassed but one man?"

A party still in the minority cannot afford to lose the active aid of its independent members, a body of men whose numbers are underestimated, and whose sincerity and consistency will not suffer in comparison with the anti-Administration wing of the organization.

The late campaign was waged mainly upon the financial issue, and its qualified success precipitates the solution of some serious questions. The shibboleth of the platform and stereotyped phrases of orators will require interpretation. Maine is said to have sustained "resumption" and to have insisted on "honest money for the people." Which kind of "honest money"? "Coin," or greenbacks made equal with coin? If "coin," is it to be gold or silver? If silver, is it the Bland dollar of 412½ grains or the Blaine dollar of 425? The 86-cent dollar or the 89-cent? What sort of resumption? The Senator Hamlin and ex-Secretary Morrill kind, or the other Senator's variety? Do the coming Governor and the new Legislature represent a resumption which consists in the payment of every greenback in gold and its cancellation as fast as it is presented, or that more modern species of resumption which means its temporary redemption in 86-cent silver dollars and its immediate re-issue at the opposite counter, while duties are paid wholly or partly in paper? Maine Republicanism must be prepared to meet the practical test which success imposes, and to define its definitions, just as the opposition fusionists would have been called upon to do if they had prevailed. When the definition is given somebody is liable to be surprised, if not disappointed, and the result may be decisive in 1880. If it should be found that the divergences between the different Republican statesmen of Maine have been and still are as wide as, or even wider than, the gulf which separates some of them from "the Greenback heresy," it may become vitally important to know, and to know early, which school of political financiers is to be the exponent of our creed next year.

That a political effort of unprecedented severity has been able but imperfectly to retrieve the disaster of 1878, and has failed even to command a popular majority, is a fact of deep significance, for it is more than doubtful if the effort can be repeated. Even if the means and the speakers were obtainable, it would not be easy to rekindle the same public interest within a twelvemonth. It would be too much like Mr. Lincoln's powder which had been blasted before and would not go off. But they will not be obtainable. Too many other more important elections will next year demand each its share of attention and labor, the whole of which Maine has this year so largely monopolized; and the exigencies of a Presidential election will doubtless impart to our opponents in 1880 a vigor which has been signally deficient during the recent campaign. Much has been accomplished, but the State has not yet been redeemed, save in name. To the intolerable pressure of personal government within the party far more than to any financial delusion, Maine is indebted for

the humiliation of 1878, and a just apprehension of its return has prevented an overwhelming triumph in 1879; it is able to bring defeat in 1880. Extreme prudence on the part of the managers can carry the State next year; a very small percentage of the mismanagement and insolence of 1877 and 1878 is sure to leave it where it still is—beneath the burden of an anti-Republican majority.

The election affords rational ground for hope, and is a loud call to renewed effort and a purification of the party; but it offers no excuse for glorification or adulation, least of all for arrogance, recklessness, presumption, or personal Presidential capital. X.

PORTLAND, September 15, 1879.

Notes.

WE print elsewhere a letter in regard to the pamphlet publications of the Honest Money League, a list of which may be acceptable to some of our readers: (1) 'Honest Money,' an argument in favor of a redeemable currency, by Thos. M. Nichol, Secretary of the League; (2) 'Address on the Currency,' by John Johnston, of Milwaukee; (3) 'Extracts from some of the Communistic, Inflammatory, and Treasonable Documents circulated by the National Greenback Party'; (4) 'Contraction of the Currency,' by C. K. Backus, editor of the Detroit *Post and Tribune;* (5) 'Suspension and Resumption of Specie Payments,' by Gen. J. A. Garfield; (6) 'National Banking,' by M. L. Scudder, Jr., Chairman of the League's Executive Committee; and (7) 'Bi-metallism,' Mr. McCulloch's Harvard lecture of May 8, 1879.——A history of the art of printing and of the book-trade in Leipzig during four centuries has just been published in that city, and abounds in interesting information ('Die Druckkunst und der Buchhandel in Leipzig durch vier Jahrhunderte'). The author is Karl B. Lorck.——We mentioned some time ago a few extracts from General Moltke's journal during his stay in Rome in 1845, which appeared for the first time in the March and April numbers of the *Deutsche Rundschau.* This journal, together with some letters of the great soldier's from Spain and France, now also printed for the first time, have been published in a very handsome volume (Berlin: Paetel). The letters from Spain, which Moltke crossed from Gibraltar to the French frontier, are particularly brilliant, and give a graphic account of that interesting country. The letters from Paris are dated December, 1856, when Moltke accompanied the present Crown-Prince of Germany on his visit to the Imperial Court of France.——The *Monde Illustré* of August 16 is wholly given up to the return of the Comédie-Française to their newly-decorated theatre. It contains small cuts of all the twenty-three associates, of varying degrees of badness, but most of them abominable; a full-page portrait of Molière, after Mignard's fine picture, which the theatre owns; a double-page engraving of the new ceiling of the auditorium, just decorated by M. Mazerolles; and another double-page engraving depicting the famous "ceremony" of the "Malade Imaginaire," in which all the associates and salaried actors make their bow in person to the audience. ——Some recent French works of importance are the tenth volume of François Ravaisson's 'Archives de la Bastille' (1687–92), in which the writer makes an improbable guess at the Man of the Iron Mask—Sébastien de Penancourt, brother of the mistress of Charles II. of England, as he would have him; new editions of Alexandrine des Echerolles' 'Une Famille noble sous la Terreur,' and of Charles de Ribbe's 'Les Familles et la Société en France avant la Révolution'; a series of studies on the châteaux of the Blésois and the banks of the Loire, by A. Storelli, beginning with the château de Chambord, illustrated with faithful and yet artistic etchings (4to); a pocket Molière bibliography (18mo, pp. 86), edited by Pierre Deschamps, and limited in edition; and 'Anonymes, Pseudonymes, et Supercheries littéraires de la Provence ancienne et moderne,' by Robert Reboul, published at Marseilles.——A society, entitled the "Nipon (Japan) Institute," "to bring into communication students, enquirers, and admirers of the art, literature, language, folk-lore, etc., of Japan," and to collect authentic information, publish notes and queries, etc., regarding Japan, has recently been formed in London. Branches are proposed in nearly every country, and, among others, one in the United States, which should be a flourishing and valuable one. Among the English members are Sir Rutherford Alcock, K.C.B., Vice-President of the Royal Geographical Society, Sir Charles Dilke, Mr. John Leighton, Dr. Edward B. Tylor, and others as eminent. One of the first publications of the Institute is a pamphlet giving a number of Japanese proverbs, their English equivalents, and a literal translation of them. ——We are all liable to error, so while the New York *Times*, throughout a formal review of 'Holidays in Eastern France,' calls Miss Betham-Edwards Mr. Bettram-Edwards, the London *Athenæum* of August 30 finds it "a somewhat curious coincidence in family history that Miss Fanny Kemble married the American general Butler, and that the son of her sister, Mrs. Sartoris, is united to the daughter of General Grant." This is all that is needed, we should think, to make the late Mr. Pierce Butler turn in his grave.

—The publishers' fall announcements have partly been anticipated. From G. P. Putnam's Sons we may expect a 'Life of Gladstone,' by George Barnett Smith; 'Abraham Lincoln and the Abolition of American Slavery,' by Charles G. Leland; 'A Forbidden Land' (Corea), by Ernst Oppert; 'Columbia and Canada,' by W. Fraser Rae; Molière's Dramatic Works, in a new prose translation by C. H. Wall; a translation of Jérome Adolphe Blanqui's 'History of Political Economy in Europe'; 'Railroad Accidents: their Causes and Prevention,' by Charles Francis Adams, jr.; numerous books of poetry; a 'Pocket Classical Dictionary,' edited by Frederick G. Ireland; an illustrated 'Dictionary of Scientific Terms,' compiled by William Rossiter; and a 'Dictionary of the German Terms used in Medicine,' by Dr. G. R. Cutter. A. C. Armstrong & Son, besides new and enlarged editions of works like Gould's 'Good English,' Doran's 'Annals of the Stage,' May's 'Constitutional History of England,' etc., will publish 'The Limitations of Life,' by Wm. M. Taylor, D.D., with a steel portrait of the author; the 'Life of Alexander Duff, D.D.,' by George Smith; and 'Homiletical and Pastoral Lectures,' by the chief dignitaries of the English Church. Roberts Bros'. list includes 'Blanid,' a poem by the author of 'Deirdré'; 'The Light of Asia: Life and Teaching of Gautama, the Founder of Buddhism,' by Edwin Arnold; 'Autobiography and Correspondence of Mrs. Delany,' revised and edited by Sarah C. Woolsey; 'Classical and Scientific Studies,' by Prof. W. P. Atkinson; 'Stories of War Told by Soldiers,' edited by the Rev. E. E. Hale; 'Studying Art Abroad, and How to Do it Cheaply,' by Mary Alcott Nieriker; and several child's stories by Miss Alcott, "Susan Coolidge," and "H. H." A large number of juvenile publications is also promised by Cassell, Petter & Galpin, among which is a novelty called 'The Little Folks' Painting Book,' consisting of plates for coloring, and accompanied by moist colors for the purpose. They will enlarge their *Magazine of Art* without enhancing the price. Houghton, Osgood & Co. will offer their usual variety of new editions of English and American classics, and the following new works: stories by Miss Elizabeth Stuart Phelps ('Sealed Orders'), Mrs. A. D. T. Whitney ('Odd or Even'), and Bret Harte ('The Twins of Table Mountain'); a third volume of Emerson's Prose Works; 'Miscellanies,' by Judge J. D. Caton, author of 'The Antelope and Deer of America'; and the seventh volume of the Rev. Joseph Cook's 'Boston Monday Lectures,' for 1878 and 1879; more poetry by Mrs. S. M. B. Piatt ('Dramatic Persons and Moods'), and by Nora Perry ('Her Lover's Friend'); 'Every-Day English,' by Richard Grant White; 'A Reader's Handbook of the American Revolution,' by Justin Winsor; 'Compositions in Outline from Hawthorne's Scarlet Letter,' by F. O. C. Darley; and 'The Illustrated Annual for Boys and Girls,' and 'Boys and Girls' Miscellany,' both home productions.

—D. Appleton & Co. will have a 'Life of Admiral Farragut,' by his son; a 'Dictionary of New York,' on the plan of Dickens's London Dictionary; and illustrated volumes on 'The Homes of America,' and 'Landscape in American Poetry,' the latter edited by Lucy Larcom. Dodd, Mead & Co. will issue Woltmann and Wörman's 'History of Painting in All Ages,' translated by Prof. Sidney Colvin; 'The Print Collector'; and 'The Indian Alps'—the Himalayas, namely. Estes & Lauriat announce a new book by Gail Hamilton, called 'Our Common-School System'; an abridgment of Guizot's 'History of France,' by Gustave Masson; and the following subscription books: Rawlinson's 'History of Ancient Egypt'; Duruy's 'History of Rome'; Rambaud's 'History of Russia'; a "History of Middlesex County, Mass.,' by S. A. Drake; and 'Wild Flowers of America,' by Prof. Geo. L. Goodale. S. C. Griggs & Co., Chicago, have in press 'The Younger Edda,' annotated by Prof. R. B. Anderson. Harper & Bros., besides extending the Half-Hour Series, the Franklin Square Library, and the English Men of Letters, will bring out 'The Civil Service of Great Britain,' by Dorman B. Eaton; 'Art in America,' by S. G. W. Benjamin, and 'Tyrol and the Skies of the Alps,' by Col. Geo. E. Waring, jr.—both of which have appeared in part in *Harper's Magazine;* 'The Land of the Midnight Sun,' being Paul Du Chaillu's travels in Scandinavia, fully illustrated; John Addington Symonds's 'Studies of the Greek Poets'; Peter Bayne's 'Lessons from my Masters: Carlyle, Tennyson, and Ruskin'; and the Comte du Mon-

cel's 'The Telephone, the Microphone, and the Phonograph.' Henry Holt & Co. announce 'Hector Berlioz,' selections from his letters and writings by William F. Apthorp. Lee & Shepard announce 'Short Studies of American Authors,' by T. W. Higginson; and 'Camps in the Caribbees,' by Fred. A. Ober. Little, Brown & Co. will publish a 'Law Dictionary,' by Benj. Vaughan Abbott. Macmillan & Co., in addition to previous announcements, will have 'France since the First Empire,' by the late James Macdonell, a writer of great promise. Charles Scribner's Sons will republish in book form H. H. Smith's 'Brazil,' from their *Monthly;* and Jules Verne's 'History of Exploration and Adventure,' in three volumes, illustrated. J. W. Bouton's fall issues will include Parts I. and II. of the *Etcher*, a monthly art periodical illustrated with three etchings in each number; the *Musée Artistique et Littéraire*, a cheap weekly reprint of *L'Art* minus the etched plates; a new edition of Owen Jones's 'Grammar of Ornament'; a second and concluding volume of Planché's 'Costume'; Part VIII. of Racinet's 'Costume Historique'; 'Rowlandson, the Caricaturist,' with copious illustrations after his designs; and a 'Ritual of the Altar,' by the Rev. Orby Shipley. R. Worthington has nearly ready 'Famous French Authors,' biographies by Théophile Gautier, Eugène de Mirecourt, etc.

—From Dawson Bros., Montreal, there comes to us the new 'Dominion Annual Register and Review,' edited, for the twelfth year of the Canadian Union, 1878, by Henry J. Morgan, with the assistance of several gentlemen. It makes a volume of about 400 pages, exclusive of the advertisements. Some features are wanting which will naturally be supplied in future issues, but even as it stands this 'Register' will be found invaluable to any one who wishes to study or write about Canadian affairs. The first considerable section is a diary of Political Events since Confederation, July 1, 1867. This retrospect is followed by the Political History of 1878, prepared with great fulness, and including the electoral returns, with names and figures, by which the Mackenzie Government was defeated a year ago. Next comes a Journal of Remarkable Occurrences, succeeded by an ample record of the incidents of the "Vice-regal Progress from Halifax to Ottawa." Science; Business Retrospect for 1878; Remarkable Trials; Public Appointments; Obituary, are the concluding heads of sections. Under Science we are told of the appointment of four chemists, by the Canadian Government, to expose the adulteration of food, liquors, and drugs. Among the dead of 1878 is the grandson of an officer who, at the time of the assault on Quebec, Dec. 31, 1775, kept the guard at Près-de-Ville, and ordered at the right moment the fire which killed General Montgomery. Another on the list, John Letteney, "was probably the last survivor of the American Loyalists" who came over from the Colonies at the close of the Revolution. Letteney arrived in 1783, when two years old. The late Hon. Lemuel Allen Wilmot, who bore a Pennsylvania name, was the grandson of a member of the Loyal American Regiment who settled in New Brunswick at the close of the war. The Fortune Bay difficulty and the beginning of the Letellier case find their proper place in the 'Register.' There is an index of names and another of topics.

—The Ordnance Department of the Army has recently taken a singular method of vindicating itself from any suspicion of learning from the militia. According to a pamphlet published by Mr. George W. Wingate it appears that his 'Manual of Rifle Practice,' in universal use among the National Guard, was deemed partially inapplicable to Army uses by the Chief of Ordnance, though various line officers had asked to be supplied with it, and he accordingly appointed Colonel T. T. S. Laidley, commanding the Watertown arsenal, to prepare "a complete system of target practice." Colonel Laidley fulfilled his commission, and his book has been adopted for the use of the Army. He had an easy task, apparently, since he availed himself of Wingate's 'Manual' with perfect freedom and to a large extent. Out of 515 sections and 18 pages of appendix about 200 sections and nearly all of 17 pages of his book are taken from Wingate's. The author of the latter objects to this conveyance of the fruits of several years' experience and labor; but his main ground of complaint is that Colonel Laidley has given no credit whatever for his gleanings. On the contrary, in transmitting the work to the War Department, the Chief of Ordnance said: "In the preparation of this work all the credit is due to Colonel Laidley." This, Mr. Wingate submits, is emphasis of outrage.

—The *International Review* for September opens with a paper on Rubens by Mr. Hamerton, in which the character and daily life of the painter are described with Mr. Hamerton's notorious impartiality. He promises to follow it with a critical essay that will easily be of quite as much interest and value, we should say, and, from its conditions, freer from the "chatting" which long-continued writing for the *Portfolio* perhaps induces. Mr. Henry Cabot Lodge has a review of Mr. Adams's 'Life of Albert Gallatin,' or rather a careful and complete article upon Gallatin, for which the book supplies a text merely. "Bibliomania in France" is a rambling talk by Mr. Andrew Lang, of London, in which there is much that is old and a good deal that is new to the average bibliophile, probably, and which is pleasant, if aimless, reading to any one. Mr. T. S. Perry has an essay on "Recent Criticism of Byron," which assumes that "now there are almost as few who admire his poetry as there are who approve his taste in shirt-collars," and gently regrets it. The essay is full of what may be called Byron *ana*, very well edited, but it has an air of gracefully avoiding the vulgarity of having a distinct drift. Rev. Dr. Washburn's second article on "England and Turkey" deals mainly with the Constantinople Conference, for the failure of which the writer holds Lord Beaconsfield responsible. The Christians in Turkey have been utterly bewildered by the recent course of the English Government, he asserts, and adds that "there is probably no name, except that of Judas Iscariot, which they curse so often as that of Beaconsfield." Mr. Felix L. Oswald has a highly rhetorical article on the treatment of the Circassians by the Russians, which indicates that his acquaintance with his subject is very slight, and that a perusal of one or two of the best books on the Caucasus would probably have prevented his writing on it at all. The very title of his paper—"A Murdered Nation"—is a misnomer. The population of the Caucasus never were "a nation of athletes and heroes." They were a number of small tribes of very diverse origin, speaking different languages, without any bond of union either ethnical or religious or political, except their hostility to Russia, and living largely by robbery.

—Col. Waring's "On the Skirt of the Alps," in the October *Harper's*, is perhaps the most enjoyable of the series; and as it treats of Venice and the sub-Alpine lakes, this is saying a great deal for his originality. One does not often, in fact, meet with a tourist who concerns himself about the water-supply of "a city where the salt sea is the scavenger, where ablutions are not *de rigueur*, and where water is not a beverage"; nor one who exposes the hollowness of the Italian railroad service, with the conclusion that no nation tolerating such a system "holds the germ of regeneration anywhere in its organization." It does not appear whether Col. Waring's experiences preceded, or not, the transfer of the upper Italian railways to the Government control (law of July 8, 1878), but he would in either event be a good witness before the Parliamentary inquest now pending, with the result thus far that the Government service is not shown to be more vicious than that of the corporations, and that complaints are much fewer than was anticipated. We remark of this, as of the previous articles, that the writer has a sure eye for the picturesque in collecting the materials for his illustrations. There is fresh description of a little-visited part of Ireland in "The Connemara Hills," by Miss J. L. Cloud. As her narrative ends abruptly in the home of a potheen-maker, or illicit distiller, there is reason to hope we may get more of it. Mr. Frank H. Taylor's "Through Texas" is also lively and improving reading, and such of its illustrations as are after photographs are decidedly interesting. Art finds its tribute in Mr. Benjamin's galloping summary, No. 3, of "Fifty Years of American Art," with the usual accompaniment of costly engravings from original canvases; and in Mr. Charles A. Cole's "Painted Glass in Household Decoration." Dr. Coan states concisely the latest conclusions of medical enquiry into the nourishing properties of alcohol administered as food; and here our enumeration of the contents must close.

—The sudden death of William M. Hunt, of Boston, leaves a gap in the ranks of American artists more noticeable, perhaps, than any other death could make. His peculiarities of talent and conviction were such as, at this time, tend to make their possessor especially prominent. As painter and as teacher of art for twenty years he has exercised a singularly powerful influence over many of the best of the younger artists and students of New England, and, through them, over the same class elsewhere. He was taken to be the best representative in America of a certain great modern school—or if "school" is a word of too exact and limited a meaning, then a tendency, a fashion—of painting. The doctrines preached with characteristic fearlessness by himself, and with a vigor which continually becomes bigoted intolerance by his pupils, are full of meaning and value. Nor should it be urged too strongly against the preachers of these doctrines that they mistake the particular for the universal, and a grace peculiar to certain recent painters for the eternal and essential characteristics of art. All writers and teachers of fine art are apt to do so; all writing and talking upon fine art tends that way; few are the writers so critical by nature and so widely informed as to avoid mis-

taking the art they love for the only art, and the style they love for the only truth and beauty. Mr. Hunt's painting was full of manliness and simple force, and his pictures, not very numerous, will remain as valuable possessions to other generations. His latest well-known work, the wall paintings in the Assembly Chamber at Albany, cannot be unreservedly admired, but the task was so difficult and so peculiar that there is scarcely an artist in America to whom one could entrust it with any feeling of confidence. Great monumental paintings do not appear singly, detached efforts of the imagination and the will of one man, but in epochs—in long-continued sequences of growth.

—The late Sir Rowland Hill, the founder of the English penny-postage system, was a remarkable man and had a remarkable career. He was so far a self-educated man that he began to teach others at the age of twelve, and it is a little singular, perhaps, that he is remembered not only for his postal reform but for his earlier efforts in behalf of educational reform as well. His father kept a school and kept it very ill, according to all accounts, although he was emphatically a man of ideas and an ardent enthusiast. Rowland is said to have inherited this temperament, modified strongly by the marked practical good sense of his mother, and the first attempt of his early manhood was to rescue his father from the debts his unbusiness-like habits had incurred. This involved thorough reform in the school, and young Hill thus developed the power of organization and discipline which he afterwards called his forte. He and his brother Matthew, the late Recorder of Birmingham, subsequently established a school near Birmingham, which was managed on the peculiar principles of a pure democracy. The "sixth-form" boys were elected by the school and formed a kind of parliament. Offences were tried before a jury of the offender's peers, and so on. In after-life Sir Rowland observed with a smile that he would hardly send a boy of his own to such a school; but it had its good points certainly, and anticipated many of Arnold's subsequent reforms at Rugby. Matthew Hill at this time wrote a volume called 'Public Education,' after reading which Bentham threw aside, as he says, all he had himself written on the subject. De Quincey reviewed it among others. Wilberforce, Brougham, Grote, Joseph Hume, and Miss Edgeworth visited Hazelwood and took a great interest in the "experiment" of the brothers Hill. After giving up teaching, Rowland was made Secretary of the Commission for the Colonization of South Australia, in which scheme, as well as in other movements of the day, he had taken an active part. His duties did not occupy all the time of a man accustomed to work fifteen hours or more a day, and he turned his attention first to certain inventions, one of which was a printing-machine, and then to postal reform. He set about investigating the Post-Office, and finally arrived at the practicability of a uniform rate, after discovering such data, for example, as that the cost of conveying a letter from London to Edinburgh was less than one-thirty-sixth of a penny, whereas the charge was 1*s.* 1½*d.* Of course every one was against him at first, and every official to the end. In 1837 he published his plan in a pamphlet, entitled 'Post-Office Reforms,' and January 10, 1840, penny postage came into effect. Sir Rowland's rewards were for a long time absurdly disproportionate to the value of his services, but before his death he had obtained all the recognition, substantial and merely complimentary, that a far vainer man could ask.

—Whatever is worth doing at all is worth doing well, and consequently the attempts to reproduce the dialect of the Irish peasantry by persons whose acquaintance with it is very slight, which one sees nearly every day in prose and verse in the newspapers, are to be regretted. They are for the most part a mass of blunders, both as regards phrase and pronunciation. The Irish peasantry do not use half the "locutions" which are put in their mouths, and do not pronounce one-half the words in the way they are made to pronounce them. We will mention at present only the most flagrant of these errors, as a warning to those who furnish the press with stories of what "the Irishman" or "Biddy" said. No Irishman pronounces *ee* or *ie* as *a* in *fate*. Consequently when an Irishman is made, as he is constantly made, to say "spache" for speech, or "praste" for priest, or "same" for seem, or "fate" for feet, the reporter confesses himself a pretender. The diphthong which Patrick and Biddy pronounce differently from educated people at the present day is *ea*, to which they always give the sound of *a* in *fate*. Consequently they "chate" for cheat, "thrate" for treat, "sate" for seat, and so on. But in doing this they are simply preserving the pronunciation in use in England when the language was first introduced into Ireland in the sixteenth century, and which has come down among them as a tradition unaffected by literature. Numerous other illustrations of this survival among the ignorant Irish of extinct modes of English pronunciation might be given. But, as might be expected, a large number of their peculiarities of speech are reminiscences of their own language, transmitted from generation to generation without the correction of school education or much intercourse with people of English origin. Blunders of a similar kind to those we have been noticing are made also by persons ignorant of the Irish language attempting to interlard Irish-English speech with pure Irish phrases. A ludicrous one was pointed out in the *Spectator* the other day, in which a writer of "Irish" verse introduces the phrase "Father avick," addressed to a priest; "avick" meaning "my son," and being a form of address in Irish from an old to a younger man, and, therefore, somewhat ridiculous when collocated with "father." The writer evidently thought it a vague form of endearment.

—Professor Voigt, well known as a specialist in the field of the so-called *Tier-sage*, has recently (*Zts. für deut. Alterthum*, xxiii. 307) subjected the writings of Odo de Ciringtonia, an Anglo-Latin fabulist of the thirteenth century, to a careful detailed examination. The results at which he arrives are, that Odo's fables are for the greatest part based upon the compilation generally known under the name of "Romulus"; some, however, may be traced to other popular works, such as the Vulgate, Physiologus, Petrus Alfonsus, etc., and some are of his own invention. Some, furthermore, afford an instructive glimpse into "the prolific *fabulation* of the twelfth century, with which Odo became acquainted by reason of his studies in Paris, and the then active intercourse between England and Northern France." Professor Voigt goes to the length of saying that Odo "in his importance for the history of the Reynard cycle surpasses all the fable-compilers of the Middle Ages."

—Readers of the *Revue des Deux Mondes* for August 15 will have found enjoyment in a new series of Mérimée's letters, accompanied by critical and other remarks by M. Othenin d'Haussonville. It was M. d'Haussonville's original intention, he tells us, to write an "étude complète" on Mérimée, and in furtherance of this design he sought both for oral information and for unpublished documents. From men and women who had known Mérimée he heard the most diverse opinions as to his character, and he promised himself much pleasure in unravelling "the secret of these contradictions," but finally gave up the idea because of the publication of the 'Lettres à une Inconnue,' which must, he thought, have so taken the edge off the public's appetite as to make it impossible to secure attention for a biography of the author of them, unless, indeed, the biographer were willing, "at the risk of defiling both living and dead, to jump headlong into a pool of scandal." Of the twenty-six letters which the editor prints, the greater part, and to the English reader the most interesting, were addressed to Mr. N. W. Senior's daughter-in-law, an Englishwoman, like the famous Inconnue. The first letter to her here printed is of the year 1854, the last of 1867. As was to be expected, the letters are much less personal than were those to the Inconnue, and there is, of course, no thread of a love-story running through them. They are none the less very attractive. The relations of men and women, the customs of various countries, and opinions on all sorts of books form their substance, anecdotes and gossip being occasionally thrown in. Macaulay, for instance, he finds "a too-perfect writer," just as the characters in English novels are too perfect morally, because "he never gives his readers occasion to think." Other letters here printed were written to "the daughter of a soldier famous at once for the name he bore and for the rank he had attained," and are worth reading, though inferior to the first named. Among the few personal sketches is a very severe one of Mme. Récamier.

—But besides letters, M. d'Haussonville picked up from his friends a good many reminiscences of Mérimée, with which he favors the reader. He was born in a respectable, middle-class family of Paris, and his grandfather was a Rouen lawyer, who afterwards became land-agent to the late Marshal de Broglie. Strangely enough, it was from his mother, a woman of considerable culture, that he got his disposition to scandalize his acquaintances by the avowal of heretical opinions. While still a young man he became intimate with George Sand, but neither her friendship nor her enmity had much influence upon him. His dismissal by another lady after very close intimacy, and after being wounded in a duel by her husband, went, however, to his heart. It was to relieve his mind from this mortifying adventure that he journeyed in Spain in 1830, having previously refused the offer of a minor diplomatic position from unwillingness to sacrifice his liberal opinions. The July revolution brought to power a personal friend, by whose favor he entered the Government service, in which he remained, in one form or another, till his death. During his tour in Spain he had made the acquaintance of the Montijo family, which later grew into close intimacy in Paris, Mérimée being

often entrusted with the care of amusing "la petite Eugénie" when her mother was otherwise occupied. It was before this, of course, that he knew Mme. Récamier, of whom he writes that he did not become acquainted with her "till she was well past forty. It was easy to see that she had been pretty, but I do not think that she ever had claims to beauty. Her figure was square, her hands and feet very ugly, and as to her mind, no one thought of speaking of that till she had lost all other means of pleasing. During her youth her reputation was rather bad, later she posed as a saint; in reality she was never either a Ninon de l'Enclos or a Mme. de Maintenon." It is well to say in closing, after the recent discoveries about Sainte-Beuve, that admirers of Mérimée will find nothing in this long paper to lessen their respect for him.

—There has lately been published in Paris a novel entitled 'Le Journal de Mlle. d'Arvers,' written in French by Toru Dutt, a young Hindu poet, whose recent death in her twenty-second year is apparently a literary misfortune that cannot be too deeply regretted. It is prefaced with a critical study by Mlle. Clarisse Bader, who has refrained from correcting any of the trivial idiomatic errors which serve to make more vivid the surprising accuracy and ease with which so young a writer uses a foreign tongue. The characters and action of the book are French, though the spirit of it is Indian, which causes regret that Toru Dutt's ambition prevented her from choosing an Indian subject that she would naturally have managed better, and so have produced a more valuable if less surprising book. As it is, 'Le Journal de Mlle. d'Arvers' is described by the *Saturday Review* as a novel "of great power and beauty," and the reviewer takes advantage of its publication to recall the circumstances of its author's brief career. One is naturally sceptical about literary discoveries, but we are assured that "in intellectual power Toru Dutt was one of the most remarkable women that have lived," and that had George Sand or George Eliot died at twenty-one "they would certainly not have left behind them any proof either of application or originality superior to those bequeathed to us by Toru Dutt." These proofs are chiefly contained in a volume published at Bowanipore in 1876, called 'A Sheaf Gleaned in French Fields,' which consists of translations in English of two hundred poems selected with great delicacy of taste not only from Victor Hugo, Lamartine, and Musset, but from Gautier, Vacquerie, Bouilhet, Baudelaire, and various minor bards who, as the reviewer remarks, "certainly never expected to hear of themselves at Bowanipore." She was born in 1856 and early manifested a literary bias, resolving to make European languages her chief medium, although never neglecting Hindustani poetry. Her first literary production was an English essay, "very full and learned," on the writings of Leconte de Lisle, with metrical translations in English. She was then eighteen, and had begun the study of Sanskrit, which she followed unremittingly until, after she had made an English blank-verse translation of the 'Vishnuparâna,' she fell ill and all literary work was forbidden her. She died in August, 1877, "perhaps the most promising woman of letters at that time living." To show that this praise is not wholly unwarrantable we append a specimen of her English verse, whose high and pure poetic force is not less remarkable than her erudition :

"The rural sounds of eve were softly blending—
The fountain's murmur like a magic rhyme,
The bellow of the cattle homeward wending,
The distant steeple's melancholy chime;

"The peasant's shouts that charms from distance borrow,
The greenfinch whirring in its amorous flight,
The cricket's chirp, the night-bird's song of sorrow,
The laugh of girls who beat the linen white.

"The breeze scarce stirred the reeds beside the river:
The swallows saw their figures as they flew
In that clear mirror for a moment quiver,
Before they vanished in the clouds from view."

PLANT ARCHÆOLOGY.*

I.

INVESTIGATIONS in fossil botany are recondite and technical, the materials generally unattractive, and the results unintelligible to the popular mind; but in Count Saporta's 'Monde des Plantes,' and under his happy exposition, the stony desert is made to rejoice and blossom as the rose. The interest which we take in the vegetation of former periods is not so much geological as genealogical; and this interest diminishes with the distance from our own time and environment. We know nothing of the earliest plants—the beginnings of vegetable even more than of animal life are beyond our ken; no great satisfaction seems obtainable from the small acquaintance that has been made with the plants which flourished before the carboniferous period. And the botany of that age, notwithstanding its wealth of ferns and its adumbrations of next higher types, impresses us as much with the sense of strangeness as of wonderful luxuriance. For even the fern-impressions, familiar as they may look to the unprofessional observer, are outlandish. The more the critical student knows of them the less likeness he finds in them, or in the coal-vegetation generally, to any species or genera now living.* But in the vegetation of cretaceous, and still more of tertiary, times familiar forms first come to view, and pedigrees may begin to be traced. Questions of ancestry touch us more nearly than those of history; so an enquiry into the source and parentage of the plants with which man is associated is more attractive than any question concerning the origin of the pristine vegetation of the earth. Moreover, our knowledge of the later fossil botany is comparatively full—wonderfully so, considering how very recent this knowledge is—and we are in a condition to apply it hopefully and confidently to the solution of problems which not long ago seemed to be beyond the reach of proper scientific enquiry—namely, to the explanation of the actual distribution of the species of plants over the earth. For the main data themselves, and for the clear exposition of them, we are most largely indebted to three men, who happily are still alive and active—Heer, Lesquereux, and Saporta.

The Linnæus and *facile princeps* of tertiary botany is Oswald Heer, of Zürich, now a septuagenarian, but still in harness. His 'Recherches sur le Climat et la Vegetation du Pays Tertiare,' rendered into French by C. T. Gaudin, was published nearly twenty years ago. It is a general and comparatively untechnical presentation of a long line of investigations, which have since been crowned by his several memoirs on arctic phyto-palæontology, now collected in the five volumes of his 'Flora Fossilis Arctica.' All these volumes, as well as others on the Swiss tertiary, have appeared within the last ten years, the latest only a year ago.

Leo Lesquereux, Heer's compatriot, and barely his junior, came to the United States fully thirty years ago, drawn hither from Neufchâtel by Agassiz. The greater part of his researches relate to the carboniferous flora, and he has recently thrown interesting light upon silurian botany, as has Dawson of Montreal upon the intermediate devonian. But those which at present concern us relate to the cretaceous and the tertiary of our own Western regions. The most considerable of these works are the two notable quarto volumes, entitled 'Contributions to the Fossil Flora of the Western Territories,' published by the Geological and Geographical Survey of the Territories under Dr. Hayden, upon whom and whose survey they reflect high credit. One volume treats of the cretaceous, one of the tertiary flora.

Any proper enumeration of authorities upon the fossil botany of the later periods should include various other names, and especially that of Schimper of Strassburg, who, like Lesquereux, has divided his life between bryology and fossil botany, and whose classical 'Traité de Paléontologie Végétale' is a systematic compendium of what was known of fossil plants up to the year 1874. But the volume now under notice is by a younger man, Gaston, Comte de Saporta, a Provençal, who has for fifteen years or more been investigating the rich tertiary deposits of Aix and vicinity, in the delta of the Rhone, the results of which have appeared from time to time in memoirs, mainly published in the 'Annales des Sciences Naturelles.' Besides these weightier and more technical publications, Count Saporta has contributed to the *Revue des Deux Mondes* and to *La Nature* subsidiary articles of a popular cast and of fine literary as well as scientific finish. These, now collected and re-edited, form a part of the volume before us, 'Le Monde des Plantes avant l'Apparition de l'Homme,' which has been published since the commencement of the current year. It is the most comprehensive and the most attractive, as well as the most recent, exposition of our subject, is a very readable book from beginning to end, of inviting typography, with abundant illustrations, both of wood-cuts in the letter-press and intercalated plates. Although a popular, it is a truly scientific volume. The clear stream of the narrative is hardly at all troubled by the many technical terms which unavoidably strew its course, yet without obstructing its flow, for the author has the peculiarly French gift of happy exposition. As the volume is likely to be reproduced in English, let us hope that it may have a transla-

* 'Le Monde des Plantes avant l'apparition de l'Homme. Par le Comte de Saporta. Avec 13 Planches, dont 5 in couleur et 110 figures dans le texte.' Pp. 416, 8vo. Paris: Masson; New York: F. W. Christern. 1879.

* To those who wish to get a good *coup d'œil* of this vegetation, from authentic records systematically arranged, we recommend the 'Atlas to the Coal-flora of Pennsylvania and of the Carboniferous Formation throughout the United States,' by Leo Lesquereux, an octavo volume of 87 double plates, just issued by the Second Geological Survey of Pennsylvania. There is nothing else to be compared with it.

tor in whose hands it may lose nothing of its clearness, and as little as possible of its freshness and spirit.

To attempt a popular abstract of such a book would be like skimming the cream from the cream, and a critical review would cover too much or too technical ground. Still, we may give some general idea of the contents of the volume. The first part and the most discursive portion of the book is entitled "Phenomena and Theories." The introductory chapter discourses upon the introduction of life and the origin of the earliest terrestrial organisms; and the second chapter takes up the theory of Evolution or Transformism. We may skip these chapters, yet without advising the reader to follow the example, unless he is already familiar with the topic—now a little threadbare—for, as a popular presentation, it is neat and sensible, though not profound. It hardly need be said that Saporta is an evolutionist, using the term in its general sense, and apparently a thorough Darwinian. A vegetable palæontologist who studies the later geological deposits cannot be otherwise ; at least, he must needs be a "transformist." Saporta concludes that palæontology, if it does not furnish demonstration, yet gives irresistible reasons for a belief in evolution. The ground and the nature of this conviction appear in his rounded statement, that there is not a tree or shrub in Europe, in North America, at the Canaries, in the Mediterranean region, the ancestry of which is not recognizable, more or less distinctly, in a fossil state. This is too absolutely stated, no doubt, but the qualifications it may need will not invalidate the conclusion.

The chapter on ancient climates which follows, and forms a proper introduction to the second part of the book, is worthy of particular attention. It is prefaced by an elementary but very graphic exposition of the phenomena and laws of climates and their diversities, from the regular succession of equal days and nights under the equator to the contrasted condition toward the pole of a year composed of a day and a night season, separated by a season of twilight; the change so rapid in the high latitudes that, while the summer day at the North Cape is two months long, at Spitzbergen seven additional degrees of latitude lengthen it to four months. Let the author point the contrast between the two extremes, as affecting man, in his own language, here somewhat exceptionally ornate :

"Il est vrai que dans ce dernier pays [Spitzbergen] le soleil s'élève au plus de 37 degrés au-dessus de l'horizon ; il n'envoie que des rayons sans chaleur, *telum imbelle sine ictu ;* il éclaire de sa lueur pâle une terre glacée où frissonnent quelques plantes ensevelies sous les frimas, et qui ne sortent du sommeil qui les tient dix mois inertes que pour accomplir hâtivement leurs fonctions vitales et se rendormir de nouveau. Quel tableau, si l'on songe aux forêts vierges du Brésil et de Java, aux vallées profondes du Népaul, aux savanes noyées de l'Orénoque, où la vie surabonde, où une lumière ardente, vive et dorée, ondule de toutes parts, soulève de tièdes vapeurs, joue avec l'ombre, et fait resplendir les formes des plus merveilleux végétaux ! Sous les tropiques, l'homme se sent écrasé par une vie exubérante, il lutte incessamment pour maintenir sa place au milieu de la nature, dont il est dominé; ses plus fortes œuvres sont envahies en peu de temps; les arbres immenses reprennent possession du sol, dès que celui-ci est abandonné à lui-même. Dans l'extrême Nord, la faiblesse de l'homme est encore plus évidente, mais c'est du poids de la nature inerte qu'il est accablé. Les éléments règnent seuls dans ces régions dévastées, où l'atmosphère se trouve livrée à d'épouvantables tourmentes. La neige dérobe les aspérités du sol, la glace couvre la mer d'un sol factice, souvent mobile et toujours dangereux ; la confusion est partout, le calme nulle part ; chaque pas est pénible, la vie elle-même devient un effort que l'énergie la mieux trempée ne peut soutenir longtemps sans succomber" (p. 212).

The modifications of this contrast through the actual distribution of land and water, winds and currents, are then considered. As these have a fixity secondary only to the fundamental elements of climate—namely, the heat of the sun, the inclination of the earth's axis to the plane of its orbit, and the relative density of the atmosphere according to the elevation of the land-surface—the climate of any part of the world might be supposed to have been constant, oscillations excepted, through the long periods that have elapsed since existing species or their immediate ancestors were introduced. It is not very long ago that Arago demonstrated, to his own and the general satisfaction, that there had been no appreciable change of the earth's climate in man's time. Plants are the thermometers of the ages, by which climatic extremes and climates in general through long periods are best measured. For at least five or six thousand years the vine and the date-palm have grown in proximity, and have furnished grapes and dates to the inhabitants of the warmer shores of the Mediterranean. Yet a very moderate change either way in the temperature would have excluded the one or the other. So Arago concluded that man had witnessed no sensible changes in the climate of Europe ; a good conclusion, if restricted within the limits of observation. But in Arago's lifetime the evidence was already accumulating which has now proved that in earlier times man and the reindeer lived together on the soil of Southern France, when if grapes could ripen in Syria and Northern Egypt, dates doubtless could not. Then, at a still earlier day, palms flourished in Switzerland and vines in Iceland. Then maples, lindens, plane-trees, spruces, and pines formed forests in Greenland up at least to the eightieth parallel ; and, indeed, our own Southern cypress, or Taxodium—which now barely maintains its existence between the mouths of Delaware Bay and the Chesapeake—flourished along with the silver fir of Europe, within two hundred leagues of the North Pole. A climate in Greenland in which sequoias—now confined to California—magnolias, persimmons, and grape-vines were mixed with maples, oaks, and poplars, could not have been colder than, or much unlike, that of Indiana and Kentucky now.

LESSING'S PROSE WORKS.*

TAKEN conjointly with the translation of Lessing's dramas, on which we reported in February, the goodly volume now published will assist materially, in the case of those to whom German is a sealed book, towards the formation of an independent estimate of their versatile author's breadth of sympathy, critical scholarship, and penetrating insight. And yet full justice to him demands something more. To no one who duly considers thus much of his writings will it be a surprise to hear that he was, withal, an earnest and voluminous theologian. That, however, his theology would attract many modern readers is far from likely. Most of it, though startlingly original when fresh before the world, has long been superannuated. Still, there is a single short speculation of his, the essay on the 'Education of the Human Race,' which we regret to see that Mr. Bell has not found room or reason to reissue. At least not only that essay, but also 'Leibnitz on Eternal Punishment' and the 'Testament of John,' must be read by all who would not that their conception of Lessing should lack much of being comprehensive.

The editor offers us, first of all, the celebrated 'Laokoon.' Of the several translations of it which have appeared, the one which he has selected is much the best among such of them as we are acquainted with. This, the work of Mr. E. C. Beasley, now retouched, originally came out in 1853. Some time ago we had occasion to go through Mr. Beasley's version very carefully ; and we then took note of all of the few instances in which he deviated from strict fidelity of reproduction. On comparison we are satisfied that the revision professed to have been made is most thorough. In only a few instances have we detected negligence. At p. 14 "Aristomenes" should be supplied just before "Aristodemus." At p. 33 *Skänopöie* is Englished by "acting." For this most unusual term —a translettering of *σκηνοποιΐα*, taken in an unclassical acceptation— Miss Zimmern, at p. 210, has, and correctly, "mechanism of the stage." But the heedful revision which we have mentioned should have been supplemented. With a view to recasting the 'Laokoon' Lessing recorded numerous observations which he did not live to turn to methodical account ; and, mere memoranda as many of them are, they are, in most cases, of unquestionable value, if only as expressing their author's maturer reflections and conclusions. These fragments, which all real students of Lessing are conversant with, are given in what is, probably, their completest form in the edition of the 'Laokoon' brought out by Professor Hugo Blümner in 1876. It is a grave omission that Mr. Bell has allowed them to pass untranslated. Indeed, Professor Blümner's meritorious labors appear to have escaped Mr. Bell's researches altogether.

Next to the 'Laokoon' comes the dissertation entitled 'How the Ancients represented Death,' which, strange to say, has never before been invested with an English dress. The translation, a most excellent one, is by Miss Zimmern. But here again we are sorry to be obliged to find fault. To the dissertation in question Herder wrote a very learned appendix ; and we expected to see that the translatress had made free use of it, at least in annotations or in the shape of an epitome. Far from doing so, neither does she, nor does Mr. Bell, so much as allude to it.

The remainder of the volume, its larger moiety, is taken up with the 'Hamburg Dramaturgy.' An introductory note tells us that it has been "translated, with occasional abridgment." The expression is misleading, inasmuch as not less than a third of the whole has been passed by. Not, however, that we complain of this free excision ; for Miss Zimmern has

* 'Selected Prose Works of G. E. Lessing. Translated from the German by E. C. Beasley, B.A., and Helen Zimmern. Edited by Edward Bell, M.A.' London : George Bell & Sons. 1879.

here shown as much judgment in the matter of curtailing as skill in that of interpreting. In the 'Dramaturgy' Lessing is conspicuous in that phase of his genius which the most widely recommends him to tastes purely literary. No matter how subordinate or insignificant the point which he labors there, his comments are, without exception, alike equitable and searching. His strictures on Voltaire, as dramatist and as critic, and his defence of Aristotle against the misrepresentations of Pierre Corneille and Dacier, especially deserve to be particularized as worthy of attentive study. Lessing's anti-Gallicanism, while well-grounded, was fervently sincere. Here is a sample of it :

"Out on the good-natured idea to procure [read *of procuring*] for the Germans a national theatre, when we Germans are not yet a nation ! I do not speak of our political constitution, but only of our social character. It might almost be said that this consists in not desiring to have an individual one. We are still the sworn copyists of all that is foreign ; especially are we still the obedient admirers of the never sufficiently admired French. All that comes to us from beyond the Rhine is beautiful, charming, exquisite, divine. We would rather belie our sight and hearing than find it otherwise. We would rather let ourselves be persuaded that clumsiness is unconstraint ; impudence, grace ; grimace, expression; a jingle of rhymes, poetry; howling, music ; than in the least doubting [read *doubt*] the superiority in all that is good, beautiful, elevated, and correct which this amiable people—this first people in the world, as they are in the habit of modestly calling themselves—have received from just fate as their portion" (p. 490).

The skill in translating which Miss Zimmern displays is, for one to whom English is not entirely native, exceptionally creditable, and slight occasional help from some judicious friend would have amply availed to secure her against all animadversion. Her *afeared, bloodthirst, motivate, opine, subterrene, another from, another but, different to, everybody . . . their* and *themselves, such . . . that* (for *as*), *frightened of* (for *at*), *stood at* (for *in*) *this pillory, resemblance with* (for *to*), *worthy the wisdom of, take recourse to, young person* (for *woman*), *pending* (for *impending*) *over, two Cupidines*, etc., etc., surprise one unpleasantly, considering the excellent English in which these expressions are embedded. What with bad construction and contempt of stops, a strange place to make an offering is suggested where we read : "Diana removes Iphigenia from the altar on which she is to be sacrificed in a cloud and places a deer in her stead," p. 317. "Abstract," *abstrahiren*, is several times put for "deduce" or "infer," as at pp. 432, 434, 466, 491. "Hostage," at p. 285, is misused for "pledge," *Unterpfand*. "Tirades" has not, with us, the sense given it at p. 440. "Glossary" does not mean "gloss," as at p. 452 it is assumed to mean. *Ausleger* is not "exponent," at pp. 200, 378, but "interpreter." "Scholiasts" is mistaken, at p. 407, for "scholastics," or "school-divines"—*Scholastiker*. There are numerous other errors of the same character.

For a moment we revert to the 'Laokoon,' and we do so that we may record a warning in connection with a translation of it by the Right Hon. Sir Robert Phillimore, D.C.L., published in 1874. The sole merit of this translation consists in its incorporating at the end the posthumous *Fragments*, which, as we have noted, Mr. Beasley and his reviser have unwisely omitted. The long preface by the learned judge is of but indifferent value, and hardly more attaches to his notes, which, moreover, we often have no clue for distinguishing from Lessing's own. The punctuation, every here and there, is simply execrable, and is, besides, like that of an ill-taught school-girl's letter rather than leguleian. But that which particularly strikes a careful reader is the exceedingly imperfect quality of Sir Robert's acquaintance with German. For instance, at p. 136, and repeatedly, the familiar *der erste der beste* is Englished by "the first and best," and, at p. 156, by "the strongest." At p. 175 *gewissenhaft*, "conscientious," is guessingly rendered "learned." At p. 226 we find "injurious," instead of "harmless," for *unschädlich*. At p. 340, "famous," not "genuine," figures for *echt*. At p. 265, for "what Scopas said of a Venus" read "what he [Pliny] says of a Venus by Scopas." At p. 304, "with a single *liquido* in thin liquid" stands, most carelessly, for *mit einzigen liquido*. At p. 218 we read of "Ambrosian hair," seemingly suggestive of some new thing in patristics. Omissions of sentences, clauses, and single words could be enumerated by the dozen. As concerns errors of the press, a good-sized page would barely suffice to point them out. At p. 2, last line, doubtless the translator wrote, and rightly, "confined . . . to"; this the printer altered to "confirmed . . . to"; and this, again, as making nonsense, was altered to "confirmed . . . as to," in utter disregard of the requirements of the original. Add, *Talnatako*, for *Palnatoko*, and *Gomsburgers*, for *Jomsburgers*, p. 9; *sires*, for *sons*, p. 17; *secret*, for *sweet*, p. 19; *pursue*, for *not pursue*, p. 28; *larger continuance*, for *longer continuance*, p. 43; *gapes*, for *quakes*, p. 53; *shall but be*, for *shall not be*, p. 55; *Hugedorm* (in the Index *Hugendorm*), for *Hagedorn*, p. 77; *woe*, for *war*, p. 209, l. 1; *admiration*, for *admixture*, p. 240, l. 3; *frequent*, for *pregnant*, p. 303. And so we might go on.

For once in a way we have gone into such details as these last, and those winding up a paragraph preceding, as furnishing a salutary lesson to authors, how perilous it is to put forth a printed book without controlling, by constant recurrence to one's manuscript, the unintelligent ventures of compositors and the unscrupulousness of proof-readers.

WALKER'S 'MONEY.'*

PROFESSOR WALKER is so original and independent a thinker in political economy, and so far above all partisan proclivities, that the systematic development of any branch of the subject from his pen could not fail to be an interesting subject of critical analysis. But we can hardly consider either of the treatises on money which he has published within the last twelve months as falling strictly within this category. His first and largest work was so far devoted to the analysis of the views of other economists on the subject that it was sometimes difficult for the reader to conclude what the distinctive views of the author were, or indeed whether he had any decided views at all. The present work has a different object, and the author expresses in his preface the desire "to reach correct results without undertaking in all or most cases to balance conflicting views against each other and set out the arguments on either side, according to the methods of the class-room." Yet the work does not at all correspond to our idea of a systematic development of the subject. Indeed, the wide erudition and critical taste of the author are unfavorable to the perfection of such a work, in that they make the subject in his mind assume the form of a systematized collection of facts and arguments rather than that of a unified growth from a single root. To qualify one's self completely for the task we suggest, he should stay away from books so long as to forget all the arguments and views of individual authors, retaining only the general ideas necessary to enable him to work out a system for himself. It is evident that some time would be required for an author to do this.

The broad distinction we wish to draw between a systematic development and a presentation of views, facts, and arguments, however carefully arranged, has a much wider significance than any application of it to Professor Walker's writings, because on it depends the question whether political economy as a whole, or any part of it, has yet assumed the form of a science. Our desire for a systematic development, unmixed with any extraneous opinions or arguments, may be met with the objection that such a system would be simply a presentation of the individual views of the author, in which the student would not be informed how far those views were concurred in by other economists or what arguments might lie against them. We admit the validity of this objection on the assumption that our present political economy is mainly built up of opinions and arguments, differing from each other only in their soundness and the extent of their application, and that there are no points on which entire agreement can be secured ; but this amounts to assuming that the subject is still little more than a branch of philosophy in which definite results are entirely unattainable—a point we are by no means ready to admit. We conceive that in all this warring chaos there is a nucleus of solid truth to which the large majority of the really sensible disputants would be quite ready to agree. The only question is, Shall it be presented to the reader and student apart from the polemics of which it is the outcome, or with them? Shall we preface our description of the shield by an account of the dispute between the ill-informed knights, or shall we be satisfied by giving the learner a complete and accurate conception of the shield as it is? While we would not deprecate the former course, nor maintain that any one should be kept in ignorance of opposing views and arguments, we do maintain that the central nucleus of sound conclusions should be so clearly distinguished from the surrounding arguments (necessarily incomplete on account of the incompleteness of their foundation) that the reader shall see the distinction without close attention or mental effort. This our author fails to do. We do not complain that the individual views of Professor Walker are not sufficiently prominent, but rather commend both the modesty of the author in assuming them to be of no more importance than the views of others, and his judicial impartiality in presenting all sides of the subject. Nor do we deny the great value of the thoughts which are thus presented to us. The fault we find is that the author does not forge out of all this mate-

* 'Money in its relations to Trade and Industry. By Francis A. Walker.' New York : Henry Holt & Co. 1879.

rial a sufficiently compact, connected, and completed system, or at least, if the system is there, does not differentiate it with sufficient sharpness from the material out of which it is formed. There is so loud a din of opposing arguments that the reader cannot distinctly hear the conclusion.

Besides having too much argument, extended arguments are sometimes presented which are not of sufficient importance to be considered an integral part of the subject. For instance, the bulk of the opening chapter is devoted to the question whether bank-notes are money, the author taking a decided affirmative, and basing his argument on the premise that "money is that money does." Now, this question is mainly one of terminology. It does not appear that there is the smallest difference of opinion between the disputants as to the function of bank-notes. The only question is whether our definition of the term "money" shall be so extended as to include this function. Is it not a waste of energy to devote so much space to a question of pure terminology at the threshold of a subject? If it could be shown that any fallacious notions or groundless conclusions had been based on a vicious application of terms, the application of the latter would then become a worthy subject of discussion. But the author makes no attempt to show that the restricted application of the term "money" which he combats has ever led any one to an incorrect material conclusion, or that his argument has any other result than that of calling things by their right names. In leaving the subject the author shows his own moderation, and at the same time spoils the effect of what he has been saying, by having to take his rather unruly argument by the horns and hold it back from proving that bank-checks are also money. He draws three distinctions between checks and bank-notes, not one of which, in our opinion, will hold water. The substance of them all is that the successive passers of a check are all responsible to those who follow them for the final payment of the check by the bank on which it is drawn, so that the act of transferring the check does not make final payment, while the transfer of a bank-note is a final release of the payer if the note is good. But is there anything really essential in this difference? It will not be maintained that spurious coins or counterfeit bank-notes are money, or that their transfer operates as a release of the payer, so that they come into the same category with bad checks. But the transfer of a good check releases the payer as completely as that of a good bank-note. Checks are often payable to bearer, and then pass from hand to hand as bank-notes. Endorsements may be required on bank-notes as well as on checks, when there is any doubt of their genuineness on the part of the payee, and we think that many of the notes of the Bank of England presented for payment bear as many endorsements as the average of the checks presented. On the whole, we fear the argument will prove so hard to manage that it had better not be brought forward at all. We see no objection to the old system of confining the term "money" to the precious metals or other things which banks promise by their notes to pay, and leaving the term "currency" to apply to the medium of exchange in general between man and man.

The chapters of most interest and value are those which treat of the relations of the precious metals to values, including the multiple tender, and the effects of metallic contraction and inflation. We here find the first extended discussion of the multiple standard of value which we remember to have seen in an American dress. The effects of an increase or diminution in the supply of the precious metals are treated from a new and original point of view. To Professor Walker belongs the credit of bringing into prominence the functions of the *entrepreneur* in production, functions which have been singularly neglected by the English economists, though they continually increase in importance with the minuter organization of labor. This circumstance may be partly due to the fact that our language possesses no word to designate the class. His views of the way in which this class is affected by changes in the value of the circulating medium are worthy of more consideration than we can give to them. His exposition of the progress of "hard times" is a good example of the analytic method of treating the subject which we prefer, a method in which the *modus operandi* of a combination of actually existing causes is shown in a fashion to admit of no dispute among those who understand the subject. He ranges himself among the bi-metallists, but he does not assert that the bi-metallic see-saw between the two metals can go on indefinitely, and reduces the claims of the policy to limits so modest that sound monometallists will not find much to dispute in his theoretical conclusions. His discussion of the practice of banking, especially in this country, is instructive and entertaining, though not systematized in the way we should like.

Hints for Pupils in Drawing and Painting. By Helen M. Knowlton, with Illustrations from Charcoal Drawings by William M. Hunt. (Boston: Houghton, Osgood & Co. 1879.)—This is an odd little book, of the sort which the English weeklies are apt to mention in a few words of generalized praise as "racy and suggestive," or "full of interest and value," or "inspired by a sincere love of art." There is no doubt that the book in question is all of this; but when one enquires whether it is of value to the student, and whether, on the whole, it is an important addition to the list of text-books, the answer is not so easy. It is very short, very abrupt, very positive, very unhesitating. Of the twenty-seven small pages one is given up to the preparations for charcoal drawing; four to hints as to choice of subject, and as to beginning work on a subject, with an almost comical emphasis laid upon the directions to "almost close your eyelids or shut one eye" when you contemplate your subject; three pages and a half to Allston's method of painting; a page or two more to other manners and processes used or thought to have been used by great masters; then brief recipes for preparing canvas, varnishing and preparing pictures; in short, a little of this and a little of that, flavored with brief enunciation of some very sound maxims on values and outlines; the whole in language which would have been less fancifully abrupt, perhaps, but for the example set in Mr. William Hunt's pamphlet of 'Talks' and M. Couture's volumes. Twenty very interesting full-page pictures, reproduced by some "process" from charcoal sketches by Mr. Hunt, form the most valuable part of this volume, and make it well worth buying.

NEW YORK, THURSDAY, SEPTEMBER 25, 1879.

The Week.

GENERAL GRANT'S reception at San Francisco forms in every way a pleasing contrast to what it was at the beginning of the year feared it might be. Instead of being seized on the wharf by a crowd of political jobbers and converted into a Presidential candidate a year in advance of the election, partly in ostentatious preparation for civil war or some sort of illegal "salvation of society," and partly in covert preparation for the return to power of the corrupt gang who brought disgrace on his Administration, he has come back amidst the enthusiastic welcome of men of all parties, as a great general who has deserved well of his country and whose military talents have met with much respectful recognition abroad, and to whom a return to honored repose in his own land is very grateful. When one sees how passionately the people desire a hero whom they can admire and applaud simply and heartily as a man, and not as a candidate, and how desirable it is in the existing condition of American life that there should be such a hero in American society, it is difficult to find words of condemnation sufficiently strong for the plans, both past and present, for using this simple soldier as the head of the Machine, or as the pea with which the managers did their thimblerigging. Grant's fame, as the war left him, was one of the national treasures. The politicians did their mortal best to destroy it, and had he been an older man they would have succeeded. It has happily survived their snares, and everything should now be done to keep it intact during the remainder of his life.

The President has made two speeches during the week. At Youngstown, Ohio, he discussed "the objects for which we fought in the great conflict from 1861 to 1865," and elaborately considered the question "What was settled by the war?" This he did in great measure by reading extracts from Mr. Lincoln's Gettysburg speech, defining the reciprocal relations of the States and the general Government, which we all know are excellent, and which, "in the third year of the war and while its result was still undecided," as Mr. Hayes remarked, were most timely. At present, since, according to the President, "no one would again attempt to break up the Union by secession," their interest is chiefly historic perhaps; but the President seemed to feel their applicability to the present condition of things, as "there still remains in some communities a dangerous practical denial to the colored citizens of the political rights which are guaranteed to them by the Constitution as it now is." About the existence of a widespread disposition in the South to nullify the Fifteenth Amendment he had no doubt. Hence arose a question in which "the whole country is deeply interested." It would not do, he thought, to call it "an affair which belongs solely to the distant States of the South." Just how the whole country was to manifest its interest in a way practically efficacious the President did not say, though this is, of course, the whole point of the controversy now raging. The tone of his entire speech was as Stalwart as the least temperate of his party could reasonably expect from a man of such a strong conservative bias, and he evidently thinks discussion of "war issues" still pertinent. What he said will be likely to have considerable public effect, we should say, for the reason that while its attitude is Stalwart its air is characteristically dispassionate, almost to colorlessness. The Detroit speech was of much more practical value. It discussed the revival of business, the evils of municipal indebtedness and how to avoid it, recommended paying off the national debt in thirty-three years, and was generally concerned with a class of topics whose existence is scarcely recognized by the orators in an active political campaign. There is in Detroit, however, just now nothing like the amount of patriotic anxiety about the salvation of the country that exists in and around Youngstown.

The New York *Times* on Thursday, discussing the President's recent speech, speaks of "the renewed presentation by the South in Congress of the doctrine on which the theory of secession rested, and the declaration (from the same quarter) of a purpose once more to attempt the application of this doctrine to the administration of the Government." Now, the doctrine on which the theory of secession rested was the Calhoun doctrine—that the Constitution was simply a treaty between independent States, which any one of them could abrogate, in so far as it was concerned, at any time, by withdrawing from the Union, and, *à fortiori*, that any State could, *by State legislation*, refuse to permit the execution of any objectionable federal law within its borders. If "the South" has presented this doctrine in Congress since the war, it must have been either in the speeches of a majority of the Southern members, or in the speech of some one Southern member of acknowledged influence or authority, or in a resolution voted for by the majority of the Southern members. If the *Times* cannot produce one or other of these sources for its statement, that statement is simply an invention made for electioneering purposes, and intended to aggravate and embitter the sectional animosity which is already working so much mischief, and of which any paper which does not openly proclaim itself a regular "organ" ought to be ashamed. Attempts to repeal federal laws by a majority in Congress is not "nullification," or anything like nullification, however worthy of condemnation it may be at the polls.

Governor Robinson has accepted his renomination in a clear, modest, and sensible letter, in which he confines his remarks to State affairs exclusively, and makes no allusion to Tammany. He devotes himself mainly to showing what has been done for retrenchment and reform in the State government during his three years' administration, but claims no credit in connection with it for himself and other officers but that of faithful obedience to the constitution and the laws. Some of his figures tell a remarkable tale, and they are not to be questioned. In 1874 the canals cost the State in direct taxation $2,373,425 over and above the tolls. In 1878 they cost it nothing, their expenses having been reduced from $3,842,892 to $903,347, and these wholly met by the tolls. In 1876 the prisons cost the State $704,379; this year they cost it nothing. In 1874 the State taxes were $15,727,482; this year they are only $7,678,103. At the close of the war the State debt was $51,041,537; it is now, minus the Sinking Fund, only $8,130,726. The letter has all the ring of the old Silas Wright Democracy, and the Governor, to the best of our knowledge and belief, has fairly lived up to his doctrine; but then his probity and efficiency may after all, like so many of the political, social, and even physical phenomena of the day, be only "a Tilden move."

There has been nothing more entertaining in the papers of late than the reply made by Mr. Tilden, through a New York *Times* reporter, to the charges made against him by Mr. Cyrus W. Field of having secretly, treacherously, and in violation of an agreement, sold out, or "unloaded," a quantity of Elevated Railroad stock. Mr. Tilden not only flatly contradicts Mr. Field's most important assertions, with numerous accompanying comments of a highly derogatory character on the quality of Mr. Field's mind and on the condition of his morals, but produces figures, taken from the books of the company, showing, if correct, that many of the other directors, and more than one member of Mr. Field's own family, had been already "unloading" very freely at the very time when Mr. Field says there was a general understanding that everybody in the ring was to refrain from selling, and before Mr. Tilden had sold a

share. In fact, if Mr. Tilden's story be even half true, Mr. Field's story becomes somewhat incomprehensible. There is, however, one very serious side to the matter. The *Times* editorially gives credence to Mr. Tilden's defence. Now, it was settled in 1876 that *every* charge against Tilden was, *ex necessitate rei*, true, and that anybody who questioned it or closely examined the evidence on which it was based, was probably actuated by corrupt motives. We are, therefore, driven to some very painful conclusions with regard to the present relations of the *Times* to this Wicked Old Man, which are not weakened by its open and, considering everything, somewhat shameless declaration that he is "clearly in possession of vigorous intellectual capabilities."

To the Pelton part of Mr. Field's charges Mr. Tilden replies that it is amazing "moral audacity," or "immoral audacity," to assert that he knew in June, 1877, "all about Pelton's transactions in regard to the cipher despatches," when he testified before the Congressional Committee that he knew nothing about them until the despatches were published in September, 1878. He further added that Pelton's "wrong" did not go beyond a "futile dalliance," which is not a bad phrase for so old and infirm a man. He said a good many other things about the vote of the Florida and Louisiana elections in 1876, indicating that he believed it was bought by promises of office which have since been fulfilled. In fact, his conversation was full of scandalous matter, showing that he is, when provoked, a very ugly customer.

On Wednesday of last week Governor Robinson issued an executive order convening an extraordinary General Term of the Supreme Court, and designating Judges Davis, Brady, and Ingalls to hold the term. Judge Barrett was afterwards appointed in place of Judge Ingalls, on account of the latter's ill-health. The court met on Saturday, and an application was at once made by counsel representing the Mayor for an *ex-parte* order bringing the questions pending before Judge Westbrook in the case of Police Commissioner Nichols before the General Term, quashing the *certiorari* proceedings, and staying all Mr. Nichols's proceedings, or for an alternative order, under a statute passed in 1873 (authorizing the Court at General Term to issue writs of prohibition to a single justice in the same way that such writs are issued to inferior tribunals), prohibiting Judge Westbrook from proceeding with the case. The judges being of opinion that the matter was too important to be decided on an *ex-parte* motion, granted an order to show cause, which will be argued this week. It is greatly to be hoped that the General Term will, after the argument is had, come to a decision which will bring to an end the police troubles now practically paralyzing the machinery of municipal government in this city, besides doing a great deal to bring the administration of justice into contempt. Apart from the merits of the quarrel between the Mayor and the Police Commissioners, the spectacle of both sides fighting each other with judicial orders is very unwholesome, and strongly recalls the days of the Ring.

The struggle, of course, really hinges upon the appointment of inspectors of election. Two thousand odd of these officials, selected equally from the two political parties, ought to be appointed by the first of October. These inspectors have charge not only of the polling places but also of the registration, which is the sole guarantee the city has of a fair election. The theory of the system is that the inspectors of each party act as watchers upon the inspectors of the other, and ordinarily there is no difficulty in applying the theory in practice. This year, however, there are not two parties, but three, and as only two sets of inspectors can be appointed, it follows that one faction must be left out in the cold. The Police Commissioners have the appointment of these officials in their hands, and the Police Board is now evenly divided. Three lists of inspectors have been submitted to them, one by the Republicans, one by Tammany, and one by anti-Tammany. As to the first there is, of course, no dispute; but of the two others the Tammany list is the one which the two Republican commissioners, Messrs. French and Wheeler, desire to have adopted; while the anti-Tammany list is that which Messrs. Morrison and MacLean insist upon. Mr. Whitney, the Corporation Counsel, has sent in an opinion (concurred in by Judge Emott) to the effect that the statute with regard to the appointment of inspectors contemplates the selection of the lists from representatives of the two regular political organizations known as the Republican and Democratic parties, and that consequently a faction opposing the regular nominees of either party, as, for instance, the local party now identified with Tammany Hall, and led by John Kelly, cannot be recognized at all. This seems a fair interpretation of the statute, but it is not satisfactory to Messrs. French and Wheeler. The legal proceedings directed by the removed Commissioners, General Smith and Mr. Nichols, if successful, would in all human probability result in a combination between them and the Republican Commissioners to appoint Tammany inspectors. It is unnecessary to point out that, in the eyes of the unregenerate, the evidences of a bargain between Kellyites and Conklingites are rather overwhelming. The good and pure, however, who believe it to be important to elect Cornell to save the country from the Rebels, reconcile themselves to the situation by the reflection that the end in view is glorious enough to palliate any means.

General Butler has had three nominations for the governorship of Massachusetts, by Independent Democrats, Independent Republicans, and his own party, which is a composite body and has put up Mr. Wendell Phillips for the lieutenant-governorship. All three carefully avoid mention of national affairs in the platforms, but call loudly for State reform. What Butler's opinions on national affairs are at present, if known to any human being, is known only to himself. But it ought to be added that there is a sign in this of something which the Republicans would do well to heed, and that is, that interest in the quarrel with the South which the Republican party is trying to live on is undoubtedly declining with the masses, and as it declines they are the more readily led off into other fields of activity like "Greenbackism," which is really a name for a desire for changes of all sorts. The demagogues see this and act on it, but the Republican chiefs cannot be got to see it, and go on ding-dong with the same old story about the rebels and the war. Maine has furnished one warning about this. We trust Massachusetts may not furnish another.

It is useless to discuss the Butler platforms. The "true inwardness" of the movement was explained by Mr. Simmons, the late Boston collector, who has joined it as an "Independent Republican," as has Mr. Palmer, last year a prominent member of the Republican State Committee. Simmons says frankly that what they seek is to get the government of the State out of the hands of what he sneeringly calls "the better element," who give themselves such airs of purity and goodness—that is, the "Harvard men," and "high-toned men," and "prominent financiers," and "civil-service reformers," and "patriotic men," who have had hold of it ever since the anti-slavery men turned out the Winthrop and Everett Whigs with the gold-headed canes. He says "the common people" must now take hold of it, and this is the revolution which Butler is to bring about.

What the result will be it is difficult to say. Many things—such as the revival of business—have happened since last year to diminish Butler's chances, but, on the other hand, such accessions as Simmons and Palmer indicate that he will get the support of a class this time which last year had not made up its mind to throw in its lot with him. Mr. George Hoar did not injure him by eulogizing General Grant, at the regular Republican Convention, as "a great statesman" as well as "great soldier," for it recalls the fact that it was General Grant who handed over the State patronage to Butler, and who, in defiance of the protests of "the better element," made Simmons, Butler's henchman, collector, and thus gave them both the weapons of influence and machinery with which they are now

assailing the party. In fact, the sky all over the country is dark with Republican chickens coming home to roost. One of the signs of the increased efficiency of Butler's organization is that he is keeping very quiet himself. Mr. Wheeler is probably right when he says that to ride out to Harvard Commencement as Governor would probably fill the measure of "Old Ben's" desires. The spectacle would probably draw the largest crowd ever assembled in Massachusetts.

Specie importations continue, and have, up to the time of writing, amounted since the first of August to $27,000,000 in round numbers. Foreign exchange strengthened early in the week so as to check imports, but later the market fell back to the free importing point, and new lots were started from Europe. The money market has worked easily at 5 to 6 per cent., the receipts of foreign specie having more than outweighed in the bank reserves the large shipments of currency to the West and South. The Treasury 4 per cent. bank account with the banks, which was to have been finally settled on the first day of October, has been closed, or very nearly so, so that the Treasury has no longer a direct concern in the loan market, and United States bonds have advanced steadily. Mr. Sherman, finding that he could not "redeem" legal-tender notes with gold at any Treasury office except that in this city, has issued a circular saying that in Treasury payments, all over the country, a percentage of each shall consist of gold. General trade throughout the country is unmistakably active, and at the Stock Exchange there is a furor which causes anything that is low-priced, whether good, bad, or indifferent, to be taken up, and advances the price of it, on the calculation that some one on whom the fever has a stronger hold will buy it at the advance.

What about that International Silver Conference? What Powers, if any, have signified their willingness to take up the subject? What signs are there, if any, of that rapid spread of the bimetallic idea in Europe of which we heard so much before the Maine election? Where is Kelley? Silver is still accumulating in the Treasury and is still worth considerably less than gold, though all politicians talk as if they were the same thing.

Lord Beaconsfield's inaccuracy, especially in dealing with all financial, commercial, and geographical questions, has long been a standing joke in English political circles, and would long ago have killed a politician of less *aplomb* than himself. His explanation of the agricultural difficulty at the Lord Mayor's dinner, on which we recently commented, was exceedingly diverting. But no blunder he has lately perpetrated has been so extraordinary as his announcement at an agricultural dinner at Aylesbury, the other day, that since the opening of the Hudson's Bay Company's territory "nearly all the chief landholders in the extreme Western States of America had sold out" and moved over into the Canadian wilderness, to get the benefit of the fertile land and the comparatively low taxation. He is quite capable of inventing this himself, feeling sure that the Buckinghamshire farmers would swallow it, and no correction of it would ever reach them, and that his followers in Parliament would simply laugh, and exclaim, as the late Mr. Bagehot said they were in the habit of doing when he was more than usually absurd, "That's just like Dizzy." But it is more charitable to suppose that some waggish American has made him the victim of a gigantic "sell." Apropos of this, he justly observes himself of Villebecque, one of the characters in 'Coningsby': "He was master of his subject; in all things the secret of success, and without which, however they may from accident dazzle the world, the statesman, the orator, the author, all alike feel the damning consciousness of being charlatans."

The mails from England show that when the news of the tragedy at Kabul arrived the public rushed headlong into the delusion that Kabul would be promptly occupied. They have probably recovered from it by this time. If it is reached before the first of December it will be good work. There are all sorts of rumors about the disturbed condition of the country, and the Amir is writing apologetic and hopeful letters to the Viceroy. It is plain to be seen, however, that he is a weak person, who will never be able to reign alone, and the story that the mutiny and massacre were set on foot by a stronger brother is not unlikely. Attention has been called to the fact that reports of the brewing of the plot were current in Herat and Teheran some weeks before the outbreak, and were sent to a portion of the Indian press by their Persian correspondents at the very time when Lord Lytton was telegraphing rose-colored accounts of the success of the embassy. Cavagnari is a great loss to the Empire. He was in all ways one of the most remarkable men in the Indian service. He was half Irish, half Italian, and had extraordinary diplomatic skill in dealing with the semi-barbarous tribes of the frontier, an almost unprecedented gift of tongues, and, though small and slender, was so good a swordsman and horseman, and had a courage so cool and dauntless, that no native soldier who knew him would care to face him on anything like equal terms.

Cetewayo, surrounded on all sides and hunted like a wounded bear, has at last been captured. He is said to have borne himself with dignity at his surrender, and asked to be shot, but has been sent to Capetown, where he is to be kept as a prisoner of state for the present. Of course this ends all further danger of resistance. The plan of reorganizing the government of Zululand has been made public, and it consists in the erection of a number of petty principalities on the ruins of the old monarchy, some of them being those that were extinguished in the early part of the century by the invasion of the Zulus, who came down from the north. Each chief is to have a British Resident attached to him, who will supervise his rule, but without authority to interfere otherwise than by report to the Government in Natal, from which permission to make war must be obtained. The country is to be absolutely closed to white immigration. How the plan will work remains to be seen; but there can hardly be a doubt that the Zulu monarchy showed by its great organizing power that, if it could have been made peaceable, it was the best instrument which could have been devised to raise the nation out of barbarism.

The German National Liberals have published their platform in preparation for the Prussian elections. They declare their unchanged attachment to liberal institutions; denounce the attempt to modify the Constitution by making the taxes votable for two years instead of one; demand a reduction of direct taxation, the maintenance of the Falk laws, and the reform of the internal administration, especially by an increase in the sphere of local government; suspend judgment about the state purchase of the railroads, and call for renewed energy on the part of the Liberal bourgeoisie in city and country in making themselves heard in the political arena. It is not what our "workers" call a "ringing" document, but shows that the party still hangs together and has a policy.

Whether there has been really danger of a break between Russia and Germany is probably known to nobody but the German Chancellor, but the press of the two countries has for some weeks been talking as if war was imminent; the story being that Russia, in order to escape from her present internal troubles and stop the progress of Austria among the Slavs, was going to make another onslaught on Turkey, and carve what remains of it in her own fashion, counting on the support of France in the mêlée that would ensue. The latest news is that the trouble, if it ever existed, has blown over through the meeting of the two Emperors at Alexandrovno. But the mere uproar shows how far the Treaty of Berlin is from being a finality, and how much the scene has been changed by the light thrown on British military resources by the war in Afghanistan and Zululand. The Russian press makes no secret of its belief that their diplomatists were humbugged by Beaconsfield's threats. The next conflagration will undoubtedly break out in Rumelia, where the disorder is so great that the Sultan may be tempted to interfere, and thus furnish Russia with an excuse, if she desires it, for again taking him by the throat.

THE MORAL OF THE CHISHOLM TRIAL.

GENERAL STEWART L. WOODFORD, who went to Mississippi to assist in the prosecution of the Chisholm murderers, has given his impressions of the political situation at the South, formed during his visit, in an interview the report of which he certifies to be correct. It is very interesting and instructive in various ways. There is no doubt that the killing of Chisholm and his children in the jail by a mob was a foul murder of a very revolting type. It took place in April, 1877, when the mob stormed the jail to which Chisholm had been conveyed on a charge of complicity in another murder, of one Gully. In trying to get at Chisholm they killed or mortally wounded his son and daughter, who threw themselves in the way. In September of the same year the Circuit Judge charged the grand jury with reference to the offence "in words as burning and severe," says General Woodford, "as have been used to characterize the deed by any sober-minded man even at the North." The grand jury thereupon indicted thirty persons belonging to the mob. The case, after much delay, came on for trial a few weeks ago. It was tried by the Circuit Judge who charged the grand jury, and, according to General Woodford, "he did his duty fearlessly and justly. If he erred at all in his rulings, he erred in favor of the prosecution and against the defence." The District-Attorney, too, "did his duty well and bravely. He prepared his case with care, and tried it with good sense and sound professional judgment." He was assisted by Mr. Morris, of Vicksburg, "one of the most logical and forcible criminal lawyers whom he [General Woodford] had met at any bar." "The prosecution made out a clear and complete case of murder; the charge of the judge was distinct, direct, and positive; and yet the jury were out only long enough to take one ballot and write their verdict." The jury was composed of nine white men and three negroes, but "it was fairly drawn." Fifty-five of the seventy-five names drawn for the special *venire* presented themselves in court. Twenty-five were black and twenty-six white. "Whatever else may be said of Kemper County, it must," General Woodford adds, "be frankly admitted that the jury-list of the county is fairly made up. It contains over two thousand names. Two-fifths of this number are black and three-fifths white. The officers charged with making this list have done their duty impartially, and the special panel drawn from this entire list was honestly drawn." This, it must be remembered, is the testimony of a United States District-Attorney for the Southern District of New York, a strong Republican, who was himself on the spot and watched the proceedings with a critical eye.

Now, this Chisholm case has been used lavishly for the last two years by Republican papers of various shades of opinion as a case which illustrated the political condition of the South, and which proved, or helped to prove, the necessity of combining against the South, and making denunciation of it and hatred and distrust of it one of the principal duties of good Republicans. They treated it, in other words, as a sign that the policy of conciliation was a mistake, and that Southern men were still in a rebellious state of mind; and the *Tribune* assured its readers nearly every week that no attempt would ever be made to punish the perpetrators of the crime. The political exploitation of the incident even went so far as to induce the unfortunate Mrs. Chisholm to deliver a public lecture on the tragedy in which her family perished. It now appears that the machinery of justice, in so far as it is in the hands of officers of the law, worked perfectly; that, indeed, it worked not only as well as it would have worked in any Northern State, but probably better than it would have worked in most Northern States in which popular feeling ran so strongly on the side of the accused. The jury expresses the popular feeling in their verdict, and this feeling is, General Woodford says, "that it was unfortunate but natural" that Chisholm, Gilmer, and McClellan were shot by the mob; that the Chisholm children were accidentally killed, which "is universally regretted," but "that the conviction and execution of anybody for the deed would be equally unfortunate, and that the entire matter had better be allowed to die out and be forgotten." General Woodford thinks this unfortunate state of things will be cured by "a division of the white vote between opposing parties," and that this decision will probably be brought about by "a Republican victory under a wise, brave leader in 1880," as this will convince the Southern Democrats that their hope of holding a united South on "the issues of race and white rule," under the patronage of a friendly Administration at Washington, is a chimera.

In these conclusions General Woodford is, we think, partly right and partly wrong. The effect on the Southern mind of a Republican victory in 1880 will depend on the platform on which the victory is won, and the aims put forward by "the wise and brave leader." If it is won on "the bloody-shirt" platform and on the theory that every negro is *ex vi termini* a Republican, and the language of the canvass spreads the belief that the great aim of the new Administration will be to build up a black party in those States in which negroes are in a majority or nearly in a majority, we have no doubt—human nature being much the same at the South as everywhere else—that the effect will be to keep the white South as "solid" as it is now, as the best protection against the thing it most dreads—negro rule. A Stalwart, denunciatory, exultant North, revelling in the memories of the war, comparing every election to Gettysburg, and searching every corner of the South with the fierce light of newspaper criticism and report, for the purpose of turning all crimes, outrages, and disorders to political account, and indicating by every speech and article and vote its desire to see the Southern State governments in the hands of its own friends, without regard to their character or intelligence, cannot but keep the race question uppermost in the Southern mind, and prevent a division of the whites on any other subject—for all subjects are in their eyes trivial compared to this.

There are too many signs already that this is the kind of Republican victory for which the managers of the party are preparing. The effect on the South of Mr. Hayes's policy, which has been sound, just, and wise, has been largely neutralized by the fierce opposition it has encountered from these men from the beginning, and it is worthy of note that there is not one of the Presidential candidates now in the Republican foreground who ever raised his voice or exerted his influence against the shocking abuses of federal and carpet-bag rule between 1865 and 1876, or ever professed to think that in being subjected to them the Southern whites were getting anything but their due. Most of those who are making complaint about the ingratitude and irreclaimableness of the South are men who never gave the slightest sign of dissatisfaction with the régime which Mr. Hayes brought to an end by withdrawing the troops, and they have never ceased to proclaim their desire to see that régime restored. If the Republican party takes the field in 1880 with a "wise and brave leader" of this kind, the Southern whites will necessarily become "solid" before it, not because they are Southern or white, but because they are men. The appearance in the arena of a party having similar designs towards any Northern State—that is, the design of giving over the State government to a grossly ignorant majority led by characterless adventurers—would make all the persons of intelligence and property "solid" against it without fail, although the "solidity" would show itself in decenter ways than murder and arson.

A Republican victory, on the other hand, which promised the administration of federal affairs at the South through carefully selected and respectable officers, and in a spirit of pure justice, legality, and moderation, taking account of the weaknesses and misfortunes of the whites as well as those of the blacks—that is, "with charity for all and malice towards none"—would undoubtedly be a civilizing agency of the highest order. But such an administration would have to abstain from all schemes of party advantage and especially from seeking to make party votes, or reward party services, by the distribution of the public offices among party "workers"; and yet to nine out of ten Stalwart chiefs good government at the South means just this distribution and nothing more.

General Woodford, too, falls into the error of supposing that what he witnessed in Mississippi was something new or peculiar either to this period of Southern history or to the South. We venture to

assert, though, of course, without having the figures at hand, that no conviction for murder has ever taken place in Mississippi in any case in which the prisoner was able to show that the killing was the result of a previous quarrel, or that he had reason for bearing a grudge to his victim. We have ourselves had a man of good standing in Mississippi pointed out to us, before the war, who had killed thirteen persons and had never been convicted. In fact, if General Woodford had known the South a little better he would have known that the old common-law rule, which makes malice prepense tell against the accused, is, and always has been, reversed in the slave States. In them he has always pleaded it in bar or in extenuation. So that to treat of affairs like the Chisholm case and the Dixon case, as they are treated by a large proportion of the Republican press, as political phenomena created by the present state of political feeling at the South, and preventable a year or two hence by a rousing Republican victory at the North, is political quackery of the lowest order. They are symptoms of a state of civilization which began centuries before the Republican party was ever heard of, and will probably not wholly disappear until the last Stalwart has been fifty years in his grave. The difficulty with which General Woodford saw the Mississippi district-attorney contending was one, too, with which prosecuting officers in Ireland and in Corsica have been familiar ever since juries began to try criminal cases. In both countries nothing is commoner than to find it impossible to get juries to convict foul and bloody murderers, simply because they see, or think they see, excuse for the crimes in the peculiar condition of society. The experience of mankind has shown, however, that this depraved condition of public sentiment is cured not by savage denunciation from without, but by patient persistence in good government, and by bringing the afflicted community into such intellectual, social, and commercial relations with happier portions of the nation that it shall share its shame and horror as well as its hope and ambition.

THE GROUNDS OF THE INDEPENDENT REVOLT.

THE nomination of Mr. Cornell points forcibly, and it is to be hoped in a salutary manner, the distinction between the party and the Machine. The Machine, when it condescends to argue the question of its own justification, assumes the rôle of the handmaid of party—indispensable, it is true, but still ancillary. All its anxious study of the political horizon, its lonely midnight vigils, its thankless arrangement of primaries and conventions, its earnest appeals to the constancy of its fellow-partisans, its laborious and faithful reasoning with its opponents, its incitements to vote on election day and its care for the purity of the suffrage, are prompted by a holy desire to ensure the triumph of the great principles of the party, and a disinterested concern for the administration of the Government in accordance with them. Even after its hollowness is exposed, and judgment is about to be executed upon it by its victims, its prayer for mercy and for one more trial is uttered in the sacred name of party. "Not for our sake," it pleads, "but for the cause. The State ticket we have prepared for you may seem faulty, may even merit defeat, by itself considered. Unhappily on this occasion, by an unforeseen conjuncture of circumstances, on the fate of it depends the success of the national ticket next year. They stand or fall together. Will you, can you, sacrifice to your resentment the welfare of the country, the hopes of future generations?" As the saviour of society and the party the Machine thus plays its trump card.

And what, all this time, is the party? It is an organization whose chief, when it is in power, is the President of the United States, and the authoritative expression of whose common sentiments and aims is the platform adopted in national convention. If the President is true to the platform, the Machine should be at one with both; if it is not, and is found in contemptuous opposition to him, the theoretical unity of the Machine and the party disappears. Such, notoriously, is the present situation in New York, and it is a contradiction in terms to pretend that Mr. Hayes and Mr. Conkling are members of the same party. The nomination of Mr. Cornell was a flagrant act of insubordination, rendered purposely insulting, and intended to prove that the Republican party exists for the Machine, not the Machine for the party. Translated into the political phraseology of the day, it was an attack on the validity of the amendments of the party constitution to which Mr. Conkling had sworn allegiance. The successive modifications of party platforms conformably to the progress of public opinion may be likened, with perfect justice, to the alterations which from time to time our State and national charters undergo. The civil-service plank in the Cincinnati platform was a deliberate and distinct concession to the convictions of the better class of the Republican party. It was inserted because it was demanded; it became an integral portion of the manifesto with which the Republicans went before the country, was singled out for emphasis in Mr. Hayes's letter of acceptance, and was as solemn and binding as any article in the creed. To disregard, ridicule, and assail, or transfer from the President to his subordinates the duty of interpreting it, as soon as the election had been carried—if it was carried—by means of it, was nullification, in all respects analogous to that by which a State might now refuse to respect an amendment to the Constitution by the formal acceptance of which its return into the Union was secured.

Mr. Conkling's revolt offers another aspect which also has its parallel in the present denunciation of the South. When he calls upon the Republicans of New York not to make a State issue of Mr. Cornell's nomination, to regard it only in its national bearings, and vote accordingly, he implies a federal supremacy in the party which ought to be heeded by the rank and file. The rank and file, however, may properly insist that this supremacy, which overrides personal and local considerations, shall be acknowledged by the Machine as well as by themselves. Why is not the doctrine of State sovereignty as good for them in State elections as it was for Mr. Conkling in the matter of State patronage? If the control of the New York Custom-house warranted flat defiance of the party's position in regard to the appointing powers of the Executive, and the business character of the civil service, what other party tenet is so inviolable that Republicans must forego for it their right to choose their own candidates for the administration of their State? To this the Machine's answer of course is that the voter is not to judge what is essential and what is non-essential in the party platform; that the Machine will attend to that and to his conscience too. The consequence is that the Republican constituency of New York is as completely stript of the right of self-government as any Southern State under carpet-bag rule. And, indeed, if we enquire into the amount of real interest which Conkling and his henchmen take in the welfare and prosperity of the State, their likeness to the extinct carpet-baggers is irresistibly striking. Absolutely, beyond the accident of their residence here, they are as alien as the pasha of a Turkish vilayet, their motives summed up in two words—power and plunder. Their political interest is centred in Washington, because there is the administration not of principles but of places. Their political life and dependence are federal, as much so as Parker's, or Spencer's, or Kellogg's; and when the President withdrew the troops from South Carolina and Louisiana, the Machine everywhere felt the blow as aimed at itself.

In this, it is to be suspected, its instinct was truer than Mr. Hayes's perceptions, who saw clearly enough his constitutional duty to the South, but overlooked the connection between it and his pledge on behalf of civil-service reform. Nothing, in fact, could better demonstrate his confusion of mind than his immediately rewarding with federal offices the men who had brought the South to the condition in which he found it. The Machine South, in other words, was exactly the same in theory and practice with the Machine North; only its ravages had been greater because it had the support of the military arm of the Government. Instead, however, of being left to its fate when the right of the South to self-government was acknowledged, and the military called off, its managers were provided for as if martyrs who had deserved well of their country. Such are the illusions which party always breeds in those who look upon it as an end and not as a means. The root of the evil called carpet-bag government lay in the Senatorial manipulation of State

politics through the federal patronage; but this was not invented for the South—it was merely extended and applied there. If there was any difference worth insisting on, it was that at the South the Machine and the party were convertible terms; at the North their identity was at least open to dispute. In the nature of the case, this is a distinction and not a difference; and unquestionably, if Mr. Hayes could have restored the South to its rights without breaking up the Machine, he would have done so—just as Mr. Lincoln would have saved the Union, if he could, without abolishing slavery.

To save the party, however, provided it is worth saving—that is, if it is composed in the main of voters who sincerely desire the good of their country; who think platforms should be honestly lived up to, and more or less heartily believe that a public office is a trust and not a prize—to save the party and the Machine too is beyond any man's ability. He who does not apprehend this has not passed the primer of his political education. He who is blind to the fact that the Machine and the party, in the sense just indicated, not only are not one, but are essentially and permanently antagonistic, has yet to learn the meaning of "reform within the party." This does not signify merely changes in the creed, or fresh shibboleths to match the aspirations of the times, but resistance to the oligarchy which makes hypocrisy of the creed, and answers the demand for pure and upright functionaries with bargained candidates of "slates" and "rings." Such is the understanding alike of the pessimists who despair of reform within the party, and of the Machine itself, which sees no difficulty in the way and never could see any; for both are firmly convinced of the Machine's superiority to all attempts to dislodge it. The approaching election in this State will show how far the Republican voter who thinks and acts for himself is penetrated with the idea that, in this age and country, a self-reforming party is a party in revolt—the horse against his rider, Sindbad against the Old Man of the Sea.

THE FAILURE OF BRITISH RULE IN INDIA.

II.—THE FAMINE IN THE NORTHWEST PROVINCES.

LONDON, August 27, 1879.

IN my last letter I spoke of the evils which had been inflicted upon the people of India by the want of fixed principles and a continuous policy in our administration of the country. In nothing has this evil appeared more conspicuously than in our methods of dealing with famines. These of late years have been appallingly frequent. It is at present customary to assign them entirely to causes over which the Administration has no control—the failure of the regular rain-fall, spots on the sun, no matter what, so long as no responsibility on their account attaches to the Government of the country. In truth, however, they are mainly due to our maladministration. The causes which combine to produce an Indian famine are multiplex, and differ according to the districts in which the scarcity occurs. But the chief of them are directly due to our own recklessness and want of forethought. These have occasioned a dire impoverishment of the soil and a corresponding impoverishment of those who cultivate it. The consequence is that a very slight decrease in the customary rain-fall suffices to reduce the soil to a state of sterility, while the cultivators, always destitute, become a prey to famine the instant there is any abrupt rise in prices. It is not too much to say that on a right understanding of this matter depends the existence of our Indian Empire. At present I am concerned only with a particular scarcity—the famine of 1878 in the Northwest Provinces.

As you are aware, the larger part of our Indian revenue is derived from the land. The Indian Government is a part-proprietor of the soil of India, and a fixed portion of its produce is set apart every year as the share of the Government. The proper method, therefore, of dealing with famines is, in India, not so much a subject for philanthropists, as an essential and most important duty devolving upon the Administration. A year of famine not merely diminishes the revenue for that year, but affects it unfavorably for many years to come. The cultivators are impoverished; their physical vigor is impaired; their cattle perish; and thus great tracts of land which ought to return revenue fall out of cultivation and produce nothing. But there exists in India nothing answering to our English poor-law. The consequence is that in times of scarcity, unless the state comes to their aid, the two classes of day laborers and small village shopkeepers must inevitably perish. For the former there is no work, because in years of drought the land is so dried by the action of the sun that it cannot be broken up for sowing. And as the latter subsist by providing for the wants of the former class, the ruin of the one involves the ruin of the other. These considerations render state relief during periods of famine a matter of imperious necessity in India. In keeping its agriculturists alive the state is, in point of fact, keeping itself alive. It is merely sacrificing a portion of the revenue it derives from the land in order to save the remainder. The commonplaces, sound enough elsewhere, as to habits of improvidence engendered in the people by indiscriminate state aid have no relevancy in India. So long as our taxation leaves to the cultivator nothing beyond the bare margin of subsistence, the state must keep him alive in seasons of scarcity. Nevertheless, as can easily be understood, the Indian Government has been most reluctant to acknowledge that it is under any such obligation. The Indian Government always lives up to the extreme limit of its income, and generally a good way beyond it. A governor-general and his council hold office only for five years, and their chief desire is to do something dazzling and sensational during his term—to make a war, to construct a thousand miles of railroad, to excavate a canal—anything which can be made the subject of a self-eulogistic report. There is nothing dazzling in the sacrifice of revenue for purposes of famine relief. Such sacrifices were specially abhorrent to the feelings of Lord Lytton and his Council, because they required every farthing they could scrape together to go on a wild-goose chase after a "scientific frontier." But they were aware of the indignation which would be excited in England if a famine occurred in India and the Indian Government looked passively on while hunger was claiming its thousands of victims. Accordingly, when, in 1877–78, a terrible scarcity arose in the Northwest Provinces, the Government imagined the ingenious device of denying that there was a famine, and so evading the necessity of devoting any part of its revenues to the relief of the destitute. It is the story of this denial that I am about to relate, together with the amazing untruths uttered by the Government when the fraud was discovered.

The cultivated land in the Northwest Provinces is mainly under two descriptions of crops—the rain crops and the cold-weather crops. The rain crops are sown towards the end of June, or shortly after the rains have set in, and are reaped in October and November. The cold-weather crops are sown in October and November, and are reaped in March and April. Thus during the three hottest months of the year, April, May, and June, the cultivated land of India is a bare plain exposed to the parching action of the sun and the hot winds. It is baked to the consistency of sun-dried brick, and if rain does not fall and there are no irrigating canals, the fallows cannot be broken up, and scarcity is inevitable. In 1877 there was an almost total failure of rain in the Northwest Provinces. At the end of September all that portion of India was like a vast desert. Not a drop of rain had fallen for months; not a blade of grass was to be seen anywhere, and, instead of the rain crops covering the land, there was utter sterility. At the best there could be no food, either for the people or the cattle, until the spring crops were ripe for harvesting; but, if no rain fell during October, the spring crops too would be lost, and then the Northwest Provinces would become a scene of mortality and suffering hideous to contemplate. But during the first week of October there was a heavy and continuous downpour of rain, and the hardened soil was sufficiently moistened for the spring sowings to be accomplished. Still, though the spring crops were now safe, the present destitution of the people was in no way alleviated by this circumstance. The winter lay between them and their spring crops, and the cold during the winter is in the Northwest Provinces extremely severe. It was obvious that if a fearful loss of life was to be averted prompt measures would have to be adopted to provide food for the foodless agriculturists. Sir George Couper, the Lieutenant-Governor of the Northwest Provinces, reported to the Government of India that the rain crops had been "irretrievably ruined"; and he added that if any demands were now made on the village communities they too "will simply be ruined." It has always been a standing principle in our administration of India that a failure in the productiveness of the land shall be accompanied by a corresponding remission of revenue. This principle obtains its sanction from the fact of the Government being a part-proprietor of the soil, and, as such, under a moral obligation to participate in the adverse fortune of the cultivators, just as it reaps an advantage out of their periods of prosperity. But a government which had already determined to hunt to death an old and faithful ally because he was supposed to be in possession of a "scientific frontier," could not afford to be less rapacious in its dealings with its own subjects than towards its ally. Sir George Couper was ordered to exact the full amount of the land revenue from the destitute and starving populations. Nay, the Government of India went beyond even this. Por-

tions of this famine-stricken province had lately been reassessed at enhanced rates, and these rates came into operation for the first time in 1878. Sir George Couper was ordered to exact from his people the enhanced rate. Had he been a man of humane or independent character he would have flatly refused to be the instrument of such rapacity, and would have boldly appealed to the House of Commons against the inhumanity of the Indian Government. But Sir George Couper is simply an utterly incompetent Bengal civilian, possessed of neither courage, independence, nor convictions, and in response to the orders of the Government of India he merely "trusts that the realizations will equal the expectations of the Government of India; but if they are disappointed, his Excellency in Council may rest assured that it will not be for want of effort or *inclination to put the necessary pressure on those who are liable for the demand.*" I ask you to take special note of the passage I have italicized. Sir George Couper knows that his people are starving. He has reported that they "will simply be ruined" if they are subjected to the exactions of Lord Lytton and his Financial Member of Council, and then professes his "inclination"—his positive delight—in screwing those exactions out of them. From this single fact your readers will, I think, be able to understand how it is that British rule in India is so profoundly unpopular.

But having thus resolved not to remit the land revenue, Lord Lytton, Sir George Couper, and their coadjutors were compelled to go a step further. They had to make believe that there was no need for remission—that there was no famine. The people were to be allowed to perish, but the administration of the provinces was to be carried on precisely as if nothing unusual was occurring. It was thought that in this way the famine would simply work itself out, the Government would get its land revenue, and nobody in England or elsewhere need know anything about it. It well illustrates the enormous gulf which divides the English from the natives in India that such a thought should have entered into the mind of a government; but more remarkable still, the project was very nearly succeeding. During all that dreary winter death was busy claiming his victims. At the lowest computation, more than a quarter of a million perished of actual starvation. The number would have to be doubled if it included all those who perished of disease, the result of insufficient food and exposure to cold; for in the desperate endeavor to keep their cattle alive the wretched peasantry fed them on the straw which thatched their huts, and which they used as bedding. The winter was abnormally severe, and without a roof above them or bedding beneath them multitudes perished of cold. The cross-country roads were strewed with the dead. Scores were cast into old disused wells as the readiest means of getting them out of the way. Mothers sold their children for a single scanty meal. Husbands flung their wives into ponds to escape the torment of seeing them perish by the lingering agonies of hunger. Lord Lytton and his colleagues and advisers maintained their serenity and cheerfulness undisturbed. The local papers in the Northwest were persuaded into silence. Strict orders were given to civil officers to open no relief-works in their districts, or in any way to give countenance to the pretence of the natives that they had no food. One civilian, a Mr. McMinn, unable to endure the misery he saw around him, opened a relief-work at his own expense. He was immediately suspended from his duties and punished by degradation to a lower office.

All this time not a whisper of the tragedy that was being enacted in the Northwest had reached Calcutta. The Government was well aware that in Calcutta there was a sufficient strength of public opinion to shatter to pieces the plans they had resolved on. And, but for an accident, it is not improbable that the famine might have passed off without its existence being known in Calcutta. But in the month of February Mr. Knight, the proprietor of the Calcutta *Statesman*, had occasion to visit Agra. He was astonished to find all around him the indications of an appalling misery. He began to investigate the matter, and gradually the truth came out. A quarter of a million of British subjects had perished, hunted even to their graves by the pitiless exactions of a Government which had looked on unmoved at their sufferings.

Mr. Knight made known through the columns of the *Statesman* what he himself had seen, and what he had learned from others in the course of his enquiries. Lord Lytton and Sir George Couper felt they must do something to extinguish Mr. Knight. The official newspapers were instructed to denounce him as a mendacious journalist, who rejoiced in calumniating an infallibly wise government because it procured him notoriety. At the same time Lord Lytton and Sir George Couper drew up a report in which all Mr. Knight's statements were flatly denied, and Sir George Couper eulogized as a far-seeing philanthropist. Mr. Knight, however, was far too strong a controversialist for his official adversaries. In a series of trenchant leading articles he established, to the satisfaction of all India, every statement he had made, and in so doing convicted Lord Lytton and his advisers of inhumanity and disregard of truth. I must quote the salient points of Lord Lytton's eulogy of Sir George Couper when acknowledging the receipt of his report traversing the allegations of Mr. Knight. He calls it a "convincing statement"; but adds that the Government of India needed no such statement to convince it that "the Lieutenant-Governor had exercised forethought in his arrangements, and had shown humanity in his orders throughout the recent crisis." The mortality which Lord Lytton "deplored" with "a deep and painful regret," in so far "as it was directly the result of famine, was caused rather by the unwillingness of the people to leave their homes than by any want of forethought on the part of the local government in providing works where they might be relieved." Lord Lytton "unhesitatingly accepts the statement of the local government that no one who was willing to go to a relief-work need have died of famine, and it is satisfactorily shown in his Honor's Minute that the relief-wage was ample." This eulogy was published on the 2d of May, 1878, after Mr. Knight had begun making his revelations in the *Statesman*. It is to be observed that there is no attempt now to deny the existence of a famine, or the fact of an appalling mortality. It was felt that in the face of Mr. Knight's statements the pretence that there was nothing out of the ordinary occurring in the Northwest must be given up. But what the policy of the Government would have been without Mr. Knight's inconvenient disclosures is apparent from an official report of Sir George Couper, dated 28th of February. At this time the people had been dying for months at the rate of many thousands a week. Over that part of the country where famine prevailed, the official mortuary returns showed that the mortality was seven and eight times in excess of what it ordinarily was. It was impossible that Sir George Couper could be unacquainted with the fact. Yet he did not scruple to report to the Government of India that "it may be questioned whether it will not be found hereafter that the comparative immunity from cholera and fever which, owing apparently to the drought, the provinces have enjoyed during the past year will not compensate for the losses caused by insufficient food and clothing, and *make the mortality generally little if at all higher than in an ordinary year.*" Left to themselves, Lord Lytton and his friends would have stoutly maintained that famine there was none, and the mortality no greater than in an ordinary year. Mr. Knight compelled them to relinquish this particular falsehood, and they fell back upon what may be called their second line. They acknowledged that there had been famine and mortality, but that the Government had foreseen and provided for every emergency; and that if, notwithstanding, a vast number of people had perished, this lamentable issue was due to the obstinate perversity with which they clung to their foodless villages, instead of availing themselves of those means of relief which a beneficent Government had abundantly provided. This statement was false on the face of it; for, as Sir George Couper had reported that there was no excessive mortality, it was ridiculous to suppose he could have adopted extraordinary measures to meet an emergency which did not exist.

Mr. Knight had charged the Government with taking no measures for the relief of the people, although it knew that the rain crops had perished, and that consequently the people had nothing to live on during the bitterly cold winter. This charge Sir George Couper affirmed to be entirely false. He writes: "In October Colonel Fraser was deputed to visit the headquarters of each division, and, in consultation with the district officers, settle what works should be undertaken to give employment to the poor when the inevitable pressure began." Then, after reciting some details, he adds: "I submit that it was not in the power of the local government to take further precautions than these in anticipation of the coming distress." This statement Lord Lytton characterizes as "a convincing statement of facts," and congratulates the Lieutenant-Governor on his "humanity" and "forethought."

Now mark the truth. Colonel Fraser, it is true, was deputed to visit the headquarters of the various districts in which it was known that the population was foodless and destitute. But it was in order to read the following extract from a letter addressed to himself by Sir George Couper:

"Please discourage relief-works in every possible way. It may be, however, that when agricultural operations are over, some of the people may want work. This, however, except on works for which there is budget provision, should only be given if the collector is satisfied that without it the people would actually starve. *Mere distress is not a sufficient reason for opening a relief-work.* And if a relief-work be started, *task-work should be rigorously exacted, and the people put on the barest subsistence-wage*, so that we may be satisfied that if any other kind of work were procurable elsewhere they would resort to it."

The spirit of these instructions is unmistakable. They were intended

to drive the people away from the relief-works. Nobody was to be relieved unless he or she was actually in a state of starvation. The consequence was that only when a man was already half-dead with hunger could he be received upon a relief-work. He then received the "barest subsistence-wage," while a full day's work was "rigorously exacted" from him. Colonel Fraser was a fit instrument for carrying these instructions into effect. He swore "that there should be no famine under his administration, and that any collector who attempted to get one up should —— etc., etc." The blank space may be filled up with objurgations according to the taste and fancy of the reader. The effect of the Colonel's labors was that the people throughout the Northwest were literally starved off the relief-works. The wage allotted to each man was a little more than a penny of English money; to each woman about one penny; to each child a half-penny. But even at this rate it was found that the famine-stricken wretches clung to the works rather than face absolute want of food; and in consequence the subsistence-wage was still further reduced. Then the people in despair abandoned the works and returned to their villages to die. Having achieved this feat, the Government of India charges its victims with apathy and perversity because they perish in their homes. "No one," says Lord Lytton, "who was willing to go to a relief-work need have died of famine." He affirms this, knowing that in numberless places there were no relief-works where it was possible to obtain even Colonel Fraser's "subsistence-wage." And all this time the few who might out of their savings have lived through the period of scarcity were reduced to destitution also by the merciless exactions of this false and cruel Government.

The great length to which this letter has run compels me to break off here abruptly. But I think I have said enough to illustrate my remarks in a previous letter, that our Government of India is a gigantic system of "eye-wash." The great aim of the Government is not to remedy abuses, but keep them concealed and unknown. It is continually pretending to have accomplished that which it has not so much as attempted to do. And thus it is that difficulties and dangers have been allowed to grow up unchecked until they have become a menace to the existence of the Empire.

Correspondence.

THE INDEPENDENTS IN THE COMING CANVASS.

To the Editor of The Nation:

Sir: In your issue of Sept. 11 a correspondent discusses the position of the Independents in the coming canvass. The question is certainly one of unusual interest and importance, since the two political parties are very evenly balanced, and the Independent vote is large and constantly increasing. Your correspondent "A." describes very exactly the true condition of politics at the present moment, but exception may, I think, be taken to his conclusion that a policy of quiescence is the proper one to be adopted by Independent voters. If both parties make good nominations there is, of course, no need of an Independent movement. If one party makes a good nomination, the Independent movement would also be needless. But if, and this third contingency is only too probable, both parties make bad nominations, then an Independent movement becomes essential. Suppose, for example, that the Republicans on the one hand should nominate General Grant or Mr. Blaine, and the Democrats on the other should select Mr. Tilden or Mr. Hendricks as their candidates; in such an event the condition of the Independent vote would be one of perfect helplessness, unless some attempt had been previously made to meet this state of affairs. It seems to me, therefore, that the Independents ought to organize beforehand to such an extent that, in the event of bad nominations on both sides, they would be able to come together and put up a candidate of their own.

The Fifth-Avenue Hotel conference was a failure in one sense, because as soon as the regular nominations were made the leaders rushed into one party or the other, and, abandoning all idea of holding the Independent vote together, left their followers in the lurch to look out for themselves. In another sense, however, the conference was a success. It certainly helped to force a respectable candidate upon the Republicans, if not upon the Democrats as well. It obliged both parties to bid for support by raising, instead of by lowering, the character of their candidates and the tone of their resolutions. A similar conference now would probably have a similar result. If it did not, and both parties made bad nominations, the Independent voters would then have a rallying point and an organization to fall back upon, and would be able to put up a candidate of their own, and thus avoid throwing away their votes, besides creating a very wholesome diversion in our national politics.

By this suggestion I am far from advocating anything so chimerical as starting a third party in the present condition of politics. The only practical course for the Independents is, as a rule, to work through existing parties, and, by using one against the other in turn, force upon them the policy and measures they deem best for the country. But it would be a dismal fate not merely for the Independent voters but for the country to be left in 1880 to choose between General Grant and Mr. Tilden. A third party, or a third candidate, would then be of incalculable value. It is for this contingency that I wish the Independent voters to provide. I do not, I think, underestimate the difficulty of making such provision—on the contrary, the obstacles seem to me very great indeed; but I am satisfied that the effort ought to be made. In any event, an Independent movement would tend to raise the character of the party candidates, and it might become of the utmost importance if Democrats and Republicans, relying on their machines, insist upon giving the country a mere choice of evils. L.

Boston, Sept. 20, 1879.

To the Editor of The Nation:

Sir: The references in the *Nation* of September 11 to the present political status of the Independents, or Liberals, as they were called in Michigan, seem to invite a few words on the subject from the old Northwest. A few years ago there was a large and influential element, known as Liberals—but Independents would have been a more appropriate name—in this section. They were Republicans who had become thoroughly disgusted with the infamous political methods of the Grant Administration. They were strong enough to influence local nominations; the Democrats, not then inoculated with fiatism, were wise enough to adopt their suggestions in regard to platforms and candidates, and in not a few instances the Republicans encountered their first defeats. Notably was this the case in Jackson County. Nearly all of those now regarded as Independents voted for Mr. Greeley in 1872, and many of them for Mr. Tilden in 1876; but at the elections that have been held since the inauguration of President Hayes they have generally voted the Republican ticket. None of them, however, are ever chosen as delegates to conventions, and they are not, and do not wish to be, recognized as being in good and regular standing with the Republican party; they are Independents still. Every man of them is in favor of a sound currency. The Democratic party having abandoned its ancient faith in regard to the currency, and that, too, at a time when the assertion and maintenance of that faith was a patriotic duty, and having sought and effected coalitions with the Greenback faction, as long as this question was dominant in politics there was no other consistent course for the Independents to take. They have felt compelled to vote with the Republicans because the Republican party, though tainted with financial heresies, has advocated the soundest financial doctrines. It has not been clean, but it has been cleaner, of late years, than the Democratic party.

If the Democrats had made "Hard Money and Home Rule" their shibboleth, and had behaved decently in Congress, the action of many of the Independents would have been different. Of course the Solid South, the continuance of the shot-gun policy, and the rantings of red-mouthed brigadiers in Congress have had the effect to consolidate Northern sentiment, awaken war memories, and stop that disintegration of the Republican party which was taking place at a rapid rate towards the close of President Grant's Administration; but, in spite of all this suicidal conduct on the part of the Southerners, let General Grant be nominated by the Republicans next year, and a decent, honest-money candidate—like Senator Bayard, for instance—be put up by the Democrats, and not only will the old Independents assert their independence again, but they will have numerous new recruits from the Republican party. There is a widespread feeling that the Republican party deserves to be beaten, but, bad as it sometimes is, that it is not quite bad enough generally to be beaten by the Democratic party under its present management. That would be getting "out of the frying-pan into the fire." E. W. B.

Jackson, Mich., September 16, 1879.

THE NEW YORK REPUBLICAN TICKET.

To the Editor of The Nation:

Sir: I am much pleased with your article of September 18 entitled "The Independent Voter in the New York Election." Will you permit me to add a few further suggestions in support of your view?

1. The election this year is *exclusively* for State officers. It affects

only State interests. In choosing a governor, a comptroller, or other State officer the people *should* be influenced solely by the consideration which candidate is most likely to fulfil the duties of the office faithfully and well. Of course, in determining this question party politics cannot be entirely disregarded. Other things being equal, a Republican will prefer to vote for one of his own party. But paramount to this preference should always be the wish to promote good government in the State. The idea industriously enforced by Conkling politicians, and weakly acquiesced in by many of their opponents, that we must support Cornell now in order to ensure Republican ascendency in 1880, has no basis in fact.

2. It has never before happened in this State, so far as I know, that all the dangerous and corrupt rings in the State are banded on one side. I say "on one side," because the support of Kelly by Democrats is so openly and evidently in the Cornell interest that no argument is necessary to show it. All the Kelly men profess to hope is to beat Robinson. Robinson can only be defeated by electing Cornell. In order to accomplish this the Tammany Ring, the Custom-house Ring, the Canal Ring, and the Insurance Ring, the latter headed by Mr. Conkling's devoted servant, John F. Smyth, are heartily and zealously co-operating. The election of Cornell means that John Kelly shall maintain absolute and undisturbed sway in the city of New York; that John F. Smyth shall be reappointed Insurance Superintendent and continue to prey upon policyholders to maintain the Conkling ascendency; that Jarvis Lord, Belden, and Denison, and the other magnates of canal corruption, shall be restored to the opportunities for defrauding the State from which they have for the past five or six years been cruelly excluded; and that all attempts to conduct the civil service, State or national, on honest business principles shall be abandoned, and those who have made or approved such attempts be branded, in the choice language of Senator Conkling at the Rochester Convention of 1877, as scoundrels and "man-milliners."

3. It is argued by Cornell's supporters that if Robinson shall be elected Tilden will be nominated by the Democrats for President in 1880; while if he is defeated, Tilden's chances for the Presidential nomination will be gone. Assuming this to be so, is it any reason why Independent Republicans should hesitate to go against Cornell? The Democrats must have *some* candidate. There are probably more elements of opposition to Tilden than to any other they can name. He has no qualities whatever to arouse popular enthusiasm. If the defeat of Robinson shall prevent the Democrats from nominating Tilden, it may drive them to nominate some more popular and therefore, to Republicans, more dangerous candidate. Besides, upon the question of "honest money," the most important, perhaps, that will be involved in the campaign of 1880, Mr. Tilden is himself sound. It would be better to have him elected than an avowed and earnest inflationist. But all this, upon either side of the question, is mere speculation. Our duty done to our *State* this year, it will be easier to do it to the nation in 1880. Then the questions involved will be as exclusively national as this year they are State. No State officers (except members of Assembly) are to be elected in 1880; Presidential electors and members of Congress are then to be elected.

4. Your plan of proceeding for Independent Republicans is an excellent one. I would recommend to supplement it in two respects:

1. Vote for Robinson. Your estimate of him is, in my judgment, entirely correct. He has made some mistakes. Upon some questions he has appeared to be prejudiced and narrow. But he is a ruggedly and aggressively honest man. The acts for which some of his own party have repudiated him commend him to every honest citizen. I believe he has performed no official act with wrong motives or intentions.

2. Add the name of Wendell to those of Cornell and Soule for erasure. Wendell is more thoroughly identified with the Machine than any man on the ticket, except Cornell. He has been for years the most intimate political friend of John F. Smyth. He is generally believed, with Smyth, to have traded with Albany ring Democrats to defeat honest and reputable Republicans in this city. There are many other facts, some of them of public and judicial record, which indicate clearly that Mr. Wendell is an unfit man to put in charge of the State Treasury, or for a seat in the Canal Board or Board of Audit. Particulars can be given, if desired by Mr. W. or his supporters. INDEPENDENT REPUBLICAN.

ALBANY, September 20, 1879.

GLARING WHITE PAPER.

TO THE EDITOR OF THE NATION:

SIR: The discussions held on education during the present session of the Congress of Social Science move me to offer, through the *Nation*, a contribution to the general thought on one branch of this large subject. I believe that the eyesight of children and youth in school is injured by the intense whiteness and the high finish of the paper used in the manufacture of many of our school-books. The contrast is too great between the clear white of the paper and the blackness of the letters. The impression on the eye is not comforting, but harsh. The eye in its search is more than adequately met: it is assailed. And this suffering is aggravated often by a band of reflected light striking the eye from some part of the curved page held in the hand or lying before the reader. Our very virtues are working us mischief here. We wish the best of everything for our schools; and "what is better in a school-book than its beauty and high finish, provided the contents be all right?" we unthinkingly ask. Two things, we reply—a natural tone to the paper, and a freedom from all gloss in the finish.

A school-book in a pupil's hand is a result towards which many have made their contribution, and all the partners in this result need instruction. Perhaps publishers need it least of all, for in many cases they would make the book right were it not for the author's prejudices in favor of what is fine. The members of school-committees can hardly be expected to study more than the matter of a school-book and its most obvious attractions; and teachers often forget that a school-book should more than please—should act kindly on the pupil's eyes week after week and month after month. A.

ORANGE, N J., September 13.

[We agree entirely with our correspondent in respect to the disagreeable nature of the impression produced on the eye by the highly-finished (calendered) paper which is just now in fashion. His strictures might have been extended to the gloss upon writing-paper. For all practical purposes what is called a "machine finish" (a dull surface) is greatly preferable. In respect to tinting, we would remark that a very light buff has been found, both by medical and by non-medical observers, to be the most grateful for the eye to rest upon. The notion of whiteness is one which requires to be analyzed. A natural paper, with no coloring-matter, is apt to have a shade of buff, and frequently satisfies the most sensitive and critical eye. Snellen's test-types appear to be printed on natural paper (we are not sure of the fact); and the sheet appears distinctly buff when held by the side of an ordinary newspaper. The latter, however, and a great deal of book-paper and writing-paper, are colored with indigo for the purpose of conveying the impression of perfect whiteness. The eye may feel the effect as "harsh," and the taste may be offended, but upon theoretical grounds it is hardly justifiable to condemn the addition of a bluish tint.

As regards children, the point urged by our correspondent is of value; but there is one of still greater importance—namely, the restriction of their use of books in general. If the eye-sight be protected during childhood in accordance with well-known rules, including the avoidance of long-continued application to minute objects (books, maps, fine penmanship, fine needlework), the danger of near-sight occurring in later years will be slight.—ED. NATION.]

Notes.

THE fourth part of the 'American Catalogue' completes the first volume (of Authors and Titles) with the exception of title-page and some additional matter, which will not long be delayed (A. C. Armstrong & Son). We can testify to the usefulness of this admirable work at every stage of its progress.——Thomas Whitaker announces as in press 'The Faith of our Forefathers,' a reply to Archbishop Gibbons's work on the same subject. He will also publish here the 'Simple Lessons for Home Use' and 'The Shakespeare Birthday Book,' reprinted from the English.——Lee & Shepard will publish immediately Jules Verne's new work, 'The Tribulations of a Chinaman in China,' a very modern story.——McCalla & Stavely have in preparation 'The Refutation of Darwinism; and the Converse Theory of Development, based exclusively upon Darwin's facts,' by T. Warren O'Neill, of the Philadelphia bar, who, if successful, should lose no time in changing his profession.——B. Westermann & Co. have received Parts 6 and 7 of the new edition of 'Stieler's Hand-Atlas.' Especially noticeable are the maps of India; of the West Indies proper,

including Central America; of the British Isles and the neighboring waters, and of the Northwestern United States (Plate 2 of the six-plate map of this country).——We understand that Mr. John Fiske is likely to lecture in this city during the month of December, and in the spring to repeat his visit to England in accordance with the desire of those who listened there last month to his lectures on America.——The *Athenæum* reports the Philological Society's Dictionary as making good progress; "on some days as many as 4,000 slips from books pour in." A 'Cambridge Chaucer,' says the same paper, is to be edited by Mr. Henry Bradshaw, the librarian of Cambridge University, and Mr. F. J. Furnivall, the founder of the Chaucer Society, and published by Macmillan & Co. in six octavo volumes. The Clarendon Press will shortly issue a new Latin Dictionary, revised upon Andrews's Freund's, and enlarged, by two American scholars, Mr. Charlton T. Lewis and Professor Charles Short, of Columbia College.——A 'Bibliography of the Writings of Charles Dickens,' by James Cook, has just appeared in England, and is said to be an indispensable supplement to Forster's Life.——In the *Renaissance* we find high praise bestowed on a monthly bibliographic bulletin called *La Lecture*, published at Geneva, and designed for the use of families and popular institutions and libraries. Many of the reviews are written by women. It owes its existence to the local society for promoting public libraries.——In 1863 Hetzel published 'Les Tricheries des Grecs dévoilées,' a book in which Robert Houdin exposed the tricks of professional gamblers. This same book, with no alteration whatever, has been again brought out by Lévy, with the title changed to 'L'Art de Gagner à Tous les Jeux,' and without any intimation that the work is sixteen years old. Indeed, the advertisements announce it as a new book. In spite of this disingenuousness the volume may be recommended to all interested in the subject as much the best procurable.——The death is announced by cable of Eugène Emmanuel Viollet-le-Duc, the eminent French architect and antiquary, and writer on his chosen art, in the sixty-fifth year of his age. We shall take an early occasion to speak of his services at length.——In response to enquiry we give here the address of the Independent Republican Committee referred to last week: it is P. O. Box 4295, New York. We are informed, and are glad to learn, that the responses to their address have greatly exceeded their expectations; but those who desire the success of their efforts should remember that the Committee have nobody to "assess," and are quite dependent on voluntary contributions.——Two errata in our last issue (No. 742) call for prompt correction. In the last paragraph but one on p. 185 mention was made of the Russian expedition against "the Turkomans"; for which read "Tekke Turkomans." In the last paragraph on p. 187 "$110,000" should read "£110,000."

—The dramatic unity of Mr. Henry James, jr.'s, 'Confidence' goes all to pieces in the October *Scribner's*. The leading characters are dispersed to the four quarters of the globe; the heroine has no confidence in anybody, her lover appears to lose his confidence in his friend, and the only confidence the reader can have in the ultimate re-establishment of the machinery of the story, after the two years which are supposed to intervene, lies in the dormant "property" of the Siena sketch, and in the suggestiveness of the balcony scene at the end of chapter v. But all this is very entertaining, and doubtless Mr. James is equal to his task. Prof. Lounsbury, in his second paper on "English Spelling and Reform," effectually disposes of the so-called etymological objections to reform, though when he has to expose the false etymologies suggested by corrupt spelling, criticism might be made of the statements as to how these corruptions crept in. For instance, was it on account of the analogy of *who* and *whoop*, or because he lived in Ireland, or for some other reason, that Spenser wrote *hot* "whot" in the 'Faery Queene'? So far as can be judged this paper is the last of the series, but it is to be hoped not. The reform is not going to be demanded or carried by the multitude, but by the literary and scholarly guild; and what they require is not merely the removal of their prejudices—needful preliminary work, certainly—but a precise and satisfactory account of what is to take the place of the present product of the dictionary and the printing-office. Will orthography be determined by scientific or haphazard phonetics? Will, for instance, the *catalog* of our esteemed contemporaries the Chicago *Tribune* and the *Library Journal*, or the same word translated into Mr. Alexander Ellis's "Glossic," be the correct spelling of the future; and are editors to be commended who make lists for themselves of mutilated words for the guidance of their proof-readers and compositors? Prof. Lounsbury might also find something to say as to the value of an international congress on spelling reform, seeing that English is only the worst of the languages which are susceptible of an improved orthography; and as to the principles on which the reformed dictionary will be constructed—that is, what shall be the standard of pronunciation.

—With mention of an acute but too short anonymous article on "Journalism as exemplified by the late Mr. Bagehot," which we commend to the Froudes and Macaulays of the press, we pass to the illustrated articles in *Scribner's*, all of which are readable and variously instructive. Mr. Ernest Ingersoll tells of life in Leadville and of the mode of mining there; Mr. Zimmermann, of "Field Sports in Minnesota"; Mr. Fox, of one of Mr. Edison's interesting non-successes in swift telegraphy; Mr. Randolph, of a sailor's experience in turning cotton-planter in a Southern wilderness—a humorous story, disproving the traditional inability of white men to endure field labor beside the negro; Miss Kate Field, of Arthur Sullivan; and Mr. Smith, in a paper on Rio de Janeiro, raises once more a warning note against the illusions of American capitalists and mechanics who send their goods or betake themselves to Brazil in the hope of profit. The portrait of Mr. Edison, by Mr. Lathrop, engraved by Juengling, and Fortuny's delicious "Piping Shepherd," engraved by Cole, are the masterpieces among the illustrations; but the editor should have spared us the poetical *affiche* to the Fortuny—

> "Gone is Hellas, fane and idol,
> Gone are those symmetric men
> Wise to bridle," etc.

—The *Atlantic* for October is better than usual, which to its admirers is equivalent to saying that it is an excellent number. The most noteworthy articles are "Sincere Demagogy," by the author of the paper on dangerous tendencies in American life, and "Socialism in Germany," by Willard Brown. They are timely and suggestive, and they go so well together that it was worth while printing them in the same issue even at the risk of overweighting it. The former speaks of the rapid growth in this country of a class of sincere men, laborers, farmers, and even capitalists, who believe in the repeal of all laws limiting the suffrage, Government issue of paper money and control of railroads, compulsory practical education, direct taxes, chiefly on incomes; and who look for a millennium to be produced by science. This class is far more important than is generally supposed, according to the writer, because it is both intelligent and honest. Both its poorer members and those in comfortable circumstances expect the overthrow of "men of wealth and culture," the former with exultation, the others without personal feeling. But among the latter there may arise a leader, educated though despising culture, rich but denouncing wealth as the chief danger to the liberties of "the people," elegant, of spotless character and of a kindly disposition, who will press these ideas upon our unwilling attention. The speculation of the article is "legitimate" enough, and it is nothing against it perhaps that one should note the facility with which such writers speculate after having formed the habit. Mr. Brown's report as to German socialism may be summarized as an elaborate and instructive exposition of the laborer's discontent, and the belief of the educated philanthropist that socialism is a cure for it. There is an enthusiastic article on Meyerbeer by William F. Apthorp, who, however, does not blink the essentially clap-trap nature of Meyerbeer's genius, though he might object to such a statement of his qualifying criticism; "Irene the Missionary" draws near its end; "Life at a Little Court," by Sidney Hyde, is distinctly charming; Principal Shairp contributes a paper on "Burns and Scotch Song before Him," which will be read on account of its authorship; there is an admirable review of Didier's 'Life and Letters of Madame Bonaparte,' and the "Contributor's Club" contains an interesting account of Miss McLaughlin's discovery in pottery, which enables her to rival Haviland.

—The conclusion of Miss Olney's novel, "Through Winding Ways," in the October *Lippincott* may afford a kind of shock to readers who had come to look upon it as a "permanent feature" of the magazine, but it is as happy and satisfactory as the ending of a fairy-tale. The story is a highly-seasoned one, as may possibly be remembered; one of its characters is married four times in the course of it, her first husband dying, her second being divorced, her third shot in battle, and her fourth very much such a man as would be required to take up with such a wife; other characters and incidents are proportionately intricate. The rest of the number is of a varied and light character; Mr. Oswald has a fourth "Summerland Sketch," which is readable; Margaret Bertha Wright begins an account of "Rambles of Three," which essays humor in both text and illustrations and relates the experiences of some American artists in Italy; there is a paper on "American Landscape Gardening," by Edward C. Bruce, which would have been better if it had relied more confidently upon the interest of its subject; "The Study of English in Germany" makes the most of what it treats of and in an interesting way; "Chamois-Shoot-

ing with the Emperor of Austria" is from a capable pen, and there is a curious story of a fanatical Spanish sect in "Our Monthly Gossip" that will be new to most readers, we imagine. Its members were sworn to strangle those of their number who had received extreme unction, on the ground that they were ready for Heaven and might become less so should they by any unhappy chance recover.

—It will surprise many people, no doubt, to be told that Massachusetts is, in the matter of common-school education, "living on its past reputation," and that half of the proportionately large sum it spends for this purpose yearly is money not so much thrown away as fatally misapplied. This, nevertheless, is what Mr. Charles Francis Adams, jr., asserts in his account of a radical and successful experiment recently made by the school committee of the town of Quincy. The committee found, in 1873, that "most of the pupils who have finished the grammar course neither speak nor spell their own language very perfectly, nor read and write it with that elegance which is desirable." This was a mild statement of the results of the ordinary routine teaching in these schools, Mr. Adams says, and it is probably quite as applicable to other towns than Quincy in Massachusetts and out of it. "The whole thing was a sham," Mr. Adams exclaims of the regular school examination, in which pupils show to such apparent advantage and with the superficiality of which every one is familiar; "it was, in a word, all smatter, veneering, and cram." The committee concluded to attempt a wholly new departure. Instead of the stock superintendent, "usually some retired clergyman or local politician out of a job," they found a gentleman fresh from Germany and full of enthusiasm for teaching "as a science." They tempered his transports in one or two regards, and then gave him *carte blanche* to try his system. This system consisted in the absence of system. The number of studies was reduced in the first place. The grammar, reader, speller, and copy-book were then "hustled out." Reading at sight and writing off-hand were aimed at; "children were to learn to read and write and cypher as they learned to swim, or to skate, or to play ball." In the first two grammar grades were combined instruction in reading, writing, grammar, spelling, history, and geography. General reading, even to magazine articles, was put into the pupils' hands. The scholars read first and then wrote of what they had read. Spelling came with practice, just as walking and talking do. In short, the system introduced was "a complete negation of the whole present common-school system." Of course this "seemed to take away the breath of the old-time masters," but its results were, according to Mr. Adams, excellent. "Not only was there a marked improvement in attendance, but the attendance was cheerful." The children could read at sight and could write a simple letter easily, although not one in ten knew what a noun was, for example. The cost of the improved instruction was one-fifth less than the old had been. There are probably few patriotic people who will not be interested in Mr. Adams's account of this revolution, of which we have space to give but a meagre outline—as he says, Americans believe the common schools to be "the ark of the national salvation." Accordingly we refer our readers to the little pamphlet, which Estes & Lauriat have just published, wherein Mr. Adams has collected this essay and two others germane in subject, under the title 'The Public Library and the Common Schools: Three Papers on Educational Topics.'

—Several things should be borne in mind, however, in reading Mr. Adams's paper. The Quincy experiment was tried under unusually favorable conditions. The committee were in effect a commission, and they evidently enjoyed the confidence of their tax-paying townsmen in an unusual degree; they were not subject to removal before they had fairly tested their plan, to be succeeded by another committee inimical to it. They were peculiarly fortunate in their selection of a superintendent. It is probable that their teachers were better than the average, and had a certain elasticity and adaptability. It is still more probable that they were themselves men of acumen, experience, and public spirit. Furthermore, they were pioneers, and naturally possessed of a wholesome zeal. Moreover, the method enhances the importance of the teacher greatly—with text-books abolished, everything, indeed, may be said to depend upon the ability and aptitude of the teacher. Such a superintendent as Mr. Parker could doubtless teach teachers how to teach. But supposing the Quincy method introduced into the schools of this city by the Board of Education, would Superintendent Kiddle be competent to supervise the details of reformation? Still, the adoption of any measure which would illustrate to the Board of Education Superintendent Kiddle's exact capacities would perhaps be worth trying.

—The death is announced by cable of the Rev. Dr. Joseph P. Thompson, formerly of this city, at Berlin on Saturday, in the sixty-first year of his age. Dr. Thompson was a native of Philadelphia, but acquired his early reputation as pastor of the Broadway Tabernacle, and as one of the first editors of the *Independent*. In consequence of the sudden failure of his health he withdrew from his charge in 1872, with every mark of esteem and confidence on the part of his congregation, and went to Germany to live, having especially in view the quiet pursuit of his studies in Egyptology, to which he was greatly devoted. He took, however, an active part in numerous international congresses at Brussels, Antwerp, Paris, and elsewhere, for the codification of the law of nations, the regulation of trade, the furtherance of geographical research, etc., and delivered many addresses on America during the centennial year. It is, indeed, remarkable that his powers were not sooner exhausted. Dr. Thompson was a frequent and valued contributor to the *Nation*, beginning with the second number, and the relation suffered no interruption from his residence abroad. Besides what he wrote for newspapers and reviews his published works are numerous, but of these a few memoirs of deceased friends will perhaps be the most enduring. That on which he was engaged at the time of his death is said to have related to the Hebrews in Egypt.

—The French National Library has just issued, as a supplement of fourteen pages to its August bulletin, a list of the American books collected for the library by M. Em. Terquem during his late visit to this country. The books are all gifts from various libraries, publishers, and from the Departments of Government. The most noteworthy fact about the list is, that the first library in France, and the largest library in the world, should not have advanced beyond the primitive, and one might say bibliopolic, style of cataloguing the books issued by institutions under the first word of the title. In this list the publications of the United States are scattered all through the alphabet, according as they are Reports, Acts, Regulations, Schedules, Revised Regulations, Treatises, Notices, Patent Laws, Monthly Reports, Memoranda, Lists. A worse practice could not be devised.

—M. Édouard Fournier, the French antiquarian and dramatic critic, has just published a fifth edition, revised and considerably enlarged, of his little book on 'L'Esprit des Autres.' M. Fournier is to be treated rather as a dealer in literary bric-à-brac than as a serious historian. His 'Vieux-Neuf,' or ancient history of modern inventions and discoveries, is a pellmell gathering of the interesting and the worthless. His 'L'Esprit dans l'Histoire' has provided Mr. Hayward with the text and with much of the matter of one of his most entertaining essays, in which we were shown how little reliance was to be placed on the generally received anecdotes and popular sayings attributed to the celebrities of the past. 'L'Esprit des Autres' is akin in subject and style to this. It contains four hundred rambling pages about quotations, either in French or in Greek and Latin, the only other languages most Frenchmen take any interest in. It is not a regular dictionary of quotations like Mr. Bartlett's, but an ample index of passages cited fills twenty pages at the end of the book, and gives it value as a work of reference. M. Fournier fills his first chapter with a discussion of the good and evil of quoting. Perhaps unaware of Emerson's essay and Sterne's remark about all modern literature being a pouring from one vessel into another—a remark which has been traced to Burton's 'Anatomy'—he quotes a passage of Châteaubriand in which Socrates is cited as saying that he was, as it were, a vase filling himself with water at strange fountains for the benefit of those who heard him. He also gives us a criticism of Bayle's to the effect that a certain work was "loaded with so many quotations that they interfere and keep us from seeing the author's own work"; and this reminds M. Fournier of the song of the peasant lost in Paris and crying out:

> "La hauteur des maisons
> Empêch' de voir la ville" (p. 2),

for a parallel to which see one of the numberless stanzas of the primitive Yankee Doodle. We noticed recently the letters of Ducis. M. Fournier shows us here (p. 257) that that dramatist put Goldsmith under contribution as well as Shakspere, turning the familiar

> "Man wants but little here below,
> Nor wants that little long,"

into the feebler Alexandrine,

> "Il faut si peu pour l'homme, et pour si peu de temps."

Mr. Tennyson's declaration of the real faith which may exist in honest doubt has a French parallel in Mme. Deshoulières'

> "Vous ne prouvez que trop que chercher à connaître
> N'est souvent qu'apprendre à douter" (p. 90),

which M. Fournier cites only to compare with Dante's

"Che non men che saver, dubbiar m'aggrata" (*Inferno*, *xi.* 93).

M. Fournier gives few instances of apter use of a quotation than Théophile Gautier's application to the then recently discovered photography of Virgil's

". . . Solem qui dicere falsum
Audeat?" (*Georgics*, *i.* 463).

GREEN'S PURITAN ENGLAND.*

"PURITANISM," to use a happy expression of Mr. Green's, "missed its aim." The problem for an historian is to account for the fact that a great religious and political party struggled, conquered, triumphed, and fell with a fall from which it never throughout the course of English history rose again. The puzzle is the more perplexing by reason of the contrast between the fate of French and of English republicanism. The democrats of the French Revolution were men of very moderate ability. To compare Roland, Danton, or Robespierre with Pym, Hampden, or Cromwell is simply ridiculous. The French leaders were men who at the best grasped the readiest, the most obvious, the most violent, and therefore the worst, means for accomplishing their objects. If insane panic affords some excuse for the cruelty, the plea of fear condemns the whole policy, of the Terrorists. Their rule was the rule of brute force directed by fear, and the Reign of Terror is a monument as much of human folly as of human cruelty. The Puritan leaders were men of whom any country might be proud. A loyalist might admit that Cromwell needed but the title to the throne to have been the greatest of English monarchs. The memories of the Terror filled even liberals with horror, and converted every man of sense throughout Europe into a conservative. The Commonwealth was a period to which every Englishman might look back with national pride. It might, therefore, have been expected that the prestige of the French Republic would have perished, whilst the glories of the Commonwealth would have ensured the prolonged existence of a Republican or of a Cromwellian party.

Events exactly disappointed natural expectation. After a century French Republicanism is alive. Robespierre is the saint of a political sect. The name of Napoleon is still a power. The calamities of the Revolution did not conciliate France to the Ancien Régime, and the enquiry raised by De Tocqueville, "comment la nation, en cessant d'être républicaine, était restée révolutionnaire," still remains a perplexity to historians. No similar question needs the attention of those who study the great Rebellion. Neither the Commonwealth nor Cromwell was accepted by England. If affection for the Stuarts accelerated the fall of the Commonwealth, detestation for James II. gave no new life to Puritanism. The traditions of the Protectorate, as well as republican enthusiasm, proved within thirty years of Cromwell's death to be as dead as the institutions of William the Conqueror. The problem of English history (if one may adapt the expressions of De Tocqueville to totally different circumstances) is, how it happened that the nation remained attached to freedom without ever adopting the principles of the Puritan revolution? The author who answers this enquiry will have thrown as much light on the history of England as De Tocqueville has cast on what may be termed the theory of French history. We cannot say that Mr. Green has explained the enigma of Puritanism, but we can assert that his book supplies ideas and materials which go a great way towards suggesting the kind of answer of which the problem is capable. His strength does not lie in analysis, but he exhibits an impartiality not to be found in either the assailants or the admirers of Puritanism; and this spirit of fairness, combined with rare literary gifts, enables him to set forth the general circumstances under which Puritanism arose, flourished, and declined, and thus to make a great step towards explaining its failure. The aim of this article is to state briefly the general conclusions which Mr. Green suggests in reference to the causes why Puritanism missed its aim.

Two considerations of a general character are apt to escape students of the seventeenth century. The first is that the hour of the Puritan triumph was not in reality the time when Puritanism had its greatest influence. In 1603 England might be fairly termed a Puritan country. Calvinism was the prevailing, and so to speak the received, creed of the Church. Opposition to arbitrary power was, though in a much less distinct way, the predominant political feeling of the nation. If we might be allowed the use of expressions which are admittedly inaccurate and involve an anachronism, but which nevertheless convey a distinct idea to modern readers, we should say that the people were, when James I. came to the throne, in religion Calvinistic Evangelicals, and in politics constitutional Whigs. These terms are, of course, inaccurate; but what ought to be noted is, that in religion, at least, the doctrines which afterwards became associated with an extreme party were the creed of the mass of religious Englishmen. The High-Church movement or revival under Laud, together with the parallel movement in favor of despotism under Strafford, were revolutionary—*i.e.*, they were attacks on the predominant sentiment of the nation. If this be so, as we think would be admitted by writers so little enthusiastic for Puritanism as, say, Dean Hook or Mr. Gardiner, the result follows that Puritan influence reached its height at any rate before Charles ascended the throne, and that the influences of various kinds had, even before the outbreak of the Civil War, begun to turn what had been the tide of Puritanism.
